The men in Moscow face, then, a significant dilemma. They know that high agricultural productivity demands that the Russian and Eastern European peasant be given real incentives to work hard and to produce efficiently. More than that, these concessions must appear to the peasant as permanent enough to inspire him to change his whole outlook on production. He has been beaten down and imprisoned for many years by the Communist leadership. He knows all too well the usual tricks of stick and carrot. His productivity cannot be turned on and off like an electric-light switch.

But if the peasant is to be given stable incentives, Moscow has to accept two major consequences: (1) The degree of political and social control in the countryside must be lifted so that the peasant can enjoy an im-

portant degree of individual freedom. (2) Goods must be produced which the peasant wants to buy and can buy with what he earns. This means that the amount of production going into heavy industry and armaments must be relatively reduced in favor of consumers' goods. Together these decisions involve, if they are taken—and they have not yet been taken—a significant reversal of political, social, and economic policies which communism has systematically followed wherever it has seized power.

At present Communist leadership in Moscow and Eastern Europe has acknowledged that the problem exists; but it has drawn back from a fundamental solution. Moscow has by no means decided to reverse the process of collectivization and to give the peasant the environment and the incentives he requires if food is to be produced efficiently on the desired scale. Nevertheless the discussion in the Soviet and satellite press reflects a recognition that for the long pull the situation of agriculture under communism is unsatisfactory, even dangerous to the leadership.

Thus the Russian and Eastern European peasant has demonstrated that he cannot be quickly converted into a rural industrial worker according to Marx's formula, even by the full power of a modern totalitarian state. As Mitrany concluded:

"Marx's analysis of the evolution of agriculture has nowhere been proved right; his prescription for the organization of agricultural production has never come to be practiced as part of a normal economic evolution. The Marxist view of the political standing of the peasants has been made ridiculous by the dependence of the Communist advance on the peasants' revolutionary impetus and action; while its expectation of a natural alliance between proletariat and poor peasants, as a result of class division in the village, has, in spite of much Communist effort, nowhere come to pass."

THE ATTACK ON THE CHINESE FARMER

In the Far East the Chinese peasant is beginning to make a similar demonstration. This is a different and more serious matter than it is in Europe, where the problem does not threaten an immediate major crisis. Russia and Eastern Europe can, in extremity, produce enough and export enough industrial goods to buy food abroad. To some extent this is what Russia is now doing. It is, of course, grotesque that Russia and Eastern Europe should become food-importing areas; but the situation in China is, from the Communist point of view, vastly more dangerous.

There, too, the Communists, once they had effectively seized power, turned on their peasant support much as Stalin did in 1929. They made good their promise to redistribute land from the rich to the poor peasant in 1949–50. But they did not redivide the land because they wanted a nation of small independent proprietors. They did it in order to wreck the social, economic, and political power of the village gentry and other middle-class elements in China whose income depended on the ownership of substantial amounts of land. In this way, agents of Peking supplanted the complex and diffuse authorities of village life.

When this job was done they began immediately to push the peasant into collectivized farms. The Chinese Communist model is drawn from Eastern Europe rather than the Soviet Union. Its key institution is the producers' cooperative, from whose total output a family receives a share. At first the share is computed according to the amount of land and equipment the family puts into the cooperative, plus the amount of labor contributed. But it is official policy that shares will rapidly become proportional to current labor, not past capital contribution. The family will then lose not only its capital but also its feeling of connection between output and effort. It is a share in the total that each family gets—a total averaging the vigorous and weak, the conscientious and lazy.

The producers' cooperative is buttressed by policies which require the peasant to sell all his marketable output to the government at low-fixed prices; which sterilize his cash in government banks; and which limit what he can buy, through the spreading monopoly of government stores. There is not the slightest doubt that the Chinese peasant dislikes this collectivized organization of agriculture; and there is not the slightest doubt that the Chinese Communists have the intention and the ability to complete the process of collectivization they have begun. The latest statements indicate that they expect to place more than half of China's peasants in producers' cooperatives by the end of this decade; and the government monopoly of the grain trade is already a universal fact.

Why have the Chinese Communists betrayed their peasant supporters? Why are they taking risks with the level of agricultural output in China by damaging the peasant's incentive to produce?

They have launched this policy of collectivization for two reasons. First, they feel that unless the peasant is collectivized he will not be under Communist political control. Some 80 percent of the people of China are peasants; that is, about 500 million people are in rural families. In such a nation a free agriculture means virtually a free people. And this would be a denial to the Communists of their victory. Second, the Communists have decided to build, as a matter of over-riding priority, a heavy industry base: both to supply their armed forces and to guarantee that China can later continue to industrialize out of its own resources. This requires that the government control intimately the agricultural output of the country and that the government be in a position to use it for its own purposes: to sell abroad for arms and machinery; to feed the army, the Communist administration, its horde of men in forced labor, and the rapidly growing cities. The government in Peking does not appear confident that it can achieve this control over output unless collective farms are installed. Peking appears willing, in short, to risk less output if it can fully control what there is.

This is a greater risk for Communist China in the 1950's than it was in the Soviet Union during the 1930's. Whereas the Soviet Union could achieve its industrialization plan with a 20-percent decline in agricultural output, China requires something like a 10-percent increase. This is so because, unlike the Soviet Union, Communist China must increase its foreign trade to industrialize and because population is growing so rapidly in China. Peking now claims a population increase of 2 percent per year, which means an extra 12 million mouths to feed.

What will happen if agricultural output does not increase by 10 percent? We should be quite clear that up to a point the Chinese Communists can and will balance their books with starvation. In fact, to some extent, this happened last spring and is likely to happen again next spring. A Communist-control apparatus can handle a high degree of discontent; and starvation is chronic in China.

There are, however, two dangers to Peking. First, a sustained failure of output to increase or a substantial decrease could create so vast a hunger in China that even a Communist-control system could not prevent some kind of crisis. Second, a demonstration that Communist techniques in Asia lead to chronic starvation could damage or destroy the powerful belief in underdeveloped areas that communism holds the key to rapid economic growth. It is this belief which is one of communism's greatest assets in the cold war: in Southeast Asia, in the Middle East, in Africa, and even in Latin America.

REVOLUTION BY CONSENT

The most important conclusion at which I have arrived from 3 years' immersion in the study of communism is this: it lies within the capabilities of the United States and the free world to shatter the belief in communism as the unique method for rapid development. And we can do this over the next decade—by, say, 1965.

The faith and judgment which lie behind this conclusion stem not only from knowledge of how the peasant's human response to Communist methods has affected agricultural output. This conclusion is supported by results already achieved in the free world, notably in India, by the techniques of freedom, the method of individual consent.

India has begun its attempts to industrialize in a way exactly opposite to Communist China. China is investing in heavy industry. India has plowed its scarce capital, for the first 5-year plan, primarily into agriculture. China is forcing its peasants into collectives, by threat and force. India is trying to induce the peasant to improve his methods, to increase the use of chemical fertilizers, to install new irrigation facilities, to double-crop his land. All this is done painstakingly by education and example.

The results thus far are remarkably hopeful. The substantial increase in agricultural output planned in India for the first 5-year plan has been achieved in 3 years; and the evidence is that a constructive chain reaction is sweeping the Indian countryside, far beyond the demonstration villages. The returns are not yet in; but there is a distinct possibility that this truth will become evident: in underdeveloped areas, starting from scratch, with a population predominantly made up of peasants, the method of consent is not only right morally, it is right technically as well.

A free world economic program, with strong United States support, might demonstrate this simple truth, notably in the competition between India and Communist China. These two great nations are simultaneously attempting a radical transformation. Over the next decade they plan to put themselves in a position where economic growth will be relatively automatic. Throughout Asia and throughout the vast underdeveloped portions of the world, the relative performance of communism and democracy at this monumental task will be closely watched and weighed.

Even Communist totalitarianism cannot afford enough policemen to follow the peasant about in his daily round and make him produce what economic growth requires. The devices of a police state, which work with tragic efficiency in urban areas, adapt with difficulty to the countryside.

In short, the fact that Marx was a city boy gives the free world the chance to destroy in the next decade the myth that only Communist brutality can raise an underdeveloped area into self-sustaining growth, and if that myth is dissipated the chance that communism will gain power in the underdeveloped areas, whose destiny will determine the long-run balance in the world's power, will be much reduced, if not once and for all eliminated.

Youth Temperance Education Week

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. NEUBERGER. Mr. President, on April 20, Gov. Paul L. Patterson, of the

State of Oregon, officially designated April 24 to April 30, 1955, as Youth Temperance Education Week. This was done through the cooperation of the Governor and Mrs. Fred J. Tooze, president of the Oregon chapter of the Oregon's Woman's Christian Temperance Union.

I ask unanimous consent that the Governor's proclamation and the brochure issued by the Oregon Woman's Christian Temperance Union, upon that occasion, be printed in the Appendix of the RECORD.

There being no objection, the proclamation and pamphlet were ordered to be printed in the RECORD, as follows:

YOUTH TEMPERANCE EDUCATION WEEK

GOVERNOR'S PROCLAMATION

"Never has it been more important in the history of our Nation, and State, than now, to bring to our youth the truth on temperance," said Governor Patterson in designating April 24 to 30, 1955, as Youth Temperance Education Week.

"I urge all Oregonians to plan meetings and observances for youth-temperance education during this designated week, and further urge all Oregonians to consider the matter of youth-temperance education as a year-round project."

OREGON LIQUOR FACTS

[Population (1953)—1,521,341]

Liquor law: State monopoly, exclusive State administration. Local option on question of sale (a) of all alcoholic beverages; (b) alcoholic liquors under 17 percent alcohol by weight; (c) alcoholic liquor under 4 percent by weight.

Wet and dry territory (1953): Two cities and towns ban spirits, wine, and beer. Three and six-tenths percent of population, or 5,199 persons, live in dry areas.

Number of liquor retailers (1952):	
State	5,564
United States	481,210
Population per liquor retailer:	
State	273
United States	324
Malt liquor dealers (legal licenses):	
State	3,177
United States	199,513

Consumption of, expenditures for, alcoholic beverages (1952)

(A) Consumption:	
Total gallons:	
State	28,951,119
United States	2,926,000,000
1. Hard liquor, wine:	
State	2,784,054
United States	322,000,000
2. Malt liquor:	
State	26,167,065
United States	2,604,000,000
Per capita:	
Total gallons:	
State	19.03
United States	18.78
1. Hard liquor, wine:	
State	1.83
United States	2.07
2. Malt liquor:	
State	17.20
United States	16.71
(B) Expenditures:	
Total:	
State	$94,468,232.81
United States	9,715,000,000.00
1. Hard liquor, wine:	
State	46,750,808.93
United States	4,755,000,000.00
2. Malt liquor:	
State	47,717,423.88
United States	4,960,000,000.00
Per capita:	
Total gallons:	
State	63.41
United States	62.36
1. Hard liquor, wine:	
State	30.73
United States	30.52
Malt liquor:	
State	32.68
United States	31.84
Total gross income received from alcoholic beverages (1952)	$44,581,903.53
(a) Hard liquor, wine, including sales at State stores and agencies	42,389,764.75
(b) Malt beverages	31,389,764.75
Net income	14,751,059.20

Total traffic fatalities (1952)

(a) Mileage death rate per 100,000,000 vehicle-miles:	
State	436
United States	38,000
(b) Population death rate per 100,000 persons:	
State	28.7
United States	24.4

Urban crime

(a) Total arrests:	
1950:	
State	13,823
United States	1,036,934
1951:	
State	13,566
United States	1,091,039
1952:	
State	14,938
United States	1,138,106
(b) Rate per 100,000:	
State:	
1950:	
Murder	1.81
Aggravated assault	29.6
1951:	
Murder	1.93
Aggravated assault	22.8
1952:	
Murder	3.18
Aggravated assault	25.4
United States:	
1950:	
Murder	5.11
Aggravated assault	73.4
1951:	
Murder	4.88
Aggravated assault	70.5
1952:	
Murder	5.05
Aggravated assault	81.5

Aid to dependent children

1949:	
State	$3,713,000
United States	414,157,000
1950:	
State	4,209,000
United States	520,330,000
1951:	
State	4,913,000
United States	567,685,000
1952:	
State	4,129,000
United States	547,268,000

Total expenditures for public instruction

1940:	
State	$18,724,000
United States	2,344,049,000
1945:	
State	26,800,000
United States	2,638,666,000
1948:	
State	57,254,000
United States	4,311,176,000
1949:	
State	58,100,000
United States	5,010,236,000
1950:	
State	93,325,000
United States	5,837,643,000

FRED D. L. SQUIRES,
Research Counsel.

YOUTH TEMPERANCE COUNCIL OF OREGON

PURPOSE

The purpose of the Youth Temperance Council is to unite the young people of the community, State, and Nation in a program of Christian citizenship, to build for total abstinence for the individual and sobriety for the Nation.

MEMBERSHIP REQUIREMENT

To become a member of the YTC one must sign the following pledge and pay 25 cents dues to the local council.

PLEDGE

I hereby solemnly promise, God helping me, to abstain from all distilled, fermented, and malt liquors, including wine, beer, and cider, and from all tobacco and narcotics in every form, and to employ all proper means to discourage the use of and traffic in the same.

The Upper Colorado River Project—Editorial Comment

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorials on the upper Colorado River project. Two of them are from the New York Times of April 20 and April 24, and are entitled, respectively, "Echo Park Dam" and "Bananas on Pike's Peak." The third, entitled "GOP Squanderbill," is from the Chicago Daily News for April 21, 1955.

These editorials, Mr. President, point out the weaknesses and inadequacies of the upper Colorado River project. They refer to its excessive costs for power and irrigation, and they question whether the project is in the public interest. They point out, too, the inconsistencies in the stand of the Eisenhower administration, which, on the one hand, opposes TVA as "creeping socialism"; but, on the other hand, supports this project, where costs for power, construction per kilowatt, and irrigation are several times as high as at TVA, on the Columbia, and at other existing projects.

I hope, Mr. President, that Members of the House of Representatives may have their attention called to the wastefulness of the upper Colorado River storage project, by noting the editorials in these responsible newspapers.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 20, 1955]

ECHO PARK DAM

With speed that bears evidence of political maneuvering, the Senate has suddenly taken up the administration's billion-dollar upper Colorado Basin storage and power project containing authorization for the bitterly controversial Echo Park Dam. It is difficult to believe the Senate can be cajoled into voting for a measure that could pave the way for the destruction of the national park system.

The entire upper Colorado scheme itself should be subjected to severe analysis and

questioning. The plan involves construction over the next half century or so of a number of water storage, power, and irrigation projects in eastern Utah, western Colorado, and neighboring areas. The first phase of it is to cost over a billion dollars, with sums of untold magnitude yet to come. Quite apart from the governmental propensity for underestimating costs, the entire economic basis for this scheme has been cogently attacked as unsound. It has been shown by such authorities as former Governor Miller, of Wyoming, that power to be produced at the Echo Park site, for instance, will cost $883 a kilowatt, while power produced by steam-electric plants in the same area costs less than $170 a kilowatt. The potentialities of cheap atomic power development have, of course, not yet been scratched. So far as the irrigation aspects are concerned, the estimated costs range from a few hundred dollars to a thousand or two per acre. There are far cheaper ways to increase our agricultural surpluses, if we insist on doing so.

But no matter what one thinks about the entire upper Colorado project, the proposed dam at Echo Park inside Dinosaur National Monument ought to be eliminated. Its construction would constitute a precedent-making invasion of the National Park System, which was established nearly 40 years ago. Creation of a dam and of a reservoir slowly filling up with silt and scarring the river banks for miles with the typical rim between high and low water levels would destroy two of the Nation's most beautiful river canyons forever.

[From the New York Times of April 24, 1955]

BANANAS ON PIKE'S PEAK?

With hardly a ripple, the Senate has coolly authorized a series of public power and reclamation projects for the upper Colorado Basin States at a cost that even the notoriously inadequate official estimates place at more than a billion and a half dollars. The power will be produced at fantastically high rates; the irrigation per acre will cost many times the conceivable value of the land; and as an incidental byproduct the National Park System of the United States will be threatened with ultimate destruction.

This newspaper is all for developing the underdeveloped areas of our country where feasible; but we do believe that large-scale developments ought to have some realistic relation to expected costs and benefits. It would of course be possible to grow bananas on top of the Rockies if one wanted to spend the money; but the question is, couldn't this money be spent more advantageously elsewhere? Hydroelectric power is important to the West, but is it essential to produce hydroelectric power at great cost when steam power can be produced in the same area at a fraction of the price? And when atomic power is around the corner? Even such an able defender of public power as Senator NEUBERGER concedes that upper Colorado power will be produced at a rate so high it "precludes extensive use for competitive manufacturing."

It is strange to find the Eisenhower administration, so devoted to good business management, so enthusiastic over the upper Colorado. No "partnership" is involved here, presumably because no businessman in his right mind would invest in it. And even if the economics were sound there remains the impact that Echo Park Dam, one of the units of the power and water-storage complex, would have on the national parks of the United States. This dam would raise its 690 feet right in the middle of one of the finest protected areas of natural scenery in the country and would flood two magnificent river canyons for many miles.

To construct it would set a ruinous precedent for invasion of other national parks and monuments, many of which are threatened by power, lumber, or other interests. Figures supplied by the Reclamation Bureau to prove the necessity for this dam have been proved wrong time and time again. Alternate sites have been proposed by competent engineers. There is no good reason for rushing ahead with this dam, to supply doubtful power needs decades hence, until careful studies of the alternatives have been made.

[From the Chicago Daily News of April 21, 1955]

GOP SQUANDERBILL

In all of Senator PAUL DOUGLAS' record of fighting governmental waste, no chapter does him more credit than his valiant efforts against the upper Colorado water project on the floor of the Senate Monday and Tuesday.

With 8 of the arid States represented by 2 Senators apiece, the $2-billion squanderbill passed the Senate despite DOUGLAS' efforts. These Senators were joined by most of the supporters of public power.

Senator DOUGLAS himself is a strong supporter of TVA, but he deplored the "doctrinaire" attitude of those colleagues who favored the upper Colorado project just because it includes vast sums for public power as well as irrigation. He urged them to discriminate on the basis of return.

No other public power project, existing or contemplated, is so expensive per unit of power to be produced. The current will cost 4½ times as much as current produced on the Columbia; 3 or 4 times as much as current produced by the single unit dams in the Tennessee Valley, and 4½ to 6 times the cost at the TVA multiple-purpose dams.

The irrigation costs are even more fantastic. The average, he estimated, will be $2,142 an acre to bring irrigation to land which cannot possibly exceed a value, when irrigated, of $150 an acre. In Utah, the cost will reach $3,953 an acre.

This is high-altitude land with a short growing reason and the principal crop it can produce is hay. As DOUGLAS pointed out, the top price for the richest agricultural land in the world (Illinois and Iowa) does not exceed $650 an acre.

Senator DOUGLAS made the most of the curious fact that the adminstration pushes this monstrously high-cost project while complaining about "creeping socialism" in the TVA and other public power areas.

When the Government first got into the reclamation business, the beneficiaries of irrigation projects were expected to pay interest on what the Government spent. Then the interest was deferred, for short periods, and for a longer time with every new project.

The Colorado project sets a new record for deferring interest. There will be a 10-year development period in which nothing will be paid on either interest or principal. Then there will be a 50-year period in which the beneficiaries will (theoretically) pay back principal but not interest.

Interest, in other words, is deferred for 60 years. If you assume a 10-year construction period, it would actually be deferred 70 years. Yet the Government will be paying interest on its obligations all the time.

It is hardly conceivable that fiscal irresponsibility could be pushed further.

Brotherhood and Democracy

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Representative CHARLES C. DIGGS, Jr., of Detroit, Mich., on Dr. Tomlinson D. Todd's ninth anniversary of the Americans all radio program, on March 27, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BROTHERHOOD AND DEMOCRACY

(Address delivered by Representative CHARLES C. DIGGS, JR., Democrat, from Detroit, Mich., on Dr. Tomlinson D. Todd's ninth anniversary of the Americans All radio program, Sunday, March 27, 1955, Station WOOK, 1:30 p. m. to 2:30 p. m.)

I deeply appreciate the privilege I have received in your invitation to share in the ninth anniversary broadcast of Americans All. The esteem in which your listening audience holds this program reflects the quality of your leadership and direction, Dr. Todd.

There is, of course, a great service to the public inherent in the enjoyment that a radio broadcast furnishes through its programs in either a sense of pleasure or stimulation of thinking. The greatest service, however, is that which is performed by a program of this kind which in its essence fulfills the foremost of American principles—those ideals of brotherhood and democracy.

The fostering and upholding of these principles have always been for Americans a civic, moral, and a Christian responsibility. They are the centermost part of our American way of life through which all the parts of the total can be balanced. They hold within themselves the first laws of our land, the first laws of morality and ethical conduct, and the first laws under God.

It has been precisely stated that the democratic idea upon which our Nation was founded and for which Americans have given their lives through two wars and an international conflict, is founded in human nature and comes from God who makes human nature.

The fact that ours is a government of the people, in which supreme power is retained by the people and exercised directly or indirectly through a system of representation—presents to the world our esteem of man as a human being whose stature arises from intellectual and creative powers and his practice of right or ethical conduct.

Our profession of faith in such a principle of government also expresses our faith in the brotherhood or kinship of all the people who make up our common family—a kinship that lies in the common pursuit of the objectives of such a form of government—life, liberty, and happiness.

Unless we have brotherhood among all men of our Nation, we cannot have a government of the people, by the people, and for the people, because brotherhood implies an equality between all men which makes them capable of self-discipline and thus self-government. Brotherhood also implies an unlimited personal liability for the pursuit of the objectives of democracy for all men—life, the right to equal opportunities for work as embodied in the FEPC bill cosponsored by the distinguished senior Senator from North Dakota and guest today, the Honorable WILLIAM F. LANGER, to worship freely and to live sociably with fellow man; liberty, the right to impartial laws by all men may be secured in their equal rights; and the pursuit of happiness, the state of well-being and pleasurable satisfaction arising from personal accomplishments and personal acceptance in the common family.

Brotherhood and the principles of democracy have been the subject of discussion for generations by orators, poets, governmental officials, and religious leaders, but never before has the fate of the world hung more upon the relationship of man within his own sphere of activity and the effects of

the relationship as it is intensified and as it reaches out into the outer spheres of the lands of other men. America, the leader of the free world, is faced with its moral and Christian liability for the welfare of fellowmen within and without its sphere. Only so can it give demonstration of its faith in the principles of democracy and brotherhood.

The tensions which are abroad in the world today and give rise to our fears for civilization are evidences of the lack of a strong sense of kinship between and liability for other men—the doubt of one man's belief in the equality and worthiness of others. Events have proved we cannot remove an iota or a dot, from the law of brotherhood and still accomplish democracy. So long as there exists in American men who are without equal rights under the law, men who are without equal opportunty for self expression and development or men who are unprotected, we have not fulfilled our democratic ideals. As it effects the outer world, we can ease tensions by showing others a better way of life or even our faith in such a life.

Men of all the free world and, we are sure from the testimony of those who have escaped the snare, men of the enslaved world look to America—world leader, foremost advocator of democracy—with the prayer that she will demonstrate her faith in the destiny of man.

Address by Hon. Edward Martin, of Pennsylvania, at Dinner of the Amen Corner

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by our colleague, the senior Senator from Pennsylvania [Mr. MARTIN], at the annual dinner of the Amen Corner, in the William Penn Hotel, at Pittsburgh, Pa., on Saturday evening, April 23, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROMANCE OF ROADS

(Address by Senator EDWARD MARTIN, of Pennsylvania, at the annual dinner of the Amen Corner, in the William Penn Hotel, Pittsburgh, Saturday evening, April 23, 1955)

One of the most spectacular developments in the United States has been the surprising increase in our population. According to the latest Census Bureau estimates, we are now a Nation of almost 165 million people.

That figure represents an increase of more than 13 million, or nearly 9 percent, above the total for the last general census of 1950. Compared with the 1940 census we have had an increase of 25 percent.

Translated into terms of human needs and the American way of life, this population increase has imposed upon us many great problems.

We need more schools to educate the growing army of young people. We need more hospitals. We must build more churches of every denomination. We must have more, better, and safer roads to accommodate the vastly increased volume of motor traffic that crowds upon our inadequate and hazardous highway systems.

I refer to these problems because they offer a challenge of such great importance to the future of our country. They should be the concern of every public-spirited American.

This evening I want to center my remarks on the urgent need for the expansion and modernization of our roads in all parts of the United States. As ranking Republican member and former chairman of the Senate Committee on Public Works, I have given a great deal of study to the highway legislation now under discussion. I am confident that substantial progress will be made from the standpoint of economic growth, national defense, civil defense, the safety and convenience of the traveling public and the general welfare.

This history of transportation in America is a fascinating story. It is filled with the romance of an expanding empire of freedom and opportunity. It is the story of resolute, courageous men and women who pushed westward over the mountains and plains to open new lands, to clear the forests, and to create new communities that have become great centers of industry and enterprise. From the earliest settlements along the Atlantic seaboard, the development and use of our waterways, highways, railways, pipelines, and air transportation has been one of the most important factors in our material, cultural, and spiritual progress.

In the early days the streams and Indian trails provided the only means of communication and travel. The first roads that connected scattered communities were built to accommodate horse-drawn vehicles in the unhurried pace of that day.

Military necessity was another strong influence in road development. General Braddock's road through the mountain wilderness from Cumberland, over a course now followed by the historic Route 40, and the Forbes Road from Bedford to Ohio Forks, were outstanding examples. They rank with the world's great military operations. The mission of these military campaigns was to secure the "point" where the Allegheny and the Monongahela join to form the Ohio. The prize at stake in this great struggle was the control of a continent. The British finally won after years of hard fighting. Here in the wildnerness, 200 years ago, the future of the New World was decided and the geography of Europe was shaped.

It is not necessary to recount the battles, campaigns, and individual exploits before a western Pennsylvania audience such as this. The thrilling story has been told many times by students of history. It has been brought home to us in song, folk-lore, and on the motion-picture screen.

The westward migration through the Point resulted in the settlement of the plains, the prairies, and the Pacific slope of North America. It brings to mind the great fleet of Conestoga wagons, which had their origin in Pennsylvania, and other covered wagons, ever moving westward. This is an inspiring picture. It is typically American. It embodies the American spirit of self-reliance and individual responsibility. It meant hardship, privation and often death, but it developed the greatest Nation the world has ever known.

Yes, my fellow Americans, there is romance in our roads, yet they are today, as always, the basic means of transportation. The other avenues of transportation—waterways, railroads and the air—aid and supplement the roads just as the auxiliary branches of the armed services help the "doughboy" gain and hold his objective.

Turning now to the present and the future, there is widespread agreement that bold, new steps must be taken to correct the deficiencies that have accumulated on our highway system during and since World War II.

The Nation has not kept pace with highway needs. The time has come when obsolete and dangerous roads must be replaced or rebuilt to modern standards of safety and efficiency. Larger, faster, and increased numbers of motor vehicles have added to our problem and will continue to do so. The American people now own 58 million motor vehicles and that figure is expected to rise beyond 81 million in the next 10 years. The number of vehicles using the original Pennsylvania Turnpike has multiplied by 4 in the last 5 years.

For many years roads were built where there was the strongest political pressure. There was no comprehensive plan.

Today we have a program and a plan. It was placed before Congress by President Eisenhower after an exhaustive study by the President's Advisory Committee on a National Highway Program in cooperation with the Governor's conference. It calls for the expenditure in the next 10-year period of $101 billion.

To reach a better understanding of what that figure means—$101 billion—let me tell you that it is more than the cost of all wars in which we have been engaged, with the exception of World War II.

Under the President's plan, the total cost will be apportioned approximately one-third to the Federal Government and two-thirds to State and local governments.

The Federal Government will assume primary responsibility for developing the National System of Interstate Highways. This is a specially designated network of 37,600 miles connecting 42 State capitals and 90 percent of all the cities over 50,000 population. It will have controlled access and will bypass large centers of population.

The system has been carefully laid out to take care of the military and industrial needs of the country. When completed it will also be one of our greatest cultural and spiritual assets, providing easy and safe highways that will bring our people closer together and provide the means for a better understanding of our great country.

On the other systems, primary, secondary and urban, Federal contributions are to be continued on a matching basis at the rate of about $600 million a year, as provided by the Highway Act of 1954. This, incidentally, was the largest highway program ever authorized by the United States.

I have discussed the proposed program in broad outline, but there are many difficult problems involved. The most serious, of course, is how it is to be financed.

I am sure most of you are aware that I have always been a strong advocate of the pay-as-you-go plan in Government at all levels.

I have always favored the pay-as-you-go plan because it means greater economy. It avoids the danger of burdensome debt and keeps taxes at the lowest possible level.

I would prefer to have the proposed highway program carried out on that basis. But we have been told by qualified experts that even with a substantial tax increase it would take 30 years to do the job that is needed right now—and can be completed in 10 years under the plan proposed by the President.

That plan recommends the creation of a Federal Highway Corporation authorized to issue bonds to finance construction of the interstate system. The bonds will be supported by Federal gasoline tax revenues above the $622½ million now contributed to the States for all road construction other than the interstate system. It is anticipated that the 2-cent gasoline tax now levied by the Federal Government will liquidate the $23 billion in bonds in 30 years while the roads will be completed in 10 years. It will not require an increase in the tax.

There is some opposition to this financing plan. It has been argued that it is not legal to appropriate for such a long period. To my mind this objection is not valid. The same argument could be made against the bonds for the public debt and the payment of pensions because each Congress must make the appropriations.

Others contend that it is not good Government practice to earmark revenues for specific purposes. Against this is the fact that 24 States already have constitutional provisions segregating all gas tax receipts for roadbuilding purposes.

We need the roads. There is no disagreement on that score. We must have them if we are to have an expanding economy. We need them for our industrial, cultural, and spiritual advancement. We need them for national and civilian defense. We need them to reduce the frightful toll of lives taken each year by accidents on our highways. The big decision we must make is how they shall be financed. It's up to the American people to decide, for they must pay the bills.

Personally I feel the President's plan is sound. I do believe, however, that serious consideration should be given to the question of tolls. I believe that the collection of tolls, wherever feasible, on sections of roads, bridges and tunnels, would be advantageous to our country and fair to the traveling public. Or perhaps it might be wise to require the payment of a license fee for vehicles traveling on the interstate system.

In the past the romance of traveling in covered wagons, stage coaches, and packet lines were adventures pictured in the famous prints of Currier & Ives and other artists. The tying together of the Atlantic and the Pacific by steel rails was acclaimed all over the world.

The first plane across the continent was hailed as an event unparalleled in transportation.

The completion of the highway plan now under consideration will be another romantic story in American progress.

It means the mobilization of the best in engineering skill and construction ability; the assembling of material and equipment in quantities never before equalled and all coordinated with American know-how in the American way.

Dedication of Glenn L. Martin Institute of Technology, University of Maryland

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. BUTLER. Mr. President, one of the foremost pioneers of aviation has been a long-time resident of the State of Maryland. One of the Nation's leading aircraft-manufacturing concerns in nearby Baltimore carries his name, and his great talent for aeronautical design has brought forth aircraft of all types. I speak of Glenn L. Martin, a respected and revered civic, business, and educational leader in my State, whose unselfish generosity has made possible the establishment of the Glenn L. Martin Institute of Technology, at the University of Maryland.

Ceremonies marking the dedication of this great center of education and research in all phases of engineering were held at College Park, Md., on March 25, 1955. Mr. President, I therefore ask unanimous consent to have printed in the Appendix of the RECORD the very excellent dedicatory address, entitled "Washington Looks to Maryland," which was delivered by Lee A. DuBridge, president of the California Institute of Technology.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WASHINGTON LOOKS TO MARYLAND

(By Lee A. DuBridge, president, California Institute of Technology)

It is a great honor to be able to participate in this important occasion on which we salute formally the opening of the new and magnificant Glenn L. Martin Institute of Technology. Surely every engineer in the country must envy you who are privileged to study or to teach at this fine place; they must envy the opportunity of molding this new institution into something which will be a signal and a unique contribution to the Nation's welfare.

It has always seemed to me that a very special opportunity lies with the University of Maryland; indeed, almost a special obligation. Here you are within a stone's throw of the Nation's capital city—the city in which decisions are daily being made which affect in a vital way the future of the Nation. The heart and mind of the whole free world indeed lie almost at your doorstep. You are far enough outside the city of Washington so that its petty squabbles and minor bureaucratic evils do not throw sand in your eyes and prevent your seeing the larger picture. Yet you are not so far away, as we are in California, for example, that the rumble of national and world problems is so attenuated as to be nearly inaudible or, at least, to be lost in the welter of local noises. But here the thunder of these problems beats directly upon you. You may wish the thunder were less loud, but you dare not ignore it. You have, indeed, a great opportunity to help tame that thunder—to probe its core and find that the noise is only the outpouring of a great store of energy which, when understood, can be diverted and put to beneficial use.

It is a truism, whose truth is not yet fully realized on the banks of the Potomac, that developments in pure and applied science over the past 50 years—indeed over the past 20—have vastly changed the nature of the problems with which Washington, D. C., is concerned. The time was, not long ago, when Government officials and legislators could be blissfully unaware of the advance of science—and still better—of the existence of scientists. It is true that when electricity displaced the horsecar, there was probably quite a ripple of excitement along Pennsylvania Avenue. The first horseless carriage, the first electric lights, the first air conditioning and the coming of television also made important changes in the living and working habits of Washingtonians. But that day when a congressional committee called in a couple of nuclear physicists to give lectures about neutrons and protons and uranium fission was a signal that a new age had arrived with which Washington was unprepared to cope.

Such signals of unpreparedness had appeared before. In 1939 a war began in Europe which, it was clear, might some day involve the United States. The possibility of trouble had indeed been apparent for several years. But, as late as the spring of 1940, there was no mechanism whereby the Government could call on the scientific community for help in preparing the United States defenses. Even then it was a private individual—who, by some providential combination of circumstances, had recently moved to Washington—who initiated such an effort. Dr. Vannevar Bush called together a small group of men who offered their services in getting a defense research organization started. The way in which the Office of Scientific Research and Development, OSRD, became a decisive factor in winning the war is now history. It is as convincing an argument as I can think of for having some good scientists and engineers always close to Washington.

Today, of course, the Government has literally hundreds of scientists and engineers in its employ in and around Washington. They are at the National Bureau of Standards, the Naval Research Laboratory, the National Institute of Health of the Public Health Service, and man yother places. What can the University of Maryland add to this picture?

Many things.

Should this university become itself a great center of weapon development? I would hope not—though there might be circumstances under which some such projects might need to be undertaken. But this is not the primary need or opportunity. Nor is this the prime function of a university. The task of the university is not to invent weapons, but to seek basic knowledge. And that represents a prime obligation of this and every other university. The University of Maryland will, I hope, become an ever-growing and thriving source of new knowledge in many fields of science and engineering. What the Government and the country can do in the future in applying new knowledge to increase the Nation's welfare and security depends on what new knowledge the universities discover today and tomorrow.

A second function of a university is to teach. And here is where your greatest contribution to national welfare will doubtless be. Washington and the Nation need many scientists and engineers. There are not nearly enough first-class institutions in this area to meet the need. We need in this immediate vicinity the finest minds to be found anywhere in the world—minds sharpened by the finest educational experience that anyone knows how to supply. Why should one have to go all the way to Boston—or Pasadena—to fill this need? Why should it not be filled right here in this campus? What an opportunity you have to make a major contribution over the next 50 years to the scientific competence and effectiveness of the Government of the greatest technological country on earth.

I want to emphasize my conviction that just ordinary scientists and engineers are not good enough to meet the needs of our Government. We need the very best. And we need men with more than just an ordinary educational experience. We need men who are educated—not just trained. We need men who are not only skilled in laboratory techniques, but who understand the principles of science and who have a creative approach to new problems. We need men who understand not only science, but the world of men in which we live.

And let no one persuade you that understanding science and knowing something about the world are mutually exclusive educational goals. Let no one tell you that engineers understand only things and that only a liberal arts graduate can understand people. That is nonsense! The scientific mind has a pretty good chance of understanding anything it tackles—for the job of the scientist is to understand. If a man has the talent for understanding, then he will be a good scientist; and if given the opportunity and incentive, he will understand other things too.

I am not saying that there are not many scientists and engineers who have failed to step outside their narrow specialties; many have refused to take an interest in nontech-

nical fields. There are many lawyers, doctors, businessmen, and politicians who are too highly specialized, too. But I do say that the principal scientific leaders of this country are not narrow-minded technicians. They are broad men of high competence whose talents can be and have been turned in many directions and who have proved outstanding citizens in every respect.

And here is an opportunity for any educational institution. A modern school of engineering must offer its students broad and extensive opportunities for work in nontechnical subjects. It must require the students to spend much of their time in these areas; and what is even more difficult, it must make them like it. I can assure you from the experience at my own institution that if smart engineers are offered challenging, meaty, stimulating courses in history, government, literature, philosophy, economics, psychology, they will not only eat them up, they will love it and ask for more. And they will be better men, and better scientists, as a result.

I do not need to emphasize further how critical is the need in and around the Nation's capital for more such broadly educated scientists and engineers.

There is still a third area in which the University of Maryland, because of its location, can be of outstanding service to the Federal Government. This is the task of providing scientific and technical advice, on a part-time basis, to the various agencies of Government. In order to explain the opportunity here, I ask your indulgence while I go back a bit and review the elements of this problem.

As I have already suggested, the United States is a very different Nation now from what it was 50 or even 25 years ago. It is also obvious that the most conspicuous changes of the last two generations have been made possible by new discoveries in pure and applied science. Our political and economic systems have not changed in principle during the past 50 years. They have provided a good environment for the development of our industrial system which has capitalized new knowledge in science and new applications of this knowledge to effect the physical transformation which has taken place in this country within the memory of most of us who are here today. The last 50 years have seen a technological and industrial revolution which can be described only in terms of almost ridiculous superlatives.

It is not necessary to point out that this technological revolution has had important and often staggering impacts upon the structure of the Federal Government. Fifty years ago our Government got along quite nicely when its only scientific activities and concerns consisted of the Smithsonian Institution, a small Bureau of Standards and a Coast and Geodetic Survey.

Today the Department of Defense alone spends $2 billion a year on what it calls research and development, and spends many more billions in putting the products of this research and development into manufacture and into the hands of trained soldiers, seamen, and airmen throughout the world. Another $2 billion a year or so goes into an independent agency which is only 8 years old and which deals with a phenomenon which was wholly unknown until 16 years ago; namely, the Atomic Energy Commission. This one single discovery of uranium fission has revolutionized our entire military posture and policy; has profoundly affected our whole attitude toward foreign relations; has affected many aspects of our domestic life; and, during the next 50 years, will produce unpredictable revolutions in our industrial civilization.

In addition, very profound, if less spectacular, effects on American living have been produced by other technological developments—developments in transportation, communication, production, and the whole mechanism of daily living.

Now it is a miraculous fact that a Government and a Constitution which were established 175 years ago have been able to meet so well the shattering tests of these revolutionary changes. Most of the countries of the world have had their government structures shaken apart not only once but many times in the past 150 years—often as a direct result of the changed ways of living and of thought which new technologies have brought about. One of the great achievements of those who formulated the American Constitution was that they left it sufficiently flexible to allow the Federal governmental structure to adapt itself to the changing needs of revolutionary times; to adapt itself to conditions which would not only have been unforeseen but unbelieved in 1776. Born in revolution, our Constitution has met the test of many subsequent revolutions.

I believe that the reason for the success of our form of government is that the Constitution, though it states clearly the principles on which the Nation was founded, leaves many of the mechanisms and machinery of Government to be developed and altered as conditions require. This means that each generation faces a new challenge in adapting the machinery of Government to the conditions which that generation faces and to the changes in those conditions which that generation itself produces.

There is no doubt that our generation has seen radical changes in our way of living. We have seen radical changes in our Government too, many of them made necessary by worldwide conflicts; others made necessary by the economic cataclysm of the 1930's; others which have been made necessary by the many complications introduced by modern technology. And there are many changes in our Government which many people think have not been necessary at all. Without entering into this controversy, I should, nevertheless, like to raise the question whether our Government has adapted itself adequately to the technological revolution which the last 25 years have brought. My answer to this question will be "No" even though I hasten to recognize the many important and necessary changes which have been made. In spite of these changes we must face the undeniable fact that while the activities of the United States Government in defense and in other fields make use of some 50 percent of the scientists and engineers of the country, and while many of the major problems and tasks of government have to do with the changes which science and technology have wrought, we nevertheless find no place in the top structure of government where scientists and engineers are brought into contact with policy or executive decisions. I think there are only two Members of the Congress of the United States who have had a scientific or engineering education. In the whole top structure of the Department of Defense there are only 2 or 3 scientists and engineers. The one scientific position in the State Department has been vacant for many months and it seems likely to be abandoned.

Now I do not mean to imply that the Government should be run by scientists or engineers; but it seems to me inconceivable that the government of a country which has gone through such a major technological revolution in recent years can get along without scientists and engineers in key spots at policy and executive levels.

How can this be brought about? Clearly, we are not going to see many scientists and engineers running for Congress, though I think it would be a good thing if a few did. We are not even going to see scientists and engineers flocking to take Government positions. It is extremely difficult to find top-quality men for the few positions that already exist. There should, however, be a few more of such top positions at the assistant secretarial level; they should pay higher salaries than they have so far paid; and strenuous efforts should be made to make them important and attractive opportunites.

I do think, however, that many departments of government could make more effective use of scientific advisory boards. A number of very successful scientific advisory groups have existed for some years in various parts of the Department of Defense and the Atomic Energy Commission. There is one in the Office of Defense Mobilization which serves the whole Executive Office of the President, including the National Security Council. There is no scientific advisory mechanism in the Department of State and none serving any one of a dozen different committees in Congress which could well use such a service.

I am not proposing the creation of the type of scientific advisory committee which meets for 1 day once or twice a year, on which occasion it is given a "briefing" by the agency which it serves, is asked a few minor questions, and then sent home after having, by implication, put a rubber stamp of approval on all activities of the agency. Rather, I am proposing more advisory groups which will meet for extended periods several times a year; groups which are brought into contact with every activity and problem of the agency; which have access to all activities of the agency and are encouraged to search out technical and scientific problems whose existence was previously unsuspected. Such a group should also have funds available so that, when it runs onto a problem requiring further study and analysis, it can set up ad hoc study teams to focus the best minds of the country on that problem.

One difficulty with such advisory committees as exist in government is that their members are scattered far and wide throughout the country—from Boston to Berkeley—and it is exceedingly difficult to keep them informed as to what is going on. If even 1 member of each such group lived in, or close to, Washington the situation would be vastly improved. Here, of course, is where the University of Maryland comes into the picture. I would like to express the hope that over the next 5 or 10 years Maryland will attract to its faculty some of the outstanding scientists and engineers in the country who have had experience in governmental affairs. These men should be encouraged to continue their interest in government affairs and, if they are competent people, their services will be in much demand. They will stimulate among their students and colleagues further interest in such affairs and this university could eventually become a key factor in bringing the talents and experience of the Nation's entire scientific community into contact with the Government and into effective collaboration in solving some of the Government's key problems.

I congratulate all those who have helped to make this event possible; who have contributed to the creation of the Glenn L. Martin Institute. I wish the Institute and the University many centuries of conspicuous success.

Address by Hon. Joseph R. McCarthy, of Wisconsin, at Testimonial Dinner for Rabbi Benjamin Shultz

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the re-

marks made by the junior Senator from Wisconsin [Mr. McCARTHY] at a testimonial dinner for Rabbi Benjamin Schultz, held in New York City on April 20, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR MCCARTHY AT TESTIMONIAL DINNER FOR RABBI BENJAMIN SCHULTZ, NEW YORK, N. Y., APRIL 20, 1955

Ladies and gentlemen, our meeting tonight is long overdue. The gallant warrior we are honoring has been covering himself with glory for so many years, it's a wonder we have never stopped, until now, to say thanks.

That's the trouble, Ben, with being a solid, unwavering bastion of strength—like the Rock of Gibraltar, people tend to take you for granted. I regret this is not the 10th or 20th time we have gathered to honor you; but I thank God we have always been able to take you for granted.

Someone recently observed that no man is indispensable. As regards some matters, I emphatically agree. But in other fields, I would be more cautious. How, for example, would the anti-Communist fight have fared over the past decade without Rabbi Schultz? And how should we bear the loss if ever he were to leave his post? Some men in some jobs, let's face it, are indispensable.

What is it that can make a man indispensable in this struggle? Is it the possession of keen insights—an understanding of the fallacies of the Communist doctrine, an appreciation of the moral evil it contains? Or is it practical shrewdness in the day-to-day battles? Is it an ability to joust with the dialecticians at the intellectual level? Or is it stubborness and grit at the street level? Is it unflagging courage? Is it single-mindedness of purpose—an unswerving determination to defeat the enemy absolutely?

Each of these qualities is a scarce commodity; the possession of any one of them makes a man valuable to the anti-Communist cause. But when you find them all in one individual, you have found a rare man, indeed; and you can afford to talk about indispensability. The good Lord put in all the ingredients when he made Ben Schultz.

Ben Schultz' contributions to the anti-Communist cause are innumerable, and many of them have been cited here tonight. We have heard, and we might well hear a great deal more, of his distinguished accomplishments—as an arresting orator, as a skillful writer, as an organizer. But it is in this latter capacity—as the founder and the guiding star of the American Jewish League against communism—that Ben Schultz has performed what is perhaps his most distinguished service.

Ben Schultz, ably seconded by Roy Cohn, Benjamin Gitlow, Frank Chodorov, Judge Irving Kaufman, Eugene Lyons, George Sokolsky, Walter Winchell, Alfred Kohlberg, Ben Mandell, and countless other leaders who share his religious beliefs, has managed to expose the malicious myth that persons of the Jewish faith and Communists have something in common. This wicked falsehood has been ruthlesly exploited by the Communists for their own ends.

The Communists sow this particular seed of discord by two methods: First, they emphasize the religion of traitors or security risks in those instances where it so happens that they are of the Jewish faith. This type of propaganda, as the Communists well know, catalyzes latent prejudices and creates race hatred. Why don't the Communists comment on Alger Hiss' or William Remington's religion? The reason is obvious: There is no profit here, no conspicuous prejudice to exploit, no promise of creating division or suspicion.

The second Communist method of exploiting the race issue is more subtle. Rabbi Schultz shrewdly diagnosed it in an article for the American Mercury last summer. The Communists energetically peddle the line that anticommunism and antisemitism go hand in hand—specifically that all hard anti-Communists are ipso facto antisemitic. This slur is, of course, pure invention; but it commonly results, as Ben Schultz suggests, in 1 of 2 things—both of which give aid and comfort to the Communist. Some non-Jewish Americans are angered by the accusation, and in reaction to it, turn their resentment against Jewish people. Others are intimidated by it, and with an eye to their political fortunes, decline to take an active role in the anti-Communist fight. Either way—whether race dissension is created, or people are frightened off from joining the anti-Communist fight—either way, the Communists win.

Let's make no mistake about this: the Communists are waging a diabolically clever campaign. But its effectiveness has, to a great extent, been blunted by the work of Rabbi Schultz and the American Jewish League against communism. The very existence of this hard-hitting anti-Communist group gives the lie to a vitally important item of Communist propaganda. And I say to you that I frankly doubt there is a single organization in this country that the Communists are more anxious to destroy.

There are two reasons why I am confident that the Communists will not be successful in this. First, Ben Schultz, and his indomitable crew of heroes will not be beaten down by anybody. Second, and perhaps of even greater importance, is the fact that Jewish people are congenital enemies of communism. Those of the Jewish faith are, historically, champions of liberty. They are, traditionally, jealous guardians of the individual's freedom—political, economic, social. These things communism is determined to destroy.

And remember too that persons of the Jewish faith have, by force of circumstances, a vested interest in tolerance. It is not an interest in tolerance of moral evil such as communism embodies. But within the framework of belief in the dignity of the individual they insist on tolerance of diverse political and religious beliefs. This is a position the Communists cannot abide. Jewish people know this—they are keenly aware that in a Communist society it is only the Communist and the Communist dogma that is tolerated.

Far and away the most valuable contribution of Ben Schultz and his organization is that they dramatically symbolize the eternal hostility between Judaism and communism.

It's a personal honor to me, Ben, to be able to join in paying tribute to you. But I don't speak just for myself. I think I speak for all of your debtors—all of the American people. You have served your country well. Thank you, good luck, and Godspeed.

Atomic Powerplants

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. ABERNETHY. Mr. Speaker, the Atomic Energy Commission has given out the information it is now making arrangements with a number of private power companies and, in one case, with a public utility district, for the planning and construction of atomic powerplants. This is good news, not only for our own country, but for the free world.

We have recently learned of the extensive plans of Great Britain in this field. I do not feel that it is necessary to get into a race with our friendly ally in this matter. Neither do I believe that the United States should lag behind in the development of such important peacetime uses of atomic energy.

The concern of the Atomic Energy Commission for the development and improvement of weapons is natural in this age of anxiety, yet atomic energy in its many peacetime uses can be one of the great boons of mankind. I do not think that we can for one moment forget that fact.

The development of efficient and economical atomic powerplants offers much to the world. In countries such as Sweden, Finland, and Austria which are dependent for much of their power production on coal imported from behind the Iron Curtain, atomic powerplants offer an end to an economic stranglehold.

If we succeed, as the Department of the Interior is endeavoring, in finding an economical way to make vast quantities of fresh water from sea water, atomic plants to power-pumping stations can make deserts bloom in many arid lands, and provide food and a better life for millions of people.

Every time mankind has discovered a great new source of power, the ability of the world to sustain a growing population has been advanced. We have made such advances through the use of coal, falling water, oil, and gas. We are standing now at the threshold of what may be mankind's greatest era if we can avoid war and put atomic energy to peaceful uses.

Hindsight on Yalta

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial from the U. S. News & World Report under date of April 8. In this editorial, Mr. David Lawrence, outstanding journalist, calls a play by play of events leading up to Yalta. Can it be said that this was hindsight? At this point, I am including the editorial in question.

HINDSIGHT?

(By David Lawrence)

(From an editorial written within 2 weeks after the Yalta Conference and published in this magazine in the issue of March 2, 1945:)

Let us examine the record before Yalta and see how the game of power politics works. The story goes back to Teheran. Here is the realistic chronology as it can be deduced from the files of the New York Times:

December 1943: Mr. Churchill at the Teheran Conference of the Big Three raises

the question of the future of Poland. Stalin demands the Curzone Line. Mr. Roosevelt is so informed. The world is told afterwards no agreements, secret pledges or partition of territory were consummated.

October 1944: Churchill and Eden go to Moscow and Stalin demands that the Polish question be settled before the peace conference is held. The American Ambassador is present at nearly all the talks.

December 15, 1944: Churchill tells the House of Commons he has decided to make an exception and not wait until the peace conference to settle the Polish question, and he reveals publicly that he has agreed with Stalin. He warns the Polish Government-in-exile to accept now or the price will be higher later on. Mr. Stalin must be appeased, he says in effect, and he betrays irritation that Mr. Roosevelt has not come through with his end of the appeasement.

December 16, 1944: President William Green of the American Federation of Labor says he hopes America will say "No" to Churchill's plan to redraw Poland.

December 17, 1944: A New York Times dispatch from London says that Churchill made a secret deal at Teheran and Roosevelt was "neutral," and adds:

"It is quite clear now that, in Teheran (December 1943), Mr. Churchill and Premier Stalin divided Europe into spheres of British and Russian influence. * * * Stalin would not agree to coordinate the Red Army's operations with those of his western allies until he had definite assurance that Britain would support Russia's claim to Polish territory as far west as the Curzon Line."

December 17, 1944: The Army and Navy Journal in Washington calls for an offensive through Poland by Russia, and Pravda denounces this publication as "a source for pro-Hitlerite propaganda," but many military men in Washington agree that Russia is stalling in order to force the hand of Churchill and Roosevelt.

December 18, 1944: The State Department issues a statement paving the way for the surrender to Stalin at Yalta. The statement says America has felt the Polish boundaries should be left to the peace conference at the end of the war but that if "a mutual agreement is reached by the United Nations directly concerned, this Government would have no objection to such an agreement." This is a tipoff that if Stalin can put across his puppet government through the Lublin Committee, the United States can be counted on to approve the ultimate recognition of some sort of Lublin government, modified, of course, to make it appear national.

December 19, 1944: The Nazi offensive is costing tens of thousands of American casualties on the Western Front as Germany, knowing that Stalin has been stalling, takes advantage of the lull on the Eastern Front.

December 19, 1944: A wave of criticism of Churchill sweeps the United States. The New York Times refers to the Churchill proposal on Poland editorially:

"It must be admitted frankly that this is not the way border problems were to be settled, under the terms of the Atlantic Charter. This is not an idealistic settlement made 'in accord with the freely expressed wishes of the people concerned.' * * * We invite the attention of the Russian Government to the hazards of making decisions in a coalition war on the basis of unilateral action. This is isolationism. It engenders isolationism in others."

The Times says bluntly also that "agreement on the Curzon line is apparently to be the 'go ahead' signal for a resumption of the battle in the East."

December 19, 1944: Teamwork by President Roosevelt, who backs up Churchill's "lapse of memory" statement. Churchill in his December 15 speech had said that "it must not be forgotten that words are inserted in the Atlantic Charter, 'No changes before the peace table, except changes mutually agreed.'" Mr. Churchill next day said he was mistaken and that the words he quoted were somewhere in one of Mr. Hull's speeches. Anyway, Mr. Roosevelt now helps out by saying to a press conference that the Atlantic Charter was just a bunch of scribbled notes anyway and not a formal, signed document.

December 21, 1944: Stalin sees his way out. Dispatches announce from London that Stalin is to install the Lublin committee as the government of Poland.

January 12, 1945: Stalin apparently decides he is tired of waiting for the concurrence of Mr. Roosevelt and that, since he has Mr. Churchill's backing, the Russians can resume their offensive and take the matter of a provisional government in their own hands.

February 1945: Mr. Roosevelt agrees at Yalta to the dismemberment of the territory of an ally—Poland.

Politics on the Pay Bill

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. YOUNGER. Mr. Speaker, the postal employees were the victims of a very cruel and shabby political trick in connection with the House action on their pay increase bill. The political maneuver was so thinly veiled that I am sure no one was fooled, much less the postal employee.

The House action, designed to embarrass President Eisenhower, will have no such result, as indicated by editorials in the Washington Post and Times Herald of Friday, April 22, 1955, and the Evening Star of Thursday, April 21, 1955, which I insert in the RECORD:

[From the Washington Post and Times Herald of April 22, 1955]

POLITICS ON THE PAY BILL

The House is making hard work of increasing the pay of postal employees. Last year Congress passed a postal pay bill which the President vetoed. Recently the House turned down a measure submitted by its Post Office and Civil Service Committee because it was regarded as not being generous enough. Now the House has again overridden its committee and passed a bill which appears to be headed directly for a Presidential veto. To those who have not followed the controversy, the difference between the 7.6 percent average raise which is said to be acceptable to the President and the 8.3 percent voted by the House may appear minor. But it is not merely a question of the extra $12 million a year which the House bill would cost. The Moss amendment accepted by the House would upset the administration's job classification plan embodied in the bill. Minority Leader MARTIN predicted, from what the President had said to him and written to Representative MURRAY, that the Moss bill would be vetoed.

This continued haggling over postal pay is the more disappointing because everyone agrees the postal employees are entitled to a raise. The trouble is that some legislators in both parties seem more interested in jockeying for political advantage than in writing an acceptable bill. There seems to be no prospect of passing the bill over the expected veto. Of course, the House-Senate conferees might, by herculean efforts, restore the equities of the classification plan, but this is not likely for the Senate bill calls for a 10 percent raise in postal salaries and contains no classification provisions at all. At present it looks as if the House will have no alternative to repassing the bill without the objectionable features if postal employees are to get the raises to which they are entitled.

[From the Washington Evening Star of April 21, 1955]

COURTING A VETO

If Government employees again fail to obtain the pay raise which they have sought so long, they should place the blame where it properly belongs—on Congress, not President Eisenhower. Congress, for the second time, has ignored White House warnings of a possible veto of too-liberal pay legislation. And once more the implied threat of a presidential veto has imperiled the chances of an increased pay scale for all Federal workers.

The pay bill approved by the House, by a vote split largely along partisan lines, has the virtue of being less objectionable to the administration than the Senate-approved measure. The House bill calls for an average raise of 8.3 percent for postal workers, instead of the maximum 7.6 percent which the President had asked. The Senate had voted for a 10-percent increase—a figure certain to be vetoed if submitted. The House measure is better than the Senate version in another important respect—it provides for a readjustment of postal salaries according to nature and amount of work performed. Postal unions have opposed tying the pay raise and reclassification together, despite administration insistence that the two subjects go hand in hand.

Since the President personally has not stated publicly that any pay raise higher than 7.6 percent would be vetoed, there remains for the employees the hope that he might accept the House figure, if it should emerge from the Senate-House conference. But the economy-minded administration faces the fact that what is right for postal workers is right for all Federal employees. And the House action would add about $12 million to the cost of pay legislation for the postal workers alone. The President and his advisers have contended that the Government cannot afford the cost of a general raise higher than 7.6 percent. All of this advice has been shunted aside under much pressure from the organized postal workers. If the President should take a strong veto stand, there is considerable doubt that enough votes could be marshaled to override it. Thus, the present outlook for an early pay raise is clouded with uncertainty, to say the least.

Dr. Jonas E. Salk Recipient of Mutual of Omaha Criss Award

EXTENSION OF REMARKS
OF
HON. JACKSON B. CHASE
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. CHASE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ROCHESTER, MINN.—Dr. Jonas E. Salk, creator of the Salk polio vaccine, today was named the 1955 recipient of the $10,000 tax-exempt Mutual of Omaha Criss award and gold medal.

Announcement of Dr. Salk's election was made by Dr. Charles W. Mayo, of the Mayo Clinic, Rochester, Minn., who heads the 14-member Criss award board of judges.

The award, the largest of its kind in the United States, was established to honor outstanding contributions in the field of health and/or safety by V. J. Skutt, president of Mutual of Omaha, as a tribute to the late Dr. C. C. Criss, founder of the insurance company, now the largest exclusive health and accident company in the world. Residents of the United States, Canada, Alaska, Hawaii, Puerto Rico, and the Canal Zone, where Mutual of Omaha is licensed, are eligible for the award.

Dr. Mayo, in announcing Dr. Salk as the 1955 Mutual of Omaha Criss recipient, said, "The accomplishment of Dr. Salk may well be the greatest contribution to medicine in our generation."

Dr. Salk was elected from a field of more than 400 nominees, Dr. Mayo said. W. Earl Hall, Mason City Globe-Gazette, editor and national safety authority, was the 1954 Mutual of Omaha Criss award winner.

Other Criss award recipients have been Dr. Howard A. Rusk, of New York City, for his work in rehabilitation of the physically handicapped; and Drs. Philip S. Hench and Edward C. Kendall, of the Mayo Clinic, for their work in the development and use of cortizone.

Members of the Mutual of Omaha Criss award board of judges, in addition to Dr. Mayo, are: Ned Dearborn, president, National Safety Council; Lt. Gen. (retired) James H. Doolittle, vice president, Shell Oil Co.; Irene Dunne, actress; Henry Ford, II, president, Ford Motor Co.; Duke P. Kahanamoku, high sheriff of Honolulu; William L. Laurence, science writer, New York Times; Harold Lloyd, actor; Hon. Paul Martin, Minister of National Health and Welfare for Canada; Dr. Elmer Hess, president-elect, American Medical Association; Don McNeill, radio personality; Dr. Thomas Parran, University of Pittsburgh; Dr. Leonard A. Scheele, Surgeon General, United States Public Health Service; and DeWitt Wallace, editor of Reader's Digest.

The formal award presentation, Dr. Mayo said, will be made in June at the American Medical Association convention in Atlantic City.

Mr. Stevenson Out on a Limb

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial from the Tidings, which appeared in the issue of April 15, 1955:

MR. STEVENSON OUT ON A LIMB

Adlai Stevenson is piqued and in a pout. It seems that the titular head of the Democrats is being studiously ignored, not only by Secretary Dulles but by the elder Democratic statesmen, notably by Senator GEORGE. Adlai is just not "in the know" anymore.

Anyway, there were no scintillating quips or titillating barbs when Mr. Stevenson, piping the liberal tune, said that Matsu and Quemoy were not important enough to risk the holocaust of war or the alienation of allies. These islands, he said, are as close to the mainland of China as Staten Island is to New York, insinuating that they be turned over to the Reds. Let the United Nations, he counseled, settle the strife in the straits and find a formula for the eventual status of Formosa.

Politics rather than diplomacy prompted Mr. Stevenson's summation, in that it was coupled with a scathing attack on administration policy. Mr. Dulles did not make the obvious retort that there would be no Formosan problem today, nor indeed any menace of communism in the Far East if Mr. Stevenson's party had been more realistic a decade ago. The attempt to make political capital of present hesitation on how to cope with past bungling is a shabby trick that ill serves the Nation in a day of decision.

The fact of the matter is that both political persuasions were almost in unison in the congressional resolution to defend Formosa and the Pescadores with discretionary power for the President over those minor outposts deemed necessary for their defense. We are committed to fight for Quemoy and Matsu if Mr. Eisenhower concludes that an assault on these islands is a preliminary to an invasion of Formosa. It is supposed to be smart diplomacy to keep the enemy off guard, guessing as to our intentions, whether we will or won't. Still, the Reds aren't scared a bit, to judge from the raucous voice and vow to take Formosa.

Mr. Stevenson is out on a limb, too, in his recommendation of a declaration in the United Nations on the Formosan straits. Apparently, Senator GEORGE didn't tell the former standard bearer that he had already sponsored such a resolution in the hope of an inflexible allied position on the bastion itself. Such recourse is but a wish-fulfillment. The U. N. has become a forum of propaganda rather than a center of action, a torrent of words and futile posturing. We cannot expect to find unanimity of action there on the future of freedom in Formosa. Indeed, that rostrum will fan and flame the spark that ignites the clamor for a return of the island to the Reds.

We unhappily, and we think not unjustly, read this consummation into Mr. Stevenson's words. Why otherwise does he want the U. N. to decree the future status of Formosa when we have already vowed it to the Nationalists? If small islands off the coast, even strategic, are not worth defending, then maybe we will come around to the position that even a larger island somewhat more off the mainland is not worth our blood and treasure either. We are asked to sacrifice Chiang again to preserve our concert of allies for the global struggle. The patent and palpable problem that Mr. Stevenson skirts is this: if we abandon Formosa we surrender Asia to communism.

Neither the General Assembly of the United Nations nor a new gathering of the Big Four will settle the impasse posed by the threat to Formosa. That problem will be solved in the mounting determination of the American people as expressed through its Congress to defend with all its resources this island outpost of freedom. Mao halts before our steadfast purpose. Mr. Stevenson's words but lull him with the mistaken mood that our purpose falters.

At Last, an Asian Answer to the Riddle of Formosa

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "At Last, an Asian Answer to the Riddle of Formosa," which appeared in the April 22, 1955, issue of the Courier-Journal, of Louisville, Ky. The editorial is as follows:

AT LAST, AN ASIAN ANSWER TO THE RIDDLE OF FORMOSA

"Formosa for the Formosans." That is the policy proposed by Sir John Kotelawala, of Ceylon, at the Asian-African meeting of Bandung. He sees no good reason why the people of the island should not be given a chance to say what kind of government they want for themselves, with full independence as one choice.

"Formosa for the Formosans" is a rallying cry that should stir hearts in Asia. National independence is the ruling passion there.

It is a policy which America can embrace with enthusiasm. We have always held that people should be free to choose for themselves. "Self-determination is not a mere phrase," Woodrow Wilson reminded Congress in 1918. "It is an imperative principle of action, which statesmen will henceforth ignore at their peril."

It seems hardly open to argument that the thought would be pleasing to the Formosans. They have been pushed about as pawns long enough. They have a national pride of their own, which became submerged under centuries of Chinese rule. Then Japan snatched them from China in 1895. That period of captivity was broken at the end of World War II. Chiang Kai-shek and those troops remaining loyal to him ferried over to Formosa in 1949. It became the seat of Nationalist power, not through any special wish on the part of the Formosans, but because a hundred miles of blue water stretch between the island and the China mainland.

The idea of a vote by the Formosans was put forward some weeks ago by Sir Anthony Eden, and was repudiated by the Red Chinese. But the proposal then came from the West. The same kind of solution from an Eastern source could rally support from all the Asian neutrals at Bandung, and could leave Chou En-lai isolated if he refuses to agree.

The Courier-Journal has advocated such a policy for some time. We recognize that it could only be carried out under grave difficulties, because:

1. Time would be needed to organize a free and secret vote of the Formosan people. Kotelawala suggests a 5-year waiting period, under a trusteeship of the United Nations or of the Asian powers.

2. It would seem necessary to identify the Formosans themselves as voters, and exclude the couple of million mainland Chinese who came to the island in Chiang's wake. This would be a troublesome job, but not an impossible one.

3. Some assurances would have to be given to the Chinese Nationalists if the islanders should vote for independence. Many would probably choose to stay in Formosa. Another refuge would have to be provided for Chiang himself and his official family, perhaps in the United States.

4. An independent Formosa would be a weak nation. Its security would require a U. N. guarantee, and its economy would need American help.

5. No solution for Formosa will be supported by Asians or Europeans if the United States should insist on tying Formosa and the Pescadores to Quemoy and Matsu. But it is already clear that no other nation in the world feels that we have any legal or moral rights in the offshore islands, and a great many Americans agree.

These all are problems that make a Formosa solution anything but easy. Yet how much more difficult and dangerous is any other prospect in that tense corner of the

world. As Kotelawala says, the first requirement is "to decide that we aren't going to shoot." His Asian solution is the only kind with a hope of stopping Chou short of war, and of giving America at the same time a thoroughly decent out.

Oppose Hoover Commission Recommendation To Abolish Present REA Setup

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, some of the reports or recommendations made by certain task forces of the Hoover Commission have aroused considerable comment as well as opposition in the Nation.

One of the reports that has drawn strong criticism is the recommendation to abolish the Rural Electrification Administration as we now know it.

Under leave to revise and extend my remarks, I wish to insert in the RECORD a resolution opposing the Hoover Committee's recommendation on REA. The resolution was adopted by 400 delegates attending the 19th annual meeting of the Wisconsin Electric Cooperative held in Madison, Wis., March 30–31, 1955. The Wisconsin Electric Cooperative is composed of 30 rural electric cooperatives.

Following is the full text of the resolution:

THE HOOVER REPORT

Whereas the Commission on Reorganization of the Executive Branch of the Government headed by former President Herbert Hoover has recommended the abolition of the Rural Electrification Administration as we now know it; and

Whereas the committee recommends that a new Federal Corporation be set up, interest rates be boosted for loans to electric cooperatives, and that no further expansion of electric-cooperative systems be undertaken where commercial utilities stand ready to provide the service; and

Whereas this report was originally drawn up by an individual in the employ of a firm dependent upon the goodwill of the commercial utilities of America; and

Whereas the report was delegated to individuals who for the most part had a record of public antipathy to the program and expressed that attitude in their refusal to even permit a representative of electric cooperatives to appear before them to tell the story of electric cooperative development; and

Whereas three representatives of the Hoover Commission have repudiated the reports endorsed without adequate study including Attorney General Herbert Brownell, former Postmaster General James Farley, and Representative Chester Holifield, of California; and

Whereas we feel this report was calculated to destroy this program totally without regard to the continued needs of rural electrification: Now, therefore, be it

Resolved, That this delegate body go on record condemning this report in the strongest possible terms; and that we charge the Commission operating under former President Hoover of lending its name to a reprehensible propaganda effort initiated by those same elements who have fought this program from the start; and be it hereby further

Resolved, That we the delegated to this 19th annual meeting of Wisconsin Electric Cooperative do respectfully urge each and every member of the Wisconsin congressional delegation to not only vote against acceptance of this recommendation, but also that the use of this Commission to achieve ulterior motives under the guise of public service be condemned in strongest terms.

Eden Is a Man as Firm as Churchill

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Eden Is a Man as Firm as Churchill" which appeared in the April 20, 1955, issue of the Gleaner and Journal of Henderson, Ky. The editorial is as follows:

EDEN IS A MAN AS FIRM AS CHURCHILL

Some in Washington are shaking their head over the retirement from No. 10 Downing Street, London, England, of Sir Winston Churchill, the biggest political figure of our time. How—these people ask—can Sir Anthony Eden step into such shoes? Compared to Sir Winston, anybody is bound to seem undersized.

I do not share this doubt. Sir Winston's greatness, in my judgment, lay less in the superiority of his policies than in his overwhelming strength of character and ability with words. Such gifts made him the indispensable man for saving Britain and the world in 1940. They may not be so necessary in 1955. For 1955, in my judgment, more resembles 1938 than 1940.

A war is threatening because of one thing: the persistent expansion of a greater and more dangerous power than the Nazi-Fascist-Japanese Axis. This war—like its predecessor—can be avoided only by courage and foresight. Has Sir Anthony Eden got these qualities?

I think he has. In fact, his past seems to demonstrate that he has had them—at times, though not at all times. Back in the midthirties he became foreign secretary with almost no particular preparation. I remember when he first turned up at a League of Nations Assembly at Geneva with the newspaperman Victor Gordon Lennox as his chief adviser.

The majority of delegates and publicists voted him a lightweight. Yet when, in 1938, the ignorant, inexperienced, and stubborn Neville Chamberlain became Prime Minister with a program of making peace with Hitler by the sacrifice of the Czechoslovaks, and even the wise Sir Robert Vansittart flirted with the idea of concessions to Mussolini in order to wean him away from Hitler, it was Anthony Eden who said no—and quit.

Things are different today? Not as much as one might hope.

Now, as in 1938, the British Prime Minister has to contend with a British people as desperately anxious to have peace that it refuses to fact the dreadful facts of international life. Our British friends are reacting to Moscow's menace and the atomic threat almost exactly as they shrank from Berlin's challenge and attack by Herman Goering's Luftwaffe.

In fact, they are even less realistic—and more frightened—now than then. Whereas the Soviet Government is telling its peoples not to be afraid of a nuclear war since it will not "end civilization, merely end capitalistic imperialism." British statesmen have been beefing that there is no alternative to coexistence but no existence.

It will not be easy—as things get worse—to reverse this current. Neville Chamberlain never succeeded and inevitably blundered into war. Can Sir Anthony do better?

He comes to power today with one strike against him and one hit to his credit. The strike was the incredible Geneva Conference of last year when, to placate his colleague, Nehru of India, Sir Anthony helped the French give half of Vietnam to the Communists. As a result, it will take a miracle to save the other half.

The hit was when, after the silly French had killed (or postponed?) West European unity and NATO seemed to be breaking up, Sir Anthony came forward with an offer of British military support that saved it.

What will his next move be? To judge by the past, he is another Europe-Firster, ready enough to see non-Commonwealth Asia fall to communism if thereby Commonwealth and European interests are preserved. This will make him popular at home and in India. It is not likely to endear him to Washington. He must never forget that part of Britain's popularity in this country, upon which the great power of the pro-British lobby in the United States is based, depended upon personal confidence in Winston Churchill.

This confidence Sir Anthony must first win. Can he do so? Will he not be driven by British public opinion, and steered by Nehru, into a whole new series of futile negotiations and successive concessions to Moscow and Peiping the result of which will surely be major war in a not-too-distant future?

Perhaps. Certainly, American policy and Indian policy are in the long run incompatible. If Sir Anthony sticks to Nehru he will lose Eisenhower. Yet this need not happen.

Sir Anthony has been quoted as believing in the absolute necessity of Anglo-American partnership. If, he sticks to this—and Eisenhower sticks to his guns—Sir Anthony will be flexible enough to meet the challenge.

For if he goes too far along the Indian path, Washington can confront him with his own greatest remark, made when he resigned from the Chamberlain Cabinet in 1938:

"There has been too keen a desire on our part to make terms with others rather than that others should make terms with us."

Precisely. Those words are even truer now than when they were spoken. Perhaps it is time to remind Sir Anthony of them.

Anniversary of the Evacuation of Boston by the British

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include with pleasure an excellent and appropriate address made by United States Senator PAT MCNAMARA, of Michigan, on March 13, 1955, in South Boston,

Mass., a part of my congressional district, on the occasion of the patriotic exercises conducted under the auspices of the South Boston Citizens Association in connection with the 179th anniversary of the evacuation of Boston by the British:

When the patriots looked from Dorchester Heights and saw the British Fleet set sail out of Boston Harbor—that was a great day. I don't suppose the time will ever come in these parts when the evacuation anniversary is not celebrated. I am sure that day will never come so long as there are Americans with Irish blood here—because this was the symbol of the dawn of freedom in this great land. And if there is one thing the Irish prize above all others—above prosperity, above security, it is freedom. In that cause they have bled and died through the centuries.

Of course they knew well enough that the departure of the oppressor did not mean that all their problems were solved. But here was a real start on the road to independence and to a chance to build a land of liberty and plenty.

The climb upward from the days of oppression has been a long one. There have been setbacks. But as time goes on the ideals of the colonial patriots have been increasingly achieved. Even the most reactionary people today would not accept manners and laws and customs that were considered all right in the days of the American Revolution.

Let us not forget that the freedom for which the patriots fought was not achieved in a battle or in a campaign or in the whole War of the Revolution. After the war was won, the only people allowed to vote were male property owners. It was many years before all white men had the right to vote. It was many more years before it was conceded that all men who were not felons should have the right to vote—and this is still not fully accepted in some parts of these United States. It was many years before women were given their political freedom and the right to vote.

Those were the days in which the institution of human slavery was commonly accepted as a proper condition, not only for the black men, but also in effect for the white bondsman.

Those were the days in which the very idea that workingmen might band together to gain their economic ends was looked on as a crime and indeed, as flying in the face of providence.

What I am getting at here today is that the pursuit of liberty and of happiness is a never-ending affair. We climb one hill, we achieve another freedom or another good, and still another unsolved problem of social justice lies ahead.

Some of us close our eyes to the hills ahead. It is more comfortable that way. We can just pretend that they don't exist. Some of us look backward, to the good old days when the jobless workingman had the right to starve but not the right to beg; to the good old days when the suspicion of hard times coming meant wholesale slashing of wages; to the good old days when there was no income tax and it wouldn't have mattered to us much if there had been—because who but the rich had a dollar in those good days?

Well, I for one am not wasting my time on the good old days. It is my idea that we should try for better days, not for a few, but for all the people. It is my idea that the dignity of the individual is a value worth keeping. It is my idea that while this great Nation has done much, we still have seen but a little of the great things that are to come. That is to say, the great things to come if we keep conquering the hills ahead. I mean to make my small contribution to that end.

We are coming close to St. Patrick's Day, and I should like to say just a few words about where that sainted man would have stood had he been here on this day in 1955. I am pretty sure that he would have been looking ahead too. He had to look ahead in his day in Ireland. There he was amid a hundred pagan tribes, trying to bring the faith and education and tolerance of each other to people who must have been pretty hard to convince. He did a fine job for all the people, and we carry him in our hearts for it. It seems to me that we could do worse than get in step with St. Patrick and make this city and this State and this Nation—yes, and this world, a bit better for those who shall come to inherit what we have left.

Unrelenting Fight Against Disease Must Continue

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Unrelenting Fight Against Disease Must Continue," which appeared in the April 21, 1955, issue of the Leitchfield Gazette, of Leitchfield, Ky. The editorial is as follows:

UNRELENTING FIGHT AGAINST DISEASE MUST CONTINUE

With the proven effectiveness of the Salk vaccine, a battle has been won in the war against polio. Hopes are high that eventually the vaccine will provide 100 percent immunity against the crippling disease that has caused so much distress in American lives. This will not remove altogether the threat of polio, because it will be necessary for everybody to take the shots to gain immunity, and there always will be with us those persons who through neglect, ignorance, or pure hardheadness will not see to it that their children are immunized.

The average person cannot comprehend the amount of time and work that have gone into the production of polio vaccine. Every detail has been gone over painstakingly to provide the maximum of safety for children taking the vaccine. The complexity of the process and urgency of production of substantial amounts has necessitated the investment of many millions of dollars.

There has not been any doubt among informed people that it was only a matter of time until a safe and effective vaccine could be developed to prevent polio. The requirements of that vaccine included the need of combating three types of polio with one type of injection. This, in addition to other problems, delayed development of a successful vaccine. Just a few years ago little was known about polio, yet the problem was attacked with thoroughness by many trained scientists. To Dr. Jonas E. Salk goes credit for first developing a usable successful vaccine, but he in turn gives credit to those whose previous research laid groundwork for completion of the task.

All those who have donated in any way to the March of Dimes now must realize that their money has been well spent to bring about the day of liberation from the dread of paralytic polio. There is just as much consecrated effort in fighting other diseases, but the horror of children being crippled has lent urgency to the fight against polio. We must not forget that there are other battles against diseases and disasters that will not yield so spectacularly as the recent polio vaccine promises, yet deserve our continuous support.

Conservation or California?—Echo Park's Many Benefits

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. DAWSON of Utah. Mr. Speaker, the well-financed propaganda campaign against the efforts of Utah, Colorado, Wyoming, and New Mexico may give the impression that sentiment outside of these States is predominantly opposed to the upper Colorado River storage project and Echo Park Dam. Nothing could be further from the truth. In addition to such organizations as the Congress of Industrial Organizations and the National Farmers Union, many of the newspapers from other parts of the United States have taken the time to analyze this propaganda and have come out in favor of the project.

I am submitting for the RECORD 2 editorials, 1 from the Pioche (Nev.) Record and the other from the San Rafael (Calif.) Independent-Journal in support of these projects. The editorials follow:

[From the Pioche (Nev.) Record]

CONSERVATION OR CALIFORNIA?

(By George R. Swain)

One of the major actions expected to come before the 84th Congress, and one which is expected to bring howls and, perhaps, even screams, from southern California's so-called conservationists, is the action concerning further development of the upper Colorado River project.

One needs only to visit the Lost City Museum at Overton, Nev., to get a thought which discredits any future activity or suggestion fostered by this selfish, grabbing, hypocritical group, which hides its true desires and aims beneath the title they prefer to work under—conservationists—rubbish, horseradish, "con" of the very lowest and unprincipled type.

This same group, which seems to have been organized and functioning for some time, according to their own claims, said nothing, did nothing, nor even mentioned the fact that the waters backed up by Hoover Dam would cover the Lost City, where countless ages of human history had been preserved for present-day mankind. Little did they care what happened to a valuable historical site in the State of Nevada, when they were going to be the ones to reap the lion's portion of the benefits from such a project.

Now, because some of the other portions of the original project are being brought into being, and one of them, the Echo Park project, is in the proximity of the Dinosaur National Monument, they are screaming to high heaven in an attempt to squelch the project, using the argument that the waters will cover the graveyard of these historic remains.

They do not bother to state that the fact is that these precious remains are some 50 miles from where any of the water, construc-

tion, excavations, or any other part of the Echo Park project will reach.

They have not bothered to look at the true facts. They have only used imagination and intrigue in an attempt to hypothecate, even steal, the rights of the upper basin States in order that they may control the entire flow of the Colorado River.

They are even too blind and self-centered to see that if the other portions of the original river project are not completed, and soon, that they will suffer along with the rest of the States involved. Ask anyone who will look at the picture sensibly and take a look at the low level of the water in Lake Mead at the present time.

Hoover Dam was not built as a powerplant or irrigation project. It was constructed as a flood control and conservation project.

Yet, during the past year or more, the water has been continually lowered in order to supply electrical energy to power-hungry southern Californians. The water has been wantonly spilled through the huge generator turbines, so fast that lower dams—the Davis and the Parker and others—have not been able to control the flow. Much of this spilled water has passed by into Mexico and the Gulf of California wasted forever.

It would be far better, in the minds of those who can see and will see, for other dams to be built in the upper river, dams that could and would assist in lowering the power load at Hoover and could control the flow of the river so in fat years, when as much as 25 million acre-feet has been known to flow past Lees Ferry in Arizona, the water could be stored above and allowed to run down more or less as needed, rather than all in one wasteful gush, to be spilled into the sea.

While Nevada is considered as one of the lower basin States, it has a vital interest in the upper basin projects. If there be anyone in the State who does not agree with this statement, they should talk to such men as Senator Alan Bible, former Attorney General William Mathews, Senator George Malone, Congressman Cliff Young, and others who have made a study of conditions. They will tell you that Nevada is not now receiving its just share of the water or power from the project and that indications are that unless the upper basin projects are completed, there is little chance that it will receive its share.

[From the San Rafael (Calif.) Independent-Journal]

ECHO PARK'S MANY BENEFITS

With the passage of the upper Colorado River storage bill, one of the finest recreation areas in America will be within a few years of actuality.

This, the Yampa-Lodore recreation area in Dinosaur National Monument, will provide the first look at some of America's finest and most spectacular canyons for thousands of tourists, 20 miles upstream from the dinosaur beds from which the entire monument gets its name.

The Colorado and its major tributaries, the Green, Yampa, Gunnison, Dolores, and San Juan Rivers, are the great canyonmakers of the West; on their way to the Gulf of California from the snow-capped Rockies, these rivers carve literally thousands of spectacular canyons across the high plateaus of Colorado, Utah, New Mexico, and Arizona.

The most famous of these is the Grand Canyon of the Colorado in Arizona, one of the major wonders of the world.

Yet there are other canyons, not quite so spectacular as Grand Canyon, which are of awe-inspiring beauty.

The deep canyons of the Green and Yampa Rivers are among the most spectacular.

Yet because they are located in areas almost inaccessible except by horseback, these canyons have been seen only by a handful of people compared with the thousands who visit other scenic wonders of the West.

At the time the original 80-acre site of the dinosaur relics was expanded to more than 200,000 acres, it was understood that some of the best sites for power and water-storage reservoirs were included in the monument, and these were exempted from provisions of law which prohibit the building of dams or reservoirs in national monuments.

Plans developed over nearly 50 years by the Bureau of Reclamation, and included in the upper Colorado River storage project, call for a stream regulation and power-producing dam at Pat Lynch Hole, now called Echo Park, 20 miles up the Green River from the original Dinosaur Monument.

Here a 525-foot concrete dam is planned at the bottom of the 2,500-foot deep canyon.

The dam will back up water for more than 60 miles up the precipitous canyons of the Green River, and more than 40 miles up the deep canyons of the Yampa River.

During the past 20 years, only a few hundred people have made the dangerous (though exciting) trip down the rapids of the Green and Yampa Rivers. The lakes, deep in the bottoms of these canyons, will eliminate most of the dangerous rapids.

Tourists, heretofore barred from the area by the dangerous river passage and the rugged terrain of the surrounding mountains, will have a chance to see the beauty of these canyons in safety.

But to the people of Colorado, New Mexico, Utah, and Wyoming, the important thing about the Echo Park Dam and its beautiful reservoir is not the scenic enchantment which visitors will be able to see for the first time; the important thing is that the reservoir will permit them to use a portion of the water allotted to the upper basin States in the Colorado River compact of 1922.

These dams and other smaller projects will bring new irrigation water to nearly half a million acres in the four States, and will provide water for the growing cities of Denver, Salt Lake City, Albuquerque, and the atom city of Los Alamos.

Altogether, 6 major dams and 17 smaller projects are planned.

The money advanced for the dams which will mean so much to the people of these four States will all be paid back much of it with interest, within a 50-year period. The dams will provide a new source of power, much needed in the expanding mountain empire, and will permit the development of many natural resources.

World Loses Great Scientist

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "World Loses Great Scientist," which appeared in the April 20, 1955, issue of the Messenger and Inquirer of Owensboro, Ky. The editorial is as follows:

WORLD LOSES GREAT SCIENTIST

What the atom bomb and the hydrogen bomb mean to our civilization in years to come will have much to do with establishing Albert Einstein's place in all history. But even with the future of the world depending largely on what happens to those two powerful forces, Einstein was still ranked by many as the outstanding mind of his time, one of the immortals of science.

It was his fellow scientists, too, who paid him what was possibly his greatest compliment. Asked by the trustees of Riverside Church in New York to name the greatest scientific figures of all time so that they could be enshrined in stone in the magnificent new building, Einstein's contemporaries unanimously selected him to rank with such immortals as Hippocrates, Euclid, Galileo, Kepler, and Newton. He was the only living person named.

When British physicists and astronomers met in the fall of 1919 after Einstein's theory of relativity had been proved, the president of the Royal Society declared Einstein's calculation was "one of the greatest—perhaps the greatest—of achievements in the history of human thought."

It was Einstein who gave science the theoretical knowledge needed for the atom bomb. Existence of atomic energy became known as a result of his relativity theory.

His life was propelled by two great drives; his hatred of war and his love of democracy. He was an ardent pacifist until he felt there was no pacific way to defeat fascism. As a lifelong seeker of democracy he accepted German citizenship only after Germany became a republic in 1919, and renounced it when Hitler began his persecution of the Jews. He made his home in the United States from then until his death.

Few will deny that Einstein was in his own particular field the greatest man who ever lived. But he was greater still because of his philosophy of life.

Through all of his years he sought to live his life as an individual, wanting only to work in privacy for the good of mankind, and to sit and think. And the sitting and thinking resulted in his showing our world in a truer perspective and in his helping us to understand a little more clearly how we are related to the universe around us.

And yet this man who so influenced the lives of his own generation and generations to come was ever humble and modest. To the adulation accorded him he shyly replied: "Let every man be respected as an individual and no man idolized. It is an irony of fate that I myself have been the recipient of excessive admiration and respect from my fellows through no fault of my own."

If others could have followed his example, even a bare majority scattered throughout the world, this great scientist would have died a happy man. As it was, he was embittered insofar as he had come to a free nation and enjoyed for a while its great freedom of action and expression. During and after World War II he saw that man was not living successfully with his fellowman and that as a result it affected his freedom and that of others.

He still liked his adopted country but he floundered hopelessly seeking a better way, even to the point of grasping at a false hope forwarded by leftist Henry Wallace, presidential candidate in 1948.

We are sorry that this happened to the great man, but despite this we can see many fine points in him that we can emulate.

If everyone would seek enjoyment in the success of others and make a greater effort toward fulfillment of the individual as he strived to do this would certainly be a utopian world which Einstein first thought he had found in America. He forgot, though, that man, unlike the pure sciences, unfortunately, fits no formula.

We still have a long way to go, but we hope to arrive at a plateau of peace and harmony some day through hope, faith, and effort, just as Einstein showed the world unbelievable marvels of science.

Louisiana Tidelands: No. 2

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I set forth tidelands editorial No. 2 entitled "The Tidelands Situation: No. 2," appearing in a recent issue of the Times-Picayune, of New Orleans, La.:

THE TIDELANDS SITUATION: NO. 2—DOES STATE GET JUST SHARE?

As interpreted by laymen, including President Eisenhower, the Tidelands Act of 1953 was intended to restore to the coastal States their offshore lands whose title was placed in question by a United States Supreme Court decision. This decision held that the Federal Government had paramount rights in these lands.

To a large degree, the desired result has been achieved. Enactment of the legislation which had support of the Eisenhower administration opened up development of offshore oil and gas fields which had been halted by the efforts of the Truman administration to take over the tidelands for the Central Government.

In the first quarter of 1955 the State of Louisiana received approximately $15 million as its share of royalties, rentals, and bonuses from offshore mineral leases.

The greater number of these leases, if not all of them, were within 3 miles of the State's coastal line—that is the coastline established by the United States Coast Guard as marking the end of inland waters and the beginning of the open sea.

Despite the language of the Tidelands Act referring to the State's coast, lessees holding mineral leases within this coastline established by the United States Coast Guard paid oil royalties to the Federal Government, instead of to the State, on approximately 20 million barrels of petroleum produced under 42 State leases up to December 1954.

Collection of this revenue by the Federal Government, as we see the situation, reflects an attitude in Washington which is not justified by existing or past circumstances.

We believe that the State is entitled to revenues from all lands between its shores and a line 3 leagues beyond its coastline. Certainly, as we understand the situation, Louisiana is entitled to all revenues from lands within its coastline.

The Federal position, it seems to us, is founded on a contention that there is something indefinite or obscure about the phrase "coastline."

Under an act of February 1807, Congress authorized the President to cause a survey to be taken "of the coast of the United States, in which shall be designated the islands and shoals, with the roads or places of anchorage, within 20 leagues of any part of the shores of the United States."

This act, obviously, emphasized the difference between "shores" and "coast or coastline."

Under a later act of Congress the United States Coast Guard was authorized to, and did, establish the coastline of Louisiana—as well as of other States. This line is the same line as that redefined under Louisiana law. It extends from Chandeleuer Lighthouse in a curved line following established aids to navigation, including Pass-a-Loutre lighted whistle buoy 4, South Pass lighted whistle buoy 2, Southwest Pass entrance channel lighted whistle buoy, Ship Shoal lighthouse, Calcasieu Pass lighted whistle buoy 1, and Sabine Pass lighted whistle buoy 1.

Some of the revenues going to the Federal Government instead of to the State government are from leases on submerged lands within this well defined coastline.

When Attorney General Fred S. LeBlanc goes to court to sustain Louisiana's boundaries, it seems to us he should seek to establish the State's claim to this particular mineral revenue.

Hiring the Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. McCORMACK. Mr. Speaker, the article included in my extension of remarks, Hiring the Handicapped, appearing in the April 25, 1955, issue of Time magazine, is worthy of consideration by business in general:

HIRING THE HANDICAPPED—A MATTER OF GOOD BUSINESS

To keep pace with the expanding demands of consumers, United States industry needs a steadily increasing stream of skilled and productive workers. One great manpower pool that many businessmen have neglected is handicapped workers. In 1954, according to the American Federation of the Physically Handicapped, there were 7 million Americans of working age who were severely handicapped—by blindness, the loss of a limb, by tuberculosis, epilepsy, or some other crippling disease. Of the total, only a relative few were permanently employed. But the estimates are that some 4 million can eventually be rehabilitated and gainfully employed. Not only would rehabilitation lead them into happier lives, but with the increasing complexity of such United States industries as electronics and aviation, handicapped people can actually perform many skilled and delicate jobs better than able-bodied workers.

Dozens of public and private groups are already hard at work on the problem. President Eisenhower has set up a top-level committee to promote the hiring of physically or mentally handicapped. The Office of Vocational Rehabilitation is doling out $30 million in Government aid to State agencies to help put the handicapped in jobs. Overall, some 60,000 disabled workers found jobs in industry in 1954, and the United States Government estimates that the number will jump 200 percent by 1959. But this will tap only a fraction of the potential manpower.

Many businessmen are frankly reluctant to hire the handicapped because they fear that such workers are prone to injury, will hurt themselves on the job and thus boost insurance compensation rates. The fears are largely groundless. Some State compensation laws make a company responsible for a worker's total disability, regardless of his previous injury. However, 42 States now have second injury funds which protect employers against paying total disability compensation for injuries to an already handicapped worker. But the biggest reason for the lag is that businessmen simply do not think that the handicapped are good workers.

Actually, a handicapped worker in the right job does just as well as his able-bodied neighbor. Says the National Association of Manufacturers, in its Guide in Hiring the Physically Handicapped: "In the past decade, production records of thousands of physically handicapped persons in industry indicate beyond any question that so-called handicapped workers are equal to—and in some instances better than—their able-bodied associates in such important factors as attendance, turover, safety, and productivity."

The records of individual companies bear out the NAM. In Dallas, Chance Vought Aircraft employs 297 disabled among its 12,500 workers. Heart cases work at tool design, polio victims as technical writers, amputees operate automatic machines and lathes. The company found that there is not only less malingering and absenteeism but better production and greater safety consciousness among this group than in any other. Ford Motor Co.'s assembly plant in the same city has 600 handicapped workers in its 2,700-man work force. Says personnel manager, John McKee: "After all, if a job can be done with one arm, why shouldn't an employer hire a man with one arm to do it?"

Few United States companies, big or small, create special jobs for the handicapped. Few have to. In Detroit, Chrysler has placed thousands of physically handicapped workers in good jobs since 1943, thoroughly tests each applicant for what he can do, then finds a job to fit. General Motors has the same type of system at its Dayton, Ohio, Frigidaire plant. For example, an ex-punch-press operator who got tuberculosis of the spine checks for leaks in refrigerator units passing through a tank of water, a job that does not require him to stoop or twist.

With the increasing specialization of United States industry, more and more jobs are opening up for handicapped workers. What the handicapped lose in flexibility because of their disability, they make up by concentrating on a single job, or a few jobs, learning to do them better. Firestone has 150 deaf employees alone. Allis-Chalmers, IBM, Hughes Tool, Procter & Gamble, Bulova Watch Co., Eli Lilly (drugs) have all found use for handicapped workers; electronic firms such as RCA, Western Electric, General Electric are using them to assemble delicate TV and radar circuits. At Lockheed's big plant at Marietta, Ga., the company last year saved $65,000 by employing a Griffin, Ga., workshop for the blind to pick over the factory sweepings, salvage thousands of tiny nuts, washers, and screws that fell to the floor below its B-47 production line.

On the record, handicapped workers are pulling their own weight in United States industry, and there are millions more who are willing and able to hold down good jobs.

The Flag Speaks—An Essay by High School Student Winning Bill of Rights Speakers Award

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. DOYLE. Mr. Speaker, by reason of having been heretofore granted unanimous consent so to do, I am pleased to present the text of what appears to me as a very unusual, pertinent, and constructive essay. I wanted you and all my other distinguished colleagues to read it. It was one of the award essays during Bill of Rights Week in Los Angeles County, Calif., especially in the great 23d

district which I have the honor to represent this my fifth term in this great legislative body.

With these remarks I also include the text of the award which was made to Marsha Caddell by the Bill of Rights Commemoration Committee.

It is appropriate I further refer to Miss Caddell as a senior of the South Gate High School in Los Angeles County, Calif., and that this winning essay was recited by her at many parent-teachers association meetings, high school and elementary student body assemblies, service clubs, and other community groups. She is a member of the Rainbow Girls, the YWCA, and is very active in her community church, is one of the student leaders of this great high school, and is also a member of the Future Teachers of America, and the California Scholarship Federation. Miss Caddell is one of the trained members of the public speaking class so ably directed by Mr. Ralph L. Beckett, faculty member.

I am honored to present this for your reading by reason of the written permission of Miss Marsha Caddell and her parents. I have had the pleasure of meeting her personally as she is one of the very patriotic, active young American citizens in my congressional district. I am sure you join with me in complimenting her upon this essay and its high achievement.

Bill of Rights speakers' award presented to Marsha Caddell.

In recognition of your participation in the Bill of Rights speakers' program, dedicated to the preservation of the American way of life as contained in this historical document.

Awarded by the Bill of Rights Commemoration Committee.

JOE CRAIL,
Chairman.

DECEMBER 1954.

THE FLAG SPEAKS

(By Marsha Caddell, 8452 San Carlos, South Gate, Calif., senior at South Gate, Los Angeles County, Calif., High School)

As I rise and look over my land I think I am the proudest, strongest, and bravest flag of any flag in the world. I grew up with my country. I remember I had but 13 stars and now I have forty-eight; my country only had 10 amendments now she has 22.

The first 10 amendments to the Constitution are called the Bill of Rights. Though some Americans don't realize it, they are the foundation of our liberties. Within these 10 amendments are the words that make my people free. Religions of any kind are accepted in my country, be they Catholic, Protestant, or Jew. The people are free to speak their opinions and their homes cannot be searched without a warrant or soldiers cannot be quartered in any house without the consent of the owner. Every person is entitled to a speedy public trial and may not be subject for the offense twice.

In my country all people are created equal and excessive bail shall not be required nor excessive fines imposed, nor cruel and unusual punishments inflicted regardless of race, creed, or financial position. No person shall be held to answer for a capital or other infamous crime unless on a presentment or indictment of a grand jury.

As great and far-reaching as the Bill of Rights is, it cannot assure my people the perfect political and social order without their help. My people are guaranteed freedom of speech, but are not guaranteed that truth will always be spoken. It assures them trial by jury, but it cannot assure them the fact that jurors will always return just verdicts. It gives them the right to vote, but it does not guarantee them that they will cast intelligent ballots. They are guaranteed the right to hold and be elected to public office, but are not guaranteed competence, ability, or honesty. These things my people must guarantee for themselves.

Many people in my country don't appreciate the freedoms they have. They should always remember that their Government was created for protecting their rights. They must guard their rights, if need be, with their lives, or they may find them taken away. They must fight for freedom, not only their freedom, but the freedom of every American. They must fight as hard as they can, and as long as they live.

In the days ahead, there will be a struggle between those who believe in individual freedom, and those who would subordinate the individual to the dictates of government. There will be a struggle, too, between those who would transfer even greater powers to the Federal Government and those who would stand by the Bill of Rights. All my people are called upon to solve these problems.

It's wonderful to fly above free people in a free land. I should know. I am the flag of the United States of America.

Program for Polio Vaccine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following editorial which appeared in the April 21, 1955, edition of the New York Herald Tribune:

PROGRAM FOR POLIO VACCINE

At least three points about the Salk polio vaccine need to be cleared up fast to relieve public anxiety and impatience.

First, the country should be given an accurate statement on supplies and be assured that everything humanly possible is being done to get maximum production at once from the pharmaceutical laboratories.

Second, it is essential to have an equitable system of distribution to make sure that the vaccine goes first to those regions and age groups in most immediate need. Time is an urgent factor; everybody wants immunity for the greatest possible number with all haste. There will have to be priorities, but it would be comforting for parents to know how soon all 60 million children under age 20 can be inoculated.

Third, ability to pay must not be a consideration. No child should be deprived of the vaccine by economic reasons. This is a public health matter. Government, doctors, and the drug manufacturers as well have an overpowering obligation.

It is perhaps understandable that a certain amount of confusion has risen. The discovery of a great boon has brought emergency problems of unpreparedness. Not even the experts seem to have fully appreciated the universal appeal or all the complexities of putting the vaccine to work on a quick and fair basis. Of course, it can be said that the problems of application are comparatively short-range and that in the long view the battle against polio has already been substantially won. But this is no time for anything resembling equanimity. Even one child killed or crippled by polio this year through lack of money or effective organization is too much.

Tomorrow there will be a conference at the White House to review the facts and presumably to decide on a course of action. The choice is apparently between some form of control or going on with confusion. It seems to us that a program of supervision is essential. Federal sponsorship may be necessary, or perhaps the National Foundation for Infantile Paralysis can be placed in charge. But this immediate problem is too big to be left to chance.

It must be settled fairly and firmly in a manner that will inspire public confidence. And, above all, the solution must be found at once.

Mental Health Study Act of 1955

SPEECH
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

The House in Committee of the Whole House on the State of the Union had under consideration House Joint Resolution 256 providing for an objective, thorough, and nationwide analysis and reevaluation of the human and economic problems of mental illness, and for other purposes.

Mr. HESELTON. Mr. Chairman, I would not impose upon the Members at this late hour of the day if it were not for three particular things I would like to say.

In the first place I would like pay a very sincere tribute to the chairman of our committee and the ranking member of our committee, both of whom for many years have been interested in and actively advocating constructive, farsighted legislation in the field of health. I know that this particular bill, as the chairman of the committee said during the course of his remarks, constitutes one of the major pieces of legislation we will enact at this session.

Second, I want to point out for the RECORD, so there will not be any misapprehension, and I do not think anybody has referred to it, that the American Medical Association was represented before us through witnesses who heartily endorsed this particular legislation, so there is no controversy on it from that point of view.

Thirdly, I want to read a brief excerpt from the report which struck me as I heard it as one of the most encouraging things that could be said in regard to handling this terrible problem of mental health. Dr. Daniel Blain, medical director of the American Psychiatric Association, said:

The despair that consigned the mentally ill to simple custody for life in mental institutions is rapidly being displaced by the realization that mental illness is not hopeless and that the great majority of the mentally ill can be treated and returned to the community in a relatively short period of time.

• • • • •

Another most auspicious change in people's thinking lies in the general trend

toward deemphasizing the conventional mental hospital as an almost exclusive tool for dealing with mental illness. This has been in no small measure due to the wisdom of the Congress in encouraging the development of community clinic services under the National Mental Health Act and through the Veterans' Administration. Increasingly, the mental hospital is thought of as merely part of a network of community services, all of them designed to forestall or prevent hospitalization if possible, and to shorten it if not.

Mr. HALE. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield to the gentleman from Maine.

Mr. HALE. I am particularly glad that the gentleman mentioned the services performed by the chairman of our committee and the ranking minority member of the committee. I have been a member of this committee for many years and it is impossible to imagine two men with greater zeal on these health problems than our chairman and our former chairman. Their efforts have been tireless and ceaseless and at all times intelligent and constructive.

Mr. HESELTON. I thoroughly subscribe to what the gentleman has said and I express the hope that at long last we will find that this action which has been initiated by the gentleman from Tennessee [Mr. PRIEST] and the gentleman from New Jersey [Mr. WOLVERTON] will be called by their proper names.

Cut This Down to Size

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the Indianapolis News under date of April 22, 1955:

CUT THIS DOWN TO SIZE

The time has come for the United States to end foreign giveaways and replace them with trade easements, private investment, and technical assistance.

On the military side, our free grants should be restricted to nations which have stood up to be counted on our side.

Many Americans who thought the pending expiration of the Foreign Operations Administration meant the end of ladling out gratis economic dollars were disappointed by President Eisenhower's message to Congress Wednesday.

This envisaged starting another big giveaway program, this time in Asia. We already have sunk billions in that area down a rat hole. Congress should cut the requested $3,530,000,000 nearly half, leaving in armed assistance to proved friends like South Korea and Turkey, and maintaining "point four" technical aid programs so that underdeveloped countries can get on their own feet. Most of these peoples are looking for jobs, not charity.

Furthermore, a much greater proportion of our assistance should be routed to our friends, the deserving Latin American republics.

Thirty-seventh Anniversary of Proclamation of Free and Independent Ukrainian Republic

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated March 5, 1955, which I have received from Dr. N. Zukowsky, of Steele, N. Dak., president of the North Dakota State branch of the Ukrainian Congress Committee of America, Inc., on the subject of the recent celebration of the 37th anniversary of the proclamation of A Free and Independent Ukrainian Republic, together with a radio address delivered by Dr. Zukowsky on January 23, 1955, on the same subject.

There being no objection, the letter and address were ordered to be printed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, INC.,
STATE BRANCH OF NORTH DAKOTA,
Bismarck, N. Dak., March 5, 1955.

Senator WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SENATOR LANGER: I am taking the liberty of writing you regarding our recent celebration of the 37th anniversary of the Proclamation of Free and Independent Ukrainian Republic, and 36th anniversary of act of union of all Ukrainian territories in one independent and indivisible state.

Radio programs, special church services, and other celebrations were held in North Dakota during January, with newspapers carrying publicity on these events commemorating Ukrainian independence.

This proclamation was issued by the Ukrainian Parliament, the Central Council on the 22d day of January 1918, in Kiev, the capital of Ukraine. The free and independent Ukrainian Republic was recognized by countries all over the world, among them Russia, which soon afterward attacked the independent state.

The love of democracy and freedom lives on in the suppressed Ukraine, for, although the republic was shortlived and fell under the forcible occupation of the Russian Communists in 1922, the resistance of the Ukrainian people to Communist totalitarianism has not ceased until this day.

At the same time our committee had the opportunity to read the staff reports of the Subcommittee To Study the U. N. Charter of the Committee on Foreign Affairs.

In this series of studies (particularly in staff study No. 4) Ukraine is referred to in comparison with Texas, i. e., that Ukraine is as much a part of the Soviet Union as Texas is of the United States. Moreover, the study urges the exclusion of Ukraine from the U. N. on the basis that it is not a nation but a part of the Soviet Union.

This sort of thinking is, of course, completely without basis, since Ukraine in the international sense was and is a nation in itself. It has been recognized by the great powers, including Soviet Russia, England, France, and others throughout its history. To disclaim its status as a nation simply because it is under Soviet Russian tyranny would necessitate the exclusion of Czechoslovakia and Poland from the U. N. because they are also under Soviet domination.

The object of the Soviet regime is to absorb cultures and nations in order that the peoples which they enslave would offer less resistance to their tyranny. Such a move on the part of the United States would greatly diminish the feelings of the enslaved Ukrainians toward this country, because they look upon America as an ally in their struggle. Were America to deny their very existence as a nation we would play into the hands of the Communists.

Enclosed is a copy of the speech I gave on January 23 by transcription over the Bismarck and Dickinson radio stations. Also is enclosed declarations signed by people at rallies held at Wilton and Belfield during January.

On behalf of our State branch of North Dakota, Ukrainian Congress Committee of America, Inc., and the 20,000 Americans of Ukrainian descent living in North Dakota, I would appreciate your inserting these statements, including this letter, into the CONGRESSIONAL RECORD as a matter of public record.

We also urge you to consider these aspects of the question when the staff studies are reported to your committee.

Very sincerely yours,
Dr. A. ZUKOWSKY,
President, State Branch, UCCA, Inc.

UKRAINIAN INDEPENDENCE DAY CELEBRATION SPEECH—37TH ANNIVERSARY OF RENEWED UKRAINIAN INDEPENDENCE

(Speech given by Dr. A. Zukowsky, president of State branch of UCCA, Inc., over stations KFYR, Bismarck, and KDIX, Dickinson, on January 23, 1955)

From coast to coast Americans of Ukrainian descent today are observing solemnly the 37th anniversary of the renewal of the independence of Ukraine which was proclaimed by the Ukrainian Parliament—the Central Council (Rada)—on January 22, 1918 in Kiev.

This celebration is not merely a Ukrainian one.

With the growth of understanding of the meaning of the celebration in America it increasingly becomes an American celebration. The governors of many American States, the mayors of many American cities proclaimed today as "Ukrainian Day."

So it was last year. So it was 2 years ago.

Today many of our States have raised the historical yellow and blue flag of independent Ukraine together with our Star-Spangled Banner to demonstate the identity of ideals which the two nations fought for under these flags.

What is the meaning of today's celebration for America? To find it we must look back into the yellowed pages of history and the blood-stained pages of the recent decades, and also look ahead into the future.

Ukraine is one of the oldest European nations, with a cultural and governmental tradition going back for more than a thousand years. This should no longer be news to any American. Many elaborate statements by eminent Americans about the glorious past of Ukraine can be found not only in books and articles but also in the CONGRESSIONAL RECORD of recent years.

The Ukrainian people are a traditionally democratic nation having always cherished freedom above all material treasures, and having throughout many centuries never ceased to fight for it.

Through her vital geographical position, through her immeasurable wealth of natural resources, the fabulous richness of her soil—Ukraine was always the main object of aggression of her neighbors, whereas Ukraine fighting for her own rights never had any aggressive intentions toward others.

So the history of Ukraine is a history of an unafraid and determined struggle for freedom and independence, for the unification of all the Ukrainian territories in one free and independent Ukrainian state—a struggle which in recent history brought a short-lived but complete renewal of independence for Ukraine 37 years ago and the unification of all the Ukrainian territories in the Ukrainian Democratic National Republic on January 22, 1919.

It was then that the Ukrainian people rightfully and freely expressed their will concerning their state. And the Ukrainian Declaration of Independence of 37 years ago is as lawful and valid today and for the future as is our own American Declaration of Independence.

The fact that the tyrannical forces of Communist Russia have overrun the independent Ukrainian Republic does as little change the validity of this declaration as the fact that the predecessor of Communist Russia—Czarist Russia—brutally violated the Pereyaslav Treaty, which was exclusively a military alliance, has ever changed the historical right of Ukraine to independence.

The Ukrainian people, having the sole right to decide upon their own destiny, rightfully and freely decided 37 years ago. Therefore all discussion whether Ukraine should be federated with Russia or possibly torn apart for the convenience of her neighbors is now belated.

We repeat—the Ukrainian people have proclaimed their will when they were free to do so. So there was and there continues to be an independent Ukrainian state.

This state is enslaved now.

It is enslaved because there was no understanding of Ukraine's struggle against Communist Russia 3½ decades ago. Communist Russia now threatens the entire yet-free world. Ukraine was her first victim. There were many to follow years later: the Baltic States, Poland, Czechoslovakia, Rumania, Bulgaria, and so on. There will be more if there will be no real understanding of the enslaved people here in the free world, particularly in America.

The Select Committee on Communist Aggression of the House of Representatives for the investigation of the Communist takeover and occupation of the non-Russian nations of the U. S. S. R. has given through eye-witness testimony ample evidence of the unlawful tyrannical rule of Soviet Russia in Ukraine, Byelorussia, and the other countries incorporated in the U. S. S. R.

Ukraine is our strongest ally behind the Iron Curtain; it is an ally which never stopped and will never stop fighting the enemy of human freedom. The Ukrainian people look for encouragement primarily from America, for they recognized long ago the identity of American and Ukrainian ideals.

The policy of liberation proclaimed by President Eisenhower is an essential part of our foreign policy. It is a part which will play a vital role in future developments of the world. And in designing this our policy, we should always keep in mind that Ukraine is the key problem of Europe, that as long as justice is not restored to Ukraine there will be no peace for the world.

Had we helped Ukraine when she fought Communist Russia so desperately 3½ decades ago, the world would be different today. There would be no Soviet Union, the life of millions and millions starved and tortured to death by this regime would have been spared, our American sons would not need to die in Korea, they would not have to perish in Communist prisons, there would be no fighting in Indochina, there would be no universal constant fear.

History has taught us a grave lesson. This lesson should have made the American people and their representatives aware of the importance of Ukraine. However, recent developments show that some of our otherwise outstanding legislators and politicians have not given this problem sufficient thought.

How else can we explain the recent proposals to alter the charter of the United Nations to exclude Ukraine and Byelorussia from membership in that organization, with the argument that this would reduce the voting strength of the Soviet Union and that Soviet Ukraine and Byelorussia are even so not independent?

Why not go even further and exclude all the nations of the Soviet bloc such as Poland or Czechoslovakia? At the present they are exactly as independent as Ukraine or Byelorussia are. Their representatives are all representatives of the Soviet Government, and none of them is the representative of his nation.

By excluding Ukraine and Byelorussia from membership in the United Nations, we would only hurt our strongest allies behind the Iron Curtain, showing them that we are going along with their enemies and denying their right to independence.

Ukraine and Byelorussia alone should not be excluded from the U. N. in order to leave the Soviet Union with two less votes, which, with the existence of the veto, would not improve the situation. In the event that the Soviet Union itself should be excluded, Ukraine and Byelorussia should remain as members, because they are victims of Soviet aggression.

Not the nations should be questioned, but their representatives. And we would gain immeasurably in our international position and moral strength if we would deny the acceptance of the present U. N. representatives of Ukraine and Byelorussia which were put there exactly as those of Poland or Czechoslovakia by the Soviet Union. This would leave their seats empty for the time being until their nations are liberated, or representation could be given to those who will really represent the Ukrainian and Byelorussian people, as the representatives of Nationalist China in the U. N. do now.

We should be able to realize that by questioning the right of Ukraine or Byelorussia to their place in the U. N. we make another fatal mistake. We would actually strengthen the Soviet Union by hurting our allies behind the Iron Curtain. Let us not repeat the ignorance of three and a half decades ago which has cost our Nation so many precious lives. If we are not actively helping our allies now, let us not discourage them by doing injustice.

The celebration of the anniversary of the renewal of Ukrainian independence is the occasion for us Americans to think of the future of the world, of the future of our America.

UKRAINIAN INDEPENDENCE DAY DECLARATION

Thirty-seven years ago the Ukrainian people renewed their sovereign rights on Ukrainian territory.

The Ukrainian Parliament—the Central Council (Rada)—proclaimed the renewal of the independent Ukrainian state on the 22d of January 1918 in the capital—Kiev.

The free and independent Ukrainian National Democratic Republic was recognized by England, France, Germany, Austria, Hungary, Bulgaria, Turkey, Latvia, Estonia, Finland, Rumania, Czechoslovakia, Poland, Italy, the Vatican, Argentina, Georgia, the Don Cossack Republic, and Russia.

But continuing along the old path of Russian imperialism, Communist Moscow attacked the independent Ukrainian Republic and overran it despite the desperate resistance of the Ukrainian people. Thus the new republic became the first victim of Communist Russian aggression. It also became the first nation to resist the aggression of Communist Moscow which today threatens the entire still-free world.

The Ukrainian Government of the Independent Ukrainian Democratic Republic went into exile. Communist Moscow set up by force and violence the Communist regime and government in Ukraine.

But the people, faithful to their democratic traditions continue to fight against this regime and the Soviet Government.

We, Americans of Ukrainian descent, gathered at the celebration of the 37th anniversary of the proclamation of independent and free Ukrainian Republic in Belfield, on January 23, appeal to the Government, representatives, and people of the United States of America to help the Ukrainian people to restore their own democratic government.

We declare that the proposal to exclude Ukraine from the United Nations is against the interests of our country, against our American policy of liberation. The present regime in Ukraine and its right to represent the Ukrainian people can and should be questioned. But no one can question the right of Ukraine to be a member of the United Nations.

What Price a Merchant Fleet?

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a very commendable and concise booklet entitled "What Price a Merchant Fleet," which has been prepared by the committee of American Steamship Lines.

There being no objection, the text of the booklet was ordered to be printed in the RECORD, as follows:

WHAT PRICE A MERCHANT FLEET?

Decisive action on the continued strength of our country's merchant shipping fleet will be taken soon by the 84th Congress when it considers recommendations from the President and the United States Maritime Administration for appropriations to maintain this fleet.

These appropriations, for the Government's fiscal 1956 year, include a request for $115 million required to meet contract obligations of the Administration with American-flag steamship companies. These obligations represent payments due under the terms of long-term operating differential subsidy contracts between the Government and the companies for regularly scheduled voyages over essential world trade routes.

The ships making these voyages are owned and operated by 16 United States-flag lines. They are modern, efficient ships. They form the hard-core nucleus of our Nation's oceangoing passenger and cargo fleet, so essential to our national security and our commercial welfare.

The $115 million needed for operating differential payments to this fleet in the fiscal year 1956 represents a reduction from the $125 million required for the fiscal year 1955.

Amounts in each year represent a substantial increase over appropriations in previous years, both before and since the end of World War II. To understand why such increases are necessary it is important, first, to know why our Government helps to maintain a United States-flag merchant fleet.

HOW, AND WHY, DOES GOVERNMENT SUPPORT SHIPPING?

Congress in 1936 recognized, and so stated in the preamble of the Merchant Marine Act, that "it is necessary for the national defense and development of its foreign and domestic commerce that * * * the United States foster the development and encourage the maintenance of" a merchant marine.

In this act Congress also recognized that if America is to have a privately owned and operated merchant fleet this fleet must have Government financial support. This is so because America's standard of living is higher than any other in the world. American shipowners cannot pay United States wage, subsistence, shipbuilding, and other costs and still compete with foreign operators whose costs are much less.

In the rates they charge for cargoes American shipowners are competitive with foreign ships. These rates are usually arrived at through conference agreements in which both American and foreign shipowners have a voice. Operating within this rate structure, the foreign operator, with his lower costs, is able to make a profit. But the United States shipowner, with his higher operating costs, cannot maintain this competitive rate without Government assistance.

LAW ESTABLISHES PARITY FOR UNITED STATES SHIPPING

Recognizing this fact, Congress set up by law machinery whereby American ships can be placed on a parity basis with foreign ships through operating and construction differential payments. These payments are designed to make up the difference between foreign costs and United States costs.

Such assistance is available to American shipping lines if they meet certain rigid requirements, and if the need for the regular service they provide over essential world trade routes is established after careful Government investigation.

Sixteen United States-flag shipping companies have qualified for differential payments under the Government program.

Each regularly serves world trade routes needed to meet our country's commercial and national defense requirements.

Each receives parity payments on the basis of contract services rendered the Government over these trade routes.

Each company is an independent American enterprise, but also works in a unique partnership arrangement with Government.

Government payments do not guarantee these lines a profit, nor do they ensure against loss. Just as a golfer is assigned a handicap to enable him to participate on an even basis with his competition, so do steamship owners get payments to put them on a parity basis with their foreign competition. As the golfer can win or lose according to his skill, a steamship owner can profit or not according to his abilities and the fluctuations in his business.

The Government program of support for shipping is unique in an important way. It provides that the companies, when earnings permit, pay back to the Government all or part of the operating payments made them. This is the only Government aid-to-industry program that has this pay-back feature. It has resulted in substantial return payments to Government since the program began in 1936.

While it differs in method, our Government's program for assisting the maritime industry is duplicated by most other major maritime powers. Virtually all assist their merchant fleets through direct or indirect subsidy.

WHY HAVE SHIPPING APPROPRIATIONS INCREASED SINCE THE WAR?

One important reason is that the Government has been making payments on a backlog of unpaid subsidy obligations totaling some $120 million. Some of these go as far back as 7 years.

Because of this the appropriation requests for recent years were not in fact representative of actual requirements for those years. Congress and the Maritime Administration are fully aware of this past obligation and progress is being made in eliminating the backlog. As a result, Congress is being asked now to appropriate funds to pay these prior year commitments in addition to paying for current contract performance. The effect of this is shown in the adjoining chart depicting what share of recent Maritime Administration payments to shipping companies represent past-due obligations for prior years, and what represent current costs.

A second reason why maritime appropriations have increased is the general rise in costs. As the cost of living has gone up in recent years for everyone, so has the cost of doing business. American shipping costs, like those of other businesses, have increased tremendously since the war's end.

For example:

Comparisons of the costs for a fairly typical C–2 cargo ship operation show that monthly base wages have increased 77 percent since 1947.

Overtime wage costs for this ship are up 187 percent because overtime activity (affected by the establishment of a 40-hour workweek aboard ship) and rates have both increased substantially.

Cost of feeding the crew, supplying the ship, and maintaining and repairing it have gone up 124 percent.

In 1947 a United States freighter plying one of the world trade routes serviced by American-flag ships had an average voyage cost of $744 per day. The same vessel on the same voyage in 1953 operated at a cost of $1,324 a day.

The American shipowner repairs and maintains his ships in American yards, and at American rates for labor and for materials. This is one of the requirements of his contract with the Government.

He buys his supplies and his foodstuffs from American industry and agriculture.

His costs are therefore the product of the American economic system, and, compared to foreign systems, it is a high cost economy.

Increases in United States ship operation costs since the war have been far greater than any similar increases in foreign shipping. Postwar developments have served to widen even further the historical difference between United States and foreign costs, putting United States operators at more of a competitive disadvantage.

At the same time, the fact that American shipowners who operate under Government contract man, supply, repair, and maintain their ships with United States labor and materials is an essential part of our national policy for shipping. Only in this way can we maintain self-sufficiency as a seafaring power, and only in this way can we have available to the Nation all the integrated parts of a ship operating and building industry when those skills are needed.

The effect of this program on our national economy is considerable, both in terms of ship and shoreside employment, and payrolls, and expenditures that reflect themselves in every State of the Union. These shipping companies spend between $300 million and $400 million annually in supporting the domestic economy.

There are other factors that also have influenced higher operating payments by Government. As postwar world trade has developed American ships are making more voyages. There has been an increase in the number of Government-certified trade route operators, and consequently there have been more ships that qualify for support. Since the postwar resumption of subsidy payments to shipping there has been a significant increase in the number and size of our American-flag passenger fleet. This is desirable so that America can compete for passenger travel across the high seas, but it is vitally important to national defense because these passenger ships form a needed troop transport reserve. They are constructed so that they can be transformed quickly into troop carriers should the need arise.

IS THIS AN ESSENTIAL GOVERNMENT EXPENDITURE?

It costs money to help maintain an American Merchant Marine, and the costs, as

shown, have grown in recent years. Is this an essential cost?

In the mission it performs, a fleet of United States cargo and passenger ships is vital to our national security. If we did not have American-flag ships our ability to defend our country and meet our worldwide commitments would be nullified.

Recognizing the essentiality of a merchant fleet for defense, it must also be recognized that appropriations to support this fleet have been relatively small in comparison with Department of Defense appropriations.

For the fiscal year 1955 defense appropriations totaled $35,500,000,000. Maritime appropriations (including the cost of operating and construction subsidies and all other maritime administration costs) totaled $175,900,000 * * * about one-half of 1 percent of our total defense budget. For fiscal 1956 the defense appropriations recommended by the President is $34 billion. For maritime it is $240,900,000 * * * less than three-quarters of 1 percent of the defense budget.

Dependent as our industrial society is upon world commerce and the imports of essential raw materials for our factories and our mills, we cannot survive without ships.

We import by ship two-fifths of our copper, and nearly a third of our lead and zinc, all classified as strategic minerals by the Munitions Board.

We are almost entirely dependent upon foreign sources for our tin, nickel, and platinum.

Of the 20 alloying elements necessary for steel production, the United States is deficient in about a dozen.

There are those who say that we can rely upon foreign shipping for thees imports and we need not maintain an American fleet. History has disproved this fallacy. Neither in peace nor in war can America depend upon foreign countries for its ocean transport. To do so under present world conditions would be to invite disaster.

Measured either by the standards of Government assistance to other segments of the American economy, or the individual cost to the taxpayer, the support program for shipping is modest. Its intent—to maintain a strong merchant fleet—is little different from other Government support programs designed to encourage and strengthen industry and agriculture. These take the form of parity payments to agriculture, depletion allowances for raw material producers in industry, and the accelerated depreciation and tax writeoff aspects of defense industries, all in the national interest.

Shipping lines that participate in the support program have been and are acutely aware of the rising costs of their operations and the attendant possible increased cost of Government support. They are engaged in aggressive programs to promote trade and to reduce costs ashore and afloat. At the same time they have increased freight rates where practicable.

Through trade promotion and advertising they increase cargo carryings and encourage passenger travel, thereby improving profit opportunities. This in turn reduces the need for Government assistance.

A recent survey shows that in the 4-year period, 1950–53, these lines spent in excess of $48 million to promote and develop trade and travel. An additional $14.5 million was spent in advertising. The lines maintain offices in every State and every major marketing area of the world, and their ships fly the American flag in ports around the globe.

The undersigned steamship companies through their sizable capital investments have a corporate stake in seeing that the Government support program is responsive to the present-day needs of American shipping.

But they, as all citizens, also have a patriotic interest in seeing that our country continues to maintain a strong merchant fleet in view of our commitments for the mutual defense of the free nations and our national dependence upon foreign trade.

The need for expanded world commerce is now receiving the close attention of Congress. It has the endorsement of President Eisenhower who, in his foreign economic policy message on January 10, 1955, said:

"The Nation's enlightened self-interest and sense of responsibility as a leader among the free nations require a foreign economic program that will stimulate economic growth in the free world through enlarging opportunities for the fuller operation of the forces of free enterprise and competitive markets.

"Our own self-interest requires such a program because

"(1) Economic strength among our allies is essential to our security;

"(2) Economic growth in underdeveloped areas is necessary to lessen international instability growing out of vulnerability of such areas to Communist penetration and subversion;

"(3) An increasing volume of world production and trade will help assure our own economic growth and a rising standard of living among our own people."

An indispensable element in this program is a strong American-flag merchant shipping fleet. Adequate appropriations to maintain this fleet and to meet the Government's contract obligations are an investment in the solvency and security of the United States.

Freedom of Information as Related to the Legislative Branch of the Government

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1955

Mr. HÉBERT. Mr. Speaker, I recently had the privilege of appearing on a panel of the American Society of Newspaper Editors to discuss the freedom of information as related to the legislative branch of the Government. I was the moderator of the panel.

Participating were William R. Matthews, publisher and editor of the Arizona Daily Star, Tucson, Ariz., and V. M. Newton, Jr., managing editor of the Tampa Tribune of Tampa, Fla.

Little could be added to the discussion in this area which was not reflected in the papers read by the participants and myself. I believe, however, that the diversified points of view should prove of interest and benefit, especially in these particular times when there is every indication that censorship is the signpost on the road from the Pentagon.

I am presenting the statements by the participants and myself in the order which they were delivered and without comment. Each speaks for itself.

REMARKS OF THE HONORABLE F. EDWARD HÉBERT, OF LOUISIANA, CHAIRMAN OF THE SPECIAL INVESTIGATING SUBCOMMITTEE OF THE HOUSE ARMED SERVICES COMMITTEE, BEFORE THE AMERICAN SOCIETY OF NEWSPAPER EDITORS ON A DISCUSSION PANEL OF THE RIGHT OF THE PRESS TO KNOW ABOUT LEGISLATIVE PROCEEDINGS, STATLER HOTEL, WASHINGTON, D. C.

Members of the panel, I appreciate this opportunity of participating in this discussion. As you know, I have been for many years identified with legislative inquiries. For the last 5 years, consecutively, I have been either chairman or ranking member of an investigating subcommittee of the House Armed Services Committee. I should like to state to you, therefore, my view of the right of the press to have access to the information obtained in these inquiries.

I stand flatly upon the proposition that the legislative business must be conducted in the open; and for dissemination of information to the public so that, in our democratic system, the weight of an informed public opinon will support and sustain legislative action.

That is a declaration of the principle and a practice which I have followed in Congress. I am supported by the long standing and historical rules of the House of Representatives. The House rules provide that "all hearings conducted by standing committees or their subcommittees shall be open to the public, except when the committee is marking up bills (and that, of course, means actually agreeing on the text of legislation as distinguished from legislating) or for voting (and, of course, that provision is obvious) or where the committee by a majority vote orders an executive session."

Thus, the House has by established usage limited executive (or closed) sessions to these three classes of matters.

The House has lately added an additional rule relating to the circumstances under which an executive session may be called, in the first instance, as follows:

"If the committee determines that evidence or testimony at an investigative hearing may tend to defame, degrade, or incriminate any person, it shall (1) receive such evidence or testimony in executive session; (2) afford such person an opportunity voluntarily to appear as a witness; and (3) receive and dispose of requests from such persons to subpena such additional witnesses."

These rules are almost identical with the rules of our subcommittee.

I have referred to these rules to indicate our tradition in the Congress for open hearings. I support that usage in a democracy for the reason that the objective of any inquiry in the Congress must be the improvement of the legislative process or the need for legislative action, corrective or otherwise.

That purpose can only be served, in my opinion, when the weight of public opinion fortifies the findings of a legislative body. Obviously no such opinion can be formed unless the public has access to information. It is upon the public and to the public that the legislature must look for its support.

Bear in mind that the Congress cannot and is not charged under the Constitution with the enforcement of laws. It has neither the facility nor the continuity to provide for enforcement. In the case of the House, its tenure is marked by the constitutional limit of a 2-year term. Thus, the House especially must depend, as the whole of the Congress must depend, upon a clear and adequate understanding by the public of its legislative concerns, facts, and recommendations. Anything short of that norm is self-defeating.

However, there are some other very plain constitutional principles involved. While we demand unity for the public good, we respect and intend to protect the right to diversity of thought.

The right to differ within the framework of the law is as American as the soil on which we walk and the flag under which we live. The application of that principle is entitled to a full constitutional protection and must be respected in every forum, be it legislative, executive, or judicial.

The American right to differ is expressed and protected in the principle that a person because of diversity of view, or misfortune, ought not to be intimidated, defamed, or degraded in a public forum against his will. So the whole of it, in my very simple view, gets down not to a question of the right of the public to know, but to the duty of the public to protect all of its citizens, great and small, uniformly and effectively.

On the other hand, I believe we must be sparing, judicious, and conscientious in the application of the rule of secrecy; and that there are times when even this personal privilege must be subordinated when the good to be accomplished outweighs the strictly personal consideration.

For example, an individual having a contract with the Government certainly must expect that everything in relation to the contract is and ought to be a public matter.

If in the process of investigating such a relationship an individual is concerned, certainly the public interest in the enforcement of the laws of the contract between the Government and its citizens or the need for reformation of laws or regulations as disclosed by such ventures is a legitimate subject for public consideration.

Thus stated, in my very simple view, every argument stands for the disclosure of the legislative investigations. Yet I think no one would disagree with what we placed in our rules.

There have been, however, certain practices which, in my view, are to be condemned. I do not believe it is the contribution to the public good to turn a hearing of the Congress into a stage performance with the actors preening themselves before the camera; and with the viewers taking over the conduct of the proceedings. The information elicited at these hearings is for other purposes than entertainment. That type of hearing gets itself into the postion where the reproduction of the hearing becomes more important than the subject under inquiry.

In our subcommittee we do not deny any member of the press the right of access to the hearings not to any member of the pictorial media the right to reproduce what is to be seen at the hearings. On the other hand, it makes a mockery of a legislative process to have a hearing interrupted during its course by the taking of pictures or television cameras or other unseemly interruptions. In my opinion, it serves no legitimate legislative purpose. There are many hours in a day during which actors can perform outside the legislative halls.

Now, a word about release of information in executive sessions. We have provided by rule that no one member and no group of members, only a majority of our subcommittee may release the text of any such information.

Finally, I think I must say in complete candor that the dignity and decorum, the dispatch and the demeanor of persons at a hearing, are in every instance but the length and shadow of the judgment and discretion, the restraint and the capacity of the chairman and the committee conducting the inquiry. No law and few rules can cope with every human quirk. But the healthy and wholesome use of the gavel by the chairman can enforce the rules and can keep hearings within the bounds of propriety, good conduct, and public decency. And that can be done without doing violence either to the principle of open and fair dealings or full and frank discussion.

Mr. Matthews followed me with this statement:

Let me reassure you that I am an ardent worker for freedom of information. For nearly a lifetime I have been battling in its behalf as a fighter on the firing line. Some of the battles I have won; some I have lost. Most of them could have been evaded had I followed an easy-going, disinterested policy. They have cost me money and they have cost me heartaches. As long as I have a breath to breathe I will continue this same vigorous policy.

From this experience I have learned some lessons, some of them painful and some disillusioning. That is why I challenged Russ Wiggins' report a year ago. My experience has taught me that there are limits to where news media can go; limits to what they can demand in the way of freedom of information.

For instance, as a newspaper editor I insist that no news media has a right to invade the privacy of any American home or family life. That goes for the lowliest, and it reaches up to the Roosevelts and the Eisenhowers. I insist there is a right of privacy on personal and family matters that is a precious and indispensable part of the right of freedom.

These limits apply to legislative and administrative processes, from school boards up through Congress. There was a time, when I was a young crusader, that I denounced executive sessions of our city council. When such a demand worked to the advantage of articulate demagogs, while hindering rather than helping good government, I modified my stand.

Reporters of Tucson newspapers sit in on the executive sessions now but they scrupulously refrain from writing any comment on what goes on. We maintain always the fundamental policy that the public is entitled to know what is done at official meetings of any public body.

Legislatures and our Congress are entitled to a varying amount of privacy in the work done by their committees. If committees are to function in a way that will command respect for democratic government, they must be able to do much of their work in privacy.

Important committees, such as the Committee on Appropriations, have an enormous job to do. To insist that the press and the public have a right to sit in on all such meetings ignores the give and take, the compromises that must be made, and the massive amount of detail work that must be done. Members have to be able to think aloud without the fear that some speculative question might make them look ludicrous to the public. They must be able to bargain with their fellow members. Bargains and compromises cannot be made unless much of this speculative thinking goes on. Compromises require all committee members to give in, in order to reach a conclusion. Able and sincere committee members could easily be made to look foolish by making concessions to expedite the work of the committee.

On the other hand, demagogs, of which every legislative body has a surplus, would thrive on seeing their sensational charges, their eloquent pleadings, and their irresponsible chatter, publicized. The committee is one place where they can be shut off. The floor of a legislative body is the place where they have ample opportunity to glorify themselves with their loose talk.

After all, the work of a committee is a necessary administrative procedure designed to formulate what is a proposition, a resolution, for debate upon the floor of the legislative body. With a bicameral legislature the records will show these resolutions are subject to debate and most of them are amended in some form before they become law. From what I have seen of legislative work, democratic government will be harmed, not bettered, by any requirements that all committee meetings be open and the votes of the members recorded. Members may vote one way on a committee in order to facilitate a report, and vote another way on the floor of the legislative body.

The fact is that any mandatory requirements on open meetings can be dodged by unofficial meetings in homes, clubs, hotel rooms, and private offices. No law can prohibit them. This process is used from time to time, even now, by leading members of some committees who want to thrash out their differences by frank discussion.

Much as I insist on this right of privacy of committees, I insist with equal emphasis that it is not an absolute right. There are many times when committee meetings should be open. There are times when responsible parties like the press have the right to appear and to ask questions, to demand reports, in behalf of the public welfare. Those are the times when a newspaper should take the initiative in performing a public duty, instead of begging for some law to prevent what it wants on a platter. Those are the times when editorial judgment has to be used.

As my time grows short, let me sum up:

1. I am a vigorous exponent of freedom of information, but I have learned from long experience that there are limits to what can be demanded. I am unqualifiedly opposed to this doctrine of absolute rights. A tendency of so many of us Americans to think in terms of absolutes is one of our big weaknesses.

2. The limits on freedom of information cannot be defined with a rigid line because situations vary. Editors should be expected to put their abilities, their spirit of fair play and public interest to work. Committees must have privacy to perform their routine work.

3. The decisions and the minutes of all legislative and administrative bodies should be made public or available to responsible parties.

4. Meetings of legislative committees and administrative boards should be open on demand by any responsible party where specific information on questions of high public importance should be made available.

5. Public documents, excluding the errata of informal office memoranda, should be made available to the public, when publication does not impair national security.

6. At this time, when we are doing so much shouting about freedom of information, I cannot help remarking how some of those who have done the loudest shouting boiled over in indignation at the publication of the Yalta papers.

In my opinion, the Potsdam and Cairo documents should be produced. They are historical records. National security is not involved. Unless we are now starting to write our histories so as to protect some and glorify others, the way the totalitarian powers do, these documents should be published. Some of us who took part in these great events of the past generation would like to know, before we die, what really went on.

Is this too hot a question for our own Freedom of Information Committee to handle Or must hot issues be avoided?

I think our committee ought to get busy on it, and so should those responsible for Washington news coverage, instead of waiting for a New York newspaper to crack the barrier.

Mr. Newton closed with the following remarks:

Fifteen minutes, the time allotted me here, is hardly time enough to penetrate the secrecy which enshrouds Federal Government,

as any Washington correspondent will tell you today.

During 1953, congressional committees held 3,105 meetings and a survey shows that 1,357, or 44 percent, were secret meetings held behind locked doors with press and public barred.

During 1954, congressional committees held 3,002 meetings and 1,231, or 41 percent, were held behind locked doors.

Few of these secret meetings dealt with defense or security affairs. Instead, they dealt with virtually every matter before Congress. Nearly every one of the Appropriations Committee meetings, in which our public servants decided how to spend the citizen's tax funds, was held in secrecy.

Much of this legislation conceived and congealed behind the locked doors of these secret congressional committee meetings was railroaded through Congress with a minimum of debate and with little opportunity for the restraint of public opinion to be exerted. Actually, some of it did not see the light of public print until it became law.

In my correspondence with Members of the United States Senate over this matter, Senator JENNER, of Indiana, at that time chairman of the Senate Rules Committee, wrote me last April as follows:

"Another reason for the railroading of legislation through Congress is the very large role played in legislation by the bureaucracy of the executive branch. They frequently draft the bills. They write the arguments for the bills. They fill the RECORD of hearings on bills. They have supporting groups which come in and testify to the approved line. Ordinary citizens cannot meet such well-financed, well-organized competition. It may appear as if the sentiment is all in one direction on a bill and Congress hears little or no objection, and so moves quickly to pass it."

Now when you add Senator JENNER's damning statement to the fact that nearly half of all congressional committee meetings are held secretly behind locked doors, you can reach only the conclusion that the ordinary American citizen has very little to say about our legislation. Under such a system, the ordinary American citizen is deprived by his elected representatives of his inherent right to exert constantly the pressure of public opinion upon his free Government. And any student of history soon learns that free government cannot long last in such secrecy.

Senator FLANDERS, of Vermont, wrote me that the secret committee meetings were necessary to mark up bills and to prevent the Congressmen from being self-conscious and from dropping into oratory. Yet it is in the same peace and quiet of these secret meetings that amendments are tacked onto the bills and other changes made that the American people should know about at the time and not after the fact, when too often it has been too late.

Senators HOLLAND, of my Florida, SMITH of Maine, PAYNE, DIRKSEN, GILLETTE, WELKER, ELLENDER, and HENDRICKSON expressed great and tender concern over the danger of needlessly ruining the reputations of witnesses and appointees before public meetings of the committees. But what about the case of Harry Dexter White, the Communist spy? His appointment was considered and confirmed in a secret meeting of a Senate committee and then railroaded through Congress. How in the world can the interests of the American people be properly protected unless all the facts are made public at the time and not after the fact, as in the case of White?

Senator GOLDWATER, of Arizona, wrote me that he felt the American people would be more informed if their legislators are allowed to work in the privacy of their own arguments. Isn't this the modern philosophy in Federal Government today, that Government belongs to our public servants, and that the American people are entitled only to that information which our public servants think they should have?

Senator HAYDEN, of Arizona, wrote me that the secret meetings were necessary to protect our Congressmen from the bureaucrats and the lobbyists. But what about the protection of the American people from those same bureaucrats and lobbyists? What about giving the people a look at the bureaucrats and lobbyists in action?

Senator MILLIKIN, of Colorado, wrote me that the publicizing of the committee's work prior to final decision, and I use his exact words, "might lead the citizen into actions harmful to himself." In reply, I asked the Senator if he could name just one case in all history where free, open government, under the constant restraint of an alert and informed public, has "led the citizen into actions harmful to himself." On the other hand, any student can dig out of the pages of history thousands of cases wherein the politician, acting behind the locked doors of secret government, really dealt the citizen a knockout punch.

Senator BENNETT, of Utah, wrote that it would be impossible for our Congressmen to reach a compromise in a public committee meeting. This poses an interesting question. Does free American government today consist of nothing more than a secret compromise between two political parties without the restraint of the people's opinion? Isn't this a sad commentary on free government, anyway you look at it?

Later in our correspondence, Senator BENNETT wrote that if the congressional committee meetings were opened to the public, it would force the committees to adjourn to secret meetings in so-called smoke-filled rooms. In reply, I wrote that a group of Congressmen meeting unofficially in a smoke-filled room would have no official power whatsoever. They could not draw a bill; they could not vote on a bill; they could reach no official decision. And if the American people ever tumbled to the fact that our legislation was being cooked up in a smoke-filled room, I am sure that we would have a new set of public servants in Congress after the next election.

Senator ROBERTSON, of Virginia, suggested that I propose the plan of open meeting to the board of directors of my newspaper and invite the reporters of competitive newspapers to sit in on all meetings of our board of directors. In reply, I reminded the Senator that American citizens, through considerable taxation, are stockholders in their Government and had the right to check on the actions of their public servants just as the stockholders of a newspaper have the right to check on the actions of their board of directors.

Senator IVES, of New York, wrote me that the quiet atmosphere, divorced from the temptation of public expression or political maneuver to gain advantage in the eyes of the public was much more efficient than a public sounding board. In reply, I asked this question: Which is better for the people, the harmony of the secret communistic government in Russia, or the turbulence of free, open democratic government in America? I think the answer to this question also would answer all of the questions involved in the quiet atmosphere of any secret meeting in government. We cannot afford to sacrifice the basic freedom of our country for expediency or because another way is speedier, easier, or more efficient. The world's history shows that once you sacrifice freedom, you regain it only through bloodshed.

Of the 62 Senators with whom I corresponded on this matter, only 25 stated they were for open committee meetings. And only 11 had the courage to state outright that they were opposed to the open meetings. The others hemmed about this qualification or hawed about that reservation. Thirty did not even condescend to answer my original letter.

Now, 25 Senators are not a very high percentage of the free world's greatest legislative body in favor of the free people's inherent right to know about their Government. And it is with great sadness that I tell you, after a number of years struggling with this national problem, that many other people, including some within our profession, think that a little secret government is all right.

Yet we can no more have a little secret government than we can have a little freedom, a little justice, or a little morality. Of course, we do not have absolute freedom, absolute justice, or absolute morality today. Yet our adherence to these great absolute principles, even though we yield a little here or compromise a little there in actual practices, has give the world the greatest free civilization of all time.

And I tell you with great personal conviction that should we ever veer away from our absolute principles of freedom, justice and morality, even though we occasionally compromise them in practice and in deference to human frailties, we will consign the great American experiment to that limbo of fallen civilizations.

So I tell you also, with equal conviction, that we in the newspaper profession are deeply obligated, under the precepts of free government, to fight with all our might for the absolute principle of freedom of information; for it is only through upholding that absolute principle, in the face of human frailties, that a free people can be guaranteed the maximum of information of government, so necessary to retention of freedom.

Speaking of human frailties, I am reminded of a school board in South Georgia, which closed its doors to both press and public last year. In defending the board's action, its chairman announced to the press, and I use his exact words:

"You are crazy if you think we are going to wash our dirty linen in public."

It is a great pity that we do not have such unadulterated honesty in our Federal Government today. There is, for instance, the question of our national security. No editor of the free American press will question the right of the free American Government to withhold that news which would endanger national security and give aid and comfort to the enemy. But every editor will question the right of the Federal politician to abuse this privilege by the withholding of legitimate news in the name of national security but which has nothing to do with national security.

Last May the House of Representatives Armed Services Committee locked its doors and held secret deliberations on the bill for a separate Air Academy. I wrote Representative DEWEY SHORT, of Missouri, then the chairman of the committee, about the matter of these locked doors. He replied that this was a classified matter and then he arrogantly demanded to know what right I had even in writing him. Yet as an American citizen who pays taxes, I could not help but wonder what political pressures were being exerted back of those locked doors, first by rival armed services, and second, over the matter of a site for the new academy. And certainly the complete revelation of all the facts and discussions on this important matter would not have given aid and comfort to the enemy.

I could go on for hours and hours citing similar cases wherein our Federal politicians have abused their privileges in the regulations to protect our national security. But my time is limited and before I close, I would like to dwell for a moment upon what the precedent of secret Government in our

Congress has done to the rest of American Government.

Our Congressmen may think a little secret Government in their committees is all right, yet this precedent has so spread in Washington today that we have developed a new philosophy of government. In most of our 2,000 Federal executive agencies and bureaus, Government largely is conducted behind the locked doors of the secret executive session; legitimate facts and records of Government are withheld; and the people are spoon-fed information only in the form of handout releases from Government press agents, which often are propaganda carefully devised to promote and prolong the political life and interests of the officeholder. More and more, our public servants, once elected or appointed, assume that the people's business is their private domain and that any critical voice raised against this philosophy is that of a deadly enemy.

Sixteen months ago President Eisenhower revised President Truman's Executive order giving the right to certain Federal officials to withhold facts of Government in behalf of national security. He eliminated the classification "restricted" but retained the three classifications of "confidential," "secret," and "top secret."

This should have released a mass of information, particularly from the Department of Defense, but it didn't work out this way. On June 1, 1954, a Department of Defense directive created a new classification for official use only, and it set forth the purpose to assure the proper custody, preservation and use of official information which requires protection in the public interest.

The Department of State a short time later adopted this same new classification of for official use only, and then stamped it upon even its press clippings.

But, in view of the precedent of congressional committee secrecy on matters of the people's business not concerned with national security, why shouldn't our other Federal governmental agencies protect the public by barring the people from even looking at the press clippings they save?

Why shouldn't the appointed public servants of the executive branch of our Government lock out the people from their procedures if the elected public servants of the legislative branch can get away with it? Where shall we draw the line on a little secret government?

Furthermore, the congressional precedent of secrecy is spreading to the lower levels of American Government. And, when a Georgia school board and North Carolina legislators rise up and announce that they are going to deliberate their people's business in secrecy just so long as Congress deliberates the American people's business in committee secrecy, then I say in all sincerity that the time has come for our Congressmen to examine their consciences over the matter of freedom of information, or the American people's right to know about their Government.

Thank you.

Postal Field Service Compensation Act of 1955

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4644) to increase the rates of basic salary of postmasters, officers, supervisors, and employees in the postal field service, to eliminate certain salary inequities, and for other purposes.

Mr. DONOHUE. Mr. Chairman, out of a sense of simple justice I am impelled to urge prompt passage of this bill, H. R. 4644, designed to extend a reasonable cost of living pay adjustment to our postal employees.

We all know that whenever the cost of living rises, as it has been doing for the past several years, persons with fixed incomes suffer the most. Some workers can obtain raises to offset at least a portion of the increased cost of living, but those whose incomes are stationary or whose salaries are set by law have serious trouble trying to keep up with rising prices and maintain their family on a decent living scale.

Such is the current predicament of our Federal employees. Their salaries are set by law, and it takes action by the Congress to raise their compensation. An important consideration in this connection is that while Federal employees may organize, they are not allowed to strike; and, to have the record present the truth on this subject, let us remind ourselves that they have never shown any disposition to strike. They have been content to rely upon a sense of fair play on the part of Congress and the general public.

May I also remind you that the best insurance against any misguided reception of false Communist propaganda by our Government employees is to wisely and practically extend them adequate salary compensation.

It is only ordinary commonsense and recognition of the facts of life that if our Government employees are sufficiently compensated to enable them to reasonably meet their personal and family obligations with confidence and a high morale, then there will be no doubt of their loyalty as good Americans and their repudiation of Communist ideas.

Two Hundred and Twenty-five Million Dollars for Housing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the New York Times of April 21, 1955:

TWO HUNDRED AND TWENTY-FIVE MILLION DOLLARS FOR HOUSING

The soundness of New York City's future in many respects, social and economic, depends on the clean-up of slums and the satisfactory supply of decent housing. Hence we welcome the $225 million housing plans, combining Federal and city aid, approved by the board of estimate.

Of the 14,915-family apartment units proposed 8,230 in nine projects would be federally subsidized low-rent dwellings. These might rent for about $10.50 a room and would be limited ordinarily to families whose income ranged from $3,000 to $3,700, depending on the number of children. The subsidy goes to keeping down the rent. The city housing authority pays yearly to the city, in lieu of real-estate taxes, an amount of money equal to about 10 percent of rental income after light and gas.

The no-cash-subsidy part of the new program will provide 6,685 dwelling units in 8 projects at a rental of perhaps $20 to $22 a room. Income limits to be eligible for these apartments have not yet been set, but similar, though less expensively constructed, housing allowed family income to range between $4,100 and $5,400, also depending on size of the family. The city receives taxes based on the value of the site (plus improvements) when acquired at the tax rate then current.

Neither of these types of public housing is an innovation. The no-cash-subsidy plan was used in the O'Dwyer regime. But the policy of combining low-rent and middle-income housing in the same area, as is planned in some cases, is a constructive departure. This should create a better-rounded community, and be a greater stimulation to improvement of the surrounding area.

Warren Moscow, executive director of the city housing authority, invites private capital to come in and supplant the city as builder of any of the middle-income projects under the newly liberalized tax-relief housing legislation approved by Governor Harriman. There is still plenty of work for private and public capital to do for housing in New York, and there is—we are happy to say—a great deal of building underway. There are sound reasons for the optimism Mayor Wagner expressed in a speech early this week about the city's future. The present stage of troubled self-examination and expenditure of greater exertion in several fields may later be seen to have been a turning point for the better.

Favor Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD a resolution adopted by the executive board of the Wisconsin State Council of Carpenters in support of the Hells Canyon Dam as a multiple power and irrigation project.

Following is the full text of the resolution:

Whereas Senate bill 1333, introduced by Senator WAYNE MORSE, of Oregon, and 22 other Senators, proposes the erection of a federally financed high dam at Hells Canyon which would develop the full hydroelectric potential of the site and, in addition, it would provide water for irrigation, navigation, and a maximum amount of flood control; and

Whereas the erection of a high dam at Hells Canyon would be far superior to the proposal of building a series of low dams: Therefore be it

Resolved, That the executive board of the Wisconsin State Council of Carpenters, assembled in semiannual meeting in Madison, Wis., on April 21, 1955, go on record favoring the enactment of Senate bill 1333 and the erection of a federally financed high dam at Hells Canyon; and be it further

Resolved, That a copy of this resolution be forwarded to all Wisconsin Representatives in Congress and to the Nation Hells Canyon Association, 1135 East Salmon Street, Portland, Oreg.; to Senator JAMES E. MURRAY, chairman, Interior and Insular Affairs Committee; to Senator WAYNE MORSE; and to the general office of the United Brotherhood of Carpenters and Joiners of America at Indianapolis, Ind.

Editorial Tribute to Bishop G. Bromley Oxnam

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. NEUBERGER. Mr. President, the Oregon State System of Higher Education, under the able direction of Chancellor Charles D. Byrne, has stood firm for academic freedom and open discussion, in having Bishop G. Bromley Oxman and Dr. J. Robert Oppenheimer speak on the Oregon campuses.

Despite the threats and attempts to stifle free discussion by a small minority, Oregon, unlike her neighboring State university, has stood firm.

Bishop Oxnam spoke in Portland at Portland State College, under the auspices of Methodist Bishop A. Raymond Grant, an outstanding churchman and religious leader.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able editorial of April 14, 1955, from the Register-Guard, of Eugene.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW SUBVERSIVE WAS THE BISHOP?

The Eugene Freedom Club, in a mimeographed bulletin circulated by mail, criticizes this newspaper for incomplete reporting. The club complains that our precede stories about the university appearance of Bishop G. Bromley Oxnam failed to include specific information about the subversive organizations and publications with which he had been associated. To a degree we plead guilty. At the same time we look askance at the report of the Freedom Club. Charges, we think, should not be published without an answer to those charges, when such answers are available.

It is of the greatest importance that the bishop was not summoned to testify before the House Committee on Un-American Activities. He asked to appear to clear up matters that had caused the committee to mention him unfavorably over a period of 7 years.

The bulletin points out that Congressman DONALD JACKSON, of California, called the bishop "one who served God on Sunday and Communist fronts the balance of the week." More of this quotation should be used to give a better picture of Mr. JACKSON. After referring to the bishop as a gentleman who now presumes to criticize the work of your House committee in its investigation of identified Communists, Mr. Jackson said:

"Bishop Bromley (sic) has been to the Communist front what Man-O'-War was to thoroughbred horseracing, and no one except the good bishop pays much attention to his fulminations these days. Having served God on Sunday and the Communist front for the balance of the week over such a long period of time, it is no great wonder that the bishop sees an investigating committee in every vestry."

The Freedom Club bulletin sets out that the bishop was associated with seven organizations and publications it calls "subversive." Also, it says, there are 8 more which it doesn't list. Let's look at the 7:

"1. The National Council of American Soviet Friendship. During the war he addressed a meeting of this group. Also at the meeting were Edward Stettinius, Jr., the Earl of Halifax, Henry J. Kaiser, Philip Murray, William Green, A. F. Whitney, and Serge Koussevitsky. Messages came from Generals Eisenhower, Devers, and Patch. In November 1945, General Eisenhower said in a message to the council, "I wish your council the utmost success in the worthy work it has undertaken." After the war Bishop Oxnam resigned from the group.

"2. The Protestant and the Protestant Digest, magazines cited as subversive. He was an editorial advisor for a short time, although he never attended a board meeting. He resigned February 11, 1942, when he suspected the publications might be party line.

"3. Soviet Russia Today, another magazine. He wrote an article for it in April 1945, before the European war was over. Two United States Senators also contributed.

"4, 5, and 6. The American Committee for Spanish Freedom, the Medical Bureau and the North American Committee to Aid Spanish Democracy. These organizations flourished during the Spanish civil war. He belonged because "I despised Franco and that entire regime, just as I did Stalin and the regime in Russia today." He contended that at the beginning of the Spanish war the Nazis were not supporting Franco and the Communists were not supporting the Spanish Republicans. He argued it was proper for a clergyman to be interested in aiding victims of war.

"7. The Methodist Committee for Social Service. The bishop questions the subversive character of this organization at the time he belonged. There appears to be a confusion between this group and the Methodist Committee for Social Action, a later group with which he was not connected and for which he makes no defense."

These facts ought to be as important in a discussion of the bishop's background as the fact that he was cited by the committee. When the bishop was here this week he complained that the Velde committee was "less interested in getting facts than in getting me." The same criticism, it appears, may be leveled at the Freedom Club.

Tuesday morning the bishop read the Freedom Club's bulletin and said, "My oh my. How do they spend their time?" It's an excellent question.

Thanks to My Sons in the Service

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very outstanding letter to the editor, written by Mrs. George Poppen, of Carthage, S. Dak., and printed in the Daily Plainsman, of Huron, S. Dak. The Members of Congress who have voted on the question of requiring military service will find that one mother has put into words what millions of parents must have felt in greater or lesser degree.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

"SO LONG"

To the EDITOR:

I just said "so long" to my youngest son, for what I hope to be the last time while he is in the military service. We had a wonderful month together while he was home on Navy leave, after 30 months, 29 of them spent at NSC, at Pearl Harbor. He is no longer the boy who entered the Navy 3 years ago, but a man with grown up thoughts and ideas.

He will soon be free to make plans for the future, like attending college and taking up a profession or whatever the future has in store for him. He like his brothers before him had to give a few years of his life to Uncle Sam. One served in the Army during World War II and another served in the Navy, part of that time in the Korean incident.

I am not a hero mother. Each time one of them had to leave I would have stopped him if I could. Had heard about boys getting deferred, but strings always had to be pulled, besides didn't know what strings to pull. Like many mothers I voiced the thought "why mine, some don't have to go." After each one graduated from high school there was always that universal call from Uncle Sam to be reckoned with first of all.

So I said "so long" time and again.

Army basic, Navy boot, at least my vocabulary was enlarged, words I never knew existed became household language.

Short furloughs, hectic days mostly from the day of homecoming until that awful day of parting again. Now for me that is nearly over. I can look back with a mixture of feelings. The heartache and tears are in the past now, and a feeling of pride is coming to the fore.

Bad as I hated to see them go I know now I was proud of them because they were going out to do their bit for our great country. Sure, they did no more than what thousands of other mothers and sons have done or are doing, but we all feel that our boy is a bit special.

I was proud of their letters, of each new rate, of little gifts. How many get a corsage of orchids all the way from Hawaii to wear to a mother-daughter banquet? When something hurt them I hurt and when things were going smooth I was happy. I learned about boot and basic, bivouac, hit the deck, and short timers' attitude, etc., thanks to my sons in service.

Right now there is a lump in my throat, but remembering past experiences, I know there will soon be letters telling about new interests. New duty, new officers, most of them fine understanding fellows, new buddies, and of a happy meeting with an old one. Best of all soon I shall share plans for the future, be it school or a job.

It's "so long" today, but in a few months there will be "Hi, Fritz" welcome home.

MRS. GEORGE POPPEN,
Carthage, S. Dak.

To Private Hands

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial by Mr. Phil

Bladine, published in the McMinnville (Oreg.) Telephone Register:

TO PRIVATE HANDS

With completion of the sale of 24 synthetic-rubber processing plants the Government has taken itself out of still another business. The Government built the synthetic rubber plants early in World War II to overcome the loss of natural rubber sources.

More than $700 million in Federal funds was poured into the project, but because of the urgency of the need there was little inclination to count the cost. Experiments to produce natural rubber had gone on for years without results. The wartime program produced a usable product in a matter of months.

Despite the fact that the plants were built under the most extravagant conditions, the rubber plant disposal board has realized more than $300 million in the sale.

Leftwing criticism that the Government's disposal action has fostered concentration of rubber manufacture in a few giant corporations is unfounded. Buyers have included the Big Four in the rubber industry—Firestone, Goodyear, Goodrich, and United States Rubber—as well as several syndicates. This disposition of the plants will lead to more intense competition among rubber manufacturers on a more equal footing. What critics of the sale who shout "monopoly" favor is Government monopoly.

Sale provisions set up by Congress require the new owners to guarantee continued supplies for small business, to produce a minimum of 500,000 tons of general-purpose synthetic rubber annually and to return the plants to the Government in event of a national emergency affecting rubber supplies.

But the basic provision is Washington's restoration of ownership of a prime industrial actively to private hands.

Postal Field Service Compensation Act of 1955

SPEECH
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4644) to increase the rates of basic salary of postmasters, officers, supervisors, and employees in the postal field service, to eliminate certain salary inequities, and for other purposes.

Mr. FINO. Mr. Chairman, during the 83d and the present Congress, I introduced legislation providing a substantial pay increase for postal employees. I have consistently supported a pay raise of at least 10 percent for all Federal employees.

I would therefore like to state my reasons for voting against the inadequate pay raise and reclassification bill reported out by the Murray committee and against the amendments offered by the gentleman from California [Mr. Moss].

I believe that the amount provided in this bill as amended, is insufficient, inadequate, and unfair to postal workers. I feel that these faithful public servants are entitled to an increase of at least 10 percent and I regret very much that the Members of the House have not been permitted to vote for that increase as provided in S. 1 when that bill passed the Senate.

Because of my strong feelings in this matter, I cannot, in good conscience, vote for the small increase provided by the House version of this legislation as presented to us today. Further, it is my conviction that post office employees should not be forced to accept a reclassification plan they do not want.

Tribute to Tamara Jaffe, Queen of Annual May Festival at Lewis and Clark College

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. NEUBERGER. Mr. President, a success story, created by hard work and deep suffering, including escape 10 years ago from the bonds of communism, is the story of Tamara Jaffe, who will be crowned queen of the annual May festival at Lewis and Clark College, Portland, Oreg., May 6 and 7.

Tamara Jaffe stands as proof of the important and exceptional contributions new Americans are making in our cultural and social life.

Meriwether Lewis and William Clark, for whom Lewis and Clark College was named, stand as honored names this year as our Nation celebrates the sesquicentennial of the completion of the great Lewis and Clark Expedition.

Mr. President, it is with much pleasure that I ask unanimous consent to have printed in the Appendix of the RECORD this tribute to Miss Tamara Jaffe from the columns of the Oregon Journal of April 14.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GIRL WHO ESCAPED REDS CHOSEN COLLEGE QUEEN

Tamara Jaffe, who 10 years ago escaped from the Communists and started life anew in the United States, will reign as queen of the annual May fete at Lewis and Clark College May 6 and 7.

For Tamara, the festival will be 2 days of happiness, something she has known little of in her 22 years of life.

Born of Russian parents in Berlin, Germany, Tamara, with her mother and two brothers, was deported to Siberia in 1941. There, they spent 4 years of primitive existence on a collective farm. Her mother and brothers eventually died of the rugged life, cold weather, and poor food.

To escape the Communists, Tamara finally posed as the adopted daughter of a British woman and, with the help of the British Ambassador, they fled through Finland and Sweden and then to England. After nearly a year in a London boarding school she received permission to come to Portland to join her father, Boris, whom she had not seen in 7 years.

The pretty brunette speaks German, French, Spanish, and Russian in addition to near-perfect English. She is a political science major and plans for a career in the United States Foreign Service after graduate study.

Tamara cooks and keeps house for her father, sews and works after school as a salesgirl in a downtown store.

Others in her court are Catherine Delistraty, Portland, and Joanne Forstrom, Centralia, Wash., crown princesses; Elsie Baker, Portland, senior princess; Alice Schmidt, Lebanon, junior princess; Marilyn McLean, Tigard, sophomore princess; and Verle Pilling, Portland, freshman princess.

Tidelands

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. HÉBERT. Mr. Speaker, George W. Healy, Jr., editor of the highly respected and influential New Orleans Times-Picayune, has rendered a public service in having reproduced a series of editorials on the subject of the explosively controversial tidelands issue. I hope I will render a service in having these illuminating editorials reproduced here and spread on the pages of the CONGRESSIONAL RECORD.

The New Orleans Times-Picayune has never faltered in its stalwart support of the individual States in their fight to retain title to that which they lawfully possess. Now that it has been determined by the Congress that the States do have the right of possession to their tidelands, the new issue of just what do the tidelands consist has been raised by those diehards who refuse to accept the decision of the Congress in its full meaning and embrace. While one part of the fight has been won, much remains before a full and complete victory becomes final.

The consistent fight of the New Orleans Times-Picayune has been one of the brightest spots in the unfaltering battle to retain for the individual States that which belongs to them. The position of the New Orleans Times-Picayune in this instance only reflects the position which it has consistently taken whenever the rights of the individual States have been challenged or involved. Its editorials have always spoken out against violation in any form of the fundamental principle that each State of the United States is a sovereign State.

Any comment on the long and hard fight to restore the tidelands to the States would be incomplete without mention and full recognition of the role played in the fight by Judge Leander H. Perez, of Louisiana. True, there were many who contributed their full ability to the fight to restore the tidelands. The roll will be long when called but at the head of the list will be the name of Judge Perez.

When others grew feint of heart and others were tempted to compromise, and still others were frustrated to the point of surrender, it was Judge Perez who

never even momentarily faltered or hesitated. Even today when there are those who would settle for less than what rightfully belongs to them, Judge Perez stands as the uncompromising foe who of any individual or any group who would take an infinitesimal part of that which rightfully belongs to the individual States.

Fighters like Judge Perez are necessarily positive and determined men. Their objective is the success of their cause and not the niceties and subtleties of the suave compromiser or the clever manipulator. These kind of men and these kind of leaders fight to the death for that in which they believe. So it is with Judge Perez, and better is his State and his Nation for such a fighter. There are those who will disagree with him but there are none who will challenge his courage and his determination nor his resourcefulness in battle. I again salute him.

Here are the series of the New Orleans Times-Picayune editorials to which I have referred:

ALL WANT MINERALS MONEY; FLOW SHOULD BE INCREASED

Three recent developments in the situation affecting revenues received by the State of Louisiana from offshore minerals, it seems to us, merit extended comment.

First of these was the repeated statement by Secretary of the Interior Douglas McKay that Louisiana's tidelands claim is one based on a 3-league, rather than a 3-mile limit. Although, after prompting, the Secretary said that he had intended to testify before the House Appropriations Committee that the Federal Government claims title to submerged lands beyond a line 3 miles from the Louisiana coast, his actual testimony to the contrary appears to us to have been significant.

The second of the developments was the issuance of a statement by Fred S. LeBlanc, attorney general of Louisiana, that the State will go to court relatively soon to sustain Louisiana's boundaries. It is and should be the State's contention, in our opinion, that the Louisiana boundary is 3 leagues, slightly more than 10 miles, beyond the coastline.

Third of the developments was a continuing action by State and city agencies to find ways to spend the money which Louisiana is receiving from offshore minerals. Most recent of the spending suggestions was a recommendation by city officials of New Orleans that tidelands oil revenues be used to pay part of the cost of a new incinerator here.

For many months this newspaper has contended that first call on money received through the sale of the State's mineral wealth should be conceded to elimination or reduction of the staggering State debt.

To exhaust the mineral resources of Louisiana without reducing the debt of Louisiana, we submit, would be worse than folly.

The joint committee of the Louisiana Legislature which is headed by Senator W. M. Rainach has accepted suggestions that tidelands money be used to retire the public debt, with amendments.

This committee believes that the money should be used three ways: One-third to retire the State debt, one-third to improve the State school system, and one-third to build and maintain highways.

A firm dedication of the minerals revenue to the purposes recommended by this committee, it seems to us, would be wise. Certainly it would prevent dissipation of the windfall which won't last forever to pay inflated current expenses.

In the first quarter of 1955, royalties, bonuses and rentals received by the State from its mineral lands aggregated $33,908,707. These figures were obtained from the office of Mrs. Ellen Bryan Moore, register of the State land office.

Of this income, slightly more than $14,800,000 was from offshore minerals and more than $19 million was from inshore royalties, bonuses and rentals.

If the rate of the first quarter is continued throughout 1955, the State's income from its minerals—exclusive of severance taxes—will exceed $130 million.

This income, of course, is tremendous; but in the opinion of students of the situation, Louisiana still is not receiving its just returns from minerals being severed from submerged lands off its shores.

One of these students, Leander H. Perez, is convinced that a positive stand by the State to protect its claim to all lands within its historic boundaries should substantially increase the revenue realized by the State from its minerals.

An elaboration of this thesis will be presented in succeeding editorials in this series.

DOES STATE GET JUST SHARE?

As interpreted by laymen, including President Eisenhower, the Tidelands Act of 1953 was intended to restore to the coastal States their offshore lands whose title was placed in question by a United States Supreme Court decision. This decision held that the Federal Government had "paramount rights" in these lands.

To a large degree, the desired result has been achieved. Enactment of the legislation which had support of the Eisenhower administration opened up development of offshore oil and gas fields which had been halted by the efforts of the Truman administration to take over the tidelands for the Central Government.

In the first quarter of 1955 the State of Louisiana received approximately $15 million as its share of royalties, rentals, and bonuses from offshore mineral leases.

The greater number of these leases, if not all of them, were within 3 miles of the State's coastal line—that is the coastline established by the United States Coast Guard as marking the end of inland waters and the beginning of the open sea.

Despite the language of the Tidelands Act referring to the State's coast, lessees holding mineral leases within this coastline established by the United States Coast Guard paid oil royalties to the Federal Government, instead of to the State on approximately 20 million barrels of petroleum produced under 42 State leases up to December 1954.

Collection of this revenue by the Federal Government, as we see the situation, reflects an attitude in Washington which is not justified by existing or past circumstances.

We believe that the State is entitled to revenues from all lands between its shores and a line 3 leagues beyond its coastline. Certainly, as we understand the situation, Louisiana is entitled to all revenues from lands within its coastline.

The Federal position, it seems to us, is founded on a contention that there is something indefinite or obscure about the phrase "coastline."

Under an act of February 1807, Congress authorized the President to cause a survey to be taken "of the coast of the United States, in which shall be designated the islands and shoals, with the roads or places of anchorage, within 20 leagues of any part of the shores of the United States."

This act, obviously, emphasized the difference between "shores" and "coast or coastline."

Under a later act of Congress the United States Coast Guard was authorized to, and did, establish the coastline of Louisiana—as well as of other States. This line is the same line as that redefined under Louisiana law. It extends from Chandeleuer Lighthouse in a curved line following established aids to navigation, including Pass-a-Loutre lighted whistle buoy 4, South Pass lighted whistle buoy 2, Southwest Pass entrance channel lighted whistle buoy, Ship Shoal lighthouse, Calcasieu Pass lighted whistle buoy 1, and Sabine Pass lighted whistle buoy 1.

Some of the revenues going to the Federal Government instead of to the State government are from leases on submerged lands within this well-defined coast line.

When Attorney General Fred S. LeBlanc goes to court to "sustain Louisiana's boundaries," it seems to us he should seek to establish the State's claim to this particular mineral revenue.

LOUISIANA'S CLAIM TO LAND 3 LEAGUES FROM COAST

Under the Tidelands Act of 1953 "title and ownership of the lands beneath navigable waters within the boundaries of the respective States, and the natural resources within such lands and waters" were "vested in and assigned to" the respective States.

A section of the Tidelands Act provided further that the "seaward boundary of each original coastal State is hereby approved and confirmed as a line 3 geographical miles distant from its coastline." This section provided also, however, States admitted to the Union after its original formation might establish such boundaries but that "nothing in this section is to be construed as questioning or in any manner prejudicing the existence of any State's seaward boundary beyond 3 geographical miles if it was so provided by the Constitution or laws prior to or at the time such State became a member of the Union, or if it has been heretofore approved by Congress."

The latter provision apparently was intended particularly for the benefit of Texas, which was a republic before it became a State—under a treaty establishing its boundary 3 leagues, instead of 3 miles, beyond its coast line.

This provision appears to us to apply also to Louisiana, giving this State title to submerged lands 3 leagues beyond its coast line.

Reason for this interpretation is the language of the act of Congress of April 8, 1812, under which Louisiana became a State of the Union.

This act of admission established the seaward boundary of the new State at "three leagues of the coast."

That the Congress acknowledged that it could neither take away from nor add to a State's territory was manifested a few days later, on April 14, 1812. On this date the Congress added to Louisiana lands which had been claimed by Spain, which are known today as the Florida parishes, "in case the Legislature of the State of Louisiana shall consent thereto."

The Louisiana Legislature subsequently did "consent to" the Florida parishes being added to the State.

In view of the language of the act which admitted Louisiana as a State and of Congress' acknowledgement that it lacked the power to take from or add to a State's territory, without its consent, it seems to us clear that Louisiana had a boundary more than three miles beyond its coast line "at the time such State became a member of the Union."

During prohibition it was generally understood that the Federal Government had no jurisdiction "beyond the 3-mile limit." This understanding was shaken, of course, by the "I'm Alone" case—in which the rum-running boat I'm Alone was captured far beyond this "3-mile" limit.

Whatever the origin of this popular conception or misconception, it has no support in the language of the 1783 Treaty of Inde-

pendence, which settled the Revolutionary War and fixed the boundaries of States then bordering the Atlantic Ocean and the Great Lakes.

Probably because the Atlantic coast States had substantial interest in fishing, the boundaries of the original States touching that coast were fixed by the treaty at "20 leagues from shore" into the Atlantic Ocean.

The Continental Congress on August 4, 1779, had instructed the treaty commissioners of the Continental Congress to insist on the 20-league boundary as an ultimatum.

Before Louisiana was admitted as a State, with a boundary three leagues from its coast, the area of the Louisiana territory—as shown by early maps—extended even farther into the Gulf of Mexico, to the edge of the Continental Shelf.

It seems to us that State officials are obligated to maintain Louisiana's right to the submerged lands three leagues beyond its coastline.

SHOULD RESIST BUREAUCRAT ATTEMPTS TO FIX BOUNDARIES

Several years ago, during the Truman administration, an agent of the United States Department of the Interior prepared a map of the coast showing where the Department believed Louisiana State jurisdiction ended and Federal jurisdiction began.

This newspaper published that map, with the comment that—by strange coincidence—the line drawn by the agent to divide State lands from Federal lands cut across the entrances of bays in which there was no oil production but drove deep into bays and coves where there were producing oil wells.

Judging by dispatches from Washington, there still are employees in the Interior Department who think that they have the power to determine where Louisiana's lands stop and where Federal lands begin.

As a matter of record, the Federal Government had little, if any, interest in the so-called tidelands until oil was discovered in submerged lands off the shores of California and Louisiana.

Also as a matter of record, the Federal Congress never has given to the Department of the Interior the power to establish State boundaries or, for that matter, to fix coastlines. Congress first made the President responsible for establishing coastlines. Later the responsibility was shifted, by law, to the Secretary of the Treasury and then to the Secretary of Commerce and, finally, in 1946, to the commandant of the Coast Guard.

An attempt was made to legally authorize the Secretary of the Interior to "define and publish lines" marking areas of State jurisdiction, but this authority was taken out of the Tidelands Act of 1953 before its final passage.

Nevertheless, Washington correspondents, including this newspaper's Paul Wooton, have been informed that the Department of the Interior is having its agents make aerial pictures, draw maps, and perform other work to "establish State boundaries." This apparently is being done on the theory that the Department of the Interior has authority to decide what oil belongs to the States and what oil belongs to the Federal Government when petroleum is produced from offshore lands.

This theory, we contend, has no basis in law and should be discarded, in addition, on the basis of practical considerations. The record of the department of the interior in handling Federal oil lands, before the adoption of the Tidelands Act of 1953 and of the companion statute which provided for the department's leasing of mineral lands in the outer continental shelf, was far from brilliant. Federal oil lands were leased for 50 cents per acre when adjoining State and private lands were leased for many dollars per acre.

Just because the Federal department received a surprising $250 million when it opened its first bids for leases on the Outer Continental Shelf—after adopting bidding procedures formerly used only by the States—is no justification for it to follow bureaucratic precedent and try to take in more territory than the law allows.

The only authority which the interior department has to justify its recent actions is an interim agreement reached with Gov. Robert F. Kennon and members of the State mineral board.

This "interim agreement" was reached, dispatches reported, "in an atmosphere of mutual cooperation" on September 28, 1954, to prevent State and Interior Department officials from seeking bids for leases on the same tracts of land.

At that time Governor Kennon said that the State government and the Federal Government should seek some agreement on what is the shoreline of Louisiana. Since the Tidelands Act is concerned with the State's coastline, rather than its shoreline, and since the Coast Guard definitely has established the State's coastline, it is difficult for us to comprehend why officials of either the Federal Government or the State government should be bothering about a shoreline.

The Tidelands Act itself defines coastline as the seaward limit of inland waters. This is the line as defined and established by the Coast Guard and, obviously, is a definite line. In most places the Louisiana shoreline is an indefinite, shifting line—depending on tides, wave wash, accretion and other factors.

The full definition of coastline contained in the Tidelands Act is: "The term 'coastline' means the line of ordinary low water along the portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters."

As we view the situation, there is nothing vague or complicated about this definition.

Since the act of Congress which admitted Louisiana as a State in 1812 fixed its seaward boundary within 3 leagues of coast, since the Coast Guard established the State's coast line, and since the Tidelands Act restored to the States lands within their historic boundaries, there seems to us no justification for discussion of shore lines or other factors which should have no bearing on the matter.

The "interim agreement" reached by the State and Federal officials, we believe, should be discarded in favor of a permanent agreement, in which the Department of the Interior should recognize the realities of both the letter and spirit of the Tidelands Act of 1953.

Secretary of the Interior Douglas McKay, in an appearance before the House Appropriations Committee, recently said that 3 leagues, instead of 3 miles ,applied to Louisiana as well as to Texas—in the determination of off-coast State boundaries.

The printed report of the executive hearing contained the following:

"Mr. MAGNUSON. Mr. Secretary, I would like to ask you further about the drilling off the coast of Louisiana. This is, of course, outside the limit of 3½ miles.

"Secretary MCKAY. It is 3 leagues down there, Congressman MAGNUSON.

"Mr. MAGNUSON. I was under the impression that the 3 leagues only applied in the case of Texas.

"Secretary MCKAY. It applies both in the case of Texas and Louisiana.

"Mr. MAGNUSON. It applies in both States?

"SECRETARY MCKAY. Yes, sir.

An attorney for the Interior Department immediately expressed belief that Secretary McKay had made a "slip of the tongue." Next day Secretary McKay wrote the committee chairman saying that the Department supports the contention that the Federal Government owns lands "3 geographical miles off the coast of Louisiana."

Secretary McKay, it seems to us, was correct when he said, "It is 3 leagues down there, Congressman MAGNUSON."

A Congressman's Periodical Report to the People of Cleveland and Ohio

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert my address delivered over radio station WHK, Cleveland, on April 24, titled "A Congressman's Periodical Report to the People of Cleveland and Ohio":

During the past week there have been many interesting and indeed important events on the Washington scene. There have been developments in the international field, with which we are very much concerned, because they have a direct bearing on the security and well-being of each and every American.

Last week was highlighted by a dinner honoring SAM RAYBURN, Speaker of the House of Representatives, which brought together some 3,500 leaders of the Democratic Party from all 48 States. Former President Truman was among the speakers and he gave every evidence that he had lost none of his old fire and persuasiveness as a campaigner. There was an atmosphere which gave every indication that the rank and file membership of the Democratic Party is looking forward to a new and inspired leadership within the ranks of the party. The inspiration of Thomas Jefferson and Andrew Jackson and Woodrow Wilson was in abundant evidence at this national Democratic dinner and I have every reason to believe that the party will present to the people in 1956 a program based upon the great ideals expressed by Jefferson, Jackson, and Wilson. The Democratic Party, by its tradition, has offered the best leadership toward the goal of world peace with freedom and justice for all.

Congress debated the appropriation bill for the United States Information Agency. During the debate, I made one basic criticism. My criticism was that we have failed to fully understand the tremendous power for good inherent in the United States information programs and the relationship they have to the urgent question of peace or war. I believe that most Americans are agreed that the crisis which now grips the world is best described as a struggle for the hearts, the minds, and the allegiance of all the people of the world. On the one hand, the forces of human freedom of which we are a leading part, seek to show all the people of the world that they can attain their aspirations more quickly and more surely by their association with us. On the other hand, the evil forces of despotism as represented by Communist imperialism, seek to lull mankind into a deep slumber during which time the chains of slavery will be thrown over the entire world. In this struggle, I brought to the attention of the Members of the House that the Russians spent somewhere between $1 billion and $1½ billion a year on their false propaganda programs as compared with $77 million appropriated last year for all our information programs.

As a practical example of the way Russian propaganda works, I pointed out that in 1953 alone, the Russian Communists published over 1 billion propaganda books in 40 different languages which were used to penetrate every nation on the face of the globe. These publications put out in pamphlet and book form, sold for a price of from 5 cents to 50 cents—books which obviously would cost several dollars to reproduce—but which the Russians subsidize in order to promote their propaganda line.

I reminded Members that it did not take Congress long to recognize that there was great power for good or for evil in the new force called nuclear energy, which caused Congress to establish a Joint Committee on Atomic Energy to make certain that this great force would be kept in the hands of the American people. I, therefore, urged that Congress establish a joint committee on international information programs in order that they might be placed on a level and scope commensurate with their importance to the urgent question of peace or war. There is no doubt in my mind that ideals such as we Americans cherish and their transmission to the multitudes of people throughout the free world, form a weapon in the struggle between the forces of human freedom and those of Russian slavery, which ideals may, in the end, be more powerful and conclusive than nuclear energy. I intend to push this measure in Congress until there is created such a joint committee, because I believe we have a lot to learn in the field of propaganda if we are to make rapid progress toward our national goal of peace with freedom.

On January 24 I appeared before the House Ways and Means Committee to testify on H. R. 1. H. R. 1 is the Trade Agreements Extension Act of 1955, a bill to extend the trade agreements authority of the President for another 3 years, and among other things, to permit him to negotiate tariff reductions up to 5 percent during that period. At the time this bill was first under consideration there was strong indication on the Washington scene that Harold Stassen, who has just been relieved of his duties in connection with the Foreign Operations Administration, was advocating either the giving or selling of our surplus food stocks to the Russian despots. He was advocating this ill-advised maneuver under the slogan—"Barter Butter for Manganese." From my long-time study of the Russian Communist empire and the struggles of the enslaved people against their rulers, I felt compelled to appear before the House Ways and Means Committee to impress upon them that if we were to give or sell any of our surplus food stocks to the Russian despots, we would be doing a great disservice to the enslaved people who are struggling to defeat communism and to regain their freedom and independence. I also pointed out that one of the greatest weapons the people have against the despotic regime is that of withholding food from the state which would bring about a crisis within the empire because food shortages bring about grave and sweeping discontent and further opposition. Several days ago Moscow admitted to the world in an editorial appearing in Pravda, leading Communist mouthpiece in Moscow, that the farmers within the Red colonial empire had wrecked the planned agricultural economy and appeared bent upon forcing a crisis within the Communist empire. Pravda revealed that the farmers are withholding more food stocks than they turn over to the state, and that these food stocks are consumed by the farmers, given to their friends, or destroyed. While Pravda called for grave punishment of all the farmers because of their wrecking the production program, by the same token it was forced to admit that the farmers of Ukraine, Bylorussia, Lithuania, Turkestan, and the other non-Russian nations of the Soviet Union were engaged in a constant struggle against the tyrants of Moscow, and that they were doing so at grace risk to their own lives. How anyone, including Harold Stassen or others within the Eisenhower administration, could possibly think of selling or giving our surplus food stocks to the Soviet Government in light of these established facts, is beyond me. The Eisenhower administration is supposed to stand up for a program of liberating the captive non-Russian nations from communism, and it had better not be tempted by the lush profits held out by the Russians as a reward for trading or exchanging our surplus foods for their low-grade manganese.

On the international scene, a great deal of attention was focused on the Afro-Asian Conference taking place this week at Bandung, Indonesia. This is the first time in history that the nations of Asia and Africa have ever come together for the purpose of discussing common problems or common aspirations. Before this conference opened, there were some misgivings that this conference could do little more than criticize Western civilization for its past implication in colonialism and imperialism. Much of this apprehension was due to the fact that Chou En-lai, the notorious Chinese Communist conspirator, along with Nehru of India, were among the sponsors of this conference. There was no doubt in any one's mind concerning Chou En-lai and his and his evil deeds of the past, but Premier Nehru has been a big question mark in the minds of statesmen who earnestly seek peace and freedom, because of Nehru's truculence and his unquenchable thirst to become spokesman for a large segment of mankind. These misgivings have, in large measure, been dissipated, because of the courageous and foresighted stand taken by the statesmen of Egypt, Iraq, the Philippines, Pakistan, Ceylon, Indonesia, Turkey, Afghanistan, and others. The leading spokesman for the people of Asia and Africa did not hesitate to identify Russian communism as a new type of colonialism—a type of colonialism far more dangerous and more tyrannical than any form of colonialism or imperialism yet visited upon the human race. Many of the great Moslem leaders spoke out with spirit, condemning communism because it denied God in the affairs of man. Still others made it clear that the new and inspiring era of national independence which has finally come to South Asia and Africa must defend itself against the new Russian colonialism—and that to preserve their national independence, these nations must develop common programs of security and economic advancement. In my opinion, the Bandung Conference boomeranged against the Russian despots and isolated the Russian stooge, Chou En-lai. Moreover, it should serve as a practical object lesson for the vacillating Nehru, whom we hope will now give up his precarious fence-sitting of neutralism and join the forces of human freedom and progress.

In my judgment, the Bandung Conference did much to break up the Communist propaganda that there is a wave of the future, namely, that Russian communism will eventually triumph and for that reason, it is smart to aline yourself and your nation with Russian communism. Russian propaganda boasts its great conquests over 800 million people covering one-third of the world's surface. This so-called wave of the future has been stopped by United States aid to Greece and Turkey, its assistance to Iran, our Berlin airlift, and our fight in Korea. The efforts of the Bandung Conference to break up the Communist free ride on the wave of the future may very well have set a new course which will, in the end, upset Moscow's timetable, for enslavement of these newly independent nations.

The House passed a bill to increase salaries of post-office employees. The administration recommended an average salary increase of 7.6 percent. However, an amendment by Congressman Moss, Democrat of California, was adopted, raising the average salary increase of 8.278 percent. The major difference created by the Moss amendment is that before the amendment was adopted the bill carried an average of only 6.7 percent increase for the majority of the employees. The Moss amendment brings the increase up to where all of the employees in the lower grades will receive approximately the same percentage of increase in their annual salaries.

The Senate Labor Subcommittee conducted hearings to increase the minimum hourly wage in interstate commerce which is now a penurious 75 cents. The administration advocates 90 cents per hour. Others more realistic to the needs of workers and heads of families and the increased cost of living advocate $1.25 per hour to which I subscribe.

The House authorized the construction of 24 combatant ships, including a new *Forrestal* type carrier, about 60,000 tons, which will be the fifth of its type. Also authorized were 3 atomic submarines, 10 auxiliary ships, and the conversion and modernizing of 28 ships, some into guided missile ships, the total cost is estimated at $1,317,000,000.

Upper Peninsula of Michigan a Highly Desirable Site for Industry

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article from the March 18 edition of the Ironwood Daily Globe, of Ironwood, Mich., setting forth very clearly why the Upper Peninsula of Michigan is a highly desirable site for industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UPPER PENINSULA CALLED A PROFITABLE SITE FOR INDUSTRY—LOW-HUMIDITY WEATHER IS LABELED "HEALTHFUL AND INVIGORATING" ASSET—INDUSTRIAL REALTORS PRAISE CHARACTER OF RESIDENTS IN REPORT

DETROIT.—Industries pointing toward "more efficiently serving the vast Midwest and Northwest markets" were told today they could "profit handsomely during the next decade" by building in Michigan's upper peninsula.

The advice came in a report by the Michigan chapter of the Society of Industrial Realtors on an upper peninsula survey.

It described the upper peninsula as one of the few remaining "industrial location frontiers in a good general marketing area," and said that its low-humidity weather was "healthful and invigorating" and an industrial asset.

"Within 500 miles of the upper peninsula," the report said, "are 50 million users and consumers of a wide variety of manufactured products—a tremendous market, easily reached."

Cooperating with the Society of Industrial Realtors (SIR) in its survey were the United States Department of Commerce, the Michigan Economic Development Department and the Upper Peninsula Development Bureau.

It is entitled "Industry Location Advantages of Michigan's Upper Peninsula."

The report says that the most numerous industrial opportunities are for those industries which would utilize the area's considerable natural resources of forest products, farm crops, and minerals.

It listed as available minerals: limestone, dolomite, feldspar, andalusite, talc, asbestos, iron oxide, lake clay and lake sands, as well as copper.

"These opportunities," is says, "include increased lumber manufacturing and greater use of veneer logs now being shipped out."

It adds: "There could be future possibilities of petro-chemical industries resulting from the crude oil line now traversing the area."

The report continues:

"Industries such as light metal manufacturing, electronic and scientific instruments, and other fabrications requiring skillful, capable workers have good opportunities.

"Any additional technical manpower needed for these would be attracted by the area's excellent living conditions.

"One of the most important single industry location advantage of the Upper Peninsula is the character of its residents. Their records in many diverse industrial employments show a high worker productivity—10 to 15 percent above that of other areas—an adaptability to changing production methods, and excellent attitudes toward their jobs."

Turning to the Upper Peninsula's weather, the report said that the climate throughout the year is healthful and invigorating, and added:

"Stories on weather endeavor to portray the unusual. Consequently the occurrence of an occasional low winter temperature or a heavy snowfall in the upper peninsula is interpreted with considerable misunderstanding.

"Temperatures are moderated by the bordering Lakes Michigan, Superior, and Huron, and these large bodies of water also insure the absence of smog or other forms of air pollution."

It compared average July and January temperatures of several industrial cities with that of the upper peninsula. It showed the peninsula's average July temperature was a cool 65.1. Its January average of 14.8 compared with 13.1 for Minneapolis, 25.5 for Detroit, 20.6 for Milwaukee, and 25.3 for Chicago.

Some of the high productivity of upper peninsula workers was credited to the region's pleasant surroundings and recreational facilities.

The report said the peninsula is well covered by 23 newspapers and 10 radio stations, with 16 television channels having been assigned the area.

On the question of water, a scarcity of which has hindered industrial development in some other areas, the report says:

"In this period of growing concern for adequate water in so many areas of the country, the unlimited quantity and top quality of the upper peninsula supply is of prime importance.

"According to the Michigan Water Resources Commission, the water in bordering Lake Superior has 50 parts hardness which places it in the category of rain or distilled water. Lake Michigan water is of high quality, too."

On the availability of land, the report comments:

"Ample land suitable for industrial sites is available in practically all sections of the peninsula. Several cities have excellently zoned industrial districts and others are planning them.

"Coal and fuel oil are delivered to all port cities by bulk carriers and tankers. A large oil pipeline from the Canadian Alberta field to Sarnia, Ontario, refineries runs the entire length of the peninsula.

"Everyone works better in pleasant surroundings with recreation facilities easily available.

"Residents of the area are less affected by possible economic cycles than people in metropolitan centers because of the opportunity to supplement their income with farms, woodlots, hunting, fishing, and tourist services.

"The number of industrial establishments increased 95 percent between the 1947 census and the first quarter of 1951. Iron and copper ore reserves are sufficient for many decades of continued mining activity."

The Cain Mutiny

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. WATKINS. Mr. President, there recently appeared in newspapers across the country a syndicated column by Holmes Alexander, with the headline "The Cain Mutiny." The subject of the article is our ex-colleague, Harry Cain, from the State of Washington, now a member of the Subversive Activities Control Board.

I ask unanimous consent that these short remarks concerning Senator Cain's position on the internal security system be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CAIN MUTINY
(By Holmes Alexander)

WASHINGTON, D. C.—"Rocks in his head" is what some of ex-Senator Harry Cain's friends are saying about him, but they're wrong.

"Stars in his eyes" is the proper diagnosis for Cain's running critique of the hodgepodge internal security system which President Truman clapped together and President Eisenhower has done precious little to improve.

Cain is a bona fide conservative. He's an Eisenhower appointment to the Subversive Activities Control Board. For these reasons his strictures against the octopus commie-catching laws and practice have fluttered the dovecotes of Republican orthodoxy.

A party loyalist, it's said, shouldn't give any comfort to the other side. A patronage-eater shouldn't nip the hand that fills the trough.

But Cain's philosophy goes much deeper than this trivial political etiquette. What I'm going to write may seem exaggerated, but I'm taking care to be exact in my estimate of Harry Cain. Into politics there often wanders a man or woman whose purposes are high up on the plane of patriotic service. Too often such a person loses the gleam and becomes an empty thumping tub or tailor's dummy for hanging fine phrases, or a professional patrioteer. It's a far rarer person who keeps the shinging vision, come good luck or bad. Such a man is Harry Cain.

This isn't to say that he is a brain or a flame or a blithe spirit. But some men like to plow a field, to shake a test tube, to sing a song. This man Cain is what Nathan Hale would be without a firing squad. Cain has one life and he lives it for his country. His only regret is that he can't do more.

Adversity had something to do with his dedication. His defeat in 1952 by Senator HENRY (SCOOP) JACKSON, Democrat, of Washington, closed the door on Cain's career in competitive politics. We talked about it at the time. He told me that his fundamentalist views on private property and other phases of the Constitution, strictly interpreted, were not for our time and age. He conceded that he had probably run his last election.

But another matter, not unrelated to his 1952 defeat, was on Cain's mind. Senator JOE MCCARTHY had come to Cain's State to campaign for him and was booed from a platform. But something about McCarthyism, as a violent antidote for communism, disturbed Cain. He told me over a 2-hour luncheon table:

"This fight against communism isn't just for this year or even for our lifetime. It's a long, hard battle, the end of which nobody can see. If we've got to win it by use of the concentration camp, the secret police, and confidential informer, we will have lost—not the battle maybe, but the war. America won't be America any more."

He didn't have any answers to the problems at that time. But he was looking for answers. As a friend of 30 years' standing of the Eisenhower family, particularly of Edgar Eisenhower, but including brother Ike, Harry Cain could probably have had a better job than he's got. But the post on the SACB, created by the McCarran Internal Security Act, gave the ex-Senator just what he wanted—a chance to study the Communist conspiracy versus the American Constitution.

Cain is not a lawyer. He's a history reader. It would be a long while, he told me, before he would open his mouth on the internal-security subject. Last January almost 2 years to the day, he had his first say. Last week he spoke out again. Both times he said in effect that our internal-security system, intended as a rattrap for the Communists, is too often a boobytrap for free-speaking, free-stepping, though foolish, Americans.

Without offering a blueprint, Cain has made some practical suggestions. He wants a cutoff date for persons who joined subversive organizations in the long, long ago. While recognizing the Government's need for undercover agents, Cain sees no reason why casual or volunteer accusers should not be forced to repeat their charges in open courts or hearings.

But above and beyond his remedial measures, not all of which may be workable. Cain has preached what in religion we call fundamentalism. It's a good word for back-to-the-Constitution, too. Fundamental to the Constitution are the rights to be publicly accused, speedily tried on specified charges. Fundamental, also, as Lincoln noted in the matter of secession, to the right of a government to preserve its life.

These joint rights are a double duty in which the Truman administration failed. And in which, to be charitable about it, the Eisenhower administration has not conspicuously succeeded. That's what Harry Cain is talking about.

A Rock Was Found

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1955

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a clipping from the Lead Belt News, Flat River, Mo., which is an article entitled "A Rock Was Found," by Adella Breckenridge Moore, of Caledonia, Mo. It is an interesting

article surrounding the historical figure of Andrew Henry, fur trader:

A ROCK WAS FOUND

(By Adella Breckenridge Moore)

In the spring of 1953, Hazen A. Hawks, Drummond, Idaho, found on his farm on Conant Creek a granite rock 2 by 3 and 6 to 8 inches thick. Cut on the rock in letters about 2 inches high and ½ inch deep were the names of A. Henry, J. Hoback, P. McBride, B. Jackson, L. Cather, also the date 1810, a face in profile with the suggestion of a beard and a cross. The first two names are memorialized in southeastern Idaho in the names of lakes, forts, and streams.

The name of Andrew Henry, fur trader, is not a stranger to southeast Missouri. Missouri histories have given him a fair amount of space and from them we learn that Andrew Henry was born in Fayette or York County, Pa., about 1775. He was a son of George Henry and Margaret Young. For his first appearance west of the Mississippi River, we go to a small, aged pocket notebook now in my possession. It was the property of my grandfather, George Breckenridge, who bought land in Washington County, Mo., near Old Mines, in 1817. In 1818, he bought land south of Caledonia in the Bellevue Valley. On June 19, 1819, he arrived with his large family at that farm from Maury County, Tenn. He was a surveyor and had established lines for the Government and is known to have surveyed in Virginia, Kentucky, and Tennessee before coming to the Territory of Missouri.

The notebook is interesting and notes on various subjects may be found. The page from which we quote does not have any connection with any other pages in the book. "First time Andrew Henry came to this country was in April 1800; stayed here nearly 2 years, returned to Nashville, and returned to this country in February 1803, resided in Ste. Genevieve for some time, some short time after he returned the second time he heard of the purchase of this country by the United States at which time Paschal D'etchemonde is the man that had the clame that William Morrison now owns. William C. Carr boarded at Pascal's house at the time in 1803. Rufus Easton also lived at Ste. Genevieve, Thomas Oliver at the same time, Nathaniel Cook was there the first and second times I was there and obtained clames himself. Thomas Maddin also Surveyor. Valle died in March 1803. Governor Lassus Antoine Sular Surveyor General of Upper Louisiana."

For the Ste. Genevieve District of Upper Louisian the Court of Common Pleas met at the house of Andrew Buat and was organized December 11, 1804. The judges appointed were Moses Austin, Jacques Guiboard, Benjamin Strother, John Hawkins, Francis Valley. The venire of the Grand Jury was composed of the following: Joseph Spencer, William Hickman, John Price, Joseph Pratte, Andrew Henry, Pascal Detchmendy, Charles Smith, Robert J. Browne, John Stewart, Charles Bates, Thomas Alley, Abraham Baker, William Murphy, David Murphy, Clark Camille DeLassus, James Hunter, John Burget, Samuel Bridge, Aquilla Low.

It is in connection with this court that we introduce the following copy of an original paper in the collections of the Missouri Historical Society, house in Jefferson Memorial, St. Louis: "To whom it may concern: Know ye that I, James Wilkinson of the Territory of Louisiana, do by these presents in virtue of the power lodged in me by a law of the said Territory entitled 'A law regulating the oath of officers,' I appoint and commission Thomas Oliver, Esq., to administer the oath of office to James Maxwell as a justice of the general quarter sessions of the peace and of the common pleas. To Camile De Luzie, ditto. To Amos Bird, ditto. To John Hawkins, ditto. To Charles Smith, ditto. To Andrew Henry, ditto. To Francis Valley, ditto. Given under my hand and seal at Ste. Genevieve the 21st day of November 1805."

On December 16, 1805, Andrew Henry married Marie, daughter of Louis Dubriel Villars and Marie Louise Valle. William H. Ashley was one of the witnesses to the marriage. He separated from his wife January 3, 1806, and divorced her October 16, 1807.

About that time Andrew Henry was much interested in Masonry. Early in March 1805 Western Star Lodge No. 107 A. F. & A. M. had been organized at Kaskaskia, Northwest Territory, just across the Mississippi River from Ste. Genevieve. The first petitions for the degrees received were from Walter Fenwick, George Bullitt, and Andrew Henry.

From "Territorial Masonry" by Ray V. Denslow, we learn that in 1806, Andrew Henry, George Bullitt, and Dr. Aaron Elliot petitioned the Grand Lodge of Pennsylvania to form a lodge at Ste. Genevieve in Louisiana Territory. Accordingly the lodge was instituted on July 17, 1807, and Andrew Henry became one of its first officers. This lodge ceased to exist in 1824 but Mr. Denslow has given us a list of the members, and I quote: Stephan F. Austin, George Bullitt, John B. Bossier, G. A. Bird, Richard G. Bibb, Bartholomew Bertholdt, William Bates, James G. Brady, Robert T. Brown, Sebastian Burtscher, William Cabbeen, Nathaniel Cook, T. T. Crutenden, Edward Cheatham, Alexander Craighead, James Clark, Josiah Dodge, Peter Daggett, Henry C. Dodge, Azariah Dunn, John Donnahoe, James Dowlin, Aaron Elliott, Charles Elliot, Elias A. Elliot, Henry Elliot, D. P. Etter, Ezekiel Fenwick, Nicholas Fleming, John J. Guion, Andrew Henry, William Hickman, Joseph Theodore F. Tong, John B. Janis, Hertick, Simon M. Hubbard, John Jones, Joseph Kimball, Henry Kiel, Louis Lassous, Harvey Lane, Lewis F. Linn, James Martin, Josiah Millard, John McArthur, Andrew Miller, Israel McGready, Josiah McClenahan, Thomas Oliver, John Oklass, Joseph Perkins, Jacob Pettit, Henry Pinkley, Nathan Pusey, Francois Legnier, Daniel Roe, Edmund Roberts, John H. Robertson, Otho Shrader, John Scott, John Smith, William Scarcy, Reuben Smith, Andrew Scott, Robert Terry, Francois Valle, William Varner, Walter Wilkinson, John H. Weber, James Wood, Thomas M. Welch, Nicholas Wilson, Coleman Withlow, Samuel H. T. Young.

In 1806, Francis Azor died. Breton assigned his grant to Walter Fenwick and Andrew Henry. (See History of Missouri, vol. 1, p. 367, by Louis Houck. Used by permission of Gibboney Houck of Cape Girardeau.)

On July 4, 1806, in a letter from Moses Austin to Andrew Henry as found in the Austin papers he asks Henry as a peace officer for protection from seizure of a three-pounder in his possession. On August 7, 1806, H. Austin writes to John Smith and refers to a meeting they had in the presence of Mr. Henry. The above reference to the Austin papers was received in a letter under date of December 21, 1953, from Miss Barbara Kell, reference librarian of Missouri Historical Society, St. Louis. I want to thank the society for the help that it has given in this Washington County story of early-day community building.

On June 10, 1807, the Ste. Genevieve Court appointed William H. Ashley, William Strother, James Keith, and Andrew Henry, to view a road from Ste. Genevieve to Mine a Breton.

On June 21, 1808, the law of the territorial legislature incorporating Ste. Genevieve Academy was approved and the following trustees named: James Maxwell, Jean Baaptista Valle, Jacques Guibord, Saint James Beauvais, Francis Janis, Jean Baptiste Pratte, Walter Fenwick, Andrew Henry, Timothy Phelps, Aaron Penniman, William Shannon, George Bullitt, Henry Dodge, Harry Deal.

Also in 1808 the Missouri Fur Co. was organized with the following named persons as stockholders: Benjamin Wilkerson, Pierre Chouteau, Manuel Lisa, Auguste P. Choteau, Reubin Lewis, William Clark, Sylvester Labadie, Pierre Menard, William Morrison, Andrew Henry. There were 150 men in the expedition when it left St. Louis.

Under date of June 5, 1810, Andrew Henry writes to Francis Valle on the Madison and understands that Valle regrets having left the fort. If he wishes to remain he may do so under arrangements he had with Manuel.

On October 8, 1811, Wilson Price Hunt with about 65 men reached Fort Henry on the Snake River. (See Missouri Day By Day, vol. I, p. 190, edited by Floyd C. Shoemaker.)

On June 4, 1812, Missouri Territory was created out of the territory of upper Louisiana. The previous five districts of this territory, St. Charles, St. Louis, Ste. Genevieve, Cape Girardeau, and New Madrid were created counties of the same name by proclamation of Territorial Governor of Missouri Benjamin Howard. The first territorial legislature met in the summer of 1813 received a petition from the citizens of Mine a Breton and surroundings asking that a county by the name of Washington be erected out of the townships of Breton, Bellevue, and part of Big River Township. The date December 1, was set for the activities of the organization to begin. Accordingly the first court of common pleas met January 4, 1814. The first judges of this new county were John Stanton, William Sloan, and Martin Ruggles. The sheriff was Lionel Brown whose father and brother are buried in Potosi and who is said to have been related to Aaron Burr. He was later killed in a duel with the notorious Jack Smith.

The first jury was composed of Andrew Henry, foreman; Abraham Brinker, Solomon Daily, John Perry, Jr., John Hopkins, Joshua Morrison, Philip McGuire, Joseph Cross, Nicholas Hays, John Hughes, Zopher P. Evans, Josiah H. Bell, David Smith, William Hughes, David Wheeler, John H. Weber, Peter W. Lore, Moses Bates, Edward Cheatham. This information is found in the book of common pleas housed in the probate office of the Washington County courthouse.

Andrew Henry's return from the West in late 1811 found much talk of Indian warfare and by the time that Washington County was completely organized the citizens were formed into military companies. It has been handed down in the family of my grandfather, Timothy Phelps, that the two were in the same company at one time. Both came out of the War of 1812 with "major" added to their names. In the Sixth Regiment, county of Washington, William H. Ashley Lieutenant Colonel commanding and Andrew Henry Major of First Battalion.

In the "Missouri Gazette and Illinois Advertiser," St. Louis, October 12, 1816, appeared the following notification: "The following named gentlemen have been recommended as commissioners to take the testimony in cases arising under the act authorizing the payment for property lost, captured, or destroyed while in the military service of the United States and for other purposes. For the county of Washington: Moses Austin, Andrew Henry, John Brickey, Israel McGready, Samuel Perry. Should any of the above mentioned feel not disposed to serve in that capacity, they had better signify it to Richard Bland, commissioner of claims, at the City of Washington and name some other person to serve in their respective places."

On August 19, 1815, Andrew Henry and Samuel Perry signed Daniel Dunklin's bond as sheriff of the county for the sum of $10,000.

The records show that Andrew Henry owned slaves. During the latter part of the year 1816 to show that he and his household were not roaming the woods for deer meat to eat as so many had been doing at Mine a Breton a dozen years before, we go to the account book of my great-grandfather, Daniel Phelps, now in my possession. We note that at that time the Breton of the French had changed in spelling to the Burton of the Americans. We quote:

"Mine a Burton, October 4, 1816, Andrew Henry to Daniel Phelps and Co., Dr., October 8, 1816, to beef, 115 lbs. at 4 cents, $4.60; October 12, 1816, to beef, 122 lbs. at 4 cents, $4.88, total, $9.48; November 27, 1816, balance by note, $9.48."

Through this year and the next citizens of the Missouri Territory were discussing ways and means of securing statehood. A map of that period shows two counties north of the Missouri River, St. Charles and Howard. South of the river were St. Louis, Ste. Genevieve, Cape Girardeau, New Madrid, and the newly created county of Washington. The talk was concreted into action by the circulation of five memorials, which, after securing about 60 signers each, were sent to the Territorial Delegate, John Scott, to be presented to Congress. The people enumerated their grievances and prescribed the boundaries of the new State. Two of these memorials with their signers are still in existence and are to be found in historical society collections. One has 68 and one 69 signers. One is a note penciled on the margin, saying that the first 18 names were the members of the grand jury of Washington County of the October term 1817. There are a few names on both memorials. Seventy percent of the names on both memorials were from Washington County. The names of the grand jury are copied first and some of the best known names of that day follow:

B. J. Thompson, David Wheeler, Joseph McMurtrey, John Hawkins, Thomas Higginbotham, John Stewart, Moses Ferguson, John Hutchings, Timothy Phelps, John Tulk, John Trimble, Jr., A. Miller, John Jones, John McIlvaine, Josiah H. Bell, Jacob B. Rambo, William Hughes, John Frazier, Louis Valle, William Ficklin, George W. Jones, James Austin, Daniel Dunklin, Abraham Brinker, Zachariah Goforth, Nicholas Hayes, Isaac W. Jamison, William H. Ashley, Israel McGready, John Rice Jones, Robert T. Browne, John H. Weber, Andrew Henry, Ben Horine, John McCormick, James Donnell, Hugh McIntyre, Samuel Huitt, Laken Walker, Amable Partnay, Jason Frizzel, Felix Hedding, Absalom Eaton, Barnard Coleman, Alexander Craighead.

From an issue of Missouri Gazette, which is also preserved in Missouri Historical Society collections, dated October 1, 1818, we copy.

"The sale of lots, in the town of Caledonia, Belleview, Settlement, Washington County Missouri Territory, will commence on the 15th day of May next. The town is situated in the largest tract of fertile land in this county; it is surrounded by many valuable farms, the products of which have already found their way to New Orleans; a still greater number of farms are now opening; men of wealth from almost every State in the Union are making purchases. Land which 12 months ago sold for $1.50 per acre is now selling for $5.00. The main road by Potosi to Cape Girardeau, the county of Lawrence, Arkansas, Ouachita, Red River, and all of the southwestern country passes through the town. Within the limits of Caledonia, are three excellent springs, the largest of which affording water enough for a mill in the center of the town and within the square laid off for public uses." Signed: Alexander Craighead.

A search of the county deed records shows that Ananias McCoy and William Buford each deeded to Alexander Craighead 17 acres of land for the purpose of having a town laid off. The three elegant springs so close together had attracted settlers and attracted attention to the coming sale of lots. Mr. McCoy and Mr. Buford each reserved a choice of lots for their own use. Andrew Henry owned lots 25 which Frank Larmer now owns and lot 19 where Jane Thompson's house was built some years later and has lately changed owners. The street connecting the two lots was named Henry Street. Some other owners of the first town lots were Zachriah Goforth, Willoughby Goforth, Robert Sloan, John Rice Jones, Robert Stevenson, W. O. Stevenson, Thomas Reed, Joseph McCormack, Alexander Russell, Moses Russell, James Johnson, Jacob Moyer.

In the year 1818 or 1819 Our Fur Trader married the second time, Miss Mary Fleming, daughter of one of the original owners of the Mine a Joe property, which is described as being located 18 miles southeast of Mine a Burton and outside of the horseshoe described by Grand River as it circles Mine a Burton and Potosi. The Flemings have been enterprising people through the years in St. Francois County. There were five children born to that union: Missouri died young, Jane, Patrick, Mary, and George who was born February 3, 1830, and died February 20, 1867. Jane married Robert Cain, died leaving two children, Andrew and Mary Catherine. Andrew went to California in early manhood and his life is lost to us. In early adult life, Mary Catherine Cain located at Bonne Terre and peddled, in her buggy drawn by one horse, Singer sewing machines. She became a rather eccentric and familiar figure in the town and surrounding country. Her will left her property to the Methodist Church in Bonne Terre. Patrick married first Miss Amanda Hangar, of Bellevue Valley. She was the daughter of David and Mary Hangar. Amanda Henry died leaving one daughter, Mary, who became a schoolteacher and was in demand as a teacher in this and surrounding counties. Patrick Henry left Bellevue and located near Salem, Dent County, where two sons were born to his wife. They also went West in early manhood. In later years she went to keep house for her father and died there and is buried beside her father.

Mary Henry married John A. Harris, son of Rankin Harris and Vicy Breckenridge, daughter of George Breckenridge, whose pocket notebook was quoted above. Mary died young leaving 2 small children: Firman and Ava, who died very young. All 3 are buried in the Bellevue Presbyterian Cemetery near Caledonia. John A. Harris is buried near Durango, Colo. George Henry married Angeline Harris, a daughter of Rankin Harris. They settled on a farm adjoining her father's which was known as Big Lick. Four girls, Georgeanna, Lucetta, Nevada, Carrie came to bless the home. It was in February 1867; the Civil War had left the valley so stripped of provisions that times were very hard. Mr. Henry had gone out about Webster, now Palmer, to engage in mining to help earn a living for his family. The word reached Mrs. Henry that he was very sick, that she must come at once. She went and brought the remains back to lie near his sister, Mary Harris. Only a little more than a month later her fifth daughter was born and named Grace George Henry.

The oldest daughter, Georgeanna Henry, married William Denton of Bismarck. They spent a long life together, which was mostly spent on the Big Lick farm. Lucetta Henry made a teacher and taught in this and surrounding counties. But the rigorous winters were too hard on her physical strength and she died young. Nevada also died too young. Carrie married Rufus W. Williams and bore several children. One son, Paul Williams lives near Bismarck. His son, Paul Vernon Williams, has been a recent mayor of Bismarck. Grace George Henry made an outstanding teacher in this and adjoining counties. The last 13 school years of her life she taught in the grades in the Flat River schools from which she was retired several years before her death.

From various histories we learn that Andrew Henry and William H. Ashley went again to the Rocky Mountains on a fur-trading expedition in the spring of 1822. On July 10, 1822, Benjamin O'Fallon writes to Ramsey Crooks that 2 companies are contending for wealth in the upper country: Ashley and Henry and Missouri Fur Co. The former had the misfortune to lose a boat and it may arrest the progress of their expedition. On September 8, 1824, James E. B. Austin writes to his older brother, Stephen F. Austin, and mentioned Henry's return from the Stony Mountains a few days ago saying "he has suffered much and met with many misfortunes." So for the third time in 25 years, Andrew Henry comes back home.

We do not know where Mary Fleming was living at the time of his return. The fact that he had owned so much land in and around Caledonia would lead us to think that she might have lived on some of the different holdings. We infer that he was not leading the active life he had done for so many years. Harmony Township, in which the mining town of Webster, now Palmer, was located, does not appear in the Washington County records until 1828. On May 28 of that year the court appointed judges of the election and named polling places in the various townships. For Harmony Township the judges appointed were Moses Scott, A. W. Hudspeth, and Andrew Henry. The election to be held at the house of Andrew Henry, which was used for the same purpose in 1830. On May 10, 1832, Ahijah W. Hudspeth, William Clark, and Andrew Henry were judges, the voting to be done at the home of Reuben Smith.

Before next election time the mortal remains of Andrew Henry had been laid in a lonely grave on a hillside where his neighbors and friends had promised him to carry out his request. The rumor trickled down to us that Andrew Henry did not stay with his wife much more after he came back from fur trading than he did while he was gone. He died June 10, 1833, with the youngest child about 3 years old. The fact that all of her living children married in Bellevue Valley leads us to think that she lived in Bellevue.

Some years ago the State of Oregon asked Missouri for the location of his grave, with a view to erecting a monument over it. No one then living could point out the lonely grave. Now I am told by old residents of Palmer that their own cemetery is located on a side hill near the town. I cannot keep from wishing that some day it will become the Andrew Henry Memorial Cemetery and be so designated.

The appraisers of the Andrew Henry estate were Moses and John Scott and Samuel Baird. F. Manning was the administrator. Who bought what at the sale makes an item of interest in this Washington County story of Andrew Henry and his associates. We quote in part:

G. Tennison, iron wedges, etc., $1; James Robinson, smoothing iron, 25 cents; T. W. Hopkins, 2 coffee mills, 51¼ cents; L. Tennison, lock cain, $4.37⅓; Samuel Baird, old basket and weeding hoe, 37½ cents; Samuel Allred, old pine table, 18¾ cents; E. Gillam, folding table, $1.93¾; Samuel Baird, shot gun, $5.12½; Jerry Campbell, spring and steeple, $1; John W. Maxwell, 6 volumes, Pinkston's Travels, $18.50; John W. Maxwell, 10 volumes, American State papers, $8.25; James Gobbet, historical register, 93 cents; Samuel Baird, Burns' Poems, $1.30¼; W. J. Walker, 10 volumes Sterns' Works, $10.06¼; James Gobbet, 1 History of England, $1.37½; Samuel Baird, 1 Modern Chivalry, $1.50; James Gobbet, Atlas and Geography, $1.87½;

T. D. Blount, 1 companion for girls and boys, 25 cents; W. N. Pledge (?) armful of old books, 68 cents.

There was a violin priced at $4 and a Yankee clock.

From Missouri Republican, St. Louis, June 18, 1833, page 3, column 4:

"Departed this life, after an illness of a few days, at his residence in Harmony Township, Washington County, on the 10th inst., Maj. Andrew Henry, a man much respected for his honesty, intelligence, and enterprise. Major Henry was one of those enterprising men who first explored the wild and inhospitable regions of the Rocky Mountains and at that time was a partner of the first American Fur Co. that was formed for the prosecution of that trade."

Not all references have been tabulated but the sources of information have been the collections of both historical societies and the county records.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Bridges, Saltonstall, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Capehart, Bricker, Ives, Bennett, Bush, Beall, Payne, and Morse.

Committee on the District of Columbia

Messrs. Neely (chairman), Gore, Bible, McNamara, Beall, Hruska, Case of New Jersey, Allott, and Morse.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, Capehart, and Morse.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.

Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The Work of the Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a lecture by Mr. A. J. Wagner, General Manager, Tennessee Valley Authority, at the University of Wisconsin, on April 21, 1955. The lecture was most interesting and most timely.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE WORK OF TVA IN THE REGION AND IN THE NATION

(Excerpts from lecture of Mr. A. J. Wagner, General Manager, TVA, at Seminar in River Basin Planning, University of Wisconsin, Madison, Wis., Apr. 21, 1955)

I should like to have you keep in mind that while the TVA operates largely in a relatively small region of the United States, its benefits are not so confined. Besides its responsibilities for carrying on certain Federal activities in the Tennessee Valley, it has national responsibilities also. This is true of its activities in research and experimental production of fertilizer and in the demonstration of new and improved fertilizers. The Fertilizer-Munitions Development Center of TVA at Muscle Shoals performs in the fertilizer field the same functions as the United States Forest Products Laboratory here in Madison performs for forest industries and the users of forest products. Your University College of Agriculture and your State Agricultural Extension Service and many farmers in this State have coperated in testing and demonstrating TVA fertilizers.

The navigation channel provided by TVA is an important addition to the Nation's inland navigation system of 9,000 miles. To mention but one item, it has widened the market for Midwest grain, with new elevators and mills in the valley importing their materials by barge. More than half the average annual benefits of TVA's flood control are to be found not in the Tennessee Valley but in the basins of the lower Ohio and Mississippi Rivers, where the reduction of flood crests helps protect cities and towns and millions of acres of farm land.

TVA's national defense functions are obviously as important to the people of Wisconsin and New York as to those of Alabama and Tennessee. In the last war, its plants produced three-fifths of the military phosphorus used by the Armed Forces, as well as other munitions. Its power output helped produce aluminum and chemicals, not to speak of its vital part in the development of the atomic bomb. TVA's chemical know-how is now assisting the Army Chemical Corps in producing an important ingredient of nerve gas at a new plant at Muscle Shoals.

In the first 9 months of the current fiscal year—July 1954 through March 1955—the TVA power system produced nearly 35 billion kilowatt-hours, of which nearly half (more than 15 billion kilowatt-hours) was used by Federal agencies, mainly the Atomic Energy Commission. This was about half again as much power as was used by all the 1,375,000 homes, farms, factories, and businesses served by the municipal and cooperative distributors of TVA power in the same period.

Despite these facts, I am sure that you have heard complaints that the TVA area is somehow a favored region in Federal expenditures. In a way, this is to be expected, simply because TVA's unique character among Federal agencies has attracted a great deal of public attention. "Why," people ask, "should we pour all that money into that one small area?"

It's a question that deserves some brief attention. The "favored region" idea rests on an implicit assumption that Federal expenditures should somehow be equally distributed among regions on some such basis as population or area, although the shortcomings of this assumption are obvious. Federal expenditures are made where the need and opportunity exist and where such expenditures will further the national interest. We don't spend Federal money for harbor improvements in Nevada simply because New Yorkers are so favored. We spend harbor money where harbors exist. We develop river navigation where the rivers are susceptible of such navigation.

However, given the premise, I am sure that it will surprise a number of people to learn that, far from being a uniquely favored region, the Tennessee Valley is far from a favored region.

Let's take expenditures for water and power resource development, which are primary interests of TVA. The Federal Treasury's total investments for such purposes in the Tennessee Valley region as of June 1953 had amounted to about $235 per capita. In the alluvial valley of the Mississippi—that stretches from a little above Cairo, Ill., to the mouth—the Federal investment has amounted to $390 per capita. In the Central Valley of California, where development was started after TVA, the per capita Treasury investment is $175, not substantially lower than in the Tennessee Valley.

This tells only part of the story, however. In the Tennessee Valley, the largest part of the per capita expenditures represents investment in the power system, and all this will be fully repaid to the Treasury. The investments for flood control and navigation in the Valley, which won't be paid back, amount to about $403 million, or $115 per capita. In the Mississippi alluvial valley, the total costs for flood control and navigation have been nearly 3 times as high—$1,185,000,000, or $390 per capita, for which the Treasury will not be reimbursed.

Thus the ultimate net cost to the Treasury for complete water resource development in the Tennessee Valley will be far lower on the Tennessee than on the Mississippi. Ultimate net costs are likely to be higher also in the Missouri, Colorado, and other river basins than in the Tennessee.

Another primary interest of the TVA is land and agricultural development, it being a principle of an integrated program that development of a river and of its watershed go hand in hand. However, most of the Federal expenditures for land and agriculture development in the Valley, as elsewhere, are made through the United States Department of Agriculture. Here again we find the Tennessee Valley is not favored. Taking the expenditures of both the United States Department of Agriculture and TVA from 1934 through 1953, the average per member of the farm population has amounted to about $707 in the Tennessee Valley, only about 58 percent as high as the comparative figure of $1,228 for the Nation as a whole.

You might think, from some of the descriptions you've read, that the Tennessee Valley is a region simply crawling with Federal bureaucrats, drawing great sums from the Federal Treasury. On the contrary, Federal payrolls per person in the Tennessee Valley have amounted to only $500, or about 31 percent of the United States average of $1,595. Furthermore, in 1934 about 3.9 percen of the total Federal civilian employees were located in the Tennessee Valley region; in 1953, that proportion had dwindled to only 2.8 percent of the total.

The Tennessee Valley also fell behind in other categories of Federal expenditures. In one category, and one only, the valley did lead—that of construction. This includes, over the period 1934–53, the construction of two major AEC projects, the Arnold Engineering Development Center of the Air Force, and various arsenals and military installations, as well as TVA facilities. The construction expenditures in the Tennessee Valley averaged $700 per person, as compared with $320 in the Nation; however, it must be remembered that construction accounted for only 6 percent of total Federal expenditures—a small factor in total Federal expenditures.

The Tennessee Valley fell far behind as a seller of goods to the Federal Government during this period. On a per capita basis, United States purchases in the Tennessee Valley amounted to $520 per person, whereas the national per capita average was $2,300. The valley average was but 23 percent of the national average. Even TVA was not very kind to the valley on this score, for only about 40 percent of TVA's purchases up through the fiscal year 1954 have been from the region. Of about $1,555 million of purchases by TVA, about $933 million have been made outside the seven Tennessee Valley States. Examples are $288 million in Pennsylvania, $119 million in Ohio, $140 million in New York, $92 million in Illinois, and $58 million in Wisconsin.

Federal expenditures for military procurement and construction alone in a number of States were several times as great during the 5 years 1950 to 1954 as the total TVA expenditures over the entire 21 years of its history. During the period 1940–45, military procurement and construction in New York State alone was 10 times as large as all of TVA's expenditures to date.

When Federal expenditures of all types are taken into consideration, it is apparent that the people of the Tennessee Valley region are a long way from being favored proteges of the Federal Government. In fact, on a per capita basis, the Federal expenditures in the Tennessee Valley from 1934 through 1953 have been only about 48 percent of the national per capita expenditures—$2,600 in the Tennessee Valley, compared with $5,430 in the Nation.

I want to make it very clear that I am not complaining on behalf of the people of the Tennessee Valley about this imbalance of expenditures among regions. I am sure that the valley people recognize that Federal expenditures must be made where necessary for the overall good of the country. Federal money has been, and will be, spent in many areas of the country for various purposes—improvement of the St. Lawrence River, the Colorado, the Columbia, the Missouri, and the Delaware; purchase of military and other supplies wherever they may be most economically and efficiently secured; research and development in mineral and forest resources wherever the national ends may best be served.

I am confident that the people of the valley realize, as I am sure you do, that the real test of the worthwhileness of Federal expenditures is whether or not the Nation gets a full dollar's worth of value for each dollar of investment. In the Tennessee Valley we are sure that this has been accomplished.

Correspondence Between Senator Kefauver and Representative Gwinn

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence between Representative RALPH W. GWINN and myself as it appeared in the Star of Elizabethton, Tenn., on April 3, together with the explanation by the Star of the correspondence.

There being no objection, the correspondence and explanation were ordered to be printed in the RECORD, as follows:

TVA: KEFAUVER VERSUS GWINN

(Back in January the Star, in its morning mail, received one of those extension of remarks published in the CONGRESSIONAL RECORD. This particular one caught the editor's eye because of the title: "Twenty Years of Experience With Our First Socialist-Communist Experiment."

(Its author was Representative RALPH W. GWINN of the 27th District of New York.

(Representative GWINN's attack on the Tennessee Valley Authority (the Socialist-Communist experiment) and his uncomplimentary remarks concerning Tennessee drew from this newspaper a column-length editorial which pointed out that TVA's defense becomes Tennesseeans' obligation, since unfair attacks upon the public-power system appear to become direct attacks upon the people of Tennessee themselves, and that the biased and inaccurate estimates of TVA became, willy-nilly, biased and inaccurate estimates of Tennessee and Tenneseeans.

(Representative GWINN received a copy of this editorial and wrote a letter to the Star in reply to it. He mounted a nine-point attack upon TVA which would "summarize the facts as I seem them," he said.

(The Star was interested in the facts as Representative GWINN saw them, but it was also interested in how Representative GWINN's views would appear in the eyes of one of the men who knows TVA intimately and has championed its cause. With this in mind, Representative GWINN's letter was forwarded to Senator ESTES KEFAUVER, with the request that the Congressman's points be answered, so that both might be published simultaneously.

(This was done, with the result that the Star's readers, in the exchanges below, may see the major arguments against TVA and the rebuttal to these arguments. Juxtaposed, they make very enlightening reading. Here they are:)

NEW YORK CONGRESSMAN ANSWERS STAR EDITORIAL IN NINE-POINT ATTACK; CHARGES REMARKS MISREPRESENTED

EDITOR, STAR:

One of your subscribers has sent me your editorial printed in the February 6, 1955, edition of the Star entitled "Also at Stake: Our Reputation." It appears the editorial was prompted by my remarks regarding TVA printed in the CONGRESSIONAL RECORD of April 8, 1954.

Near the beginning of the editorial is this statement:

"1. There is not a word of truth in what Representative GWINN said or implied." In other parts of the editorial I am represented as "spewing a wildly inaccurate speech," that I used loaded statistics and that in general my remarks were "tripe." These charges would be less serious if all your readers had the benefit of reading my remarks, rather than your interpretation of them.

Men of good faith and good intentions can honestly disagree as to the merits of nationalizing basic industries. But the holding of different opinions gives no license to misrepresent the facts. Surely the people who are sought to be convinced and who must pay the taxes to support such adventures as TVA are entitled to all the facts and the unvarnished truth.

I find it difficult to answer your editorial, for nowhere does it cite my facts and prove them wrong. Mere characterization does not constitute rebuttal. At one point my remarks are completely misrepresented. I did not say that the people of Tennessee are less well off than they were in 1933. Of course, Tennessee has made progress in the last 20 years but she has not progressed as rapidly or as well as her sister States in the South that still rely on the private production of power.

Should you see fit to print this letter as a reply to your editorial let me summarize the facts as I see them for the benefit of your readers:

1. The TVA has permanently flooded 660,000 acres (an area the size of Rhode Island) including rich farmland capable of yielding $27 million worth of farm produce annually. Thus, rather than controlling floods, TVA has permanently flooded more land than the Tennessee River could, left in its natural state.

2. The low-cost power produced by TVA has created such a demand (at least 100,000 homes in Tennessee are heated by electricity) that the supply has never been able to meet it. No other section of the country, supplied by private utilities, has experienced a shortage of power. It is worth mentioning that the private power industry is presently expanding to the tune of $2.5 billion.

3. The TVA is a complete monopoly in its reservation, having forced out all competitors by law. It is subject to no State regulations.

4. Allocation of costs among the various TVA operations have been consistently made on basis favorable to power production.

5. TVA pays no Federal taxes.

6. TVA pays only a small sum in lieu of State taxes which in 1954 amounted to $3,578,668, or about 2.7 percent of its total revenues. On the other hand the Consolidated Edison Company of New York which supplies my district paid $113,447,477 in State and Federal taxes for 1954, or about 24.4 percent of its revenues.

7. Except for a low rate of interest paid on about $65 million worth of bonds which were bought by the United States Treasury, TVA has paid no interest at all on the money it has borrowed or which has been advanced to it. It has been estimated that if TVA repaid the Federal Government for the interest costs alone of Federal moneys spent through TVA, the bills from TVA to its customers would have to be increased over $40 million a year.

8. The taxpayers of the Nation have spent $2 billion in TVA and in recent years congressional advances have averaged in excess of $150 million a year. The 1954 appropriation was $188,546,000.

9. TVA has only made a book repayment of $101.1 million which is $87 million less than the appropriation made in the single year 1954.

Those are the facts. I believe the people are entitled to have them. When they do, I am sure they will come to the proper conclusion.

Sincerely yours,

RALPH W. GWINN.

TENNESSEE SENATOR ANSWERS GWINN'S LETTER TO STAR: CHARGES CONGRESSMAN GREATLY MISREPRESENTED TVA

EDITOR, STAR:

I am glad of the opportunity to present the other side of the TVA case in answer to Representative RALPH GWINN, of New York.

Congresman GWINN's letter of February 14, 1955, to the Elizabethton Star, as well as his speech of April 18, 1954, in the CONGRESSIONAL RECORD, greatly misrepresents the facts about TVA and the Tennessee Valley.

This can be illustrated by his first point in his letter, regarding flood control. In comparing the amount of land inundated in the TVA reservoirs with the land protected from floods, Congressman GWINN simply omits the fact that the TVA system, by holding back water and increasing the effectiveness of the Mississippi levees, helps protect 6 million acres of productive farmland in the Mississippi River Basin from floods. This is 10 times the amount of land inundated in the TVA reservoirs when filled to the brim, not counting the land and cities and towns in the Tennessee Basin which are protected.

In his speech, Mr. GWINN claimed the Army engineers said the Tennessee "would not seriously flood more than once in 500 years," although there would be some spring overflows which would leave a fertile sediment on the land. Actually, as their report shows, the Army engineers said 230 lesser but damaging floods could be expected in 500 years, or about 1 every 2 years. In fact, in 1946, 1947, and 1948 there occurred what would have been without TVA control, the 5th, 6th, and 7th largest floods in the history of the river at Chattanooga. Had it not been for the TVA system, these floods would have deposited a fertile sediment in the homes, stores, and factories of the city, causing $36 million of direct flood damage in 3 years.

In the second point in his letter, Mr. GWINN fails to mention the major reason the power supply situation is tight in the valley region: Namely the large proportion of TVA power going to AEC and to other Federal defense agencies, which are of immense importance to the entire country. Last year TVA's sales to these agencies totaled about 12 billion kilowatt-hours, an amount about equal to that sold to the 150 distributors serving 1,350,000 consumers, and within a couple of years it will reach about 30 billion kilowatt-hours a year. This fact helps explain why TVA appropriations have been large in the past few years. Essentially of course, this point in Mr. GWINN's letter raises the question of whether it is better to have a high demand for power at low, but profitable, rates or to have ample power available at high, exorbitant rates which limit customer use.

In general, Mr. GWINN resorts to some indefensible calculations—the sources of which he does not give—to improperly inflate TVA's power costs. For example, he figures interest not simply on the investment in the powerplant in service but on all the money invested or expended by TVA, for navigation, flood control, fertilizer and munitions research, and so on. Yet surely he must know that the Federal Government has spent many millions of dollars for navigation improvement in his own State of New York—as much or more than in the entire Tennessee Valley—which the people there will neither pay back to the Treasury or pay interest on, through their electric bills or otherwise. When he asserts that TVA allocations of investments have been consistently made on a basis favorable to power product, he ignores the report of the Federal Power Commission in 1949, made with the assistance of the United States Army engineers, which approved the allocations.

When Mr. GWINN tries to compare TVA's payments in lieu of taxes with the tax payments of private utilities, he ignores the fact that TVA is entirely a wholesaler of power while the private utilities sell power at retail at much higher rates. Actually, when the tax equivalent payments of TVA power distributors are added to the TVA payments, the consumers of TVA power (except for Federal agencies, which properly are exempt) pay about 6 percent of their electric bills for taxes whereas the proportion for surrounding companies for State and local taxes ranges from 4.6 to 11.4 percent. While TVA is not subject to income taxes, it must be remembered that all its earnings belong to the Federal Government.

Mr. GWINN's letter obscures the fact that, far from being "subsidized," TVA rates are a paying proposition. TVA books, kept in accordance with the Federal Power Commission's uniform system of accounts for all utilities, show that its revenues have been sufficient to cover all the costs of producing and selling power and to leave a margin equal to an average return of 4 percent on the power investment over the past 21 years. This return is about double the cost of money to the Government.

A word might be said of Mr. GWINN's statistics by which he attempts to show Tennessee lagging behind in economic development. These are selected indexes, provided as Mr. GWINN said in his speech, by the United States Chamber of Commerce. Such indexes as gross postal receipts, for example, are questionable as indicators of overall economic progress. Total income is a more reliable index. In the United States between 1933 and 1953, total income increased 485 percent, in the Southeast 642 percent, in the Tennessee Valley region (including parts of 6 other States besides Tennessee) 649 percent, and Tennessee 655 percent. These figures confirm the fact, known to all Tennesseans, that the State is making very satisfactory economic progress and that the TVA program of resource development has been a helpful factor in that progress.

Yours sincerely,

ESTES KEFAUVER.

The Threat of the H-Bomb

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 26, 1955

Mr. ANDERSON. Mr. President, I have in my hand an article written by Thomas E. Murray, a member of the Atomic Energy Commission. The article, entitled "Science and Religion Must Join if World Is To Survive H-Bomb," poses an interesting judgment of atomic development in the world today, and makes certain prophecies which I think it will be well for all persons to consider.

I ask unanimous consent that this article be inserted in the Appendix of the RECORD. The article first appeared in Better Homes and Gardens, and later in Time magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCIENCE AND RELIGION MUST JOIN IF WORLD IS TO SURVIVE H-BOMB

(By Atomic Energy Commissioner Thomas E. Murray, in Better Homes and Gardens)

Man now can make weapons capable of reducing the world to the primitive conditions of the time of Cain and Abel. He even has, within the range of his grasp, means to completely exterminate the human race. Today, scientists can make a good educated guess as to the number of bombs needed for total world catastrophe—to scatter to the four winds, in a matter of seconds, the civilization it has taken man so many centuries to put together. No wonder some ask, "Are we not playing with things that belong to God?" The concerted, atheistic threat against all we hold dear has increased and grown bolder in the ratio that the hydrogen bomb has surpassed the rifle. We, in turn, must remain armed to the teeth to contain that threat.

I believe that God meant us to find the atom. Admittedly, we are wrestling with the greatest alteration in man's relation with Nature since the upheaval at the time of the Garden of Eden. But his fundamental relation with God has not changed one whit. The same trial that tested the first man in Eden, and every man since, challenges us in the atomic problem. It is the exercise of choice, the dangerous freedom to use God-given power for good or ill. I do not mean for a moment that science is wrong, but only man's worship of it. Surely, a part of our duty, the effect of the primal urge implanted by our creator, is to discover more and more of the world we live in. But science can give man mastery only over matter. It never reaches ultimates.

I greatly fear one thing. If men will not clothe the bare framework of science with the warm garments of true humanism, they will end up by making machines their god and mathematics their only dogma. The rising paganism of the western world will make our civilization cold as interstellar spaces, ruthless as the atoms which smash each other.

Against our fears, I oppose a great hope. The physical discoveries, which have shaken the spiritual faith of some men, are also shaking the philosophic foundations of materialism. I have noticed a new, extremely encouraging disposition on the part of some nonreligious scientists. They are beginning to acknowledge that the concept of divine creation should no longer be dogmatically excluded from rational speculation about the origin of the universe. To my mind, there are today startling possibilities for a religious breakthrough into the secular mind. The time is ripening for a marriage of religion and science.

THE EXPERTS

The fact is, atomic bombs are dangerous only because some atomic men cannot be trusted. Our crisis today comes from man's greed and will to power, his refusal to submit to reason. As Christians, we must hope that in the Kremlin's dictatorial mind there can eventually be sown some small measure of skepticism as to the value of the barren earth which any atomic war would bring. We must pray for that, with our lips and with the example of holy lives.

I have been especially surpprised to see that the unbelievers among scientists sometimes seem more concerned for the peace than those of us who believe the peacemakers are blessed. It is not their excess of good will, but rather their sharp knowledge of what nuclear war would do to this planet. Therefore, if one does hope to be blessed as a peacemaker this critical year of 1955, he must grasp the facts of atomic life. The American public cannot leave it to the experts. In this cosmic drama, the bald truth is that there are no experts. It is not enough to be merely a technician. For unless the technician in some small way is enamored of the idea of becoming a saint, he will fall short of success. He will not only exemplify the definition given by one learned educator who called the mere technician "a man who understands everything about his job except its ultimate purpose and its ultimate place in the order of the universe."

No, the essential ingredient to atomic survival is a broad base of informed and interested civilians. It is the only way in which we can cope with the immoral fatalism that considers war inevitable—with the folly that professes unconcern over man's darkest threat. Surely, these ostrich attitudes are like the frivolity of those who deny the reality of hell by refusing to think about it. Perhaps the secrecy with which we have guarded certain especially sensitive areas of atomic information contributes to this apathy. But the extent of this secrecy is greatly exaggerated; it is more an alibi for than an explanation of our abandonment of the normal functioning of public opinion. The fact is, the greatest atomic decisions must come from the heart and the soul, not the skilled brain that comprehends a cyclotron.

ATOMS ABROAD

We face a problem that calls for a heart-and-soul solution. Here we have a technology and industrial capability that are unsurpassed, a pool of brilliant scientists who could accelerate the development of atomic power. Overseas are "have-not" nations which desperately need that power now, but which may never enjoy it if they must first acquire the technical skills and supporting industries to produce their own reactors. Shall we fail them? Shall we say, "We could have atomic electric power if we wanted it. But, unlike you people, we don't really need it today, and so its development can wait for economic and financial forces to move it ahead." Actually, though we are investigating many different reactor types, there is only one operating reactor in the United States today. I very much fear that if we fail to push a broad, vigorous program in this field, we will be accused of following a "dog in the manger" policy. I fear even more to consider the consequences if the U. S. S. R. should win the industrial-power race. Certainly, the price tag for nuclear-power reactors would be very high, with the purchasers surrendering their birthrights and civil liberties as the down payment. What a tragedy if world leadership in reactors fell into Soviet hands by our spiritual default.

I do not mean to speak in tones of careless reassurance as one sometimes does to a child. For all you and I know, it may be the incomprehensible and inscrutable will of God to make the 20th century "closing time" for the human race.

But we do know from the law He implanted in us that we have a personal obligation to use the normal means to stay alive as long as possible. Our Nation and the human race have an inescapable duty to the Almighty to avoid an ending of this civilization until God's good time. Once, a wise and simple man named Francis was hoeing in his garden. Someone asked, "If an angel appeared to tell

you, Francis, that tonight you are to die, what would you do?" And St. Francis very calmly said, "Keep on hoeing in the garden." With all its tremendous complications, with the very future of the human race at stake, our atomic agony comes down to this. We keep on hoeing and await God's will.

Our Greatest Economic Waste

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. WILEY. Mr. President, I send to the desk the text of a most stimulating address by Mr. J. R. Cominsky, publisher of the Saturday Review. The address was delivered last year before the Rochester (N. Y.) Ad Club, but I believe that it is perhaps even more pertinent and provocative today than it was a year ago.

It furnishes important light on one of the most important challenges of our time—to make education a living, continuous force for all our people throughout their lifetime; for the 36 million children now in school and college; and in particular for Americas 7 million living college graduates.

I ask unanimous consent that Mr. Cominsky's learned remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR GREATEST ECONOMIC WASTE

(Address by J. R. Cominsky, publisher of the Saturday Review, delivered at a luncheon of the Rochester (N. Y.) Ad Club on April 8, 1954, at the Powers Hotel)

Today, I'd like to place before you a few thoughts that have to do with the very essence of living in this or any other community in this wonderful country of ours. May I first deal with a few maxims that seem trite and obvious—but, as we grow older it seems more necessary to elucidate the obvious than to clarify the obscure.

What we are all confronted with is a twofold problem—the problem of making a living and the problem of making a life. The former—making a living—is relatively easy and there are numerous patterns and formulas to achieve a satisfactory result. The latter—making a life—is inexpressibly difficult, and challenges all our talents and resources.

Nobody understood this better than George Eastman. In building a world-famous industry in this community he had assured a comfortable and secure livelihood for tens of thousands of families. But he did not stop there. He saw so clearly the role of education, music, recreation, public health and government in their relationship to human happiness that he gave millions to achieve the greater goal—the making of full and useful lives in his own time and for generations to come.

Let us focus then on the making of lives or rather on the values and principles that make for full and useful living. We can simplify this by looking first at the four great pillars that support our free society and the civilized world. These are:

1. A powerful and productive economy known as the free-enterprise system.

2. A strong and cohesive political system, known as the democratic form of government.

3. Our many-faceted educational system that is the not-so-secret weapon of our democratic way of life.

4. Our spiritual faith as encouraged and practiced in a free society.

In the relatively brief time allotted me today I can deal with only one aspect of one pillar supporting our free world and that is the pillar of education.

Those of us who are closest to the education world and the people in it are staggered by the magnitude of our educational operation and its influence on our society. For some weeks now I have been corresponding with key people in Washington in an effort to give you today one figure that would represent the operating cost of our educational plant in the United States in a single year—1954. There have been all sorts of checking and doublechecking, and the figure may still be vulnerable, but the percentage of error will not be great, no matter how you analyze it. And, believe it or not, the United States is pouring $15 billion into the operation—this has nothing to do with plant investment—of its educational system this year. I was anxious to get this figure because in a gathering with so many businessmen $15 billion is still a fairly respectable amount of money. It is also a staggering responsibility to administer a project of such scope as well as to get an adequate return on the investment. And, so, I come to the focal point of my talk today—and that is how to cash, to a greater extent, the astronomical sums of money that we are now using to develop the minds of our people.

Those of us who are involved in education, in publishing, in religion, and related fields consider ourselves primarily a part of the age-old and continuing struggle for the preservation of values, standards, and principles that are the very foundation of a free society. Values, standards, and principles have always been under attack, and the only difference lies in the fact that in each generation man thinks that the attack of his time is the most violent of all time. Those who have struggled for the preservation of values through the ages have always been a minority but they have been successful beyond their dreams because as we look at the world today we realize that values are still held in the highest esteem in great areas by countless millions of people.

I had a rather unusual personal experience several months ago when I spoke at the Corning Glass Center at a seminar of educators and industrialists on a theme that I called the Age of Wested Miracles. I pointed out that probably never before in the history of man had he been blessed with so many miraculous adjuncts to living in its fullest sense, but that we had hardly begun to make the use of those miracles, particularly in the field of communications, in relation to their potential good. Hardly had I given this talk, which I thought had a rather low hydrogen content, when I was amazed to find it being widely reprinted in symphony-orchestra programs in Boston and Cleveland and in other publications and being hailed as a teaching instrument for the young. As a matter of fact, I was most touched by a letter I received from the diocesan director of the Catholic Church in Cleveland, who said: "Nowhere have I found a finer digest of the ideas we are attempting to promote among the quarter of a million young people in our Catholic Youth program in the diocese of Cleveland. Be assured that you will be quoted ad longem et latum in our feeble yet energetic efforts to make our youth realize the great dignity of being rational creatures of God, and to encourage them to test their great potentialities in the interest of the common good."

The fight for values, however, is not confined to the church; it is a responsibility and duty for all men of good will. One of the finest statements on values was one we were very proud to publish in a recent issue of the Saturday Review, when, in discussing the great problems of our generation, Charles A. Lindbergh said: "I believe that the solution lies within ourselves, and that we can find it nowhere else. Our parties, movements, laws, and codes are important, but they are only outward manifestations of our inward values. * * * To achieve a civilization based on human values requires the desire within ourselves. * * * The character of man still forms the essential core of a lasting civilization."

Recently, President de Kiewiet made a much-admired move in the field of education when he announced a sweeping reorganization of the undergraduate program that assumed a larger responsibility for the young men and women who come to Rochester than just the classroom concept. He is striking a blow in the direction of strengthening and protecting important values as they affect the students' full intellectual, spiritual and social capacities. What Dr. de Kiewiet is doing at the undergraduate level will ultimately have to be extended to a lifetime concept in which all factors in the community, including notably the school, the church, the newspaper, the magazine, the library, motion pictures, radio and television will play highly important and cooperating roles.

Our greatest economic waste today, as I see it, is something Henry Adams so long ago described as a "waste of mind." In treating of this, Dr. de Kiewiet said: "There is waste of mind when economic or social conditions prevent a talented young man or woman from achieving the best of which he or she is capable through education. There is waste of mind when those who enter educational institutions are neglected, or poorly taught or poorly advised. The present mortality of students in our colleges, those who fail to complete their college education because of academic failures or other reasons, is a wastage of our intellectual capital."

I agree. But to me, perhaps the most appalling of all the waste of mind is what happens to the college gradute after he receives his diploma—the number who drop dead mentally, as it were, once the 4-year course is completed. Latest available figures show that our population includes 7 million persons who are described as "living college graduates," To what extent these people are "living" is a moot point. When I recently wrote a letter to one of the leaders of adult education in America I started it by saying: "This may startle you but it is my very deep conviction after long and mature deliberation that the most fertile field for adult education in the United States is among college graduates." To what extent these people are getting too worked up about the man in the street whose educational opportunities have been limited and from whom often too much is expected when a high percentage of 7 million college graduates are dragging their feet in keeping abreast of the great issues and challenges of our time and failing to participate in the crucial decisions. Here is waste in its most glaring and unconcealed form, waste that makes questionable the wisdom of our $15 billion annual operating cost if we cannot do something to make more valuable to our society, the finished product.

A program for extending the mental capacity of our citizenry beyond the day of college commencement is a growing need that represents a challenge not only to our educators but to all communicating media and to our society in general. It is shocking to realize that man has been equipped with

mechanisms of communication beyond the fantastic imagination of even a Jules Verne but that he is communicating so little, and is so inadequate and inept in transmitting human knowledge that is being developed at a cyclonic pace but being implanted in men's minds at a comparative snail's pace.

• • • • •

We are living in what is probably the most complicated age of human history. Not to get rich but merely to survive and function normally a man requires today many times the knowledge he required a decade or two ago. Education, being the unfinished business that it is, cannot protect anybody too far in the future in this world of drastic change and development. I recently read a statement that with the world moving at its present pace, any education except in the broadest terms is obsolete within 20 years.

And so, it becomes a major national problem to extend the educational and informational processes beyond graduation. Here are some major areas that deserve careful examination in meeting this challenge:

Area 1—The university: To reach the desired goal may involve drastic changes in our curriculum whereby the college student is not only being given courses but being indoctrinated and informed with specific programs as to how to continue his thought processes beyond the day he is through attending classes. We may have to think in terms of some postgraduate home-study courses built on the foundation laid in undergraduate work. The undergraduate must not only learn but learn how to continue to learn.

Also, the alumni office of the university—and of all colleges and universities—may have to take on a new scope and importance. The alumni office may have to be charged with the great responsibility of a continuing study of its graduates to ascertain how many are identifying themselves with useful organizations and agencies dedicated to the social, political, and economic progress of our country. If it is ascertained, as it is very likely to be, that much too low a percentage is making its knowledge and training available in these important areas, then the reasons why will have to be determined and some definite plan developed to overcome the inertia.

Area 2—The outside world: Here, a more determined effort will have to be made to draft, as it were, educated people to participate in those programs designed for the public welfare by the groups that represent the leadership of our country. This, of course, is a supplementary effort to buttress the effort colleges and universities would be making in this direction.

In the outside world we all have a great responsibility to bring our interest to bear on the growing and increasingly powerful mass media to devote a greater share of their efforts to matters affecting the public interest, to make them realize that they are an important part of our educational and informational apparatus that can tip the scales in many crucial areas of thought and action. We must keep insisting that the mass media must realize that an overemphasis—what amounts to almost an obsession in the area of entertainment, a philosophy that it must give what it thinks the public wants rather than what the people need—can tend to nullify a great deal of our costly educational machinery and make more difficult the solution of the major problems of our time. It is not hard nor does it require great ingenuity or inventiveness to draw a crowd if we are willing to stoop in our standards. And, of course, the more we stoop the bigger the crowd we can attract. But what we must become most concerned about is not merely the size of the crowd but what we are presenting to it.

Good taste is not limited or a precious thing in the United States of America. It has pretty wide acceptance when it is offered to the masses. There is plenty of evidence to support this, including the notable fact that more persons go to concerts of serious music in this country than to baseball games. Latest figures for attendance at art exhibitions show baseball also trailing in that area of interest. Perhaps not too kind a thing to say, with opening day just around the corner.

• • • • •

We cannot ignore the fact that the degradation of standards of taste and idealism represents a tremendous blow against our whole educational mechanism. It is damaging a mechanism that, as I have stated, costs $15 billion a year to operate. Having dealt with the university and its undergraduate influence and with the mass media that create a good deal of the climate in which we live, may I—not as a major solution of our difficulty but as a specific approach—deal briefly with an idea in the university orbit that at least might be a step in the right direction although relatively a small step. Please understand that this is not presented as a panacea—I wish it were—but as an attempt to focus again on the problem of keeping mentally alive our 7 million college graduates.

For some time, I have been suggesting to the university authorities here and to alumni groups that Rochester might do a pioneering job in setting up an alumni magazine that would not only serve the graduates of the university but be a powerful force in the community among persons who have never had the privilege of a college education. It was my thought that leading members of the faculty and graduates all over the world who have special knowledge and understanding in every area of activity, pool their mental resources and practical experience in a Rochester magazine that would go not only to all graduates of the community but be available to persons anywhere in America who wished to subscribed, graduates or not. Also, it would be available to anybody in this community, on a subscription basis or at the newsstands, so that a high level of discussion and analysis of problems close to the minds and hearts of every person could be made available as never before.

The university would have some tangible and practical benefits from such an operation, in my opinion, in that it would establish a closer relationship with its graduates and would arouse in them a sense of gratitude for continuing their education in vital areas in a changing world. New members of the faculty would become known to older graduates through the expression of their ideas—much more important, incidentally, in appreciating them than the obituary-type notice that now appears in every alumni magazine when an addition is made to the faculty.

Also, I can see the community which now has a considerable financial stake in the University of Rochester—particularly after what transpired recently—rising with appreciation to the fact that here were values now being contributed to the community that had not even been promised in the great development campaign.

It is impossible to talk about education, good taste or mass media without a passing reference to television, of course. I recently read the following statement in an important new book: "TV, it must be very seriously said, is no mere gadget; it is one of the great milestones and possibly gravestones in the whole history of culture."

I favor the great milestone concept. I am not particularly worried about television destroying our civilization. As a matter of fact, I welcome it because it is another important communicating device that can be made one of the most powerful forces we have ever had for raising the intelligence level of our people.

• • • • •

And may I let you in on some good news. Coincident with the miracle of television, which has been thrilling but also frightening to many, people have discovered that they have minds. The startling fact is that more people read more good books last year than ever before in our history—in fact, the volume of books of the highest quality that were purchased by Americans came as something of a surprise to the book publishers who approached these projects with no small amount of fear and trepidation. To reduce the gamble, the publishers made these books available with paperback covers at 25 to 75 cents and the avid public that devoured mountains of them were interested in such racy titles as the two Mentor volumes of Homer's "Odyssey" and "Iliad," selling at 35 cents each. The anticipated sale for each of these staples was optimistically put at 100,000 copies but the public snatched up more than a million of each within a year and a half.

This would seem incredible if I did not immediately restate the fact that there are now more than 7 million living college graduates in the United States constituting the very basis of our middle-class informed society—and at least that number who never entered an ivy-covered building but are thirsty for knowledge. Little do we realize the strength and power of this group in shaping the life of America, and those manufacturers, whether they be of books or magazines or other products, who are catering to this mass market, are finding it highly receptive of ideas, services and products at the same level as their reading diet.

• • • • •

Man's survival has always hinged on his understanding of values and principles that are the responsibility of all concerned with the spoken or written word. His willingness to fight for values and principles has made possible our free society. But the fight is never finished. And we, as a part of the continuing struggle, may have to fight harder than man has ever fought before for one very simple reason.

Man in his great ingenuity has now fashioned means of mass communication that have practically eliminated time and space, and have placed a new burden of responsibility on the whole civilized world. Our defense system, however, still centers primarily about the home, the church, the public school, the public library, the many forms of the printed page, the motion picture, and the air wave. And since all of these will only be as effective as those who manage or administer or direct them—the educated man is destined for the role of the front-line fighter. He must know not only how to fight but what he is fighting for. And that's a job for all of us.

Medical Research

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD a television broadcast on medical research delivered on April 12 over the ABC network by the distinguished commentator and Peabody award winner, Mr. Martin Agronsky.

While hailing the great achievement of Dr. Jonas Salk, Mr. Agronsky presented some telling statistics on how little this country is spending annually on medical research. The Senate Labor and Public Welfare Committee, of which I have the honor to be chairman, recently completed hearings on a bill sponsored by myself and the senior Senator from New Hampshire [Mr. BRIDGES] to provide $90 million over a 3-year period in matching grants for the construction of research facilities. Some of the country's most eminent scientists appeared before our committee and presented testimony to the effect that medical research in this country is severely hampered by lack of building and laboratory space. If we are to emulate the great achievement of Dr. Jonas Salk in the other major diseases which afflict the American people, we must give the young scientists of this generation the tools with which to work.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Modern medical researchers lifted yesterday from the hearts of all parents one of their greatest fears—that polio might kill or cripple their child. From Ann Arbor, Mich., there came the happy news that Salk polio vaccine works, and that it works safely. The official figures show this: The vaccine proved 80 to 90 percent effective in preventing polio. Of 440,000 children vaccinated last summer, only 113 developed polio; of these, only 71 suffered paralysis; and, most heartening of all, only 1 child among the vaccinated youngsters died of polio.

The comparative figures among 1,400,000 nonvaccinated children—who were also part of the test—tell the rest of the story. Seven hundred and fifty of them contracted polio. Of these, 445 were paralyzed and 15 died. Dr. Salk, himself, declared yesterday he is certain his vaccine can be made almost 100 percent potent to wipe out the terror polio has presented for centuries.

Last night Mrs. Oveta Culp Hobby, the Secretary of Health, Education, and Welfare, announced our Federal researchers' tests of the Salk vaccine enabled her to license it as safe for public distribution. All through the Nation now the stamping out of polio can begin; in fact, in many communities, will begin within a few days through the mass vaccination of American youngsters. The children, until more quantities of the vaccine are available, will come first—a decision with which no one would quarrel. Afterward adults will have their turn and the process will have been set in motion which is expected to make polio as much of a rarity in our country as smallpox.

There is no doubt, either, that as soon as is humanly possible our polio vaccine will—in the American humanitarian tradition—be made available to other nations. It seems reasonable to assume the world beyond our country's borders will welcome this achievement of American scientists with at least as much respect and infinitely more warmth than the other great American scientific discovery that was first demonstrated at Hiroshima.

That's one side of the polio story today. The other is told best with some facts and statistics. The first of these facts is negative. It is that no direct contributions from our Federal Government went to finance this brilliant victory over polio. And there are some statistics. We spend in our country annually now, some $4 billion on all kinds of research. The United States Government foots half this bill directly—some $2 billion. Let's break it down a little further. Of the Government's $2 billion—at least 80 percent—some one billion six hundred million, goes to military research—that is, to atomic and conventional weapons development. Of the remainder, only $47 million goes annually for direct medical research. Compare these figures—one billion six hundred million for weapons—$47 million for medical research. Agricultural research also gets Federal money. Some one hundred millions each year to fight cornborers, hoof and mouth disease, etc. That's about twice what we spend for human medical research.

A few more statistics. The Atomic Energy Commission gets for weapon testing an annual allocation of $260 million—which might be compared to the Government grant for cancer research of $14 million a year. And here's a figure—a Navy supercarrier costs $216 million—that sum alone is more than the total amount our Federal Government spends on its human research.

These statistics combine to raise a couple of pertinent questions. These: What's happened to our standard of values? What price a human life today? These are not new questions. They were, in fact, put in essence in 1888, 67 years and 2 world wars back, by another great medical researcher—the Frenchman, Louis Pasteur, who discovered a cure for rabies and the process of milk purification which bears his name.

At the opening of the Pasteur Institute in 1888 Pasteur said this: "Two opposing laws seem to me now in contest. The one, a law of blood and death, opening out each day new modes of destruction, forces nations to be always ready for battle.

"The other, a law of peace, work, and health, whose only aim is to deliver man from the calamities which beset him. The one seeks violent conquests, the other relief of mankind.

"Which of these two laws will prevail, God only knows."

Sixty-seven years later, the words of this Frenchman in whose tradition the young Pittsburgh doctor, Jonas Salk, has followed so worthily, provide a penetrating and bitter comment on the nature of contemporary man which needs no embroidery.

Mr. Corsi and the State Department

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Corsi Proves Nothing," published in the Washington Sunday Star of April 24, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. CORSI PROVES NOTHING

Two weeks ago this newspaper expressed the belief that Edward J. Corsi was being offered up as a sacrifice in the hope of propitiating Congressman WALTER of Pennsylvania. Since then, testimony in a Senate committee's investigation of Mr. Corsi's difficulties with the State Department has indicated that this criticism of Secretary Dulles was unwarranted.

There still is reason to believe that Mr. WALTER's charges against Mr. Corsi, charges which have not been supported by facts, may have been the precipitating factor in the removal of Mr. Corsi as Deputy Administrator of the Refugee Relief Act. There is also reason to believe, however, that Mr. Dulles was amply justified on other grounds in wanting to dispense with Mr. Corsi.

These grounds come down to a matter of personality—to Mr. Corsi's propensity for what Democratic Senator MCCLELLAN calls "wild" statements. Mr. Corsi charged, and failed to prove, that Mr. Dulles was guilty of a "whole string of falsehoods." He charged, and failed to prove, that he, Mr. Corsi, was a victim of "Nazi" tactics. He charged, and failed to prove, that a "security gang" in the State Department had undercut the refugee program. He made charges, which he failed to prove, of "sabotage," of "national scandal," etc. In fact, not only did he fail to prove any of these charges, but the testimony of witnesses who were not immediate parties to the controversy was all against him.

It seems reasonable to conclude that Mr. Corsi talks too much and too extravagantly. It is also a reasonable inference that Mr. Corsi's days in the State Department would have been numbered if Mr. WALTER had never opened his mouth.

Contribution of Jews to Cause of Freedom

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1955

Mr. LEHMAN. Mr. President, on January 30 of this year the American Jewish Committee held its 48th annual meeting in New York City. That occasion was highlighted by a great address on the subject of freedom, delivered by that eminent jurist and spokesman for the cause of liberty, Judge Learned Hand.

On the same occasion, Mr. Irving M. Engel, president of the American Jewish Committee, delivered a comparably brilliant speech, also on the subject of freedom, with specific reference to the contribution made to the cause of freedom in this country by Americans of Jewish faith.

I ask unanimous consent that Mr. Engel's fine remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tonight we commemorate three centuries of Jewish experience in America. Our tercentenary is but a split second in time between two eternities—the past and the future.

So we look backward to look forward. We look inward to our spiritual roots to see further growth.

We ask: what lies ahead for us? Can you imagine with what feeling this same question was asked, 300 years ago, by the first little band of 23 Jews standing on the edge of this yet unmeasured continent?

Let us build no myths about that little band. Like the Pilgrims before them, and all who came later, they were not instruments of destiny, but mortals, with mortal frailties. They did not come to America well endowed with worldly goods. Their meaning for us lies rather in the heritage they brought and the legacy they left. For what cargo could the cramped hold of their ship, the *St. Charles*, or the *Mayflower* before it, carry to

these shores so precious as the moral and spiritual values of the Old Testament? Upon these precepts, which have endured the crucible of centuries, rest the foundations of this Republic.

These 23 Jews knew themselves as settlers, struggling for survival in an untamed land, contending with a hostile governor. But we know them now as an advance guard in the battle for human rights. For in 3 brief years, they won these basic rights:

To enter the country.
To bear arms for the common defense.
To travel and trade.
To have their own burial ground.
To practice their religion.
To own homes.
And, finally, to enjoy equal citizenship.

There would be many battles to come. Indeed, some of these battles are still being waged. But these first victories helped determine the course of the next three centuries of Jewish experience in America. Nay, more, they helped determine the character of the American Nation. They won for us—and in the long run for all Americans—the right to participate in American life without loss of identity. Because these 23 at New Amsterdam did not buy equality at the cost of sacrificing their heritage, they helped shape the spirit of all America-to-be.

Witness Gov. Peter Stuyvesant himself—the man who sought to transplant the bigotry of the Old World to the New. He wrote in angry protest to his superiors: "Giving (the Jews) liberty, we cannot refuse the Lutherans and Papists."

We speak of the American Revolution. But let us keep in mind this other, earlier revolution—a revolution without gunpowder that was launched a century before the Spirit of '76. It was part of the never-ending revolution against all forms of oppression.

Out of this bloodless revolution came an America free of an all-powerful established church; a land of dissident voices and conflicting sects. Lacking orthodoxy, there could be no heresy and no persecution of heretics. And so the market place of ideas flourished and the country was enriched by diversity of faiths, creeds, and origins. And this very diversity has created tough and resilient bonds.

Thus America moved beyond the best that the Old World had to offer: the idea of toleration or sufferance, to a nobler, more fitting concept; equality in freedom. This is what Washington meant when he wrote to the Touro Snynagogue: "It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoyed the exercise of their inherent natural rights." Undoubtedly then, as now, the practices of the time fell short of this concept. But the powerful persuasion of a principle was at work.

* * * * *

Like all immigrants, they found that America spelled problems as well as promises. They found sweatshop and tenement; they found hostility as well as acceptance. But when the balance was struck, there was always the presence of opportunity that turned the scales for them and their children. For theirs was esentially the same experience as that of the first 23 settlers. In a land of diversity, they too could become Americans without sacrificing their identity as Jews. They were not thrust into the "melting pot," and lost in a vast American monolith.

Wherever the doors of opportunity opened, Jews joined their fellow Americans in building this country. They are to be found alongside Americans of other faiths and creeds in the myriad human enterprises of the arts and sciences, business and labor, government, medicine and law, philanthropy and communal service. They helped write America's songs and gave it laughter and gaiety—and deep feeling.

But beyond individual gifts—the fruits of creative hands, devoted hearts, and ranging minds—what did Jews give to America? Are not the uniquely Jewish gifts those of the spirit I mentioned earlier from which spring our earliest and deepest American traditions? For the Old Testament was revered by the Puritans no less than by the Jews. They studied Hebrew and the Judaic heritage. And the Pilgrims' first Thanksgiving was patterned after the Harvest Festival in the Bible. The laws of early colonies in Massachusetts and Connecticut were based on the rules of equity contained in the Scriptures.

The prophets furnished the intellectual arsenal of the revolution. God's covenant with Abraham helped batter down the divine right of kings. Ethical concepts of justice, righteousness, and mercy were the Hebraic mortar which cemented the foundations of American democracy. Biblical verities, known for 5,000 years, were woven into the fabric of American society.

And, as befits The People of the Book, the Jews continued in America their traditional reverence for learning, their intellectual eagerness, their opposition to the closed mind and conformist pressures. In them coursed a deep current: Call it liberalism in the true sense of freedom from prejudice and bigotry and removal of the barriers to self-fulfillment. Call it also conservatism in the classic sense of defending eternal truths and values.

However, Jews may differ on many social, economic, and political questions of the day, it is no accident that they have unwaveringly supported democracy. It is no accident that they have sought to keep the golden land open to all—a refuge for exile and rebel, for men driven from their own lands by want or tyranny. It is no accident that they have been sensitive to whatever threatens any group or individual. Liberty is indivisible—that lesson they have learned well. So they have ranged themselves in behalf of civil rights and civil liberties. They have opposed segregation and discrimination. With Americans of all creeds they have fought nazism, fascism, and communism—those "isms" which deny the infinite worth of the individual human being and crush him beneath an all-powerful state.

The program of the American Jewish Committee has been molded by appreciation of America as a land of diversity—appreciation of our heritage as Americans and as Jews. Through this committee we have dedicated our energies for almost a half century to affirming our faith as Jews; enriching our spiritual heritage; strengthening America; preserving and extending democracy; making human rights secure throughout the world.

To realize these goals we have been engaged in far-ranging activities, carried on by dedicated communal leaders and a devoted staff. We have been engaged in a pioneering enterprise, a vast social engineering effort to secure the bulwarks of democracy through education and law; through court tests; through advancement of intergroup concord; through all the formal and informal means of communication which bind our society together. We know, too, that democracy's surest foundation lies not in statutes but in the hearts and minds of men. Therefore, we have worked with our fellow Americans to strengthen freedom of opportunity, to assure equality for all, to keep the climate of America free.

In earlier sessions, you have discussed our multifaceted programs whereby we seek to secure the civil and religious rights of Jews here and abroad. Among these are four vast areas so central to all our efforts, so relevant to our examination tonight, that I venture to single them out for you: our concern with human rights abroad and at home; obtaining security for Jewish communities abroad; the special problems of Israel, and, lastly, American-Jewish communal life.

The vast problem of international protection of human rights is our direct concern. For upon the eventual construction of effective international guaranties rests the ultimate well-being of all mankind. And when future historians record the successful outcome of this prolonged and difficult quest, they will report the contributions made by two whom we esteem so highly—Judge Proskauer and Jacob Blaustein, our two living past presidents, now our honorary presidents. Their vision first took shape here at the committee. They carried forward this bold, imaginative approach to the State Department in Washington and won support there. Then at San Francisco, in 1945, in the face of greatest odds, in the company of the leaders of America's foremost voluntary organizations, they saw it finally emblazoned in the United Nations Charter. For the first time in history, nations subscribed to the broad principle of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

I shall not give you soft words about the progress we may expect or belittle the obstacles ahead. The principle of international cooperation throughout the U. N. which shone so brightly a decade ago has suffered reverses. Perhaps we were too optimistic. But now we must not yield to frustration and bypass the U. N. We cannot cry retreat. Until there is an international bill of human rights, until there is a Genocide Convention, until there are other international safeguards, which one of us is safe? Is peace itself safe?

We must help carry these concerns to our fellow Americans. As a non-governmental agency accredited to the U. N., we must assist its efforts to attain dignity and peace for all mankind.

Turning to the domestic scene, how staunch are the guaranties of our own Bill of Rights? This is one of the gravest questions confronting us. If by ignorance or imprudence we miscalculate the threat to our freedom, or if, spurred by fear, we erect ill-conceived security measures, we shall inflict upon ourselves wounds perhaps no less deep than those we could ever receive from Communist conspirators. The problems of achieving security while safeguarding individual liberties cannot be solved by pretending that a Communist conspiracy does not exist. Neither can they be solved by pretending that the sprawling, elephantine network known as the loyalty-security program does not carry within it fearful menace to our own liberties. Both risks must be faced simultaneously.

Why are these problems before the American Jewish Committee? Because on the one hand, the continuing welfare of this Nation and of all its citizens depends on cauterizing subversion. This affects us as it affects all citizens. And we are concerned as Jews. Where through irresponsibility, as in the Ladejinsky affair, the seeds of suspicion are sown, freedom is imperiled. Others—the bigot and the xenophobe—renew their efforts to twist differences of national origin, race, or faith into indices of disloyalty. Let freedom falter and a time of critical danger is upon us. There may be only a few short swift steps from confidence to fear, from harmony to hatred, from safety to persecution.

As a public contribution to help devise ways of maintaining national security while preserving individual liberty, AJC sponsored an intensive study of the manifold aspects of this problem. That sober analysis, entitled "American Security and Freedom," has been widely hailed in the Nation's press, on the floor of Congress, and in many quarters where the issue has been seriously studied. One of its key recommendations calls for the

creation of a Presidential Commission to re-examine the entire loyalty-security program. AJC vigorously endorses this recommendation.

A thorough study and improvement of current clearance procedures is imperative if this Nation is to protect itself adequately against unrelenting Communist threats. In the deepest sense, the very terms of the security program itself, as well as the conflicting interpretations it is given, impair the security of the Nation that it is intended to preserve. Terms like "subversive," "derogatory," "security risk" need far more rigorous definition than they have been given lest they become weapons turned against us. Fear of the consequences of honest reporting may cripple our Foreign Service. Important procedural safeguards are still denied to accused employees. The Nation may be deprived of the services of intelligent, experienced and devoted men and women because they have been tagged "controversial."

These grave defects have now harassed two administrations. They will not be corrected until a thoroughgoing review of the entire system is undertaken and improvements made. Creation of additional coordinating or review units is not a substitute for a painstaking and intelligent overhaul.

With these considerations in mind, the committee, in concert with other responsible bodies, will continue to press for a Presidential commission to develop means of protecting our national security without injustice to individuals or further damage to the Nation.

A second major area of our committee's concern is defending the civil and religious rights of Jews the world over. The committee indeed was founded in 1906 to help Jews in Eastern Europe suffering from barbarous onslaughts.

What has made us ever sympathetic to the plight of Jews in other lands? Certainly our ties with Jews abroad are not political. Rather we are moved by sentiments based on common tradition and religion.

This past year we have responded as fully as we could to our fellow Jews in the still war-benumbed countries of Europe. Those are continuing problems and too complex to permit swift sketching. Communities have been fractured; new patterns must be developed. Similarly, special conditions confront the Jews of Latin America. And still unrelenting pressures beset 2,500,000 Jews in Iron Curtain countries.

This past year, north Africa, like a massive atomic pile, reached a critical stage. As authorized by your executive committee, Jacob Blaustein, John Slawson, and I flew to Tunisia, Morocco, and Algeria. We were accompanied by Zachariah Shuster, director of our European office, and Abe Karlikow, his assistant. It was a fact-finding mission to ascertain the conditions and prospects facing some 500,000 Jews.

These are lands of fierce contrasts—extremes of wealth and poverty; bursting cities and hillside caves; the East versus the West, the old versus the new.

There, in lands stirring from feudalism, fired by nationalism, stand the Jews. Some are descended from forebears who settled there 2,000 years ago. Around them swirls a contest between a France reluctant to yield her power and increasingly restive, impatient Arab nations-to-be. Between both forces are the Jewish communities, eager to stay if assured full rights, fearful of what the future may bring in the wake of French withdrawal or waning influence.

The situation is too delicate for sloganizing as "nationalism versus colonialism." The problems of 240,000 native Jews in the theocratic and feudal state of Morocco are different from those facing 50,000 native Jews in Tunisia; in Algeria almost all the 140,000 Jews are French citizens. Yet this much does apply universally: We seek to help insure that these lands, part of a region that cradled mankind, shall not entomb the Jewish communities. In so doing we shall help promote peace and stability in that turbulent region.

In conferences with Jewish community leaders and Arab rulers and spokesmen in North Africa, and with high French officers and our own State Department, we advocated: Guaranteed equal rights for all, including the right of each man to determine freely whether to remain in full security and equality, or to emigrate with his property. In short, we urged for Jews and for all minorities in north Africa the guaranties of the international bill of human rights.

Through our Paris office, through discussions here with the State Department, and through contacts established with Jewish leaders in those lands, we shall endeavor to help speed the peaceful and orderly solution to the north African crisis.

Our record on Israel is a third illustration. We endorsed the Balfour declaration soon after it was issued, and since then we have supported, first, Palestine and, later, Israel, as a home and haven for those Jews who have had to go there or have wanted to go there. Simultaneously we have tried to work for Arab-Jewish understanding. Our emphasis has always been on the humanitarian, not on the political; on helping human beings in need, not on ideological slogans. For us the state was never an end in itself, it was the only means left for transferring survivors of the Nazi holocaust from the despair of the DP camps to the security and dignity of a home in which they were wanted.

Because of the American Jewish committee's non-political orientation, generally referred to as non-Zionist, we were in a strategic position, always working clearly within the framework of American interests, to contribute to the progress of Israel and help clarify the relations between that country and the American Government as well as between Israel and American Jewry. We have helped to secure economic aid for Israel from the United States in the form of grants-in-aid; we have also helped to secure loans from the Export-Import Bank, and materially contributed toward the successful effort of obtaining the restitution payments by West Germany.

Our ceaseless work for peace in the Near East is entirely in accord with United States policy and interests in that area. Often, at the request either of our own Government or of the State of Israel, we have undertaken important and delicate tasks, and rendered services which have been greatly appreciated by our own Government as well as by Israel. For these services we in turn owe our two honorary presidents a large debt of thanks.

Is it necessary to repeat what we all know—that this concern with Israel has nothing in common with any doctrine or ideology of Jewish nationalism? Anyone who has the slightest acquaintance with American institutions and with the attitudes of American Jews knows that this involves no question of loyalty or allegiance. The loyalty and allegiance of American Jews are unreservedly to the United States.

Further clarity of the distinction between Israeli citizens and American Jewish citizens was secured in 1950 by Jacob Blaustein, then president of the committee, through personal conferences with Ben-Gurion, then Israeli Prime Minister.

Our last concern turns us homeward to our philosophy of the American Jewish community. Do not 3 centuries of Jewish experience in America tell us this about ourselves: If we have wrought changes upon America, America too has wrought its changes upon us? The interaction has been mutually beneficial. This new land evoked new communal patterns—patterns of voluntary association in keeping with the American spirit of voluntarism. Separate enclaves do not thrive here for the same reason that kept out their physical counterparts—the walls of the ghetto. In this land which encourages diversity, each man speaks for himself, each organization only for those members it actually enrolls. We reject the proposition that American Jewry is, or should be, a single mass with but a single will, a single voice, a single chosen instrument.

Time and again a central authority has been urged in the name of unity, efficiency, central planning, economy, order versus chaos, etc. Such calls have been rejected by the majority of American Jews as alien to the spirit of voluntarism. AJC's founding president, Louis Marshall, father of our distinguished chairman tonight, stated that no formal convergence of American Jewry is possible outside the framework of voluntary association.

* * * * *

This celebration is a testament of freedom, of achievement under democracy, of fulfillment, and enrichment. As such, its message speeds forth from us around the world to bring the light of freedom to men of every race, color, and creed. Our three centuries of experience is America's eloquent answer to rebut Communist propaganda. Let us challenge the totalitarian world: where can they match this testament?

The Tercentenary's meaning is also deeply personal. It calls upon us to affirm anew our determination to enrich our spiritual heritage. Each of us will find this meaning deep in his own spirit, in his relations to his fellow men and to God.

Thus the Tercentenary commemorates the greater aspects of Judaism and American democracy. To this fruitful and inspiring national celebration many individuals and organizations have contributed. As for our role, I need do no more than quote from the American Jewish Tercentenary Committee which declares that this celebration was spurred by the American Jewish Historical Society and the American Jewish Committee. For the magnificent direction of this national celebration, we pay tribute to Mr. Tercentenary himself, Ralph Samuel, one of our vice presidents.

And so, with neither arrogance nor smugness, but with thankful heart, and courage for the future, we commemorate what has gone before. And this, too, reflects America, for its climate nourishes men who are confident, not craven.

Fundamentals of Peace

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the lead editorial appearing in the Washington Post and Times Herald this morning, in which tribute is paid to a speech made by the President yesterday in support of H. R. 1. We all join in the hope that the President and others in the administration will take a more affirmative lead in support of the measure which is so vital to the Nation.

Particularly, Mr. President, the editorial compliments my colleague [Mr. GORE] upon the outstanding presentation he made yesterday on the floor of the Senate in support of the proposed legislation. The editorial points out that now is the time for others in the Congress as well as in the administration to get behind the measure, which is somewhat bogged down at the present time, and to try to rescue the program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FUNDAMENTALS OF PEACE

President Eisenhower yesterday reaffirmed his administration's dedication to peace with another plea that it be underwritten by stronger economic ties between the free nations. "Either we foster flourishing trade between the free nations," he said, " or we weaken the free world and our own economy." The President underscored his argument for closer ties with other peoples with the dramatic announcement of plans to send a new atomic powered merchant ship around the globe. The picture he drew, with the consequent effect on communications, should shake the confidence of the most confirmed protectionists. For science and invention are making the peoples of the world interdependent whether they want to be or not.

But the President's speech may have come too late to prevent serious damage to his trade program—and serious damage to America's position of leadership. The Senate Finance Committee amendments adopted last week, to give added protection to the textile industry and strengthen the hand of the Tariff Commission to to the embarrassment of the President, may have opened the flood gates. Yesterday the President appealed to the country to support him in his fight against crippling amendments of the reciprocal trade program. But the Finance Committee continued to be the object of protectionist propaganda designed to undermine the whole program.

At about the same time the President spoke in New York before the annual meeting of the Associated Press, Senator GORE of Tennessee gave the Senate one of the most eloquent and convincing statements it has had on the significance of the trade program. It was the kind of speech administration leaders should have been making for months; they have been strangely silent in the face of mounting opposition to the Eisenhower proposals. Although the President's program had been in serious trouble, its supporters seem not to have known how to counterattack. Senator GORE brilliantly showed the way in his long, skillfully documented account of the effect of foreign trade on the textile industry.

Because of the intense pressure put on him by textile management and labor to amend the trade program, the Tennessee Senator sought to find out for himself what logic there was in the textile arguments. He found, and presented elaborate statistics to support his conclusion, that the industry's difficulties are not due to imports, that it has an overwhelming stake in exports, and that the liberalization and expansion of world trade can bring important net returns to the cotton textile industry. He felt entirely justified, therefore, in condemning the textile lobby, which has been powerfully organized and directed, for its shortsighted campaign.

Let us hope that these forceful utterances by President Eisenhower and Senator GORE will give new strength to Senators who are trying to follow the national interest rather than the dictates of poorly informed groups that want protection at any price.

Military Job Changes Since 1949

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert a brief analysis and accompanying charts on changes of duties and training requirements of military jobs in the armed services.

In any look at the technological changes in the offensive and defensive methods of maintaining our national security, one is apt to overlook the tremendous revamping necessary to provide a workable scheduling of adequate proficiency levels of service personnel.

To give some guidance in our thinking on this vital problem, which I have discussed at some length with Assistant Secretary of Defense, Carter L. Burgess, the following information will, I believe, prove most helpful:

MILITARY JOBS IN THE ARMED SERVICES—CHANGING DUTIES AND TRAINING REQUIREMENTS, 1949–55

A review of the jobs of the enlisted men in the armed services during the past 6 years reveals a series of changes in each service. These job changes have been made in the interest of better manpower management to reflect the changing technology of the armed services. Table I is a list of major job changes since 1949, including new, revised, and deleted jobs. The training time to reach an entrance level of proficiency in these jobs is also shown.

A significant number of new jobs have been created, such as, guided missile propellant explosive specialist, jet mechanic aircraft and atomic weapons nuclear assembly specialist, reflecting the results of technological development in new scientific fields. Some jobs have become obsolete, such as, the signalman in the Navy, due to these same technological improvements. The complexity of many jobs has become sufficiently great so as to require the breakdown of 1 military job in 1949 into 2 or more separate new jobs. For example, in radar maintenance in the Army in 1949 there were 3 specific jobs. Today the Army requires 7 different jobs for this area of work. Major developments in each service are summarized in succeeding paragraphs.

Between 1949 and 1955 the Army's system of classifying military jobs has undergone two major revisions, in 1950 and now in 1955. The general trend has been that jobs are grouped and related to one another on a functional basis. Likewise, substantial changes have been made in school-training requirements due to increased complexity of the specialty and the division of a single job into two or more new jobs. This tends to simplify training and to accelerate productive time on the job. This latter point is especially noticeable in Army with 2-year inductees as compared to the other services with 3- and 4-year enlistments.

Both the Navy and the Marine Corps have made considerable changes in their job classifications since World War II. The changes, as in Army, represent new skill requirements commensurate with technical innovations. For example, a Navy destroyer in 1940 had fewer than 200 electronic tubes; in 1955, a destroyer has over 5,400 such tubes.

As new weapons and equipment have been acquired by the Air Force, they have had two effects on Air Force military jobs. One has been to add entirely new jobs related to the installation, operation, and maintenance of the new equipment; a second has been to radically alter the content of the jobs originally established in relationship to older, less complex equipment. This modification of existing jobs to meet the needs set by new and improved equipment results in a system in which jobs are not dropped entirely, but often are drastically changed.

Table II indicates for a sample of jobs the comparative length of time, 1949 to 1955, required for a person to qualify in a skill. More time is required today than 6 years ago to train personnel on jobs that have become more complex, as radar repairman or gunner's mate. Some jobs, as aviation ordnanceman, have become sufficiently complex as to be split into new jobs, thereby often reducing the training time for a specific job.

TABLE I.—*Department of Defense changes in military jobs since 1949*

ARMY	*Training time (months)*
Additions—Job titles:	
Medical records specialist	7
Surface to air missile materiel chief	10
Surface to surface missile materiel chief	10
Surface to air missile fire control chief	15
Surface to surface missile fire control chief	12
Guided missile mechanical specialist	5
Surface to air missile electronic specialist	11
Surface to surface missile electronic materiel specialist	12
Nonelectrical instrument repairman	7
Guided missile materiel crewman	6
Guided missile fire control crewman	6
Atomic weapons electronic assembly specialist	6
Atomic weapons nuclear assembly specialist	7
Fixed station transmitter repairman	10
Fixed station terminal repairman	11
Fixed station receiver repairman	10
Aircraft repair foreman	9
Helicopter maintenance supervisor	10
Cargo helicopter pilot	12
Airplane repairman	9
Soils technician	7
Medical equipment repairman	9
Aircraft powertrain and engine repairman	9
Rotor and propeller repairman	6
Aircraft instrument and electrical systems repairman	9
Target airplane mechanic	6
Helicopter repairman	10
Atomic weapons electrical assembly crewman	5
Fixed station radio attendant	8
Aircraft maintenance crewman	8
Signal parts specialist	6
Guided missile propellant explosive specialist	6
Engineer parts specialist	6
Ordnance parts specialist	5
Transportation parts specialist	4
Quartermaster parts specialist	4
Clinical technician	16
Integrated fire control electronic repairman, M–33	8
Integrated fire control electronic repairman, T–38	8
Chemical parts specialist	6
Integrated fire control electronic repair helper	10
TV equipment repairman	8
TV cameraman	6
Radio relay and carrier operator	6
Guided missile mechanical repairman, corporal	7
Guided missile mechanical repairman, Nike	6

ARMY—continued

Additions—Job titles:	Training time (months)
Guided missile doppler system repairman, corporal	6
Guided missile computer repairman, corporal	7
Guided missile radar repairman, corporal	7
Guided missile internal guidance system, repairman, corporal	8
Guided missile launcher control repairman, Nike	6
Guided missile acquisition radar and computer repairman, Nike	8
Guided missile track radar repairman, Nike	9
Guided missile internal guidance system repairman, Nike	7
Light Antiaircraft artillery integrated fire control equipment mechanic	13
Medium or heavy antiaircraft artillery integrated fire control equipment mechanic	13
Field artillery radar mechanic	10
Guided missile electronic repair helper	10
FA radar crewman (field artillery)	8
AAA radar crewman (antiaircraft)	8
Heavy antiaircraft artillery fire control crewman	8
Light antiaircraft artillery fire control crewman	8
Surface-to-air missile electronic assembler	9
Surface-to-surface missile electronic assembler	9
Surface-to-air missile fire control crewman	8
Surface-to-surface missile fire control crewman	8
Light fire control equipment repairman	11
Heavy fire control equipment repairman	11
Doppler repairman (corporal)	11
Computer repairman (corporal)	11
Radar repairman (corporal)	11
Internal guidance repairman (corporal)	12
Acquisition radar repairman (Nike)	12
Track radar repairman (Nike)	12
Internal guidance repairman (Nike)	12
Atomic weapons nuclear assembler	11
Radar repairman	10
Electronic warfare repairman	10
Electronic navigation equipment repairman	13
Civil mechanical engineering assistant [1]	3
Mathematics-statistics assistant [1]	3
Chemical engineering assistant [1]	3
Electric electronics assistant [1]	3
Physical sciences assistant [1]	3
Biological sciences assistant [1]	3
Social sciences assistant [1]	3
Deletions—Job titles:	
Electronic fire control equipment repair supervisor	11
Electronic fire control equipment repairman	9

The Department of Commerce and the Alleged Defense Essentiality of the Watch Industry

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include a letter which I addressed to Secretary of Commerce Weeks some 10 days ago:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C. April 15, 1955.

Hon. SINCLAIR WEEKS,
Secretary, Department of Commerce,
Washington, D. C.

DEAR MR. SECRETARY: This morning, I read newspaper reports of your press conference and was very much surprised to learn that you told newsmen you had never seen the report prepared last year by the Defense Department concerning the jeweled watch industry.

It was particularly disturbing to me that you were unaware of the contents of this report in view of the fact that: (1) Your Department took the lead in persuading ODM last year that the domestic jeweled watch industry was essential to national defense; (2) you and other Commerce officials have frequently testified before congressional committees concerning the vital role which the four jeweled watch companies supposedly play in our defense production, and (3) at the present time, the Commerce Department is sponsoring an exhibit by the domestic watch industry emphasizing the unique importance of these firms in the defense procurement picture.

I think you will agree with me that the Defense Department is in an excellent position to evaluate whether the skills and facilities of the watch industry are truly vital to national security. Certainly, it would have been advisable for you and other Commerce officials to have studied the Defense Department's report on this subject—which was made available to you although it was suppressed from the public and the Congress for obvious reasons.

For your information, I am attaching a copy of the Defense Department report, which was recently declassified. You will note that the report can hardly be considered as obsolete since it was prepared less than a year ago after the most exhaustive study. Mr. C. S. Thomas, who was then Assistant Secretary of Defense and is now Secretary of the Navy, emphasized that "the report has had the benefit of the most thorough examination by technical experts of the three military departments. The conclusions have been reached after careful consideration by cognizant officials of the Department." Certainly, nothing has happened within the past year which would give the Defense Department a valid excuse for changing the findings and recommendations in this report.

The conclusions reached by the Defense Department were as follows:

(1) "The timing devices used in the ammunition program were produced by the jeweled watch manufacturers, nonjeweled watch and clock manufacturers, and others completely outside the horological group. There does not appear to be any part of the manufacture or assembly of mechanical time fuses that is peculiar only to the jeweled watch industry."

(2) "Only 11 percent of the total mobilization requirement (for all timing devices) planned with industry, is with the jeweled watch industry."

(3) "There is in no way a unique requirement for it (the jeweled watch industry) in the fuse program." Many manufacturers outside the jeweled watch industry "are capable of producing mechanical time fuses and rear fitting safety devices. Every part is being produced by some company other than a jeweled watch firm."

(4) Mobilization requirements of the Defense Department for jeweled watches and chronometers are "nominal," far below World War II levels. Sufficient capacity "will remain and can be used for current procurement needs and be the basis for supplying the mobilization requirements. If, in the future, it should become apparent that sufficient capacity will not be maintained and available, the Defense Department can then procure all of its requirements of jeweled movements for the mobilization reserve"—i. e., can easily be stockpiled.

(5) The needs of the Defense Department for industrial capacity clearly demonstrate that "no special nor preferential treatment for the jeweled watch industry is essential."

I hope that you and other Commerce Department officials will study this document carefully. In view of this authoritative report by the Department of Defense, it seems hard to understand why the Commerce Department continues to insist upon further Government protection for the domestic watch industry—particularly in view of the current prosperity of these firms and the hardships which have been imposed upon American watch importer-assembler firms, United States exporters, and millions of watch customers who now must pay higher prices.

Actions by the administration to curtail watch imports have a direct result on the ability of the Swiss to purchase American agricultural and industrial products. The farm population in my district is keenly aware of the fact that their market for cotton, rice, and other commodities is sharply reduced when other nations are deprived of the dollars they need to trade with the United States.

In view of the fact that the Defense Department has conclusively stated that there is no need for special Government action to protect the domestic watch industry, the administration should immediately reconsider its moves which have been so destructive of international trade and friendship with the Swiss.

Cordially,

FRANK E. SMITH,
Member of Congress.

Our Country's Aim Is Peace

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared on the front page of the Washington Daily News on April 20, 1955, presenting the consensus of opinion of the various Scripps-Howard editors of the Nation. The title of the editorial is "Our Country's Aim Is Peace," and it is very thought provoking.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR COUNTRY'S AIM IS PEACE

Editors of the 19 Scripps-Howard newspapers meeting here yesterday agreed unanimously that a dramatic restatement of America's position in relation to world affairs is due soon.

The editors concluded that it is high time something be done to dampen the widespread notion—which seems to be shared even among some of our friends and allies—that America is hellbent for war.

After hearing detailed reports from Scripps-Howard foreign-policy experts, after many hours of discussion which expressed the viewpoints of men representing communities from coast to coast and from the Great Lakes to the Gulf of Mexico, the editors formulated this statement of Scripps-Howard policy:

America should take the peace initiative away from Moscow. We should prove to civilized opinion that we, more than anybody else in the world, want and need peace because we, above all others, have more to lose by war.

This is a job which the President of the United States can do far better than anyone else.

The time and place also are of vital importance. And they are near at hand—as if made to order.

In June the United Nations will hold a special commemorative session in San Francisco on the 10th anniversary of the signing of the charter. Many of the foreign ministers of the world—maybe even Soviet Foreign Minister Molotov—will be there.

We respectfully suggest that it would be fitting for President Eisenhower to open that conference in person with an appeal for a new effort to establish peace. He should put before the world America's case for peace in a new and vivid light.

It would be a chance for the President again to demonstrate the lengths to which the United States is willing to go to attain peace. He could:

Offer to disarm to any limit the other powers would be willing to go under strict regulation.

Propose to ban mass-destruction weapons if others would agree to cheatproof supervision and inspection.

Suggest that the United States would agree with others and with adequate guaranties of compliance to limit the proportion of key resources that could be used for arms so that more could go into peaceful goods.

Reiterate the right of civilized peoples everywhere to governments of their own choosing, at free elections, by secret ballot, and without outside interference. * * *

Emphasize that we seek nothing that belongs to anyone else; that there are no strings attached to our offers; that all we ask in return for reciprocal arms reduction is the dropping of Iron and Bamboo Curtains—the opening of frontiers not only for international inspection teams but also for plain, ordinary people.

The President could catalog the peaceful moves by this country, its participation in peaceful projects, and its genuine desire to do more. He even could recall his 1953 offer to devote a large percentage of the savings from any real disarmament to a world fund to help man enjoy the fruits of this tormented old earth.

He would have to emphasize, of course, that the United States was not seeking abject appeasement. Distasteful as military life is to Americans, they also know—as the President himself has so aptly put it—that a soldier's pack is not nearly so heavy as a prisoner's chains.

President Eisenhower has done all this before. But it is now 18 months since his atoms-for-peace proposal to the United Nations and 2 years since his last full dress speech on peace. Efforts to attain peace and to portray the United States in its rightful peaceful role require constant stimulation.

All we seek is peace. But the Communists claim they want peace and we want war. Too many people, unfortunately, believe the Communists.

Ten years ago this June the hopes of man were focused upon the newly born United Nations. Ten years of bitter experience in a divided world has tempered those hopes.

But that experience has not lessened the hope that surges in all men's breasts that somehow, someway, somewhere a way will be found to implement the first line of the U. N. Charter—

"We, the people of the United Nations, determined to save succeeding generations from the scourge of war."

At San Francisco next month President Eisenhower has an ideal place before the United Nations to remind the entire world that American policy is peace and that America is prepared to go to great lengths and to make great sacrifices to attain it.

Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 26, 1955

Mr. PAYNE. Mr. President, recently May Craig, Washington columnist for the Guy Gannett newspapers in Maine, returned from a trip to Europe and Russia. May has written some excellent columns about her visit to Russia itself. The first two of these columns appeared in the Portland (Maine) Press Herald, on April 21 and 22. They are entitled "May Sleeps in Sight of the Kremlin" and "A Visit to the Tomb of Lenin and Stalin." I ask unanimous consent that these interesting reports on scenes behind the Iron Curtain be printed in the Appendix of the RECORD.

There being no objection, the article were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald of April 21, 1955]

BEHIND THE IRON CURTAIN—MAY SLEEPS IN SIGHT OF THE KREMLIN

(By May Craig)

Moscow, April 1.—Last night I slept in sight of the red star that shines on the highest spire of the Kremlin. It is bitter cold and snowing. In the streets women in short skirts and high boots are shoveling the snow away. We arrived last night in a storm in a two-engine Russian plane, from Warsaw, on a runway humpy and slippery with ice, though heavy snow had been piled off to the side. The pilot had to feel his way in; we circled around for more than half an hour before we found the airport. Same in Vilna, entry point for Russia. Vilna was once in the Baltic State of Lithuania.

There is a fine new air terminal at Vilna, two-story, marble and red carpets, comfortable lounge, excellent toilets even with tissue-paper removable covers for the seats. We went through customs with no trouble, just a spot check. I did not have to open anything. However, we had been told to leave our little red canvas plane bags and other personal hand luggage on the plane, but when we got into customs we found this had been brought in also; my little portable typewriter had not, though it had been opened on the plane. We had to fill out a long questionnaire as to how much money we had, whether we had opium or anything like that, printed matter and film, etc., plants, fur, and many other items.

The lunch was plus and minus. First, excellent orange-colored caviar; then a big plate of chicken-rice soup, also excellent. Main course was bad—a sort of fried sausage cake, very greasy, french fried potatoes, ditto; red cabbage, cooked, ditto; rice, ditto. Dessert was "compote," consisting of three small pieces of apple and one small plum, floating in thin red juice. No coffee or tea; the men had beer which they said was thin but good.

We had left Warsaw without seeing any official, though we had asked. They said there was not time. We did not get a positive refusal, we just didn't, and this I find happens very often and is very exasperating to an American. In Warsaw I mailed off some stories to my papers. I had to take them to a post office; open, so they could see there was no money enclosed. The two women at the post office looked inside, took out a few sheets, glanced at them and put them back. I sealed them. There was a lot of palaver about how much postage to put on; they do not have much mail going outside the country.

Maybe we did not see officials because they had not heard from Moscow and didn't know what latitude they had; whether it was a snub, or whether Moscow wanted to give out whatever was given.

At cocktails at the American Embassy I met a keen young man, Bogdan Lewandowski, in charge of the British-American Department in the Ministry of Foreign Affairs, who has been 5 years one of the Polish delegation to the United Nations, and speaks excellent English. He asked about my trip so far, and I told him of our frustration, our sense that we had not been allowed to make the most of our time and see things and people in Prague and Warsaw. He said we had not given adequate notice and didn't stay long enough. I said we had asked for visas as long before as November and had not known until we got to Paris, a week before we left London for Prague, that we could come.

Section of the Warsaw Airport from which we left was much better than the section we came into, which I told you was so unattractive. The main part, where we waited for our plane to depart, was comfortable, with a big map, in inlaid wood, on the wall, plants, and a small bar where coffee was the equivalent of $1.75 per cup, without milk or cream; tea by the glass at 75 cents. We had no trouble with customs or money leaving Warsaw. It took about 5 hours to Moscow, including the Vilna stop, and the 2 hours' change in time made it seem late when we got to Moscow in the twilight. The soldiers and officials at Vilna were most courteous, and when we arrived in Moscow there was a representative of our Ambassador, some American newspapermen, some Russian newspapermen to meet us. There were no photographers to take pictures of arrival in any of the Iron Curtain countries. At Vilna there were many planes parked far off to the side of the airfield, which was a desolate, vast expanse of snow. The landings made by the pilots on the icy runways were very smooth. We got no snacks on the plane from Warsaw to Moscow.

The dinner we got at the National Hotel, here, in sight of the Kremlin, was perfect. Stan Johnson, the Associated Press man, helped us order and we sat relaxed and mellow after the meal, nicely served by pleasant waiters. Then we went out in the bitter snowy wind to walk around Red Square, past the red marble tomb of Lenin and Stalin, and looked at the Basilica of St. Basil, the high wall with crenellated top, and Red Star shining over all. My room is large and ornately furnished; there is hot water and heat in the radiator.

[From the Portland (Maine) Press-Herald of April 22, 1955]

BEHIND THE IRON CURTAIN—A VISIT TO THE TOMB OF LENIN AND STALIN

(By May Craig)

Moscow.—A religious awe is wrapped around the tomb of Lenin and Stalin, now the twin patron saints of Soviet Russia and its satellites. Outside the great red marble tomb queues of people, a half mile long, wait in sun and icy winter, on the 4 afternoons a week when they are allowed to enter and file, 2 by 2, past the 2 glass-enclosed, bronze sarcophagi in which the 2 leaders of modern Communists lie embalmed.

As "guests" we were allowed to go to the head of the line of people who stretched interminably across Red Square, down the street, around the corner and into a park. It was bitter cold and we shivered in our coats as we waited for the chimes from the tall Spasskaya Tower to sound quarter to five. We waited perhaps a half hour, on the edge of the Square, a long way, perhaps a distance of 3 or 4 blocks from the tomb beside a young, immobilized soldier in long overcoat and black leather boots, who had halted us at this spot. Behind us waited the long files of people who had waited perhaps 2 hours. After the clock on the Kremlin tower chimed, another soldier came, saluted, and motioned that we follow him. We paced very slowly, across the Square, past two other soldiers standing singly at points along lines white-painted on the pavement. Everything was quiet, nobody spoke. We felt the influence of the stolid soldier-guide with his slow steps.

When we arrived directly opposite the tomb with its massive, solid block-on-block architecture, we could see the soldiers with bayoneted rifles, standing on either side of the entrance, up the wide, deep steps. We followed, through a massive door, into the dim interior, beautiful dark green marble, even the floors. Downstairs into a crypt, still in that slow walk, still deathly still, past more silent guards, through a massive door into the crypt itself. The 2 sarcophagi stand high on bronze bases, topped with ornamental bronze. Everything is gloom, except the brightly lighted sarcophagi and the two bodies, which stand out with startling lifelikeness. Lenin has been dead for 31 years, yet it seemed as though he would speak.

The raised sarcophagi are in a sort of pit, level with the floor as we entered, but as we went up steps, we were level with the shoulders of the soldiers who stood stiffly at attention on the pit floor, so that we were on a level with the bodies themselves. Slowly, two by two, we walked past Lenin, turned past their feet, walked past Stalin, then down the steps and out a door opposite the one we entered.

Lenin is nearly bald, his right hand is clenched in the famous Communist salute, he has a little pointed beard. Stalin looks as we have seen him in pictures, sandy hair, large mustache. Lenin's face is intellectual, he is frail. Stalin, the man of steel, is massive as the architecture of the tomb. The embalming is amazing; possibly the vacuum inside the glass is the secret. Stalin's hands are open, palm down, in a most natural position. The smallpox pits which in pictures mar his face, were not noticeable. He wore his medals on his breast.

The whole scene was dramatic, melodramatic, if you wish, and after you got out, into the bright cold blue day, you said that to yourself. But while you were going through, you felt the immense impact as a shrine. The Communists are trying to take religion away from the people; they are putting the state, communism, Lenin who preached it and Stalin who imposed it for so long, in its place. It reminded me of Hitler who sought to put the swastika and the sword on the altar; of the ancient Pharaohs and Caesars who were presented to their people as divine. This tomb is part of the Communist rule of the people, shrewdly and imaginatively designed as part of the plan.

Back of the great tomb itself is a sort of memorial garden, with stone walks, long, low marble strips, 2 feet above the ground, the mass graves of the martyrs of the revolution of 1917. Back of these are individual graves, with tablets and bronze and marble tombstone of individual heroes. Behind all this, the ponderous locked doors piercing the ancient crenallated red-brick wall which surrounds the Kremlin, which is a vast collection of cathedrals, palaces, offices, the grand Kremlin palace, the art galleries.

In the wall, back of the mass tomb and the individual memorials, which enclose the actual bodies, are engraved plaques about 1 by 2 feet square, enclosing the ashes of other leaders of the Communist movement. One of the latest is Andrei Vyshinsky, well known to Americans in the United Nations who died recently. We followed our guide, still 2 by 2, but walking faster now in the bitter twilight cold, down the granite steps, to the sidewalk, across Red Square to our waiting automobiles. The slow double line of people was still twisting serpent like toward the tomb, as far as we could see. Is this devotion? Or does the block leader keep account and remind Ivan and Ina every so often that they have not been lately?

The Display of the Flag

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. REES of Kansas. Mr. Speaker, I am including herewith a resolution adopted by the National Society of the Daughters of the American Colonists at their convention meeting held in Washington recently.

Copies of the resolution have been sent to the leadership of the House and Senate by Mrs. William L. Ainsworth, chairman of the resolutions committee, and Mrs. Frank G. Grau, national president of the organization:

DISPLAY OF THE FLAG

Whereas the flag of the United States of America is the symbol of our Nation; and

Whereas there is an ever greater need for display of our flag, not only on public buildings, schools, and State institutions, but from every home throughout this country; and

Whereas a general display of the flag by our citizenry would reaffirm faith in our constitutional Republic,

Resolved, That the 34th general assembly of the national society, Daughters of the American Colonists, through its active membership, urge all citizens to own and display the flag of the United States of America at their homes on all those days set aside for special display of the flag as designated by section 2 (d) of the Flag Code, Public Law 829; and be it further

Resolved, That the Flag Code be observed as in section 2 (f) regarding display of the flag in or near every polling place on election days; and be it further

Resolved, That funds be provided by the State and Federal Governments for the supplying, the cleaning, and/or replacement of United States flags in all Federal courtrooms and on Federal properties where United States flags are customarily flown.

Resolved, That a copy of this resolution be sent to the majority and minority leaders in the Senate and House and to the chairman of the Appropriations Committee.

The Yalta Papers

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. CURTIS of Missouri. Mr. Speaker, a great deal has been written—the newspapers and periodicals, stated in radio and television broadcasts, and spoken here—the case about the release of the Yalta papers. There is much half information, false information, and impertinent information about the position of the State Department in this matter.

The Secretary of State, John Foster Dulles, made a complete statement on the subject before a committee of the other body on April 19, 1955, and yet confusion still exists in the public mind about what he said. The hearings of congressional committees, though printed, are not easily read by or readily available to the general public. The CONGRESSIONAL RECORD is a somewhat better medium for disseminating public statements of this nature. Accordingly, I am inserting into the RECORD a copy of the statement made by Secretary Dulles on the subject of the release of the Yalta papers:

STATEMENT BY SECRETARY OF STATE JOHN FOSTER DULLES BEFORE THE FOREIGN RELATIONS COMMITTEE OF THE SENATE

Let me say at the start that I believe that it was right that the Yalta papers should be made officially public. I believed—and still believe—that the American public, historian and citizen alike, is entitled to all relevant information on this remarkable chapter in world history that could be divulged without jeopardizing the national security. In this respect I share the view expressed by the late Edward R. Stettinius, Jr., who, as Secretary of State, participated in the Yalta Conference. He said, in 1949, that "it is important for the public to know exactly what took place in the Crimea, and, almost equally important, what did not take place." That was said in the preface to his volume "Roosevelt and the Russians," which very fully reproduces his detailed record of the Yalta Conference.

The official United States publication has now taken place. I am glad to review with you the background and the chronology of events in connection with it.

I

The volumes on the Malta and Yalta Conferences were two of a number of volumes in the Foreign Relations series requested by the Senate Appropriations Committee in its report for fiscal 1954. The request grew out of the supplemental hearings of the Senate Subcommittee on Appropriations on May 15, 1953, which considered a 4-year publication program submitted by the Department of State. This program involved the reduction of the backlog of 26 volumes which had been compiled but not published, along with the publication of a series of volumes on our relations with China during the 1940's and another on the World War II conferences of heads of Government. The Senate Appropriations Committee's report of May 28, 1953, requested the Department of State to "allocate sufficient funds from the appropriation 'Salaries and expenses, 1954' to provide the necessary personnel and other related expenses essential to start reducing the backlog" of the Foreign Relations volumes, and referred with approval to the 4-year program submitted by the Department.

In the hearings for fiscal 1955 the Senate Appropriations Committee had before it a report from the Department showing the proposed schedule of publication which listed the Malta-Yalta volume as having top priority for publication in the series on World War II conferences.

The Senate Appropriations Committee's report for fiscal 1955 stated:

"The committee reiterates its firm conviction that the historic and documented record of our international relations as compiled in the Foreign Relations volumes should be continued aggressively and in unexpurgated form. Every effort should be made to make these documents available just as soon as security considerations will permit. Accordingly, the Committee is recommending $227,280 for this specific purpose."

The Yalta papers were ready to be sent to the printer early last September. If they had been printed at that time they would have been ready for publication in October. The question of whether to publish in October was put to me while I was in the Far East in September. On my instructions, Assistant Secretary Carl W. McCardle cabled the Department from Tokyo on September 11, 1954, as follows:

"With respect to date of publication, Secretary believes that it should not be published until after the congressional elections. If the publication could have taken place a month ago, that would have been all right; but to publish only 2 or 3 weeks before elections would, he thinks, damn the entire operation as political, and in the eyes of students discredit it as politically motivated. They would be suspicious that the selection and omission of documents had been politically motivated. He would, therefore, recommend publication sometime about the first of December."

That December date was not met because of unexpected developments. The British Foreign Office, in accordance with customary practice, had already been shown the documents of British origin, and had cleared these, with very minor exceptions, which did not affect our foreign policy. But toward the end of November 1954 the Foreign Office asked to see the entire collection of documents, including those of United States origin.

In view of the understandable British interest in the minutes and related conference papers, the Department sent the entire set of galleys to the Foreign Office for its information. This was done on December 2, 1954.

By early January, no comments had been received. So, on January 10, 1955, I sent a personal message to Foreign Secretary Eden telling him of our desire to proceed with publication without further delay and expressing the hope that he had no objections. On January 13, he replied that he still had some questions which he suggested we could discuss together at Bangkok the following month. He requested delay until then.

In deference to the Foreign Secretary's wishes, I postponed the publication. However, under the pressures of other matters, Sir Anthony Eden and I failed to talk about this at Bangkok.

Accordingly, upon my return from Bangkok I decided that, while awaiting British approval, a limited number of galleys should be printed and made available on an official basis for departmental use and use by those committees of the Congress who had a special interest in them. On March 10, I cabled Sir Anthony recalling that he had planned to talk to me at Bangkok about the publication of the Yalta papers, but that in the pressure of business we had both overlooked this. I said that, in deference to his views, I was still holding up general publication, but that I did plan to make copies of these documents available to the appropriate congressional committees, for their official use.

On Monday, March 14, at the regular noon briefing of the correspondents who cover the State Department, the State Department spokesman, Mr. Henry Suydam, announced this program. This announcement was premature, in the sense that it was made before Assistant Secretary Morton had had the opportunity to consult with the appropriate members of these committees.

Shortly after lunch on the 14th, I saw news ticker reports which indicated that the chairman generally preferred that their committees not take custody of the papers, but thought it would be better that the State Department make them generally public.

Assistant Secretary Morton confirmed this, and I then asked him to send the following letter to the respective congressional leaders:

"Pursuant to congressional authorization and appropriation concerning special conference volumes the State Department has compiled the papers relating to the Yalta and Malta Conferences of 1945. It is deemed inadvisable at this time to issue these papers in volume for public distribution. Since, however, the papers have actually been compiled and since they may be of interest to your committee members in their official capacity, but not for publication, the Department of State will, if your committee so desires, make a limited number of copies available on a confidential basis."

These letters were written Monday evening, March 14, and delivered by hand on Tuesday morning, March 15.

The Tuesday morning press indicated that the delay in publication was widely ascribed to British objections. So, at 9 a. m. on Tuesday, March 15, I telephoned the British Ambassador. I expressed the view that, in the light of the wide public interest which had, by then, been aroused, it was better for Anglo-American relations to publish at once rather than to allow the impression to gain ground that the United Kingdom had something to hide—which was not the case. The Ambassador indicated his concurrence. I said I would advise Sir Anthony Eden of my views and the Ambassador said he would do the same. He indicated that he felt confident that I would get a quick answer from Sir Anthony. Accordingly, at 10:30 a. m., I sent a message to Sir Anthony saying that I thought it undesirable to perpetuate a situation which created an atmosphere of mystery and concealment, and that, accordingly, unless he felt strongly against it I proposed to publish.

I should, at this point observe that I had already carefully considered the possible impact of publication upon the international situation and particularly upon the pending ratification of the Paris Accords by the German Bundesrat and the French Council. I concluded that that impact would not be unfavorable.

At 10:30 on Tuesday morning, I spoke over the telephone with Senator GEORGE and informed him generally of the position and that I hoped shortly to be able to release the documents generally.

At 11 on Tuesday morning, I had my regular press conference, at which I said:

"The Yalta papers are at the present time in galley-proof form. They are available here in the State Department for consultation on a restrictive basis by Members of the Congress who are on committees that might be concerned with them, and we are still studying the matter of their full publication."

While Assistant Secretary McCardle and I were preparing for my press conference, Mr. James Reston, of the New York Times, telephoned Assistant Secretary McCardle's office and left the following message for him:

"Tell him while he is with the Secretary that I have had a long talk with GEORGE about the Yalta business and I think I ought to see the Secretary after the press conference if I can."

When my press conference was finished, Assistant Secretary McCardle brought Mr. Reston to my office. Mr. Reston said that his impression of his conversation with Senator GEORGE was that the Senator wished to see the Yalta record made public by the State Department. Mr. Reston urged that it was of the utmost importance that the papers be published as a whole and not in garbled form; that unless the New York Times did this, no one else would, but that this would be very expensive and take time. Therefore, if there was to be any comprehensive publication, they had to have an advance copy since it would involve setting up an enormous printing job.

I said that such matters fell under the jurisdiction of Mr. McCardle, Assistant Secretary of State for Public Affairs, who was a former newspaperman. Thereupon the two left.

I subsequently learned that Mr. McCardle gave a galley proof to Mr. Reston about 8:30 p. m. that evening (Tuesday). This involved an exercise by Mr. McCardle of a discretion that was his. It involved no breach of security. On November 5, I had taken and recorded a decision to publish without deletion on an expedited basis. This constituted authority to declassify under Executive Order 10501. The galley proofs, on March 3, were marked "For Official Use Only," under Mr. McCardle's instructions. This was not a security classification but a purely internal classification which Mr. McCardle himself had imposed and which he had full authority to remove.

At 10:12 a. m. of Wednesday, March 16, the British Ambassador phoned me that his Government agreed to publish and that a confirmation cable from London was on its way to me.

At 12:45 on Wednesday I lunched at the Capitol with Senators KNOWLAND and BRIDGES. This appointment had been made 5 days before, on March 11. They mentioned that they had heard a rumor that the New York Times was going to publish the Yalta documents on March 17. I expressed surprise, but said that I thought that we would release the documents that afternoon to all news media. When I returned from lunch, I found the confirmation cable from Sir Anthony Eden agreeing that we should now publish.

Also, shortly after I returned from my lunch with Senators BRIDGES and KNOWLAND, Mr. James Hagerty phoned me that he, too, had heard that the New York Times was planning to run the Yalta papers the next morning and I made to him the same reply I made to the Senators, namely, that I planned a prompt general release.

At 3:45 I talked with Assistant Secretary McCardle and asked him to arrange promptly to release the documents generally. This was done and there was a general publication the next morning (Thursday, March 17).

II

The decision to publish the Malta-Yalta records required decision as to just what to publish. As to this I relied primarily upon Dr. George B. Noble, who has served as Chief of the Division of Historical Policy Research or of the Historical Division since 1946.

The task was not easy. There were no agreed tripartite minutes. The only records available are those which were made by certain members of the respective delegations. These were done on a national basis and no distinction was recognized between formal and informal conversations.

At the Paris Peace Conference of 1919, minutes were kept of the meetings not only of the Council of Ten, but for the most part of meetings of the Big Four (France, Great Britain, Italy, and the United States). These were circulated among the interested delegations and became substantially "agreed minutes." These minutes, which have been published, contain many casual comments of the nature of those to be found in the records of the Yalta discussions.

Where the participants in a conference do not themselves make any distinction in their remarks, as by asking that certain remarks should be treated as off the record, it is extremely difficult for subsequent historians themselves to make the distinction. Secretary of State Stettinius in his volume did not eliminate all of the so-called chit-chat. The record published by the Department of State was the actual record as compiled by certain of the participants and supplied by them to the Department of State for its records.

The most complete record is that of Mr. Bohlen who acted as interpreter. Early in 1949 he had checked and cleared for accuracy the proofs of Mr. Stettinius' book, and in July 1949, Mr. Bohlen transmitted his own record to the Division of Historical Policy Research.

It will be recalled that the report of the Senate Appropriation Committee for fiscal 1955 called for publication of the "unexpurgated" record. I should, however, say that a very few casual or informal remarks have nevertheless been omitted which might have done harm without adding anything of substance to the record.

In some cases remarks which otherwise might have been omitted by the above test have been included because they had previously been incorporated in authoritative memoirs and given wide publicity. The harm, if any, was done, and omission in the official record would merely have served to raise question as to the validity of the publication.

III

To sum up:

(1) At no time have I had any doubt about the desirability of publishing the story of Yalta. This, indeed, seems to have been the view of three of my predecessors who have held office since the Yalta Conference. I have already quoted Mr. Stettinius, the Secretary of State at the time, as to how important he judged it for the public to know exactly what took place at Yalta. His successor as Secretary of State, Secretary Byrnes, published in his memoirs his notes on the Yalta Conference. Secretary of State Acheson early in 1949 cleared the publication by former Secretary Stettinius of his extensive record of the conference.

The view that there should be publication was not only an executive judgment, but also explicitly endorsed by the United States Congress which appropriated the funds for prompt and full publication.

It has been a matter of common knowledge for approximately 2 years that publication was in process, and this has seemed to meet with general approval.

(2) The timing was judged opportune, in the light of the general international situation, and I think it has proved opportune. Furthermore, the timing was such as to avoid any approximation to a domestic election period.

(3) When publication was finally agreed upon, there was full publication of the volume which covers the Yalta Conference. I believe that at least two newspapers, within a few hours of the release, carried the full text of about 300,000 words, while others carried very substantial portions. This served the indispensable purpose of assuring that the American people and interested peoples abroad would easily and quickly get the main story in full and not be dependent upon extracts which might have been selected for partisan purposes or for reasons of pure readibility.

(4) The Yalta papers are now where they belong—in the public domain.

Strong Reserve Can't Be Built on Volunteer Basis

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial by George Fielding Eliot, a commentator on military affairs with a national reputation. He points out how futile it would be to try to build our reserve strength and not have some form of compulsion. In other words, some form of discipline which require that a trainee obey the military rules and comply with the obligation he assumed when he entered the program. That is what the reserve bill, which will soon be considered by the House of Representatives, provides.

The editorial of Mr. Eliot follows:

STRONG RESERVE CAN'T BE BUILT ON VOLUNTEER BASIS

(By George Fielding Eliot)

There seems to be a curious blind spot in that mental vision of many of the distinguished members of the House Armed Services Committee in their current examination of Reserve legislation.

They were quite ready to recognize the need for continuing selective service (2 years active duty) because otherwise the Army could not be kept up to the required strength.

They appear quite willing to require men who have completed this 2 years of active duty to be compulsorily transferred to a component of the Ready Reserve (including the National Guard) for a further period of Reserve service, and to put teeth in the law.

They recognize, however, that adequate numbers for the Ready Reserve (especially the Army National Guard and the Army Reserve) cannot be obtained by this method, and further that it would be desirable to enlist a due proportion of our young men directly into these Reserve units, after a period of basic training.

With its reduced strength the Regular Army cannot possibly absorb anything like the number of young men who annually reach the age of 18: indeed, the long delay between registration (at 18) and induction (now generally 21–22) results in uncertainty and dislocation in individual lives which has a seriously adverse effect on the morale of our youngsters.

So a new form of service—6 months of basic training plus 7½ years in a National Guard or Reserve unit—has been set up.

But the committee appears reluctant to apply the principle of compulsory induction to this type of service. This one is to be purely voluntary.

Why? It is difficult to see any sound reason for saying to a young man: "If we need you for 2 years, we'll take you whether you like it or not, and you'll have to serve in the Reserves afterward, too. But if we need you only for 6 months' basic training, plus a period of Reserve service, we won't take you unless you volunteer."

Also it is difficult to see how the Congressmen imagine that a truly Ready Reserve (especially on the Army side) can be maintained in adequate numbers by voluntary enlistments, when all our experience since Washington's time shows the exact contrary.

The ideal Army National Guard or Army Reserve unit should have a large proportion of active, youthful men, who have already received basic training before joining the unit: given a regular annual intake of such young men, plus a due proportion of ex-draftees with 2 years of experience, a really Ready Reserve unit can be built up which can take the field in 30 or 60 days—that is, as soon as it could be sent to any overseas theater in any case.

But if we are to depend on voluntary enlistments we shall, as all our history proves, be leaning on a broken reed. And this time we just can't afford any broken reeds.

The real crux of the matter is the buildup of the Army National Guard combat units. Ask any experienced Regular officer whether he would feel differently about the proposed reduction of the Regular Army if the 6 armored and 21 Infantry divisions of the Army National Guard could take the field on M-day plus 30 days instead of (as at present) M-day plus 6 to 9 months.

The reason the National Guard can't do better today is that they don't have an assured intake of pretrained men. They can never have such an assured intake in sufficient volume unless the law requires this form of service.

Unhappily, this 6 months' training proposal has been viewed by many Congressmen as a sort of camouflaged version of UMT, which Congress has habitually shied away from. Politically, UMT has two strikes on it already.

Yet it is the expression of a principle without which the American people can never have the ready trained manpower to meet the hairtrigger emergencies of modern times.

It is to be hoped that our legislators will think less of politically objectionable symbols and more about the central question—if we aren't willing or able to pay enough full-time soldiers, how shall we make certain that we have enough part-time soldiers ready to go if as and when the next whistle blows?

We won't get 'em by voluntary enlistment, gentlemen. That's for sure.

Annual Congressional Tour of New York City

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. VAN ZANDT. Mr. Speaker, once again Members of Congress and their families will visit New York City, Friday, Saturday, and Sunday, May 6, 7, and 8.

Full information regarding the trip is contained in the following copy of a circular which has been sent to all Members of Congress:

ANNUAL CONGRESSIONAL NEW YORK TOUR OF 1955

The cost will be $37.50; children 5–12, $32.50. Make reservations today—just phone Extension 366.

Remember our schedules are arranged on daylight time.

This 3-day tour includes every expense except your individual tips.

YOUR SCHEDULE OF EVENTS

Friday, May 6

Leave Washington via Pennsylvania Railroad, 10 a. m. Luncheon in dining car. Arrive New York Pennsylvania Station, 1:45 p. m.

Party goes direct to Pennsylvania Station 31st Street entrance and board motor coach for trip to city hall. Reception, Hon. Robert Wagner, the mayor of New York City.

Party will return to Paramount Hotel. Motor coach will leave Paramount Hotel at 4 p. m. for transfer to Italian Steamship Co., new superliner *Christoforo Columbo;* 6:30 p. m. motor coach will transfer party to Toots Shor's Restaurant for reception and dinner. Our host will be the Pan American Airways. Evening will be open.

Saturday, May 7

8:30 a. m.: We board motor coach for transfer to the United Nations for breakfast and a complete tour of the headquarters.

11:00 a. m.: We board motor coach for transfer to Port Authority of New York liner for New York harbor trip. This is the most interesting trip in New York City. Luncheon aboard ship.

3:30 p. m.: We arrive pier for motor coach transfer to Hotel Paramount.

5:40 p. m.: Motor coach will transfer our party to the Waldorf Astoria Hotel—reception and dinner. Our host will be Edward F. McGinnis, assistant to the president of Joseph E. Seagram & Son. Cocktails, Basildon Room at 6 p. m. Dinner, Jade Room, 7 p. m. The evening will be yours to attend theaters, etc.

Sunday, May 8

The morning will be open for all members of our party to attend church. 11 a. m. motor coach will take us for trip to United States Maritime Academy at Kings Point for in-

spection and luncheon. Buses will leave the Academy at 3 p. m. We will arrive Pennsylvania Station at about 5 p. m. Our train will leave Pennsylvania Station at 5:30 p. m., and we will arrive Washington 9:35 p. m. Dinner in the dining car on our return home.

Those members interested can make reservations by calling Mrs. Powell, Extension 366 or 1830. Reservations must be made immediately.

The Second Declaration of Independence

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BURDICK. Mr. Speaker, citizens of San Diego, Calif., have prepared, printed, and signed a petition to Congress under the caption of the Second Declaration of Independence. This document vividly presents the danger our present Constitution is in and deserves as wide a circulation as possible. If we lose our own constitutional form of government, it will be due to the apathy of the citizens themselves. We have had so much liberty that we take it for granted. Patrick Henry thought otherwise when he said, "Eternal vigilance is the price of liberty," and at this moment when we are surrounded with world isms, and have allowed ourselves to ignore the warnings of Washington, this document may well be, in time, our second declaration of independence. With the names of 59 signers attached, it reads:

PETITIONING SEPARATION FROM THE UNITED NATIONS

When in the course of human events a free and sovereign people find themselves enmeshed in entangling alliances with other nations to the jeopardy of their own security and freedom, it becomes necessary for them to dissolve the political bands which have connected them with these nations, and to resume among the powers of the earth, that separate and equal station which the laws of nature and of nature's God entitle them, and a decent respect to the opinions of mankind requires that they should declare the causes which impel them to such separation. We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these rights are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to reestablish their independence, as a people, on such Christian ideals and principles as will effect their safety and happiness. Prudence, indeed, will dictate that alliances between nations, long established, should not be changed for light or transient causes; and accordingly all experience has shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them to absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards, or to renew those established by constitution, for their security.

Such has been the patient sufferance of the patriotic, God-fearing citizens of these United States of America; and such is now the necessity which constrains them to petition their Congress to dissolve all alliances with world government programs, and especially the United Nations and affiliated nations. The history of world government promoters and leaders is a record of continued restrictions of individual liberty and national sovereignty of free nations, having in final object the establishment of absolute tyranny over the free people of the United States. To prove this let facts be submitted to a candid world. Like Jeroboam, king of ancient Saxon-Israel, who abolished the worship of God in his nation, the world government planners have prohibited even the mention of the name of God and His Christ in all United Nations meetings and assemblies. And like Omri, another king of ancient Saxon-Israel, who substituted his own statutes for the divinely codified laws of his nation, the world government planners engineered the adoption of the charters of the United Nations Organization, the World Bank, the United Nations Economic, Scientific, and Cultural Organization, and other United Nations agencies, by having these charters ratified as treaties, thus making them the supreme law of the land, contrary to the spirit of the first Declaration of Independence and bypassing the provisions for amending our National Constitution. Following the pattern used by Fascists and Nazis, and now practised by the Communists, the world government planners have given dictatorial powers to United Nation officials, who are not elected by, nor responsible to, the people of the United States; and, under the United Nations Charter, administrative officials of the United States have assumed powers which have not been delegated to them by our National Constitution, nor by action of the American Congress. Among the countless instances of usurpation of authority and exercises of unconstitutional powers are the following:

They seek to control the economic life of our Nation through a World Bank and the International Monetary Fund. They have squandered our wealth and our resources through years of "lend-lease," by financial and military support to both the United Nations and the North Atlantic Treaty Organization, and by outright gifts in various "foreign-aid" programs. They advocate loyalty to a super world state, amounting to treason to our own United States. Under shibboleths of peace and liberty, they embroiled us in two world wars, and when our Armed Forces had won smashing victories in both of these wars, they lost the peace. In each instance they laid the foundations for future wars through a vacillating policy of appeasement and diplomatic retreats, and by aiding and abetting the economic and military buildup of our potential enemies. They sent our American Armed Forces into battle in Korea, without action or approval by the American Congress, and they have plotted to prevent successful prosecution of that war by hamstringing our great military leaders, MacArthur, Wedemeyer and Van Fleet, and by failing to secure full cooperation from our so-called "allies." And they engineered a stalemated "truce" in Korea, which is, in effect, a victory for our enemies. They vilify and castigate, as "isolationists," patriotic Americans, whose first loyalty to the United States, but through "internationalist" bungling, appeasement, and even treachery, the world government planners have alienated traditionally friendly peoples and nations, and they have stirred up envy, fear and distrust among all the nations of the world, thus "isolating" the United States until today we stand alone.

They have infiltrated traitors and saboteurs into positions of power and influence in our Government and public activities, and they seek to discredit and silence those who try to expose these termites. And these planners further conspire to limit and abridge the God-given inalienable rights of the free citizens of the United States, by working for the adoption and ratification as treaties, of the United Nations Human rights covenant, and the United Nations Genocide Convention, under which United States citizens could be transported to foreign lands, to be tried in alien courts, on trumped-up charges of alleged violations of these charters, or for crimes against the United Nations. They are preparing amendments to the United Nations Charter designed to completely eliminate all national sovereignties and to give the United Nations power to raise and maintain an international army, under United Nations command, to enforce all United Nations edicts and orders. They propose to present these amendments for adoption in 1955, when the United Nations Charter can be amended by a majority vote of the member nations. At the root of all world government plans is an anti-God cabal, against which the inspired prophets have warned, which seeks to prevent the great people of the United States from fulfilling their divine destiny as a "light and an inspiration for all or the oppressed peoples of the earth."

Therefore, we, the undersigned God-fearing, free citizens of the United States, appealing to the Supreme Judge of the World for the rectitude of our intentions, do petition the Congress of the United States to sever all alliances with the United Nations organization and all affiliate agencies, and to solemnly publish and declare, in the name, and by the authority, of the good people of the United States, that the United States are, and of right shall remain, free and independent States; that they are absolved from all allegiance to the United Nations, and that all political ties between them and the United Nations is and ought to be totally dissolved; and as free and independent States they retain full power and right to protect the rights and the dignity of their free citizens, and to do all other acts and things which independent states may of right do. And for the support of this declaration, with a firm reliance and dependence on the protection of God, through His Son, we pledge allegiance to our flag and the Republic for which it stands, and to each other we mutually pledge our lives, our fortunes, and our sacred honor.

Address of Carmine G. De Sapio

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith an address delivered by the Honorable Carmine G. De Sapio on the occasion of a dinner tendered in his honor by the Israel Bond Organization, held at the Waldorf-Astoria Hotel in New York City on Monday evening, April 25, 1955.

Mr. De Sapio, the secretary of state of New York, is also the Democratic national committeeman of New York State, as well as the Democratic leader of the county of New York. He was the recipient of this great honor in apprecia-

tion of the fact that he has done so much in behalf of the State of Israel. The 2,000 people who turned out to honor him purchased a total of $1,750,000 worth of bonds. This was an evidence not only of their great confidence in these bonds as an investment and in the development of the State of Israel, but also their overwhelming desire to indicate to Mr. De Sapio their devotion to the many fine and outstanding causes which he espouses. The dinner was attended by people in all walks of life.

His address follows:

My dear friends, with all my heart I thank you.

No man could remain unmoved by the warm things which were said of me tonight. I am deeply grateful to the distinguished guests who have paid me such undeserved kindness, and I will always cherish the beautiful award with which I was presented. But, most of all, I shall always try to be worthy of the soul-satisfying honor of being permitted to lend my name and my little help to this vital work, to this great cause.

I am so very thankful to all of you.

Six million Jews were slaughtered in our time, in the maddest orgy of hate since the Lord said to Moses, "And I am come down to deliver my people."

The ashes of these 6 million men and women and children—their dust and their bones—tonight lie buried in our hearts. And if the weight is heavy, it is at the same time uplifting. If the burden is severe, it is at the same time exhilerating. If the responsibility is foreboding, it is at the same time inspiring. For as each person's conscience is seared, so is his determination sharpened. And as each of us is reminded of what was, so are all of us rededicated to what should be.

That you should select me as the symbol for this rededication, is the greatest tribute of my life and the most meaningful honor I have ever known.

I am a Catholic. As such, it is my heritage to be my brother's keeper. It is my faith to love my neighbor. For it was Saint Peter who said: "In every nation he that worketh righteousness, is accepted with God." And through the ages, through tears and terror, through massacre and mutilation, through pain and pogrom, the Jewish nation retained its righteousness and brought dignity and culture, and progress to all in its reach. Through the centuries, Jews gave to the world learning, literature, laws, and love. And today Israel gives to the world a new lesson in enterprise, in courage, and in faith.

I am an American. As such it is my heritage to cherish freedom. It is my duty to protect liberty. That is why I am so proud that the United States formally recognized the State of Israel 20 minutes after she declared her independence on April 27, 1948. And that, too, is why I deplore the shipment of arms to Arab countries, to those who threaten Israel's security, and, therefore, our security.

But Israel will survive. Israel will survive the arrogance of all her enemies and the shortsightedness of some of her friends. Israel will survive because there are men and women like you—in our country, and all over the world—who have the vision, the morality and the awareness to meet our responsibilities; to fulfill our obligations and to recognize the truth of our dependence each upon the other.

And Israel will survive because her people have the courage, the wisdom, and the determination to build, to grow, and to succeed.

Tonight, on the eve of only the seventh anniversary of her independence, it would take volumes to record Israel's achievements. But to me the most miraculous of all her incredible accomplishments, has been the absorption of almost three-quarters of a million immigrants in this short period of time. And this tiny nation already has this vast number of people constructively and usefully at work creating new frontiers of progress—building a modern industrial and agrarian democracy in the otherwise feudal and decadent Middle East.

Israel's immigrants, like America's immigrants, found more than a mere sanctuary from oppression. They found an opportunity; a challenge to apply their skills and their wills to the construction of a new homeland and to the creation of a new life. And although they have not yet found the peace which Jews eternally seek, what they are doing and building, secures that peace for all of us.

The land of Israel today is the spiritual blood bank from which every Jew all over the world draws the plasma of his faith. But to me, a non-Jew, it means even more. The land of Israel stands as a fortress for freedom; as a bulwark for democracy; as an ally in the struggle against godlessness and tyrrany.

And to America, Israel stands as a stalwart supporter in a cold war which has the entire world gripped in the agony of fear.

People of all religions—who love liberty—rejoice and find hope in Israel's growing strength. And the purchases of bonds—in increased quantities—make Israel so much the stronger.

To the extent that our generation takes part in this historic and moving work, will we secure the futures of the generations to come.

As for me, the privilege of joining with you in this important and noble cause is a very deeply gratifying experience for which, again, I thank you with all my heart.

The Prairie Grouse

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I would like to place in the RECORD a copy of a letter to Mr. Charles H. Callison, Conservation Director of the National Wildlife Federation, from a personal friend of mine who resides in my home community of Black River Falls, Wis. I want to commend this letter to the attention of my colleagues as it presents a lucid picture of the problems confronting conservationists in the State of Wisconsin, with particular regard to the prairie grouse:

BLACK RIVER FALLS, WIS., *April 20, 1955.*

CHARLES H. CALLISON,
Conservation Director,
National Wildlife Federation,
Washington, D. C.

DEAR MR. CALLISON: With the plight of the prairie chicken in mind I would like to make an unusual request. It is rather a bold plan, but nothing is impossible in politics. The opponents of prairie grouse have used steamroller tactics and politics, so I believe that we who wish to save this bird, should not hesitate to use similar methods. The greatest enemy of the pinnated and sharptail grouse in Wisconsin is the paper and pulp industry, and the conservation department is pretty much controlled by it. The conservation department has promised lands for these birds, controlled burning, game crop laws, multiple land-use principles; but nothing has been forthcoming and nothing will be.

I've been in the thick of this fight for 10 years. In our State, management of lands for these birds poses no knotty problems. It is the change of policy that is so difficult. Research has recently showed us that if nesting cover is provided the prairie chicken will survive. However, each year more and more openings are planted to pine and the Conservation Department is very well aware of what they are doing to the prairie grouse. One cannot expect help from the Game Division of the Department as they are controlled or overshadowed by the Forestry Division. In giving a replay of the Wildlife Federation's radio script 2 years ago to a county board, and incidentally, acquiring 3,800 acres to be set aside for a grouse project, I was openly thwarted twice by top-ranking Game Division personnel.

Mr. Farley of the United States Fish and Wildlife Service was quite surprised to hear that in our State we must fight the paper and pulp industries for wildlife. I surmised that possibly you also might be in the dark concerning our problems, hence the rather lengthy introduction to the theme of this letter.

Wisconsin has an area composed roughly of 58,000 acres known as the Central Wisconsin Conservation Area (CWCA). This area is owned in its entirety by the United States Department of Agriculture. It is generally known that this area is to be given to the State of Wisconsin. Naturally it is very eager to acquire it. Would it be possible for you to attach a "string" to this gift? Could you persuade the Department of Agriculture to stipulate that Wisconsin could qualify for this gift of 58,000 acres, if the State in return, would set aside 20,000 acres of other State-owned land for grouse management. Of course the State wolud have to agree to establish and maintain suitable habitat for these birds. The areas to be of the State's own choosing. This would roughly be a third of the number of acres of the gift. I sincerely believe that this could be done.

It would definitely be a victory for the grouse. I've talked this over with Mr. Lester Johnson, our Congressman, who is an ardent conservationist, and he has agreed to help. Although he is of the opposite party, I respect his ability, integrity, intelligence and ambition. Possibly he can get Congressman LEE METCALF of Montana and other conservationists to help in Congress. Representative REUSS, I'm sure will do his part. I know Mr. Farley personally and I'm almost positive he'll do what he can. Assistant Director Ernest Swift is undoubtedly familiar with the CWCA area, and with Wisconsin's grouse problems and can supplement much.

Under separate cover I am sending you a booklet "Sharptails Into the Shadows" by Fred and Fran Hamerstrom and their assistant Os Mattson. They are nationally known authorities on prairie chicken. They are greatly concerned over this bird's survival and have stated that unless something is done soon for this bird its doom is inevitable. When the Hamerstroms say that, it's time to listen for they are in the habit of knowing what they are talking about. Their booklet will serve as a sort of vade mecum to Wisconsin grouse problems.

I know not of the prairie grouse populations by States but I can surmise that helping the birds in Wisconsin will certainly affect the national picture. This is surely the business of the National Wildlife Federation. This is why I wouldn't hesitate in asking for help from Congressmen other than those from Wisconsin. This is pretty much a national problem. You've probably noticed that I've mentioned the sharptail problem along with that of the pinnated grouse. The sharptails aren't your prime concern now but in helping one you'll be helping the other.

Sincerely,

DON BERG.

Engineers' Contribution to the St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. DONDERO. Mr. Speaker, under leave granted by the House to extend my remarks in the Appendix of the RECORD, I include an address delivered by Dr. N. R. Danielian, president of the Great Lakes-St. Lawrence Association, at the 75th annual banquet of the Michigan Engineering Society at Birmingham, Mich., on April 2, 1955.

It should be said that Dr. Danielian, as president of the St. Lawrence Association, made a tremendous contribution toward molding public opinion in favor of this great project, the St. Lawrence seaway. He, more than any other man, journeyed throughout the Great Lakes States and the Middle West presenting the facts connected with this international undertaking. After many years of close study and investigation for one of the agencies of our Government, he became one of the best informed individuals in our country in regard to this project. Great credit is due to him for the individual effort he made as president of this association in bringing about the approval of this undertaking. His name always will be associated with the St. Lawrence seaway, as will the name of the association of which he is president.

The notable address which he delivered on the occasion above mentioned should be read by all Members of Congress for the factual information it contains, and I commend it to my colleagues.

His address follows:

I want to express here in Michigan my deep-felt gratitude for the full-fledged cooperation we have received in Washington from all of the congressional representation from this State. I want to mention in particular, because they are good personal friends of mine, Senator CHARLES POTTER and Congressmen GEORGE DONDERO, GERALD FORD, THAD MACHROWICZ, and LOUIS RABAUT. These men have never failed, as their colleagues from Michigan have never failed to respond to any reasonable and constructive suggestion for the advancement of the welfare of Michigan and the Great Lakes States.

Without appearing to detract from the contributions made by citizens in other walks of life, I think it is appropriate for me to emphasize tonight the contributions made by the engineering profession to the advancement of civilization, both here and abroad, in the development of natural resources. Engineers have not always been merely handmaidens of enterprise; they have often led the way; they have created, promoted, and, finally, constructed some of the finest works of man. Whether in uniform or civilian clothes, the gleam of creative imagination is ever undimmed in their eyes.

Ever since 1895, the record is replete with studies and recommendations by engineers, nearly all of them members of the United States Corps of Engineers who, acting upon congressional authorization, studied, approved, and recommended the Great Lakes-to-ocean seaway. If the country had accepted their advice 30 years ago, we would have had this project at a third of the capital cost, and the country would have reaped its benefits in two world wars.

In my own personal experience, ever since 1940, I have found that the most creative thinking and constructive cooperation the supporters of the seaway have had from any quarter came from the United States Corps of Engineers. I mentioned Gen. Tommy Robins. I must add Lt. Gen. Eugene Reybold, who was Chief of Engineers at that time, and his successor, Lt. Gen. Raymond A. Wheeler.

Lt. Gen. Lewis Pick, who conquered the jungles of Burma during the war by building the Ledo Road, known as Pick's Pike, and conceived and created the Pick-Sloan plan, as a result of which the face of the Missouri Basin is being changed, was equally and forcefully interested in the St. Lawrence seaway and made a great contribution to its realization. General Sturgis, now Chief of Engineers, General Robinson, now Deputy Chief of Engineers, and General Potter, division engineer in Omaha, have always taken a personal interest in the seaway project.

I think it is only fair that the country should know that it is the Corps of Engineers who conceived this project, who planned it, in cooperation with their Canadian colleagues, who helped sell it to Congress, and who are now designing and building it for the future benefit of the country. This is a deserved recognition of their talents. While others may be in the public eye, the engineers unostentatiously are busy at the tasks which they love best—to create and to construct.

One may disagree with the United States Corps of Engineers on matters of detail and policy, but one can never question their devotion to the national welfare. As one interested in the St. Lawrence seaway, I am glad to pay a deserved tribute, and I hope the country will realize the debt we owe to the corps. The names of Generals Sturgis and Robinson and Colonel Olmstead, the district engineer at Buffalo, immediately in charge of construction, will be as closely identified with the St. Lawrence project, when the history of this undertaking is written, as General Pick's name is attached to the Pick-Sloan plan and General Goethals' name recalls the Panama Canal.

But the job in the Great Lakes area will not be wholly done by the construction of the seaway locks and canals. There is much work yet to be done and we are going to depend again upon the Corps of Engineers to do the job.

The navigation facilities to be constructed under the seaway program will cost the United States and Canada together approximately $270 million. The power phase of the project to be constructed jointly by the State of New York and the Hydro Electric Power Commission of Ontario will cost an additional $600 million. Thus, $850 to $900 million will be invested between Prescott and Montreal, Canada, a distance of 114 miles on the St. Lawrence River.

The power output from the St. Lawrence Dam will total more than 12 billion kilowatt-hours annually, to be divided equally between the two countries.

When completed, the seaway project will consist of a control dam, a dam and powerhouse, and a series of locks and canals. There will be 7 locks on the St. Lawrence River, plus the 8 locks on the Welland Canal already constructed, all 800 feet long, 80 feet wide, and 30 feet over the sills. The whole project is a tribute to the genius of American and Canadian engineering.

The original St. Lawrence Waterway plan encompassed a sailing route from the ocean through all the Great Lakes and as far west as Duluth, Minn. We have, however, not yet reached that goal. There is work still to be done.

The enabling seaway legislation in Canada and the United States does not include any navigation within the Great Lakes themselves. In effect, this puts a very definite terminus of the deep-water system some 22 miles south of Detroit, at the western end of Lake Erie.

There is a report on the feasibility of deepening the connecting channels of the three westernmost Great Lakes. In addition to their engineering studies, the corps must conduct a survey of use and savings, and weigh these potential savings against the cost of the proposed navigation projects. In the matter of deepening the connecting channels, the Corps of Engineers have reported that for every dollar spent on the project, the savings to our shipping interests will amount to $1.78.

This work would involve dredging the Detroit, St. Clair, and Sault Ste. Marie, and the Straits of Mackinac. Their current depth of 21 feet upbound and 25 feet downbound compare unfavorably with the seaway's controlling depth of 27 feet—a depth necessary for the usual oceangoing ship engaged in foreign trade.

There is another bit of unfinished business on the seaway which is also of importance to all Great Lakes ports.

In the first flush of victory over the passage of the St. Lawrence seaway bill, almost everyone tended to lean back in complacent contentment. The assumption was common that all that had to be done was to wait and let the ships sail in. The seaway, however, is in a competitive business. It must prove economical to the user. The potential shipper who contemplates using the seaway has one thought, "Am I going to save money by using the seaway?" The question of costs and toll charges, consequently, is of immediate importance. The establishment of just and equitable toll rates by both governments is as vital as the establishment of suitable depths.

Another problem that must be ironed out before the seaway can achieve its full potential is the limited expansion capacity of the Welland Canal. This connecting link between Lakes Erie and Ontario bypasses Niagara Falls and the swift rapids of the Niagara River. The canal has 8 locks which raise or lower ships some 323 feet.

To lock a ship through a single lock takes approximately 50 minutes, which limits the daily passage to 14 ships in each direction. Allowing for delays, and for noncargo lockages, there are estimated to be available during a shipping season of 244 days approximately 5,770 lockages both ways, or 2,885 lockages in each direction. From these figures, the Canadian Government estimates the practical capacity of these single locks to be around 46 million tons, assuming that 75 percent of the ships will be 10,000-ton vessels, 25 percent, small canal boats.

Now, what can we expect in the way of traffic when the St. Lawrence seaway is opened—traffic must pass through these Welland locks? We have heard optimistic figures as to expected St. Lawrence seaway traffic. The latest one is 52 million tons by 1965. I do not quarrel with this figure. It is possible. What concerns me is how are we going to get this up and down the Welland Canal. I mentioned the Canadian Government's estimate of 46 million tons as the practical capacity of the Welland Canal. At first glance this would appear to be ample. On closer examination, however, we find that in 1953, 19 million tons of traffic traversed the Welland Canal, leaving 27 million tons of incremental capacity for new busines. I am informed by practical shipping men that this figure is too generous; that the Welland locks are already used much closer to capacity, and that their additional carrying capacity is much more modest than my figures would indicate.

The expansion of this limited capacity of the Welland Canal should be one of our most important objectives for the coming years. I do not know the dollar cost of the expansion of the Welland Canal, but if five of the single locks there had to be duplicated, the cost would be in the range of $100 million—quite comparable to the amount of money we would have to put into the deepening of the connecting channels, a good deal of which will have to be spent on the Canadian side of the boundary waters. The Welland Canal is wholly a Canadian responsibility. All we can do is to bring these facts to the attention of the right people in the Canadian and American Governments.

This additional work will come to a little over $200 million, about equally divided between Canada and the United States. Added to the $900 million already committed for power and navigation, it makes a sizable sum of $1,100,000,000 to be spent from Montreal to the Soo. All but $100 million is already provided for. All but $100 million will be self-liquidating by the consumers of power and the users of the seaway.

The deepening of the connecting channels, then, the establishment of equitable toll rates, and increasing the capacity of the Welland, thus define the work yet to be done to bring this great project to its full achievement.

An International Volunteer Group Similar to World War II's Flying Tigers Could Hold the Line in Asia

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. VAN ZANDT. Mr. Speaker, with the eyes of the world focused on Formosa and the China coast, the following article by Maj. Gen. Claire L. Chennault, as reported by Tom McClary in the May 1955 issue of the magazine Flying, is very timely:

FREEDOM NEEDS AN IVG

(By Maj. Gen. Claire L. Chennault, reported by Tom McClary)

For 2 years I have urged formation of an IVG—an International Volunteer Air Group—set up along the lines of the Flying Tigers. I can see no other effective stopgap which can protect free Asia without involving us diplomatically—a sphere in which we have been notably unsuccessful in the Orient.

Despite the invincibility of the Seventh Fleet and the massive retaliatory power of Strategic Air Command, our situation is highly perilous, due to lack of a hard-core policy.

Mao does not believe we will fight for a free Asia unless we are directly attacked. This is Mao's strongest weapon, his claim that it is about time free Asia got over any illusions about the United States as a dependable ally. And as it watches free Asia dwindling, the Orient wonders if Mao could be right.

Consequently, if free Asia is to maintain faith in itself, the governments involved must immediately be supplied with a mobile, devastating air arm, able to hit wherever needed, and without the waste of time involved in partisan debate and international power politics.

Let us take a square look at the high spots as the free Asian is compelled to do.

For 20 years Chiang Kai-shek, on his own, was able to nullify Soviet imperialism. His fight did not fail until we pulled the rug from under him in 1949, by summarily cutting off his supplies. Then we tacitly gave Red China the go-ahead in Korea by pulling out our forces and subsequently changed our mind after the damage was done. We temporized again by forbidding MacArthur to destroy bases from which he was being attacked because they were north of the Yalu * * * and at a terrible cost in American lives.

In 2 years the neutral U. N. Commission has failed utterly to bring about a democratic consolidation of Korea. In fact the Commission is forcibly prevented from observing in North Korea, where it is known that truce terms are a farce. Contrary to the truce, fortifications have been built, modern military airbases constructed, war planes imported, and munitions stockpiled.

Vietnam fell to the Soviets for simple lack of effective air cover. Presently Laos, Cambodia, and Thailand are the scenes of broad scale Communist infiltration.

And now most recently, we have permitted Mao to gain more face by our abandonment of the Tachens.

The fact is that the American people have not been given a true picture of the situation involved in withdrawal from the Tachens. These islands are not, as commonly pictured, merely outposts of nominal value to Formosa. They are Formosa's outer breastworks against the mainland. But even more importantly they are the only radar early-warning stations to serve both Formosa and Okinawa. Abandonment of the Tachens puts Okinawa under equal peril with North Formosa—permitting no more than 15 minutes warning against Red bombers (twin-jet IL–28's), which can strike from the network of airbases around Kiangsu and Chekiang.

The report goes around out here that the Red China dictator has told both the Burmese and Nehru of India that he will take Formosa this year, despite the fact that Congress granted authority to President Eisenhower to make personal decision regarding defensive military action, thus cutting time impediment to resistance. Mao still thinks he can depend upon leftwingers in Congress and around Government to throw road blocks to effective resistance, if he decides to attack Formosa. The Reds have bragged so long and loud about their early liberation of Formosa that they may not be able to turn away from the attack without disastrous loss of face * * *a fate worse than death in the Orient. But whether or no, the impression is rife that we are a "paper tiger" * * * vacillating with the winds of opportunism.

At this moment the full power of the Soviet Military Advisory Commission and of Red China is concentrating on rushing to completion the military airbase network in the area; Shanghai—Nanking—Chuchow—Ningpo. Most obviously this network is not aimed at Formosa but at Japan, Korea, and Okinawa. Completion of this network will go far to compromise the preservation of our Far East perimeters.

Let me point out that, except for propaganda purposes the Communists do not need possession of Formosa. All they actually require from a strategic standpoint are Formosa's outer radar warning stations and outer island defenses. Korea, on the other hand, is strategically essential to a Red conquest of the Pacific. I fully agree with Republic of Korea Ambassador Ben Limb's recent article in Flying on this point. With Formosa's outer defenses in their hands, the Reds well may swarm first against Korea with MIG–15's and TU–4's. Such a circumstance would certainly jeopardize our whole security in the Pacific.

If anything could be a deterrent in this situation, an IVG would have by far the best chance without forcing us into a shooting war of global dimensions. Quantity of planes and manpower is, for the time being, of secondary importance to thwarting the aggression of Red China. Her Achilles heel is currently lack of transportation. Only 1 railroad runs down the coast, and all advanced-type repair parts, aviation fuel, and munitions must come by rail from Russia. Against this set of conditions, an IVG could operate with great deterrent effect. Nor could Russia complain because the whole pattern of Soviet effort in the Orient is set up on "volunteer" organization and "technical commissions."

As the Red Chinese now look back upon the Korean war, they refer to it as a "rehearsal." On foot and without air power, they point out, they swept across the Yalu and in a few days marched almost to the tip of Korea. They boast that a comparable move with MIG–17's, IL–28's, and paratroopers, would produce another result.

In my opinion, a good part of America's confused policy in the Orient stems from lack of understanding of precisely what help is needed * * * despite the fact that Admiral Radford was explicit in his explanation. Free Asia does not need ground troops from America. Properly trained and equipped, the Asiatic soldier is tough enough. Free Asia needs sea blockade and air cover. With these protections the Nationalist Chinese forces could have landed on the mainland and run over the Reds; nor do I believe that this would have sparked a general war * * * and most especially not if the air cover was IVG.

When the suggestion encountered hot debate and lack of approval in the United States, Mao considered that once more he had the same green light he had had in respect to the Yalu. He greatly intensified his fifth column in every free country in Asia. It was perfect psychology because Asia knows that, without equivalent airpower to match Red China, the Nationalists do not have a chance; and if the United States does not furnish the airpower, where is it to come from? The only answer I know is an IVG. Operational costs would be less than one-half that of a formal military organization of the same combat strength.

From the hundreds of applications which I have received from all over the world—including some from behind the Iron Curtain—a crack, elite squadron could be in action in 3 months—a self-supporting wing of 75 planes manned by 475 volunteers in 6 months.

The casual, work-a-day citizen may never understand it, but in every country in the world there are men with a passion for freedom, willing to fight and die for it. Maybe aviation has an unusual appeal to such men. Of this I can not say for certain. What I can say is that I can gather swiftly and surely an advanced pilot cadre which will have combat superiority to meet the situation.

For the Flying Tigers I was supplied with nothing but hastily assembled P–40 Curtiss Hawks with which to fight off the armadas of Japanese Zeros and German Messerschmitts.

For an IVG, I estimate the cost, per wing of foreign pilots, to be seven and a half million dollars anually. Cost of planes and munitions would be approximately the same as for a formal military establishment. I would recommend that such a group be placed under the advisory supervision of the Chief of Staff of the United States Air Force, with a congressional watchdog committee to oversee procurement and expenditures.

I am convinced that a comparatively small IVG, modernly equipped with American aircraft, could nullify Red aggression in the air. It would be a means of doing something that has to be done unless free Asia is to be thrown to the dogs.

The recent SEATO conference at Bangkok, February 23–25, revealed the urgent need for tangible military units to resist the anticipated advance of communism in southeast Asia. Despite the insistence of the Thais upon the stationing of SEATO military units in Thailand, the United States promised roving units to be available in the general area and no other SEATO conference power volunteered military units of any type for immediate resistance to Communist aggression. The conference adjourned after appointing a SEATO military committee to work on measures to cope with communism.

The International Volunteer Air Group would be an ideal military unit for this purpose. Patterned after the oft-used Communist volunteer aggression units, except that it would be truly international and really volunteer, it could be kept in a high state of training and technical supply for immediate use in any area threatened by communism in southeast Asia. Its use would relieve the United States and other SEATO powers of the Communist charge of intervention in the internal affairs of Asiatic states, as well as the possibility of precipitating a war between Red China and the United States. The employment of an IVG in southeast Asia should also eliminate the chimerical fear of opening a world war, since it is hardly conceivable that the U. S. S. R. would start such a war because of the operations of a volunteer group.

And I submit that a cadre of volunteers who passionately love freedom, fighting of their own free will, would sound a trumpet call of hope to free Asia such as has not been heard since the dark shadow of Marxism began to engulf the Orient.

Petition of Green Bay, Wis., VFW Regarding the Hoover Commission

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. REUSS. Mr. Speaker, under leave to extend and revise my remarks, there follows a petition passed by both the Brown County (Wis.) Council, VFW, and Noble-Straubel Post, No. 2037, on April 12 and April 14, respectively:

RECOMMENDING DISSOLUTION OF HOOVER COMMISSION

We, the members of the Brown County Council, Veterans of Foreign Wars, in regular meeting here assembled, make it known, recommend, and petition our congressional Representatives and Senators that they dissolve the Hoover Commission at the expiration of its activities on May 31, 1955, and kindly request that it not be extended further time for the reasons which we cite below.

The Hoover Commission which was created to bring about economy and efficiency in Government has seemingly made the veteran, the Veterans' Administration, and veterans' preference in Government employment its prime target for effecting most of their prescribed economies by recommending:

Review of all service-connected disability claims for compensated veterans, with cutting same as their prime objective.

Attacking the Veterans' Administration hospital and medical program.

Curtailment of building and renovation of hospitals now standing or contracted for.

Closing of 19 hospitals throughout the country. (Recommended.)

Putting admission to veterans' hospitals on a priority basis, with pauper's oath with addendum necessary.

Recommended drastic changes in the veterans' preference laws as provided by Congress to the veterans in civil-service employment.

These and many more too numerous to mention have been recommended. There were 14 recommendations made affecting veterans, only 2 which were deemed commendable. So we trust you will use your good offices to counteract any further extension being granted this Commission. We are told that there have been more recommendations come from the Hoover Commission than from the President of the United States.

Thanking you for any favorable support you may grant us, we remain,

Very sincerely yours,

BROWN COUNTY COUNCIL, VFW.
CLAYTON J. THYES,
Commander.
IRVIN V. SHEEDY,
Adjutant.

The Hells Canyon Dam Proposal

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BUDGE. Mr. Speaker, the following article written by Aden Hyde, editor of the Eastern Idaho Farmer, and printed in the March 31, 1955, issue, sets forth the serious concern the people of my congressional district feel toward the Hells Canyon Dam proposal. Water for the irrigation of farmlands in the upper Snake River area is vital to the economy of that area.

The article follows:

VIEWS AND NEWS ON SUBJECTS HERE AND THERE

(By Aden Hyde, editor, the Eastern Idaho Farmer)

It took residents of the Snake River Valley a few days to recover from their astonishment when a Senate subcommittee scheduled grassroots Hells Canyon Dam hearings at Lewiston, Pasco, and Portland.

But after that initial incredulity wore off, it certaily didn't take long for the screams to reach Washington. So the Senate committee condesendingly whacked Lewiston's hearing time in half and decided to spend some part of a whole half day in Boise.

That concession—which wasn't much, for sure—really stirred up the folks in the Snake River Valley. The end isn't yet, either. There will be more sharp words stemming from bewildered and irritated Idahoans begore that hearing junket comes to the Northwest.

It is still beyond our comprehension why Hells Canyon "grass roots" hearings didn't include the Snake River Valley in the first place. Lewiston, Pasco, and Portland, indeed.

Not one acre of land below Hells Canyon Dam will be irrigated because of that structure's construction. Pasco is in Washington on the Columbia River above the mouth of Snake River. And as for Portland, why not hearings in Honolulu and Tokyo?

The only possible inference in scheduling hearings at Pasco and Portland is that the whole Hells Canyon matter, downstream, has become nothing but a grab for Federal power—Federal power turbined by Idaho and Wyoming water and diverted downstream, away from Idaho entirely.

The Eastern Idaho Farmer is well aware of the insistent argument that the Government of the United States would never use Idaho's water for downstream power purposes.

Well, that's exactly what the Government of the United States would be doing if Hells Canyon Dam is built for the power benefit of anybody living in the vicinity of either Pasco or Portland. Can't take our water? That's exactly what WAYNE MORSE and RICHARD NEUBERGER are proposing to do right now.

At least, they are going through the motions. Senator HENRY DWORSHAK has publicly charged that the Hells Canyon authorization legislation, this impending congressional grass roots junket and the Lewiston-Pasco-Portland hearings is nothing but politics, designed to embarrass the Eisenhower administration. In private correspondence, the senior Idaho Senator has gone further than that; he has said that he doubts if either MORSE or NEUBERGER really want to have Hells Canyon built. They are just using the demand and the opportunity for political effect in public-power-conscious Oregon.

We do not mean to imply, of course, that there is anything in the present situation which warrants the assumption that the Government will, simply by building Hells Canyon Dam, put all existing Idaho water rights in immediate jeopardy. What we do say—and no more fully informed authority on that is Congressman HAMER BUDGE who has made it his specific business to learn all there is to know about that—is that big Government can do just that.

But present water rights do not include all the water originating on the Snake River watershed in Idaho and Wyoming. Somebody long ago suggested to the Eastern Idaho Farmer that no great vision is required to look forward to the time when industry, in search for water, could easily find the Snake River Valley a place to its liking—and that the Snake River plains may some day be spotted with factories and inhabited by 5 million people.

But that could never be unless Idaho is free to develop all its water resources—and that's impossible if prior rights are established downstream.

Senator HERMAN WELKER got into the act with this statement:

"I am sick and tried of having the people who pioneered and who toiled with shovel in hand to build an irrigation system being made political pawns of poltical interests of neighboring States."

"It is my duty to support and defend the sovereign rights of the people of Idaho. And I shall fight until the last breath in my body to keep those rights from being sold across a political cacus table.

"I am determined that the vast agricultural developments of my State shall not become a 'dust bowl' monument to the misguided political proponents of a high Federal dam in Hells Canyon. Once the high dam is authorized the rights of industrious farmers who have made this State will be a thing of the past."

That's pretty much on the fire and brimstone side but it probably well reflects the exasperation which many Idaho citizens feel.

Our final thought is to return to a statement which former Col. F. S. Tandy, chief of the Army engineers' office at Walla Walla, made shortly after he was retired:

"Give me $400 million for upstream storage and I'll make a desert of Hells Canyon."

Colonel Tandy, with long flood-control experience to support his conclusions, believed in storing water where it falls, not far downstream.

With that conclusion, the Eastern Idaho Farmer concurs. What's more, we fervently believe that Idaho's destiny will be determined by what happens in Hells Canyon.

Louisiana Tidelands No. 3

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, as I stated in the RECORD the other day, it is my desire to present to the Congress a series of articles on tidelands which appeared in the Times-Picayune of New Orleans, La. I set forth below the third in this series of four editorials, which is entitled "The Tidelands Situation: No. 3 in a Series:"

THE TIDELANDS SITUATION: NO. 3 IN A SERIES—LOUISIANA'S CLAIM TO LAND THREE LEAGUES FROM COAST

Under the Tidelands Act of 1953 "title and ownership of the lands beneath navigable waters within the boundaries of the respective State, and the natural resources within such lands and waters" were "vested in and assigned to" the respective States.

A section of the Tidelands Act provided further that the "seaward boundary of each original coastal State is hereby approved and confirmed as a line 3 geographical miles distant from its coastline * * *." This section provided also, however, States admitted to the Union after its original formation might establish such boundaries but that "Nothing in this section is to be construed as questioning or in any manner prejudicing the existence of any State's seaward boundary beyond 3 geographical miles if it was so provided by the Constitution or laws prior to or at the time such State became a member of the Union, or if it has been heretofore approved by Congress."

The latter provision apparently was intended particularly for the benefit of Texas, which was a republic before it became a State—under a treaty establishing its boundary 3 leagues, instead of 3 miles, beyond its coastline.

This provision appears to us to apply also to Louisiana, giving this State title to submerged lands 3 leagues beyond its coastline.

Reason for this interpretation is the language of the act of Congress of April 8, 1812, under which Louisiana became a State of the Union.

The act of admission established the seaward boundary of the new State at three leagues of the coast.

That the Congress acknowledged that it could neither take away from nor add to a State's territory was manifested a few days later, on April 14, 1812. On this date the Congress added to Louisiana lands which had been claimed by Spain, which are known today as the Florida parishes, "in case the Legislature of the State of Louisiana shall consent thereto. * * *"

The Louisiana Legislature subsequently did consent to the Florida parishes being added to the State.

In view of the language of the act which admitted Louisiana as a State and of Congress' acknowledgement that it lacked the power to take from or add to a State's territory, without its consent, it seems to us clear that Louisiana had a boundary more than 3 miles beyond its coastline at the time such State became a member of the Union.

During prohibition it was generally understood that the Federal Government had no jurisdiction beyond the 3-mile limit. This understanding was shaken, of course, by the *I'm Alone* case—in which the rum-running boat *I'm Alone* was captured far beyond this 3-mile limit.

Whatever the origin of this popular conception or misconception, it has no support in the language of the 1783 Treaty of Independence, which settled the Revolutionary War and fixed the boundaries of States then bordering the Atlantic Ocean and the Great Lakes.

Probably because the Atlantic Coast States had substantial interest in fishing, the boundaries of the original States touching that coast were fixed by the treaty at 20 leagues from shore into the Atlantic Ocean.

The Continental Congress on August 4, 1779, had instructed the treaty commissioners of the Continental Congress to insist on the 20-league boundary as an ultimatum.

Before Louisiana was admitted as a State, with a boundary 3 leagues from its coast, the area of the Louisiana Territory—as shown by early maps—extended even further into the Gulf of Mexico, to the edge of the Continental Shelf.

It seems to us that State officials are obligated to maintain Louisiana's right to the submerged lands 3 leagues beyond its coastline.

Suggested Rules for Negotiations With Red China

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. VAN ZANDT. Mr. Speaker, suggested rules regarding negotiations with Red China are advocated by Mr. Robert T. Oliver, of State College, Pa., an authority on Korea, in the following editorial which he wrote for the May 1955 issue of the Korean Survey, which is published by the Washington bureau of the Korean Pacific Press:

NEGOTIATIONS: SUGGESTED RULES

Inescapably, the basic question immediately before the world is not whether but how to conduct negotiations aiming toward a global settlement. Until world war actually starts, our very concept of civilization demands a continuance of efforts to prevent it by salvaging agreement through discussion. Even so, the question is not how to preserve peace (which can most surely be accomplished by surrender) but how to preserve the values of liberty. This means that negotiation must be conducted with liberty, rather than peace, as its fundamental aim.

On the basis of the experience of the past decade, the following guiding principles emerge as indispensable guides:

1. We must negotiate from strength; and strength means a sword in hand, not in a sheath. Even when the United States had the world's only hoard of atomic bombs, this unused strength did not help us. On the other hand the Communists use strength in a way that counts heavily at the conference table. By way of contrast, consider Korea and Indochina. In Korea in 1951 the UN had the Communists beaten. But when we commenced to negotiate, we stopped our military pressure—and lost the negotiation. In Indochina the Reds poured all their strength into an attack on Dienbienphu during the Geneva Conference—and won. Our great aim is to relax tensions to achieve a calm atmosphere for talk; the Communists move quickly to create tensions as a threatening background for talk. To overmatch them, we should move greatly increased military power into Korea and Formosa before we enter another conference, and should make plain our instant readiness to use it if talk fails.

2. We must have a genuine alternative if negotiation fails. In Seoul in 1953 Secretary Dulles urged President Rhee to agree to the truce on the ground that it is better to reunify Korea by conference than by war. But Dulles was unwilling to pledge that if negotiation failed, war would be resumed. The Communists, accordingly, knew in advance they could reject all reasonable proposals without penalty. From this and many other lessons we should realize that to enter into still another conference on Asian problems will be fruitless unless we make it clear that in the event conference fails we do have other alternatives: perhaps a blockade of Red China, or a positive guarantee of the present dividing line in southeast Asia, or bombing raids of the mainland from Formosa, or renewal of the fighting in Korea. Unless there is a clear penalty for failure at the conference table, the Reds will not make any concessions.

3. We must not let our policies be undermined by weak allies. In case a world war breaks out, America will be the chief target of attack and will have to do most of the effective fighting. Yet we let Atlee of England and Nehru of India dictate a policy of no victory in Korea. We let Mendes-France dictate a surrender in Indochina, partly at the behest of Anthony Eden who, at Geneva, described himself not as America's strongest ally but as an honest broker between us and the Reds. It is simple common sense that we who will have to struggle to win the next war, if it comes, must be allowed to follow our own judgment (based on our own needs and beliefs) as to how that war may be prevented.

4. We must not blind ourselves to the fact that war may be inevitable. It is conceivable that both sides may renounce war from fear of the hydrogen bomb; but the human race has fought against all manner of weapons all through history, and the millenium may not have arrived in our time. By constant reiteration of the unspeakable horrors of the hydrogen bomb, we undermine our own moral responsibility for making any sacrifice needed to preserve our democratic society. On March 20 Secretary Dulles wisely warned: "The time may come when we shall have to sacrifice peace to secure our liberties." The great tragedy would be acceptance of a "peace at any price" psychology. The instant we reach that point, the Reds will have won the opportunity for world domination. Liberty is worth even more than safety.

Resolution on Indian Affairs

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. MADDEN. Mr. Speaker, the Anselm Forum, Inc., of Gary, Ind., passed the following resolution on April 17, 1955.

Congress should endorse the recommendations set out therein to protect the rights of American Indians on legislation involving their interests and welfare:

Whereas it has become the policy of the United States, since the passage of House Resolution 108, in 1953, to bring to an end all Federal considerations enjoyed by the Indians residing within the territorial limits

of the United States, because of their Indian status; and

Whereas the Congress has further declared its intentions by enacting into law acts terminating the special relationships existing between the Government and six separate tribes—the Klamaths, and the Uintah-Ouray—forcing liquidation of tribal assets, placing tribal lands on tax rolls despite treaties, statutes, and long-standing customs. This creates a serious threat to homes and income; and

Whereas this action, justified as a means of integrating the Indians into our common way of life, has been undertaken against the will and judgment of most Indian leaders. There has been almost no long-range preparation of the Indian by the Government for private citizen status. His inexperience in self-government requires formulation of an intelligent program for his eventual adjustment to American life. Only adequate economic opportunities for decent standards of living will make a modified termination possible: Therefore be it

Resolved, That Gary Anselm Forum be on record as opposing all future legislation in the Indians' behalf without prior consultation and agreement with the tribes involved.

ANSELM FORUM, INC.
GARY, IND., *April 17, 1955.*

Federal Power Policy

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, since the turn of this century the Federal Government—under both Democrats and Republicans—developed a power policy that is realistic and sound. As the power policy developed, it gave consideration to the interests and welfare of the public.

In recent years, however, there has been a tendency to turn away from this public power policy. I know that the people are aware of this trend. In support of this contention, I wish to insert in the RECORD, a very fine resolution adopted by 400 delegates attending the 19th annual meeting of the Wisconsin Electric Cooperative held in Madison, Wis., on March 30–31, 1955.

I commend the resolution to my colleagues for their study and consideration. The resolution outlines the development of our Federal power policy, and it also comments on the trend away from this policy by legislative and administrative action.

The full text of the resolution follows:

FEDERAL POWER POLICY

Over the years since 1900 there has evolved through congressional and executive action what has become known as the Federal power policy. The development of this policy has been under the legislative leadership of men of both major political parties and under the administrations of both Republicans and Democrats. By 1950 it could be said that the Federal power policy embodied the following principles:

1. That the Federal Government not only has a responsibility to regulate navigation and commerce and to prevent flood damage on and along our navigable streams, but to develop our great hydroelectric resources through construction and operation of great multipurpose dams.

2. That the power developed at federally owned and operated dams should be sold on a low-cost basis with preference given to public agencies and nonprofit cooperatives in the amounts of such power sold.

3. That as an incident to the marketing of power from Federal hydroelectric projects the Federal Government should construct and operate transmission lines to carry such power to main load centers where that is necessary in order to give practical effect to the preference clause.

4. That regional development of waterpower resources in the interests of navigation, conservation, flood control, and power generation is a responsibility of the Federal Government in order to bring the benefits of our great waterpower resources to the greatest number of people.

5. That it is proper and necessary for the Federal Government to construct and operate steam-generation plants in order to firm up and make more valuable power developed at federally owned hydroelectric dams.

6. That the Federal Government has a responsibility to aid in bringing electricity to unelectrified rural areas through making loans available to cooperatives and others for the construction of generation, transmission and distribution facilities for this purpose.

This evolving Federal power policy has seen the development of the great Tennessee Valley Authority, the Bonneville Power Administration, the Southeastern and Southwestern Power Administrations numerous other great dams, including those on the Missouri River and the marketing of power at rates which have encouraged the development of industry and agriculture on a scale which would have otherwise been impossible. And as a result of the Rural Electrification Act of 1936 we have seen a transformation in rural life which has brought tremendous benefits to rural America in the past with even greater benefits indicated for the future.

But this Federal power policy and its tangible expression in low cost power for industries, homes and farms have not come about without struggle nor without bitter opposition from monopoly interests who seem to think that the term "public welfare" is synonymous with stockholder profits and who try to make the public believe that when they try to do something for themselves through their Government they thereby become Socialists, if not dangerous Communists.

Events of the past few years indicate that not only are these opponents of our Federal power policy still fighting to destroy it but that they are enjoying a measure of success that threatens to scuttle the achievements of 50 years of efforts in behalf of all the people.

Recent legislative and administrative proposals to emasculate the preference clause in the marketing of Federal power, to sell or lease Federal transmission lines and even whole projects, such TVA—to build no more Federal power dams, to turn over hydro sites such as Hells River Canyon to high cost private power exploitation and the recent recommendation of the Hoover Commission on Federal Lending Agencies to abolish REA and insurance increase costs to REA cooperatives—these and many others, are startling evidence of the effectiveness of the money powered propaganda drive of private utility interests.

Now, therefore, the delegates to the 19th annual meeting of Wisconsin Electric Cooperative do hereby resolve that—

1. Our membership give full support to the preservation of our Federal power policy formulated and put into effect between 1900 and 1950.

2. We vigorously oppose current efforts to weaken and destroy that Federal power policy.

3. We support measures to extend the benefits of our Federal power policy through such acts as Government construction of Hells Canyon and other great dams, the construction of large base load steam plants to supplement and firm up hydropower and the interconnection of these plants with hydrofacilities to extend low-cost power to other areas and load centers and eliminate existing regional discrimination in rates.

4. We commend our national association, the National Rural Electric Cooperative Association, for the vigorous fight it has made in our behalf to preserve our Federal power policy, and we pledge our continual support of these efforts to the end that the benefits of low-cost electric power be extended to all our peoples to help makes a better and stronger America.

Success on New Shores

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith an article which appeared in the Christian Science Monitor on April 18, 1955, by Mary Hornaday, called "Success on New Shores":

SUCCESS ON NEW SHORES
(By Mary Hornaday)

New York has been largely built by wave after wave of immigrations from Europe. Most recent of these resulting from Hitler's persecution of the Jews has just passed a landmark with the 112-page 20th anniversary edition of Aufbau, unique German language weekly which has not only provided a forum but even families for these uprooted people.

From the point of view of Aufbau and its ex-Berliner editor, Dr. Manfred George, this latest immigration has been "more or less successful" though some of its most talented members have gone back to central Europe and others are operating, in this air age, on both sides of the Atlantic.

This immigration, symbolized by Aufbau, was unique in that it did not get stuck in the slums of New York's lower East Side. Its members were largely cultured, quick-witted people, who took large apartments in the Riverside Drive area and, though they had to rent out 4 of their 5 rooms, never left what they call their bourgeois setting. They were people who knew a little English from their school days and something about American ways and history.

In its early days Aufbau, which belongs to a nonprofit group called the New World Club, performed a valiant service by knitting together in the free atmosphere of America the threads tossed across the seas by people who had been scattered over the face of the globe by Hitler's inhumanity. The Red Cross reported that 80 percent of its searches instituted through Aufbau brought results.

Some of the older immigrants found families for the first time. Aufbau's anniversary edition records the case of Mary, a cook in Omaha, Nebr., an immigrant from East Prussia 50 years before, who put an ad in Aufbau in September, 1950, and in January, 1951, had a letter from a sister in Israel who she didn't even know existed.

Arriving in a general era of full employment, Aufbau's readers can count up among themselves today many successful careers not only in cultural fields but in business and industry. The anniversary edition pays tribute to Stefan Lorant, noted authority on Abraham Lincoln and Rudolf Flesch, author of the best-seller, Why Johnny Can't Read, and also to immigrants less well known to those outside the world of big business.

They mention, among others, Leo Jolson, who has built up a $250,000 business importing Necchi sewing machines from Italy; Leichtman, who built up the Commercial State Bank & Trust Co. of New York; Alfred Moses, who landed with $11 in his pocket, whose Almar Manufacturing Co. making plastic purses and raincoats has become one of Georgia's leading firms; Jack Minkus, the stamp king of New York; and Erich Sternberg, department store magnate in Louisiana.

With most of its readers literarily and musically inclined, Aufbau has devoted much space in the last 20 years to cultural subjects, encouraging especially the off-Broadway productions in which refugee artists got their best opportunities. Ten years ago when Aufbau took its first survey of the enrichment of American culture by refugee artists and writers, the scene was considerably brighter than it is today. A lot of refugee artists who could not conquer the American market have returned to Europe and several of the top ones have passed away.

But a new generation of youngsters writing in English is just coming to the fore and a notable phenomenon since World War II is the number of German-speaking artists working both sides of the Atlantic at the same time. Included in the latter group are Erich Maria Remarque, Hans Habe, Oscar Karlweiss, Francis Lederer, and Oscar Homolka.

Still another way in which Aufbau, which means to "build up," has been living up to its unique purpose (and operating without a deficit) has been in its attempts to heal the breach between Adenauer's Germany and the Jewish people who suffered under Hitler.

Today Aufbau is read in Germany as an American paper—not widely but by people who count in its long-term campaign to get both the post-Hitler Germans and the resettled Jews to see that a new day has dawned in which they must get along together.

"This part of our work is not easy," says Dr. George, "Many of our people have very bitter remembrances and are very emotional in their reactions. We don't say to them that they have to condone and forget what Hitler did, but we have tried to impress on them that hate cannot be productive. We have tried to contact those forces in Germany which could be counted on and have tried to build up bridges of understanding. We are fighting neonazism in Germany."

As an American newspaper representing an ex-German minority within the American Jewish minority, Aufbau was happy to have a salutation from President Eisenhower and from Chancellor Adenauer on its recent anniversary.

Free World and Formosa

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Picayune of April 19, 1955:

FREE WORLD AND FORMOSA

With one exception, Secretary of State Dulles noted in commenting on Adlai Stevenson's speech broadcast nationwide last week, the former Democratic presidential nominee's ideas on the Formosa Strait crisis parallel what the Eisenhower administration is doing. That single exception, according to Mr. Dulles, is that Mr. Stevenson would ignore "the loyalty and resources" of a principal ally, Nationalist China.

But it seems to us there is still another exception between Mr. Stevenson's ideas and what appears to be the Dulles policy in the Far East. Mr. Stevenson stressed the need for the free world "to join with us in an open declaration condemning the use of force in the Formosa Strait" and agreeing to "stand with us in the defense of Formost against aggression." While the State Department may be moving quietly and undercover toward this very objective—and there have been evidences of that goal in the United Nations—there has been no open effort toward lining up free-world agreement and concerted action in Formosa. Only Britian has — with qualifications — supported the United States statements on the Formosa Strait. For the most part that support has consisted of explanations to Parliament by Sir Anthony Eden as to what Washington means by its somewhat shifting evidences of attitude.

Naturally Mr. Stevenson's address contained statements betraying political motivation. His effort to pin blame for a "dead-end policy in Asia" on the Republican administration is an example. But by and large aggressors in Peiping will gain no comfort from Mr. Stevenson's speech. Despite the doubts on the need to fight for Quemoy and Matsu islands, it backs the American policy of doing everything possible to settle the Formosa Strait crisis peacefully and accepts the necessity of defending Formosa from Red China.

Most Beautiful Spring

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, the many people who travel western Pennsylvania are impressed with the beauty and enchantment of the scenery. I myself have traveled in many parts of the world, and I have yet to see anything that can surpass western Pennsylvania in the summertime.

With your permission, I am including an editorial from the Pittsburgh Press, which adequately expresses the beauty and charm of western Pennsylvania.

MOST BEAUTIFUL SPRING

Few places in the United States, or in the world for that matter, are as beautiful in spring as western Pennsylvania. The reason may be our abundant April showers, or the hills that show spring's finery to advantage.

Spring comes gradually here. First the grass, which has seemed dead for months, becomes a vivid green. Then the forsythia bushes and dandelion blooms add splashes of gold. A little later, peach and pear trees become pink and white clouds, and their blooming is followed by the snowy glory of apple blossoms.

Fields become purple with violets just before the trillium raises its hooded head in the woods. Then the skirts of many woodlands show lace petticoats of dogwood.

Usually the various waves of spring's advance overlap. That is especially true this year, when an unusually warm April has brought out the apple blossoms while some forsythia still is in bloom.

Any resident of this area who doesn't go out in the country in the next week or so will miss the finest scenery of the year.

Report on a Minimum Wage Rate Survey

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1955

Mr. PATTERSON. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a document entitled "What Wage Floor Would Be Necessary To Protect Connecticut's Great Industrial Labor Force Against the Migration of Industries From the State?", which was prepared by Dr. Sar A. Levitan, an outstanding economist on the staff of the Legislative Reference Service, Library of Congress.

I requested the Legislative Reference Service to conduct this survey with a view of determining what national minimum wage floor should be established in order to protect Connecticut's industrial labor force from runaway industries migrating to labor market areas of surplus labor supply, indecent wages, and substandards of living.

The Legislative Reference Service, of course, makes no recommendations. Consequently it would be unfair to read into this study any support or opposition to any specific proposal for the modification of the Federal minimum wage law now pending before Congress. This study is based upon a comprehensive survey and an objective analysis of the facts. I commend Dr. Levitan for his excellent presentation of a vital economic problem.

I hope that this factual study will be of benefit not only to me but to other Members of the House:

WHAT WAGE FLOOR WOULD BE NECESSARY TO PROTECT CONNECTICUT'S GREAT INDUSTRIAL LABOR FORCE AGAINST THE MIGRATION OF INDUSTRIES FROM THE STATE?

(Prepared by Dr. Sar A. Levitan)

MINIMUM-WAGE LEGISLATION TO DATE

Minimum-wage legislation in the United States dates back to 1912, when the Commonwealth of Massachusetts passed the first State minimum-wage law. Since then more than half the States have enacted minimum-wage legislation. Twenty-three of the thirty States and Territories with minimum-wage legislation have limited their coverage to women and/or children. Twenty-two States, most of them in the South, have no minimum-wage laws.

Two of the seven States that have extended the protection of their minimum-wage laws to men as well as women have a statutory minimum-wage rate of 75 cents an hour. These two States are Connecticut and Massachusetts. Connecticut was the first State to set a statutory minimum equal to the current Federal rate. Beside these two cases, State coverage has been largely limited and the statutory minimum wages comparatively low.

The Federal Government entered the field of minimum-wage legislation with the enactment of the National Industrial Recovery Act codes. In 1938 it passed permanent minimum-wage legislation with a 25-cent minimum that became effective in October 1938. This minimum was increased to 30 cents a year later, and during the war a 40-cent minimum became effective. The floor on wages was further increased to 75 cents in the beginning of 1950.

THE CASE FOR MINIMUM-WAGE LEGISLATION

The justification for minimum-wage legislation is twofold:

1. It attempts to raise the standard of living of those who are at the bottom of the economic ladder and tries to provide these with a minimum standard of living.

2. Minimum-wage legislation recognizes that the existence of low wages tends to debase the living standards of workers enjoying higher wage levels and acts as a drag upon the economy. Substandard wages, in the words of the Fair Labor Act, constitute an unfair method of competition in commerce and interferes with the "orderly and fair marketing of goods and commerce."

The Fair Labor Standards Act declares it to be the policy of the United States to try to correct as rapidly as practicable the depressing effects that substandard wages exert upon the overall wage structure. This is to be accomplished, however, without substantially curtailing employment or the earning power of those individuals involved.

REGIONAL WAGE DIFFERENTIALS

Minimum wage legislation normally affects directly only a small percentage of wage earners—those at the bottom of the economic ladder. It apparently has not appreciably reduced wage differentials among the several sections in the country or among different occupations.

Detailed regional information on wage distribution is available for manufacturing. Data published recently by the Bureau of Labor Statistics reveal that in April 1954, there were in the United States some 1,282,000 production workers in manufacturing whose hourly earnings were less than $1 an hour, while more than double that number were earning less than $1.25 an hour. One out of every five production workers engaged in manufacturing in the northeast were earning less than $1.25; in the South a comparable percentage was 50 percent.

TABLE 1.—*Estimated cumulative distribution of production workers in manufacturing industries by straight-time average hourly earnings,[1] United States and regions,[2] April 1954*

[In thousands]

Average hourly earnings [1] (in cents)	United States	Northeast	South	Middle West	Far West
Under 75	23	3	18	2	(3)
75 and under 80	380	58	283	34	5
80 and under 85	575	111	398	59	6
85 and under 90	817	186	519	100	12
90 and under 95	1,069	280	634	138	16
95 and under 100	1,282	360	723	179	20
100 and under 105	1,656	491	882	250	33
105 and under 110	1,925	594	991	301	39
110 and under 115	2,243	724	1,103	368	48
115 and under 120	2,518	838	1,194	429	57
120 and under 125	2,823	964	1,283	504	72
125 and over	9,767	3,534	1,281	3,874	1,078
Number of workers	12,590	4,498	2,564	4,378	1,150
Average hourly earnings	$1.68	$1.67	$1.36	$1.80	$1.94

NOTE.—For footnotes see end of next table.

TABLE 2.—*Estimated cumulative percentage distribution of production workers in manufacturing industries by straight-time average hourly earnings,[1] United States and regions,[2] April 1954*

Average hourly earnings [1] (in cents)	United States	Northeast	South	Middle West	Far West
Under 75	0.2	0.1	0.7	(3)	(3)
75 and under 80	3.0	1.3	11.0	0.8	0.4
80 and under 85	4.6	2.5	15.5	1.3	.5
85 and under 90	6.5	4.1	20.2	2.3	1.1
90 and under 95	8.5	6.2	24.7	3.2	1.4
95 and under 100	10.2	8.0	28.2	4.1	1.8
100 and under 105	13.2	10.9	34.4	5.7	2.9
105 and under 110	15.3	13.2	38.6	6.9	3.4

115 and under 120	20.0	18.6	46.6	9.8	4.9
120 and under 125	22.4	21.4	50.0	11.5	6.3
125 and over	77.4	78.6	50.0	88.5	93.7
Total	100.0	100.0	100.0	100.0	100.0
Number of workers	12,590,000	4,498,000	2,564,000	4,378,000	1,150,000
Average hourly earnings [1]	$1.68	$1.67	$1.36	$1.80	$1.94

[1] Excludes premium pay for overtime and for work on weekends, holidays, and late shifts.
[2] The regions used in this study include: Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont; South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia; Middle West: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin; Far West: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.
[3] Less than 500 workers or 0.05 percent.

Source: U. S. Department of Labor, Bureau of Labor Statistics, Washington 25, D. C., February 1955.

Average hourly rates in manufacturing disclose similar wide differentials. Bureau of Labor Statistics data reveal that average hourly earnings for production workers in manufacturing was $1.85 in February 1955. The average hourly rates for States ranged, however, from a high of $2.22 per hour in Oregon to $1.20 in Mississippi. The comparable rate in Connecticut was $1.85, New York $1.88, and in Pennsylvania $1.86. The average hourly rates in the New England States ranged from $1.44 in Maine to $1.85 in Connecticut. Representative rates in the Southern States were $1.20 in Mississippi, $1.27 in North Carolina, $1.31 in Georgia, and $1.44 in Virginia.

The average hourly wage differential in manufacturing between the average rate for the United States, and most of the Southern States ranged between $0.40 and $0.60. The hourly rate in Connecticut whose average rate was the same as for the country at large, was more than 50 percent higher than in Mississippi.

The average rates may, however, be misleading. The industrial mix in the several regions differs widely and low average in the South is due mostly to the concentration of low-wage industries in that area. Studies by the Department of Labor comparing wage rates in similar occupations and industries disclose a much lesser differential. To illustrate, in 1952 wage rates for maintenance workers—7 selected skilled jobs—in Hartford, Conn., were higher than 5 out of 10 communities surveyed in the South, but lower or equal to the rates paid in the other 5 communities. Rates for unskilled warehouse workers, however, were lower in every southern city surveyed than in Hartford. The differential ranged between 10 and 35 percent.

IMPACT OF WIDE REGIONAL WAGE DIFFERENTIALS

The migration of industry to low-wage regions has created the anomalous situation of the existence of depressed areas in the midst of national prosperity and plenty. The low wage areas, in order to perpetuate their economic advantages, have also pursued a consistent policy of keeping out unions in order to retain their low labor cost advantages. A recent Wall Street study (February 17, 1955) surveying the growth of industry in the South, quoted a spokesman for the South Carolina Development Board:

"We don't encourage any company to come into the State if it's going to bring a union with it. Our people don't want unions. They are individualistic and don't want outsiders telling them what to do."

Joseph A. Fox of the Washington Star reached a similar conclusion in a series of articles (March 31 to April 4, 1955) on migration of industry to the South. He seems to agree with the conclusions of a leader in Gaston County, Alabama: "Unless there is a radical change in sentiment, the mills down here will not be unionized in 20 years."

The insidious influence of competition among regions and localities is clearly illustrated by a letter from a mayor in a small southern town to a New England manufacturer: "Then our wonderful labor, 98 percent native born, mostly high school graduates, with lower average hourly industrial wage rates, 6 to 49 cents below other Southern States, and from 50 cents to 95 cents below Northern States." It shows that competition for new industry is not limited between low and high wage areas, but that some communities resort to undercutting neighboring towns, which already are victims of low-wage rates and substandard living conditions.

NEED FOR HIGHER MINIMUM-WAGE LEGISLATION

The need for higher minimum wages is brought into sharper focus by the recent district court decision barring the Secretary of Labor from setting minimum wages on a nationwide basis, under the Walsh-Healy Act. This law requires contractors on Government jobs to pay minimum wages prevailing in the locality for the type of work involved. The Secretary of Labor determined that a single minimum wage would prevail for the cotton textile industry. Separate wage minima for each labor-market area would result in systmatic discrimination against high-wage areas. Wide wage differentials in the same industry among the several regions would tend to concentrate all Government contracts in one area, and indirectly make the Government a party in encouraging substandard wages.

It should be stressed that increasing the minimum wage would not effectively limit the competitive forces within the economy. Labor costs account only for about a third of total manufacturing cost and the substandard rates form only a minute fraction of total costs in American industry. Substandard wages do not appear to be a proper factor in a dynamic, free, and competitive American enterprise system.

All people of good will welcome the economic opportunities that new industry is bringing to the people of the South. Defense needs make industrial dispersion desirable. National welfare would, however, require that industrial dispersion should bring with it the blessings of our high standards of living to all the sections of the country. Sound economic growth for the Nation as a whole cannot depend upon "runaway" industry from high-wage areas which reestablish the same business on a substandard wage level elsewhere.

The Congress in the Fair Labor Standards Act has established the policy of Federal responsibility to help eliminate substandard wages. The President in his last economic report endorsed this concept when he declared that minimum-wage laws can assist the comparatively small number of workers who are at the fringes of competitive labor markets. Our experience with minimum-wage legislation would seem to bear out the contention that this type of legislation can be an effective means of raising substandard wages. Six years ago when Congress was debating the increase in the minimum-wage law from 40 to 75 cents an hour, opponents of the increase claimed that this would mean an end to the economic and industrial growth in the newly developing areas. Obviously, these dire predictions did not materialize. The contrary was the fact. The areas that were most sharply affected by the minimum-wage increase enjoyed a greater growth in manufacturing employment than the rest of the country.

IMPACT OF 1950 MINIMUM WAGES

The Department of Labor conducted a number of studies on the economic effects of the 75-cent minimum-wage legislation. A summary of these studies was published in the March 1955 issue of the Monthly Labor Review. The studies disclose that any dire consequences that the opponents of minimum-wage legislation anticipated in 1949 did not materialize. The formal release of the Department of Labor (January 12, 1955) stated categorically the increase in the minimum wages to 75 cents an hour in January 1950 had only minor effects on employment.

The survey concentrated in studying the effects of the minimum wage increase on five low-wage industries: Southern sawmilling, fertilizer, men's dress shirts and nightwear, men's seamless hosiery, and wood furniture. In each of these industries substantial proportions of the employees were receiving less than 75 cents an hour in 1949. The immediate increases in average hourly earnings exceeded the statutory requirements, because some increases were given to employees whose hourly rates were above 75 cents in order to retain historical differentials, though the higher minimum did cause a market narrowing in occupational differentials. It is, however, significant that the minimum wage legislation affected some employees to whom the minimum wage did not apply. A considerable proportion of the fertilizer producers were engaged in intrastate commerce only, and were, therefore, exempt from the new minimum wage law. About half of the employees in the intrastate plants were receiving less than 75 cents an hour in 1949. By 1950 the proportion of those receiving less than 75 cents dropped to 29 percent. "This suggests," according to the Department of Labor study, "a significant, indirect effect of the minimum wage on the employees in plants when the minimum did not apply in an industry predominantly subject to the law." The wage increase had no effect upon employment, which remained stable. The study concludes that industry displayed a very high degree of adjustment to the increased minimum wage.

The Department of Labor asserts that the overall effect of our minimum wage legislation has been "to improve the position of the employees involved by increasing earnings in the affected industries, and that the relative improvement was substantially maintained." But in the absence of minimum wage pressure the relative earning position of the low-paid industries has tended to worsen. The experience during the last few years seems to further support this conclusion. Wages in the above-mentioned 5 low-paid industries has tended to cluster just above the 75 cents minimum. During the same period average wages in manufacturing have increased by about 30 percent.

It would be fair to conclude from these facts that in the absence of a new higher minimum wage the earnings of employees at the bottom of the economic ladder will tend to stagnate.

DETERMINATION OF A PROPER NEW MINIMUM WAGE

Granted that a new Federal minimum wage is desirable, there remains the question what a proper and equitable minimum wage would be at this time. The President recommended a 90-cent minimum as appropriate and consistent with overall economic considerations at this time. In arriving at this conclusion the President apparently considered only the increase in cost of living since the 75-cent minimum was enacted. It appears, however, that current economic conditions could support a higher minimum wage.

The brief review of the impact of the 75 cents minimum wage in 1950 indicated that even the lowest paying industries could absorb that minimum 5 years ago.

The determination of a new minimum wage to become effective probably in 1956, would have to consider not only the increases in cost of living, but the rise in productivity during the 6 years since the last minimum wage became effective. Furthermore, the economy in general is now in a much stronger position than it was 6 years ago.

An equitable minimum wage law, which would take into consideration increases in cost of living and rise in productivity (at an annual rate of 3 percent), would justify an immediate minimum hourly wage rate of about $1.05. Adoption of this minimum would require wage increases to about 10 percent of the manufacturing production workers in the United States. Adequate data for other groups are unavailable. The Department of Labor data indicate that 1,656,000 workers in manufacturing, or 13.2 percent, were actually receiving rates below a $1.05 in April 1954. But increases granted since then (average for the country about 5 cents) would reduce the ratio of those directly affected to about 1 out of 10.

But an hourly rate of $1.05 is still insufficient to provide a family, or even a single person, with an income necessary for a minimum decent standard of living. Such a wage would also continue to exert a downward drag on the country's wage structure. Most union contracts call for a higher starting rate. The minimum wage should therefore not be allowed to stagnate at $1.05 an hour. Increased wages should stimulate management and labor to increased efficiency and production. The minimum wage might accordingly be increased to $1.15 effective 1 year after the $1.05 becomes effective. The Secretary of Labor should be allowed sufficient funds to study closely the impacts of the new wage minima and report the findings to Congress. If no serious difficulties are encountered, the minimum wage would go up to $1.25 by January 1958.

Ample support seems to exist which would justify the belief that American industry would be able to absorb the higher minima. Prof. Lloyd G. Reynolds, of Yale, averred that available data support the conclusion that economic adjustments necessitated by minimum-wage increases, can be made through increases in the efficiency of workers, management, and equipment:

"Indeed, it was mainly the effects of minimum-wage legislation which caused economists to realize the higher wages need not mean higher costs and prices, but might mean increased efficiency instead. Before the enactment of minimum-wage legislation there have usually been dire predictions of ruin by employers in low-wage industries, prophecies of closed plants, and mass unemployment. These predictions seem never to be realized; one comes along a few years later and finds these industries flourishing as well as before. Investigation usually reveals that the answer is a general overhaul of equipment and methods which enables employers to carry on profitably at the higher wage levels."

CURRENT COVERAGE

Some 24 million wage and salary workers out of a total of about 44 million (excluding Government employees, Government, executive and professional employees) are covered by the minimum wage provisions of the Fair Labor Standards Act. Almost two-thirds of those covered are in manufacturing. Transportation, communication, and utilities accounts for about 3.5 million persons. The balance are engaged in mining, wholesale trade, finance, construction and selected retail trade and services.

About 20 million wage and salary workers are not protected by the minimum wage provisions of FLSA. Almost a third of these are engaged in industries which are normally considered interstate commerce, but are exempted by specific provisions of the act (section 13). Farm workers, employees in retail trade and outside salesmen account for 5 out of 6 of those specifically exempted from coverage. Some 14 million wage and salary workers are not engaged in interstate commerce, as defined in the Fair Labor Standards Act, and are subsequently not covered by their Fair Labor Standards Act. Persons engaged in retail and wholesale trade account for almost half of this group. Domestics and construction workers each account for about an additional 2 million. Services and related industries for some 3 million. A detailed breakdown by industry group of the present coverage of the FLSA and those employees who are exempt from the provisions of the act are presented in table 3.

TABLE 3.—*Coverage and exemptions under the Fair Labor Standards Act, employment as of September 1953* [1]

[Thousands]

Industry classification	Total employment	Employees not covered (intrastate activities)	Employees covered		
			Total	Exempt from minimum wage and overtime provisions	Subject to minimum wage provisions
Total, all industries	43,954	13,609	30,345	6,369	23,976

[1] Proprietors, self-employed persons, and unpaid family labor totaling approximately 12 million persons, 6 million Government employees, and 4 million executive, administrative, and professional employees are excluded. Personnel of the Armed Forces are also excluded.

Source: U. S. Department of Labor.

DETERMINATION OF NEW COVERAGE

It is assumed that the present provision to pay wages below the required minimum to handicapped workers and learners will continue in effect.

In addition, the present act leaves some 20 million (nonexecutive, administrative, or professional) employees in private industry outside the scope of the present minimum-wage legislation. Almost a third of these are offered some protection by State laws, though in some cases the applicable minimum is below 50 cents an hour. Undoubtedly a considerable proportion of those now exempt from coverage are most in need for minimum-wage protection. For example, average hourly earnings of employees in general merchandise stores in September 1953 was $1.12, in laundries the average was 99 cents. Undoubtedly these groups will benefit indirectly from an increase in the Federal minimum-wage law, though the "trickle down" effects may not be sufficiently effective to raise the standard of living of those employed in the low-wage industries. It is, however, highly improbably that some of these groups could withstand the impact of a minimum wage of the magnitude discussed earlier. Sound policy would apparently require a lower minimum for some of these groups should Congress determine to broaden the coverage language to encompass all "industries affecting commerce."

Data on wage distribution in the industries currently exempt from Federal minimum wage legislation are inadequate. The determination of an equitable minimum wage for the currently exempt groups as well as the extent to which it is desirable to broaden coverage, require further study before any recommendation can be made in this area.

Pennsylvania National Guard

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. QUIGLEY. Mr. Speaker, recently the Pentagon conducted a large scale atomic attack trial alert, in which National Guard units participated. Every Pennsylvanian may be proud that it was our Guard which was the first to check in with a message that the alert had gone out to all indicated organizations and that they were either at their assigned stations or en route to them.

As a part of my remarks, I include an editorial from the April 22 issue of the Harrisburg Patriot in praise of General Biddle and the Pennsylvania National Guard.

I wish to add my own endorsement of this deserved praise.

GUARD ON ALERT

While only a portion of Pennsylvania's National Guard personnel participated in Wednesday night's national trial alert, those called upon responded to the call with efficient enthusiasm and were at their posts of duty within an amazingly short time.

And Pennsylvania, the Pentagon reports, was the first of all the States to check in with a message that the alert had gone out to all indicated organizations and that they were either at their assigned stations or en route to them.

This demonstration of the State of readiness in which the country's first line of semiprofessional military men finds itself in these uneasy times is a matter of great satisfaction to all of us, including the men participating.

From earliest national history, the Pennsylvania National Guard has been properly proud of the part it has played in the country's military picture, and the very fact that this Commonwealth led the alert this week proves once again the high state of morale and the determination to maintain our units in readiness.

Pennsylvania's part in the alert was mainly that of its airmen and antiaircraft artillerymen, and the manner in which both aviation and ground elements responded to the orders brought satisfied smiles to the faces of the commanding officers.

Adjutant General Biddle, who only this week took over the command of the Pennsylvania Department of Military Affairs, was highly pleased with the results, and commented that the outfits are really on their toes.

One can but pray that we shall never see the time when a real alert will be flashed.

Doctors Strike a Telling Blow

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. BETTS. Mr. Speaker, in the midst of the front-page publicity over the Salk polio vaccine shots, I wish to call attention to the actions taken by the Marion Academy of Medicine, of Marion, Ohio, which is in the district I represent. The following editorial from the Marion Star tells more vividly than I can the beneficial effects which the action of the Marion doctors will have on the community and the desirability of its pointing the way to similar actions by other groups all over the Nation. I commend the action of the physicians of Marion and recommend the editorial analysis which the Marion Star has devoted to this new and all-important experiment in the field of medicine.

DOCTORS STRIKE A TELLING BLOW

The Marion Academy of Medicine has taken a forthright and enlightened step in its decision to give Salk polio vaccine shots, for an emergency period of approximately 6 months, at a charge covering only the actual cost of the vaccine.

This move, coupled with the offer of the academy to provide the vaccine free to those unable to pay for it, is almost unprecedented and is of far-reaching importance.

Locally, the benefits will be tremendous. In effect, the physicians' decision means that every child in Marion County in the age groups most susceptible to polio will be able to obtain protection from the disease. The plan of the private physician, of course, supplements the school program being directed by public health officials.

Beyond the beneficial results locally, however, the action has statewide and national implications. In the midst of dire forebodings and cries from the political issuemakers for Federal intervention in the problem of vaccine distribution, the step by 51 Marion County doctors strikes a telling blow for the American citizenry.

The issue that is being stirred up nationally is the familiar one of an authoritarian government that would run everything versus a supervisory government that would give its citizens the right to manage their own affairs until they asked for help.

The cry being raised for Federal intervention on Salk polio vaccine is the same one that has been raised for Federal intervention in many other fields.

It has not yet been proved that the National Foundation for Infantile Paralysis, the

medical profession, the drug manufacturers licensed to produce the vaccine, the retail drugstores and the people of the United States are incapable of solving the problem of distributing the vaccine. But already the authoritarians are making the welkin ring with strident demands for Federal intervention. They never miss a trick.

On judgment day, they will be demanding that the Federal Government take charge of everything, under the authoritarian credo that only politicians are to be trusted and everybody else is a fool, a crook or someone trying to make a profit.

The Marion County doctors have driven a sharp and powerful wedge into that theory.

Efforts Successful in Finding Polio Vaccine, Yet We Are Doing Nothing in Research To End War

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Stanly News and Press, Albemarle, N. C., Tuesday, April 19, 1955, which asks some very pertinent and timely questions in regard to research and the solution to the banishment of war.

Personally, I am very much interested in the question of world peace and feel that the editorial which follows is thought-provoking and that some serious study should be given to the questions it brings up:

The Nation is rejoicing this week over the discovery of a vaccine that is calculated to banish fear of infantile paralysis as well as the disease itself. To Dr. Jonas E. Salk and those who worked with him, the Nation owes a debt of gratitude. And there is also cause for satisfaction since the money that made Dr. Salk's research possible came from the March of Dimes, to which the people of this country have contributed a quarter of a billion dollars during the past 20 years.

Millions are also being given to heart and cancer funds, and there is reason to believe that in the years to come research will develop a cure or preventive for cancer, and a vast amount of information that will help prevent heart disease and perhaps effect cures of certain phases of ailments affecting this vital organ.

Yet there is one other disease that cripples and kills millions. It is war. We are contributing millions through heavy taxes to be ready for war, but very few dollars are being spent in research to prevent war. And yet we feel there is a tremendous opportunity for research to do for war what has been done for infantile paralysis.

While a few leaders may know exactly what causes war, the people, as a whole, are not conscious of the conditions which provoke conflict. What is the real basis for tension between Red China and the United States? Is it the island of Formosa and Chiang Ki-shek, or does it lie in trade opportunities in the Far East?

Will the Christian religion, if properly applied over a period of years, serve to reduce tension and thus the possibility of war?

Do programs of relief win friends for us, or do they promote hate and jealousy?

The right answers to these and thousands of other questions hold the solution to the banishment of war, and yet we do not know of a single dollar being spent in research to determine the actual cause of war.

What will it profit us to discover the cures for polio, cancer, and heart ailments, and yet allow the world to be destroyed in an atomic war?

Plea to the President

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a news item from Labor's Daily of April 23. This news item sets forth very forcefully the need for an adequate pay raise for postal—and classified, too—employees. It should be a telling argument against the reported veto, about which we heard too much last week when the House considered this legislation.

MR. PRESIDENT: LAY DOWN THAT VETO PEN—TYPICAL LETTER CARRIER HAS TO DO ODD JOBS TO MAKE ENDS MEET

DETROIT.—While the President brandishes a veto against a pay raise for postal employees, thousands of American families are suffering undue hardship, trying to make ends meet on paychecks that are years behind the times.

The last pay raise approved by Congress was passed in 1951. That raise was wholly inadequate at the time, and the cost of living has zoomed upward since then. Workers in other industries have had at least four rounds of increases during the same period.

One of the Nation's 103,000 letter carriers, Paul Shay, can tell you what it means to carry on under these circumstances.

Shay, married and father of 2 children—Dian, 8, and Joyce, 1 year—entered the postal service as a carrier in 1946. He is a member of Branch 1, National Association of Letter Carries, AFL.

Living in nearby Birmingham, Mich., Shay had a 1941 Dodge until it no longer would give him service to and from his assignment at the Fenkell branch of the Detroit Post Office. He had to buy a 1947 De Soto so he could get around to his odd jobs—like wall washing, landscape worker, and anything else his neighbors will let him do—to augment his small income.

NEW HOME DRAWS SACRIFICE

After living many years in a small, crowded apartment and after the arrival of their baby a year ago, the Shay family had to find larger quarters, and moved into a new modest home in Birmingham, which has only 4½ rooms. But it was necessary to cash in both his and his wife's insurance policy to get the down payment on the $7,400 home. It has no basement, but Paul hopes to convert the attic into living quarters when he can take time away from his part-time jobs.

Mrs. Shay works in a local department store whenever emergency needs come up, such as doctor's bills—which means Shay must babysit part of the time.

Adding to their burden, Shay was victim of a postal ruling in 1948, which forced him to pay back several hundred dollars erroneously paid him due to a misinterpretation of postal legislation.

His pay is $4,070 annually. Six percent is deducted for pension funds, which he can get only after he has reached the age of 60. His take-home pay, after almost 10 years of service, is still less than $300 monthly.

RAISE WON'T BRING MUCH

Married 15 years, Shay spent 33 months in the Armed Forces. Even with the 8.3 percent increase under discussion in Congress, the Shay family will still have to go without the planned-for gas furnace to replace their present circulator heat, for an 8.3 percent increase will mean less than $10 weekly more in his pay check—or just about enough to cut out one night of part-time work.

"Shay is just about the average lettercarrier in Detroit," said James H. Rademacher, Jr., president of Branch 1, NALC. "No man should be forced to work extra to have the mere necessities of life, yet under present postal pay structure there seems to be no alternative."

Rademacher mentioned that last year the Detroit Postal Employees Credit Union granted 4,020 loans, aggregating $2,860,391, another indication of the wage squeeze on postal workers.

Michigan Congresswoman MARTHA GRIFFITHS (Democrat) in congressional testimony pointed to another striking way that the low wages have hit postal families. Due to economic circumstances, the size of the average postal family numbers 2.8 persons, compared with the national average family of 3.53 persons, she said.

Better Never Forget This

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following letter from a constituent of mine, calling attention to a recent article in the New York Daily News, seems to me very worth of our consideration.

Let us not be lulled to sleep by the apparent change in the Kremlin and Peiping lines, and let us keep our guard up and our powder dry.

HANCOCK, N. Y., *April 24, 1955.*
Hon. KATHARINE ST. GEORGE,
Member of Congress, New House Office Building, Washington, D. C.

MY DEAR MRS. ST. GEORGE: The enclosure, taken from today's editorial section of the New York Daily News certainly is prophetic, and I am sure you will agree with the old quotation, "Eternal vigilance is the price of freedom." I am sure you will do everything within your power to guard it.

We have a wild bunch of Red haters here in Delaware County, myself included, who would rather die to the last man than see the Communists get a foothold in this country.

HERB VOSBURGH.

BETTER NEVER FORGET THIS

In connection with the peaceful coexistence, let's-be-pals chitchat now coming from all quarters of the Red slave empire, we quote from a speech made 24 years ago in Moscow to the students of the Lenin School of Political Warfare by Dimitry Z. Manuilsky, a big-shot Communist then and, to our best information, now:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win, we

shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

Annual Message of the President of the Greater Hazleton (Pa.) Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following annual message of Dr. Edgar L. Dessen, president, Greater Hazleton (Pa.) Chamber of Commerce. Dr. Dessen's report, made at the 63d annual meeting of the chamber, April 21, 1955, is an outstanding example of a communitywide endeavor that has paid off handsomely in increasing and advancing its economy and industrial potential. It is certainly a program that bears further observation and study by communities that presently find themselves in economic straits. It features foresight, cooperation, and optimism—prime ingredients for any worthwhile enterprise. I am proud of Hazleton, my hometown, for its fine, patient work.

The message follows:

My message will be brief. Blessed is the man, who, having little to say, abstains from giving us wordy evidence of the fact.

First, as my friends, let me warn you about the inexorable nature of events in a large public organization such as the chamber of commerce. Several years ago I was asked to serve as second vice president of this organization, with the firm assurance that the position was a nominal one and in no way meant ascendance to the presidency. One assurance followed another, and here I am starting my third year as president of the chamber of commerce. Before I wear out my welcome, let me hasten to assure you that it is also definitely my last. Thank you for your confidence and trust. And don't think I am not aware of the fact that a halo has only to fall a few inches to become a noose.

This is not meant to infer that the experience has not been edifying and satisfying. These 2 years have been a liberal education in community problems, and what makes them problems. It is an experience that every citizen interested in his community should have at one time or another. In chamber of commerce activities, as in all others, we have again found that those criticize the loudest who participate the least.

In retrospect, we are justifiably proud of the road we have traveled and the success we have attained. Some of the successes were not easily won, which makes them still more satisfying and more important.

Our chief function, of course, has been and will be industrial development. Here we have not done too badly. In the past year, the following new industries have begun operations in the Hazleton area: Superior Sleeprite Corp.; Art Crayon Co., Inc.; Mira Sue Sportswear, Inc.; Diamond Dress Co.; G & M Manufacturing Co., Inc.; Neil-Jay Manufacturing; Hazle Products Finishing Corp.; Arthur Manufacturing Co.; Bloss Glass Co.; Hour Bakery; and a branch of the Cloverleaf-Freeland Corp.

Some of these are large, others quite small. Together, as of this present date, they are employing over 500 people, divided almost exactly into 50 percent male and 50 percent female. Most of this increased employment has been brought about by the direct and specific efforts of your chamber; furthermore, it is safe to say that all of it is here because the community has been made attractive to industry economically, and in all other ways, by the chamber's efforts.

This is new employment, and it is on a scale that is sometimes overlooked in the shadow of more publicized efforts. For instance, our new employment compared to our population percentagewise in this last year is quite comparable to that achieved by the well-known and well-heeled Scranton Life plan. In view of our limited finances, that is an achievement indeed.

I am also happy to report that there should be more good news shortly—another predominantly male-employing industry that should soon be ready to announce their entrance into our Hazleton industrial family.

In addition to this new employment, this last year also saw the resurrection and restitution of an old and valued friend, the Shirtcraft Co., Inc. Beset and battered by the pressures of rising costs and the inefficiency of an old plant, they were saved at the very brink of shipwreck by the energetic action of your chamber of commerce, the generosity and public-spiritedness of several of the leading Hazleton banks, and the wholehearted cooperation of their union. That saved nearly 500 more employees for Hazleton. Adding all this together, we are, therefore, about plus 1,000 for this last year. You can readily understand why we are so proud of our industrial efforts. But even though industrial development is the heart of our corporate body, we must not forget the other vital organs.

Members and money represent our circulating blood. Last year saw us stay near the highest total membership in the history of the chamber that we had achieved the year before, thanks to the persistent efforts of our membership committee. In addition, as a result of the badly needed and long overdue dues reevaluation, we raised our total income to a new record high.

We needed every cent of it, and we need still more. You can't operate a 1955 Cadillac with a 1935 motor and low octane fuel. The high level of activity of your chamber makes a high level of income essential.

This last year has also seen our unique dime-a-week program successfully launched. Our goal for this first year is $25,000, and our present total is $16,000, meaning that our goal is within sight. In addition to the financial help, this is also fine and convincing evidence that Mr. and Mrs. Man on the Street stand foursquare behind their chamber of commerce. Let me here reemphasize that these funds are not for general chamber activities, but are earmarked solely for new industry.

The Operation Trees project was also initiated in this past year. This is a most ambitious project that envisions backfilling of strippings wherever possible, planting of trees on our large denuded areas, and planting of trees along the main highways entering our city and in the city itself. Conferences have already been held with representatives of the forestry department and the highway department. We expect to use paid professional help to plan our procedures wisely and well. This is another endeavor for which we have high hopes. Feed it funds and watch it grow.

Still another new project has been the active and spirited solicitation of conventions for Hazleton. This has resulted in the scheduling of 10 conventions, large and small, for the remainder of 1955 and the beginning of 1956. As far as can be determined, this is still another record, considerably above the total of conventions ever held in 1 year before.

Another innovation in this last year was the first Business-Industry-Education Day, or B-I-E Day, in our history, which was a huge and electrifying success. Not only was it wholeheartedly received in this community, but we have been and are receiving requests from all over the eastern part of the country for information on just how it was conceived and promoted. We intend to make B-I-E Day an annual occurrence.

We have time to strike only the highlights of our many other activities. Your Retail Merchants' Council has functioned efficiently all through the year in handling the promotions and plans of the retailers. The meetings committee has arranged several excellent gatherings, notably the congressional meeting, the dinner honoring James G. Shennan during Pennsylvania Week, and this annual dinner meeting itself. The Employment of the Physically Handicapped Committee has continued its efficient help to the physically handicapped people of our community. One of their projects has culminated in the awards given at this dinner tonight. The airport committee has met regularly concerning the trials and tribulations of our beautiful new airport, and is now making preparations for a tremendous dedication program on May 22. The plant visitations committee has added incalculable goodwill in the community by their friendly visits to existing industries. We have given annual awards to existing industries. You have seen us honor Barrett, Haentjens & Co. and the I. Janov Shirt Co. tonight. The transportation and parking improvements committee has been active and effective. They have not only helped solve local problems, but have promoted such projects as the through-way with notable success. And so on down the line. It is unfair to single out individuals for thanks and commendation, because the members of the board of directors and the various committee members have done a uniformly fine and exceptional job. But I'm sure no one will mind if I mention just a few.

Our vice presidents, John Williamson and Charlie Eidam, have been invaluable in the progress of this organization. We are pleased beyond measure that John Williamson will maintain his position for another year. Charlie Eidam leaves his vice presidency with the heartfelt thanks of all for his outstanding work. He, of course, still remains with us as chairman of our important airport committee, where he has already done so much. Our new vice president is Wilbur Evans, a well-known public servant who has often been tested and has never been found wanting. Our treasurer, of course, is John Hohman, without whose wise financial counsel and wealth of knowledge we would feel very desolate.

To our outgoing director, Fred Correale, Conrad Falvello, Donald Mason, and John Reinhart, hail and farewell. The sincere gratitude of a grateful community goes with you. And the hand of warm welcome to our new directors, as likely a lot of able people as ever took on responsibilities in our chamber. Welcome to Clarence G. Baker, Charles T. Butler, Harry Lentz, Robert C. Long, and Arthur J. Whitaker, who were elected in extremely close balloting among all our 15 candidates. It's good to have you aboard.

The community and the chamber of commerce are indebted beyond measure to:

Frank Jedlicka for his continued masterful and diligent work as chairman of the industrial development committee.

Pat Bangor and Ken Bayles, the cochairmen of the dime-a-week campaign, for their really hard and exacting—and highly successful—fund-raising efforts.

Allen Holman, president of the Hazleton Industrial Development Corp., who has worked so diligently and efficiently, and has cooperated with the chamber of commerce activities so well.

John Reinhart, who, as usual, has continued his yeoman work as chairman of the executive committee of the Retail Merchants' Council.

Llewellyn Dryfoos, for his dedication to the task of getting the operation trees project well underway.

Bill Deisroth, who has performed the onerous and thankless duties of chairman of the membership committee with admirable aplomb and excellent results.

To Fred Correale, who has given unstintingly of his own time and that of members of his firm, as chairman of the anthracite committee and in other capacities.

To Bob Wright, who has lent his own winning personality to the task of winning friends for the chamber of commerce as chairman of the plant visitations committee.

To George Snyder, for his persistent and productive efforts as chairman of the transportation and parking improvements committee.

To Paul Becker, for his outstandnig contribution as chairman of the industrial public relations committee.

These men particularly, and all of the working members in general, have served their community well. They do their work unquestioningly, and with a minimum of fuss or trouble. We have found that trouble is usually produced by somebody who doesn't produce much of anything else.

Now just a word about your executive director, Tom Stainback. You will notice him referred to in our annual report as the eyes, ears, nose, and throat specialist. He is our eyes, ears, nose, and throat. His ability to use these senses, his innate intelligence and know-how, his devotion to our cause, and his capacity for hard work that knows no limitations—all of these together have made him the most vital of cogs in our machinery; and, unfortunately, have caused too many chambers of commerce elsewhere in the country to cast covetous eyes in our direction. We could find no finer executive director anywhere.

So much for the bouqets, all deserved. But our organization must be something like Napolean's. When Napolean's military leaders came to him to tell produly of some feat accomplished, the little Corsican had one stock question: "And what," he would ask, "did you do the next day?"

Now briefly, what can we expect in the next days, or, more exactly, in the coming year? First and foremost, there will be a persistence and expansion of our industrial development activity. Althought not spectacular, our new industrial employment has been solid and steady. We can tell you with assurance that there will be more and more of it.

There will be a new membership drive in the near future, with a new record in total membership as our goal. We do not intend to rest on our oars. In the past year or two, our expenses have been swelled by such items as new industrial and convention brochures, new office equipment, new promotions, vastly increased printing and mailing expenses, and expenses incident to industrial development—not to mention the usual expenses incident to higher living costs. The future financing of such activities can only be continued with a still greater membership and a still greater income.

My friends, money is not all. It is not money that will mend a broken heart or reassemble the fragments of a dream. Money cannot brighten the hearth nor solve all the problems of a community. Money cannot do everything. I refer, of course, to Confederate money.

Our industrial fund raising will also be intensified. The dime-a-week program will be perpetuated and expanded. This project gives everyone a chance to contribute to the community's economy, instead of a chosen few. We must also come back to this chosen few for larger contributions when the time is ripe and when the occasion demands.

All of the far-reaching work done by your many committees will be carried still further. They are all important, but particular emphasis in the next year will be placed on expansion of work done by the operation trees committee, the national affairs committee, and the airport committee. There is much to be done.

Another new project for the coming year is the formation of a women's division of the Greater Hazleton Chamber of Commerce. As we men have so often discovered, the so-called weaker sex can do most things better than we can. We want and need their help, and look forward to having them with us. This may be another shot heard round the entire Hazleton area.

These frontiers for the coming year are vital. There exist limitless opportunities in every direction. Where there is an active and open mind, there will always be a frontier. But basic to all of this further progress is the maintenance of a proper community spirit, a proper enthusiasm and optimism that will not be submerged by fear or adversity. That is the vital gear in the entire community machinery. It is a part of Hazleton's heritage.

All this reminds me of the small girl who said, "Mother, you know that beautiful jug you said had been handed down to us from generation to generation?"

Mother replied, "Yes, Ann, what of it?"

And Ann answered solemnly, "This generation dropped it."

We don't intend to drop our jug of community spirit. We are living in a highly competitive world today. We must attack our community problems with the utmost zeal and enthusiasm. We must be swift and strong.

It may be that the race is not always to the swiftest, nor the battle to the strong. But that's the way to bet.

Need for Helping Hand

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BARTLETT. Mr. Speaker, the Fairbanks (Alaska) News-Miner, farthest north daily published in the United States, on April 4 editorially called attention to the serious situation which is being created by the steadily diminishing appropriations for needed Alaska activities. I present the editorial here:

BUDGET SLASHES

The Interior Department budget, which was recently approved by a House committee, is a big disappointment to many Alaskans. Appropriations for highway maintenance, the Alaska Railroad, and road construction have been cut 39 percent from the original budget figure of $20,400,000.

Road maintenance is allotted $3,500,000, the Alaska Railroad gets $4,100,000, and road construction is given $4,100,000. The grand total for road construction and maintenance in Alaska is $8,300,000. Four years ago, a total of approximately $20 million was appropriated for this item alone. Thus we see, appropriations for Alaska are being steadily slashed.

Our Government is spending billions for foreign aid. We are appropriating millions of dollars to build highways in South America. But Alaska is getting little or nothing; not even sufficient funds to properly maintain the few highways that now exist in the Territory.

In petitioning for statehood, Alaskans have been told that our Territory is too vast and undeveloped to support itself. That was the opinion of Interior Secretary McKay. But the Federal Government is doing very little to correct this condition. At the rate money is being appropriated to build roads in the Territory, we are going to remain undeveloped for many years to come.

Alaska is getting very few breaks from the present administration. Our appropriations are being slashed, and our statehood petitions are rudely tossed aside for reasons which sound neither sincere nor valid.

Tuna Situation is Critical

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the special committee on the tuna industry by the San Diego Chamber of Commerce:

The tuna fishery and the tuna canning industry are of major importance to the economy of San Diego.

These are activities which began in southern California. Since the earliest days of the development of the tuna market of the United States, San Diego has played a most prominent part. It was in San Diego that the tuna clipper was developed to take its place among the finest fishing vessels in the world.

A vigorous, growing, competitive industry developed, despite declines which occur from time to time in any business activity. Severe reverses have been felt by the local tuna industry and my much of the industry of southern California.

It is the purpose of this report to set forth some measurements of these reverses, comment on the problems involved, and suggest some solutions.

I. THE SAN DIEGO SITUATION

1. Employment

A. Processing plants: In 1949–1950 there were approximately 3,000 persons employed in San Diego canneries.

In 1955, at the time of this report, there are approximately 650 persons so employed.

This represents a decline of approximately 2,350 persons employed.

B. Fishing fleet: In 1949–1950 there were approximately 2,500 full time jobs for fishermen, engineers, radio operators, navigators, and other skilled seamen. This number rose to above 2,700 in 1951.

In 1955, at the time of this report, there were approximately 2,100 such jobs.

This represents a decline of approximately 600 full time berths in the high seas clipper fleet.

Employment declines are also felt by the local albacore fleet which has largely lost its auxiliary commercial fisheries.

C. Related activities: Employment in local shipyards on maintenance, repair, and construction of large and small fishing vessels has proportionately declined. Service and supply establishments report similar experience.

The loss of work in smaller establishments is difficult to measure accurately in the short time available to the committee. Its effect upon the individual family and the business community is, nevertheless, exceedingly important.

D. Other comments: San Diego has been described by State of California Department of Employment as an area of substantial labor surplus. This indicates minimum absorption of those displaced by the reverses encountered by the tuna industry.

2. Facilities

A. Processing plants: In 1949–50 there were six canneries operating in San Diego.

In 1955 there are 3 canneries, of which 1 is operating, a second closed with a probability of return to small-scale operations within 6 weeks, and a third closed with little prospect of operating on more than a standby basis in the predictable future.

Of the 3 cannery sites and buildings lost, 1 has been sold to an aircraft firm, 1 to a trucking firm, and 1 is leased as a warehouse.

B. Fishing fleet: The major supplier of frozen tuna to the United States is the high seas tuna clipper fleet of San Diego.

At the end of 1949 this fleet totaled 193 vessels, increasing to 210 by the end of 1951.

In 1955, at the time of this report, this fleet totaled 165 vessels.

This is a decrease of 45 vessels in the last 3 to 4 years.

C. Shipbuilding and repair: Local facilities are operating far below capacity.

At recent hearings of the House of Representatives, Merchant Marine and Fisheries Subcommittee, the need for maintenance of ship repair and construction facilities was made evident. In San Diego the record shows that such facilities can be maintained best if the tuna fleet can be kept active.

3. Other local considerations

A. Credit and collections: Local businesses directly and indirectly concerned with the fishing fleet and cannery production workers report severe credit situations, which have worsened steadily for some months.

The local fishermen's and cannery workers' union established a welfare fund to loan sums to needy members. Because of delays in unloading, often meaning 6 months between paydays, this fund is at present entirely committed.

B. San Diego's position as a port: In 1949 San Diego ranked first in the Nation in the value of fishery products (almost entirely tuna) landed and fourth in the volume of such products.

San Diego has lost this position, with the value of its fishery landings in 1954 (almost entirely tuna) declining over $10 million below 1949.

Tuna landings are an important source of new wealth to the community. The city of San Diego is now making a strong effort to increase the flow of new wealth through a bond issue to increase port facilities. A continuation of the downtrend in tuna landings would act to nullify the effect of this effort.

II. THE TUNA INDUSTRY SITUATION

1. Domestic tuna market

The canned tuna market of the United States is the only mass market for canned tuna in the world. This market was created, developed, and continues to be broadened almost exclusively by United States canners, principally in San Pedro and San Diego.

Measured in terms of domestic production of canned goods, plus importations of foreign canned goods, there has been a steady growth in apparent consumption (apparent consumption represents production plus imports without giving effect to inventory fluctuations). In 1949 the total was 7,900,000 cases of tuna and tuna-like fish. For the 2 years 1949 and 1950 the average was 9,600,000 cases. In 1953 the total was 11,800,000 cases. For the 2 years 1953 and 1954 the average was 12,350,000 cases.

2. Supply for the market

In 1949 domestic fishermen supplied tuna which represented 91.4 percent of the total United States market. For the 2 years 1949 and 1950 the average was 88.4 percent.

In 1953 domestic fishermen supplied 66 percent, with the average dropping to 60.5 percent for the 2 years 1953 and 1954. In 1954 the percentage is estimated to be 55 percent.

It is evident that the continuance of the United States tuna canning industry depends largely on whether or not there is a domestic fishery supplying a major part of the raw material requirements.

It is also evident that United States fishermen have not participated, either relatively or absolutely, in the increase in the domestic market.

3. The domestic supplier

Domestic production was originally supplemented by imports. The situation has changed to the extent that much domestic production has been supplanted by imports.

The two major evidences of this are:

(1) Long periods of enforced idleness for the domestic fleet (at times with fish cargoes aboard for long periods).

(2) Lack of construction of new vessels to replace losses. (In contrast to record levels of construction in Japan.)

The future of the domestic supplier, and, in turn, the domestic processor, is seriously threatened unless both trends are reversed.

It is reasonable to expect the United States fisherman to participate in an expanding market. This has not happened.

4. The domestic fleet

Despite an expanding market, the domestic tuna-clipper fleet operating from southern California has declined in size from a fleet totaling 44,300 capacity tons at the end of 1951 to one of about 37,500 capacity tons at the date of this report.

Despite an expanding market, the domestic purse-seine fleet operating from southern California has declined. The number of vessels taking fishing permits for tuna has declined from 110 vessels to 67 in the last 5 years.

There have been only 2 bait boats started and finished to enter the fleet since 1951. There have been no additions to the purse-seine fleet or local albacore fleets.

III. PROBABLE CAUSES

The committee has reviewed the situation and concluded that the basic cause of decline of the local and southern California tuna industry has been an excess of imports, principally from Japan.

1. Frozen tuna imports have risen from 20,600,000 pounds in 1949 to 123,400,000 pounds in 1954.

2. Frozen tuna imports from Japan have risen from 2,800,000 pounds in 1949 to 98 million pounds in 1954.

3. Canned tuna imports (oil and brine) have risen from 4,600,000 pounds in 1949 to 31,600,000 pounds in 1954.

4. Canned tuna-like imports have risen from 8,100,000 pounds in 1949 to 15,400,000 pounds in 1954.

5. Tuna purchased by Southern California canners for the period January-March totaled approximately 34,000 tons in 1954 and 33,000 tons in 1955.

Imports totaled approximately 5,800 tons, or 17 percent, in 1954. In 1955 imports totaled approximately 13,500 tons, or 41 percent.

These imports have risen faster than the capacity of the United States market to absorb them. They have caused distress in the United States industry, manifested by the facts set forth in the preceding parts of this report.

An aggravating factor now present is the probability that the United States Government will negotiate drastic concessions to Japan on tuna products within the next few weeks.

IV. SUGGESTED ACTIONS

1. It is the recommendation of the committee that the present negotiations with Japan should not result in additional concessions.

The President is authorized to grant duty reductions and make other concessions to reduce barriers to trade.

The 5-year increase in canned tuna imports of almost 700 percent does not indicate that present tariff rates are in fact barriers to trade.

The committee cannot comprehend the proposed action of the United States Government which may bind the present duty-free rate on frozen tuna. Frozen tuna imports from Japan have increased 3500 percent in the last 5 years. The Government has never made it clear why this step will do anything other than place the Japanese supplier in a preferred position. The present zero duty can in no sense be termed a barrier to trade.

The committee believes that the United States Government should state clearly what it intends to accomplish by these concessions which, if made, will have a fatal effect on the local industry's fight to recover from past and present reverses.

2. It is the recommendation of the committee that the Governments of the United States and Japan discuss a businesslike settlement of the tuna problem.

There is ample precedent for this in actions which the United States Government has approved and endorsed, as in the case of agricultural commodities where special treatment is accorded them under the GATT agreement, and in the recent tung-nut and tung-oil announcement by the President.

There is clear evidence of serious injury to the domestic tuna industry to warrant this action. A study of imports from Japan also shows evidence of need for action (for example, while frozen tuna imports for the 3-month period ending February 28, 1955, exceeded the comparable period for a year earlier by 75 percent, the dollar value increased only 34 percent—a loss of over $900,000 in potential dollar exchange).

3. It is the recommendation of this Committee that the President, Vice President, Secretary of State, Secretary of Commerce, Secretary of the Interior, California Senators, and members of the California congressional delegation be informed of this situation.

The present administration and preceding administrations have repeated the promise that serious injury to a domestic industry would not result from the operation of the Trade Agreements program.

Advice from this organization to the administration and to the Congress may very well assure more careful consideration in the proposed negotiations involving this local industry, where serious injury has occurred.

Advice from this organization may also bring needed explanation as to why this particular industry has been selected for possible elimination through trade agreement negotiations.

Roads, Not Drivers, Cause 4 of 10 Deaths

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Bluebook magazine for April 1955:

ROADS, NOT DRIVERS, CAUSE 4 OF 10 DEATHS
(By Lester David)

I passed the spot shortly after it happened. The car had ripped through the guardrail, hurtled across 50 feet of field, and climbed halfway up the thick trunk of of an old maple. The State cops were there and the ambulance had just pulled up.

A man and his wife, I heard someone say. Both mangled. Both dead. I didn't linger at the scene. I've been a reporter for 20 years and written about too many of these car-meets-tree deals to be entranced by the sight of gore or a smashed piece of machinery.

But I did see a cop pulling out his notebook to make his report, and I'd lay long, long odds I could predict how the ultimate official cause of accident would read. Excessive speed around turn, or going too fast for road conditions, or something like that.

At first glance you'd say that just about covered it. There was, I noticed, a mercilessly sharp, almost 90° curve at the spot where the car had shot off the highway. The driver had unquestionably been pushing his buggy much too fast for the curve.

But look at it another way, the way some of the Nation's most eminent traffic safety experts are now starting to study our miserable record of slaughter on the highways.

If that curve had not been so sharp, would there have been an accident? If that curve had not been there at all, if that skinny little two-lane road had been a wide, modern highway, wouldn't a guy and his wife still be alive?

The big point is that our inefficient, obsolete, and defective highway system is threatening your life and mine every time we get behind the wheel.

I mean those obstacle-course roadways with the built-in death traps; I mean those narrow traffic arteries that were just dandy for the Stutz Bearcat but are ridiculously inadequate today; I mean the criminally insufficient illumination on our roads and streets; I mean our crazy, mixed-up system of trafic laws which makes it O. K. to pass on the right on one highway and illegal on another road a few hundred feet away.

Not that this article intends to exonerate the driver. That would be just as inaccurate as insisting that the driver is at fault all the time. There are reckless nuts behind the wheel as you danged well know from personal brushes with them. There are ginned-up drivers, sick drivers, careless drivers, and knuckle-headed drivers who take their lives and yours in their hands every time those hands grip the steering wheel.

But inescapable evidence now reveals that there are other drivers, sane and sensible and careful ones, who are only too likely to wind up as accident statistics because they just couldn't compete with all the hazards put before them.

I spoke to dozens of experts, examined hundreds of reports, and everywhere I went the Nation's highway system was damned from hell to breakfast.

Dr. Bruce D. Greenshields, former research engineer of the Ohio Highway Department's Traffic Bureau and a nationally famous authority on traffic and safety, says: "We've emphasized the driver's deficiencies for a long time. Now it's time to place more emphasis on better highways. If you could figure the accident chances on some roads, the odds against the driver would be so great I doubt that a professional gambler would risk his life on them."

Sallie J. Fletcher wouldn't risk hers and she's not even an amateur gambler. It was only a little while ago that Sallie up and resigned her job with the Hunterdon County Welfare Board in New Jersey. Her significant reason: Route 69, which she had to drive to get to work, was piling up a death list as long as your arm, and Sallie wasn't taking any more chances. "It's a long ride on what is becoming a dangerous highway," she said as she quit.

Not long ago James Cope, vice president of the Chrysler Corp., told Congress that 15,000 lives might be saved every year if we had better highways. Since we snuff out roughly 38,000 lives on the roads annually, the manpower saving would be about 40 percent.

That's certainly an eye-bugging prediction, but what's the evidence for it? Well, here's one nugget:

The United States Bureau of Public Roads recently conducted an intensive study of interstate rural highways, which total some 32,000 miles. It discovered that one 1 year, 3,460 persons met death on these roads. Now, the statistics start crackling with drama: On the best 1,900 miles of road, the fatality rate was fully 40.8 percent lower than on the remaining 29,931 miles.

Concludes the Bureau: "If the rural sections of the system had been improved as proposed, 1,400 lives lost in traffic might have been saved."

The national average of car fatalities is 7.1 deaths for every 100 million miles driven. Well, little Connecticut and bigger Ohio, to cite just two States, built some new, modern roads. On these roads the average has nose-dived from 7 to about 3 for Connecticut and less than 1 for Ohio.

Roy E. Jorgensen of the National Highway Users Conference, who used to be Connecticut's chief highway engineer, figures that if every rural road in the State was up to the level of the best ones, there would have been 7,700 fewer accidents within a 4-year period.

And Mr. Jorgensen comes up with this startling equation which you can paste in your memory:

Five miles of new highway constructed equals one more life saved every single year.

He points out that if only 250 miles of main highways were modernized, in 5 years alone there would be 8,000 fewer crashes, 4,750 less injuries. And 230 men, women and children would be flesh and blood instead of corpses.

Lives and whole bodies are important, but let's not belittle money. What does all this mean in terms of your own pocketbook?

William J. Cronin, managing director of the Automobile Manufacturers Association, says AMA studies show that at least $3 billion is being wasted each year in excessive fuel consumption, tire and brake wear, needless traffic accidents and time losses for paid commercial drivers—all because of inadequate and unsafe roads.

Your own family budget, according to one estimate, is at least $100 a year higher because of transportation delays, property damage and high insurance rates caused by bad roads.

O. K. Let's move in now for a close-up and find out what's so wrong with our highways. Why is the whole thing being called "America's domestic problem No. 1"?

Well, take a pair of junior's pants, 4-year-old size, and try squeezing your own maturely upholstered rump into them. Something like this is happening on a nationwide scale these days.

We're trying to squeeze 1955's 100-horsepower automobiles onto 1920's 10-horsepower highways. We're trying to put 55 million motor vehicles onto highways that are too few, too narrow, and too old to carry so many so far.

It just won't work. Something's got to give. Look:

In Arizona, not long ago, a truck was carrying 23 Indians to a celebration at Papago Indian Reservation. The truck passed over a narrow bridge at the same time as a 36,000-pound bulldozer, coming from the opposite direction. The bulldozer had a 3-foot-high blade sticking out a foot and a half, and it sliced through the truck bearing the Indians.

They laid the dead out on the roadside—8 women and a man.

Newspaper accounts quoted police as saying that the bridge was 20 feet wide. But the American Association of State Highway Officials has set 24 feet as the standard recommended width for a 2-lane road, plus adequate shoulders. Bridges should be as wide as roadways.

So why this tragedy in Arizona? Was it because the bulldozer blade protruded an extra foot and a half? Well, if it hadn't, police pointed out, there would have been enough room for the 2 vehicles to pass each other safely. But if the width of the bridge had been standard instead of substandard there would have been sufficient clearance, blade or no blade, and there would have been no accident that day.

O. K., we'll admit that one narrow bridge is nothing to get excited about. But see how the thing builds:

According to the Automotive Safety Foundation, of 10,050 bridges in the rural interstate highway system, 8,187 or 81 percent are below standard width.

But that's only the beginning. The vast majority of our highways, the roads on which you take the wife and kids on weekends, are booby-trapped by dozens of perils. Here are some crisp figures:

Two out of every three of the Nation's 3,366,000 miles of streets and highways are "inadequate" and at least 1,700,000 miles are unsafe for drivers. So says Ralph Thomas, former president of the American Automobile Association.

Of these 3,366,000 miles of roads, only 919,000 miles—or one-fourth—are paved. Half of the paved roads are poorly surfaced with low-type tar or asphalt. So says the United States Bureau of Public Roads in its latest report.

In New York State alone, nine-tenths of the State roads still have only 2 lanes and less than half measure even 20 feet in width. A joint study by State and Federal bureaus recently uncovered this frightening situation for New Yorkers: 6,224 miles of the State's 15,462 miles of State roads—nearly half—are "deficient on the basis of safety" and 5,405 miles give inadequate service. Nor is New York unusual in this respect.

On interstate rural roadways throughout the United States, 15,115 curves are sharper than standard, 560 grades exceed the absolute maximum, and 916 other grades are too steep for prevailing traffic conditions. So says the Automobile Safety Foundation.

Because of these and other items, practically every State and every area has its own private deathtrap where the cars keep bouncing off each other with terrifying regularity and the meat wagons keep carting off the human wreckage.

Let's pinpoint just a few of these traps:

Route 17 in New York and New Jersey is affectionately known to a couple of generations of vacationers as old Butcher Boulevard. It winds its way up to the immensely popular Catskill Mountains resort area, and gets jammed up beyond the grasp of the human imagination. Even this might be tolerable if it were a reasonably safe road. But it's not. As Paul H. Blaisdell, traffic safety director of the Association of Casualty and Surety Companies, puts it: "Old Butcher

Boulevard has got nearly every engineering flaw known to man built into it."

What does he mean? He means that the road drops from a 6-lane affair at an island—and the driver emerges on a 4-lane highway with no warning. He means that it skips back and forth from 4 lanes to 3, some with a center division and some without.

He means the booby traps built into the artery, such as the mile and a quarter stretch from Waldwick to Mahwah in New Jersey, where there are no less than 45 cut-throughs. He means the intolerably steep and winding hills, such as the one at Liberty, N. Y., where a truck loaded with 3,000 gallons of milk went out of control last July, hit 13 cars, and caused 3 deaths.

A quarter of a century ago, the Hutchinson River Parkway in New York was being loudly proclaimed as the highway of tomorrow—and it no doubt was. But tomorrow is already yesterday for this route, which is one of the deadliest in the East.

Why? Take it from Wilbur Smith & Associates, of New Haven, Conn., specialists on traffic problems, who made a thorough study of the road, and from Westchester County officials who accepted their findings. The parkway was indicted by the engineers because of its curves (too sharp), its grades (too steep), and its capacity (woefully lacking). The engineers found that 48 percent of the parkway's entire length had too many twists and turns, while 100 percent lacked good shoulders, proper access roads, and efficient center islands.

They noted that in 24 places a motorist traveling in either direction wouldn't be able to see far enough ahead for safe driving, because of the curves, humps or dips; that in 30 places curves were excessive in each direction. One almost continuous succession of reverse and compound curves was especially condemned.

It all adds up to the finding that a safe speed on the parkway is only 25 miles an hour, but 40 is permitted and cars generally go a good deal faster. And one more point, the payoff one: The Smith survey showed that while the Hutchinson constitutes only 25 percent of the Westchester County parkway system, it racks up more than 55 percent of the fatalities.

For years the Guilford curve on the Baltimore-Washington boulevard took the black ribbon for the worst accident record in Maryland. A new Baltimore-Washington expressway has just been opened, and for that, loud huzzahs. The old curve, however, is stil there, for anyone who wants to try a perfect example of an obstacle course highway—first a dip, then an intersection, then a hill, and finally a sharp curve.

Relatives of 11 persons killed there in one crash in recent years won't forget the trap so readily; neither will relatives of the folks in the two cars which met head-on the first day of January 2 years ago. One of the cars contained a minister who was coming back from Florida with his family. The other contained two women and a man.

You read about it in the newspapers. Seven dead; no survivors.

Route C-1 in Massachusetts is the main route from downtown Boston to Revere Beach. One traffic report recently pointed out that about 20,000 cars use that 5-mile strip of road each day and, the report continued, "It's the easiest place in Massachusetts to get into an auto accident." Route C-1 is a 4-lane highway divided by a center strip, but accidents keep piling up because of the terrific number of cars funneling into it.

The 50-mile stretch of United States Route 31W between Louisville and Elizabethtown, Ky., has now claimed dozens of lives. Fort Knox soldiers, who have to use it going on leave or returning to base, have a pet name for it. They call it the Dixie Dieway.

So much for roads and highways. Consider, now, the confused and conflicting traffic laws and regulations. These differ not only from State to State as you tootle along, but from city to city. It's a babble of tongues, as the traffic institute of Northwestern University has called it, which makes no sense whatever.

In New York State, it has just become perfectly legal to pass another car on the right under specified conditions. But despite the fact that New York says it's okay, and despite the fact that Westchester County is in New York State, don't try passing on the right on any of the parkways of the Westchester system. It's illegal. The Westchester County Parkway Commission has the right to make its own traffic regulations and has declined to amend them to conform with the new law for the rest of the State.

It gets screwier. There's a major parkway in Westchester that permits passing on the right. It's called the Taconic State Parkway, and it's governed by State law. Now the Taconic State and one of the Westchester Parkway Commission's roads intersect and share several hundred feet of roadway at a spot called Hawthorne Circle. So apparently it's legal as well as illegal to pass on the right on the same stretch of road.

The farce still isn't over. New York approves passing on the right (with the exceptions heretofore noted) but Connecticut does not. The latter's motor-vehicle commissioner recently issued a warning to New York motorists, saying in effect: It may be O. K. where you live, but that cuts no ice with us up here. Try it and it might cost you 50 bucks.

Mixed up? Whew. You can pass on the right in Maine but once you hit New Hampshire it's illegal. You can in California but you can't in Nevada across the border. You take a six-State trip and you find: Yes in New Jersey, no in Delaware, yes in Maryland and Virginia, no in North Carolina, and yes in South Carolina.

And this is just one maneuver. You can go down the list and find literally dozens of others and no uniformity from place to place. In one area, the proper way to make a left turn is to cross on the left side of the center of the intersection. In others, left turns must be made on the right-hand side of the center of the intersection. In one area, the law requires drivers to stop when meeting a school bus that is picking up or letting off kids. But other areas don't have this law—so kids may go walking into the path of a car driven by a visiting motorist whose local laws don't require him to stop.

There is no uniformity, either, in signs, signals, and markings. How many times have you driven through an unfamiliar section and found trouble locating the traffic lights? In one town, they may appear overhead; in another, they may be on high posts at the side. Points out Alfred J. Starger, travel manager of the Automobile Club of New York: "These discrepancies not only cause confusion and irritation, but also a definite safety hazard."

Well, what's the answer? Are we going to continue building more miles of cars than miles of highways, as we actually have been doing the past few years? Are the roads going to get worse and worse until the entire country bogs down in one immense traffic jam?

Luckily, there are some answers.

For one, President Eisenhower's highway program shines like a beacon for the poor, harassed motorist. Gen. Lucius D. Clay, whom the President named as chairman of an advisory committee on a national highway program, has just come up with a plan. It calls for spending $101 billion over 10 years, the money coming in varying amounts from Federal, State, and local governments. It calls for highway construction and modernization on an unprecedented scale and, the elimination of bottlenecks and death traps.

But there are things your community can do while the plan is being worked out. They needn't cost too much, either. Some examples:

There was a dangerous railroad overpass in Buffalo on Bailey Avenue between East Ferry and Kearns Avenues. In 2 years 13 accidents had occurred there and police found that cars were banging into the piers that supported the overpass. The piers were marked only with 2 small red reflectors placed 4 feet above the pavement. Motorists were mistaking them for taillights of moving cars.

The solution: Three amber lights were installed on the center pier, two of them flashing, the third constant. The piers were painted black with luminous white stripes, 6 inches wide. And the pavement was marked to guide drivers away from the piers.

In the 2 years following the improvements, police noted a 92-percent reduction in accidents. What did it all cost? A big $266.

The intersection of U. S. Highway 40 and California Route 24 in Berkeley, Calif., averaged 10 accidents per year over an 8-year period. Police noted that there were only single traffic lights on each of the four corners and that large trucks and buses in right-hand lanes frequently blocked the signal from the view of motorists in the center lanes. So what happened? They installed four additional signal heads on the corners. And in the year following, there was a 75-percent reduction in accidents. The cost? $300.

In Los Angeles, skidding on wet pavement and slippery streetcar tracks caused 88 accidents in one 2-year period on 9 streets. Traffic engineers solved the problem by cutting grooves into the pavement to make them skidproof with a special apparatus developed by a local firm. The total cost of the treatment was $5,840—and there were nearly 60 percent fewer accidents and a 75 percent cut in the number of persons injured.

Other communities have redesigned intersections, installed flashing beacons, put up reflectorized warnings at strategic spots, relocated bus loading zones, done a dozen different things at small cost and cut accidents way down. If you have a problem in your own home town, your local officials can get expert traffic engineering help from the accident-prevention department of the Association of Casualty & Surety Cos., 60 John Street, New York 38, N. Y.

Is there a solution for the other major dilemma, the lack of uniformity of traffic laws?

There is. Three decades ago, a uniform motor vehicle code was drafted by some farsighted safety experts. The code, which has been revised and brought up to date a number of times, has sections providing for driver licensing, rules of the road, periodic vehicle inspection and the like. Several States have already adopted entire sections of it. But, points out the National Committee on Uniform Traffic Laws and Ordinances, "inertia and sometimes local pride are serious obstacles."

Can anything make better sense than having the same rules of the road from city to city and State to State? Because of the continuous flow of traffic across city and State lines these days, can anything make less sense than a hundred different rules in as many municipalities?

Uniform traffic laws may come to pass some day. So may the President's highway program. And death traps may be thoroughly rooted out on the local level, through traffic engineering.

Perhaps then cars won't come barreling toward you from around a blind curve. Perhaps then your automobile won't literally buck like a bronco over long stretches of warped and twisted pavement. Perhaps then you wan't go into a terrifying skid on poorly drained roads.

Death can be engineered from our highways. It's time we tackled the job.

A Cowboy Invitation to Oklahoma

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. EDMONDSON. Mr. Speaker, the capital city in my native State of Oklahome has been selected as the future site of the national Cowboy Hall of Fame. Representatives of 17 Western States meeting recently in Denver chose Oklahoma City as the location for this permanent monument to commemorate western heroes of past and present.

Reports indicate that this memorial may become one of the greatest tourist attractions in America. This would be fitting, indeed, since the contributions of the cowboys who conquered America's last frontier were dramatic and great, and their intrepid spirit constitutes a rich national asset. Symbols of these pioneers should be enshrined in a place of honor, while their spirit should be preserved within our hearts.

It is most appropriate that Oklahoma should be chosen as the center for this Cowboy Hall of Fame. The series of spectacular "runs" at the end of last century, which were immortalized in Edna Ferber's Cimarron, and made familiar to every American through the motion picture based on her book, helped to establish the wide renown of Oklahoma's cowboys at an early date in our history.

Further, Oklahoma is well along the way toward becoming the vacation center of America. Figures released 3 weeks ago by the Defense Department show that 4 of the 14 most popular recreational areas within Army engineer projects over the entire Nation are located in Oklahoma.

Lake Texoma, which we share with our neighboring State of Texas—although Oklahoma rivers supply most of the water—continues to lead all others in general public use. Wister Reservoir—located in the congressional district of my esteemed colleague, the majority whip of the House, the gentleman from Oklahoma [Mr. ALBERT]—ranked 10th in the Nation. In my own district in northeastern Oklahoma, Fort Gibson Reservoir ranked 7th nationally, while Tenkiller Reservoir held 13th place.

Let me take this opportunity to extend a cordial invitation to every American to visit my native State. Friendly hands of welcome will greet you when you visit our lovely lakes and hills, attend our rodeos or Indian pow-wows, tour our oilfields or mines of lead and zinc, or seek out the historical sites which abound in Oklahoma.

As an indication of what we have to offer every guest, let me mention but a few of the points of interest within my own Second District. We have the famous Will Rogers Memorial at Claremore, dedicated to America's Good-Will Ambassador who claimed he was "just an old cowhand with a little luck." We have, near Sallisaw, the log cabin home built by Sequoyah, the Cherokee Indian who was one of the 12 people in the history of the world to invent an alphabet for his people. His was so simple that it could be mastered within 3 days, and is one of the intellectual triumphs of any age. Statues of both these men now stand in the Hall of Fame in our Capitol.

Tourists can visit the reconstructed stockade at Fort Gibson, a military post established in 1824, where Robert E. Lee, Zachary Taylor, Jefferson Davis, and many other famous men served as soldiers in their younger days. Washington Irving visited there, and Sam Houston in 1829 established himself 3 miles northwest at his Wigwam Neosho, where he lived with his Cherokee Indian wife until 1832 when he left for Texas to win eternal fame.

The Union Agency for the Nations of the Five Civilized Tribes was established in Muskogee in 1873, and the affairs of these noted tribes are still administered from this city. On Agency Hill is located the old Union Creek Agency, soon to be the site of one of the Nation's outstanding Indian museums.

The permanent capitol of the Greek Indian Nation still stands in Okmulgee, while in Tahlequah the capitol of the Cherokee Nation now serves as the county courthouse for Cherokee County, and the old Cherokee penitentiary is the present county jail.

Prehistoric Indian mounds, some of them recently excavated under supervision of the Smithsonian Institute, dot the district. The fabled Texas Road and the famed Osage Trace crossed the area. The grave of Stand Watie, last Confederate general to surrender at the end of the Civil War, the lead and zinc mines first unearthed in a legendary Spanish mine dating back to Coronado's time, the Sacred-Fire ceremonies of the Kee-Too-Wahs, and the magnificent dogwood and redbud tours, are merely samples of the thrilling and inspiring sights available to guests of Oklahoma within the Second District alone.

Then we have our roundup clubs and rodeos in almost every town. They have continued the cowboy tradition in its fullest glory. This is clearly shown by the fact that both the all-around champion rodeo cowboy of the United States for 1954, and the runner-up as well, are from my district. Buck Rutherford from Lenapah is national champion, and Jim Shoulders of Henryetta won second place. Shoat Webster, who also hails from Lenapah, is the United States champion steer-roper, while Bennie Combs of Checotah, according to a recent report, is now top bulldogger of the world.

So I invite, and urge with pride, my fellow Americans to vacation in Oklahoma. Its lovely and historic sights will add substantially to your appreciation of the beauty, the vastness, and the inherent greatness of our Nation.

The addition of the national cowboy hall of fame will add another luminous star in the crown of glory that rests upon my native State.

Prosperity Picture

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an editorial from the Muscatine, Iowa, Journal of April 16, 1955:

PROSPERITY PICTURE

This may well turn out to be the best busiess year in America's history. The first 3 months of 1955 were the best of all time. Only major labor strife presumably could spoil the prospect.

The record shows that from the end of 1954 up to April 1, 1955, every major activity bounced back from last year's lows. In key fields like steel, construction, automobiles, and retail sales, new highs were established. Even problem industries such as textiles and coal showed considerable improvement.

Barring a crippling strike in steel or automobiles, or a veritable rash of work stoppages in less crucial areas, most observers except the new boom to roll on unchecked, at least through the first half of the year.

Even Senator PAUL DOUGLAS, of Illinois, roundly damned by Republicans in 1954 as a "gloom monger," says that real recovery is here, though he considers "recovery" a stage below "prosperity." And he throws in a warning that there are still dangerous soft spots in the economy.

Just a few of the hardier optimists will say flatly that 1955 will be our best year. Most prefer to hedge somewhat. They worry about the galloping production in automobiles and housing, voicing doubt that the pace can be kept. Indeed, not even the brightest estimates for these fields match the present record rate of output.

Concern is felt, too, because agriculture is not participating in the boom. Farm income is still off.

Yet these are relatively light, fluffy clouds on the horizon. The real thunderhead is the prospect of industrial strife.

The United Automobile Workers currently are engaged in important new contract talks with General Motors. The UAW bid for a guaranteed annual wage could stop bustling GM cold.

Strikes already have tripled in the past month and a half. And more than 75 major labor contracts come up for renewal between now and July—affording many more opportunities for crippling disputes.

Labor must be free to prosecute its demands by all reasonable and legal means, including the strike. But for the good of labor itself, and the whole Nation, we must hope that union leaders will employ this weapon of last resort sparingly and judiciously in the days of test that lie ahead.

Clearly, whether the boom is to reach the heights envisaged by the optimists or whether it is to be of more modest proportions, it is to the advantage of all Americans to have

the economy move along steadily without shattering interruption.

The men on both sides of the contract negotiating table should bear that in mind as they grapple with the workingman's bread-and-butter issues.

Archbishop Cushing Dedicates College Chapel

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. LANE. Mr. Speaker, in this age of confusion and anxiety, I commend to your thoughtful attention the following address. It was delivered by Archbishop Richard J. Cushing, D. D., at the dedication of the Collegiate Chapel of Christ the Divine Teacher, Merrimack College, North Andover, Mass., on April 25, 1955.

The archbishop, who has earned the respect and affection of all Americans by his many benefactions, his sincerity, and his devotion, guides us through the problems of our times with his steadfast faith and his inspiring integrity.

His address should bring comfort and confidence to all and help us to find the way to God that is our only salvation.

OVER 1,000 ATTEND CHAPEL DEDICATION

A congregation that taxed the 1,000 seating capacity of the new chapel saw Archbishop Richard J. Cushing, D. D., dedicate the Collegiate Chapel of Christ the Divine Teacher at a solemn pontifical mass Monday morning, during which he gave the beautiful edifice to the students of Merrimack College as an inspiration to make their faith count in every sphere of their individual lives, in every group, and government act in which they have a due part.

Monsignori and clergy from near and far, students of the college, knights of religious orders and invited guests, crowded the church for the inspiring event despite the inclement weather.

CORNERSTONE LAID

In preparation for the dedication of the $500,000 church, the archbishop first laid the cornerstone to the church in a niche left open on the left corner of the entrance. Inside the cornerstone went a sealed copper container including mementoes of the period. Following the brief ceremony, which he insisted on performing regardless of the rain, the prelate returned through the front of the church and was accompanied by his assisting priests to the sanctuary where he took his place on a throne. As he entered the church the full student body sang Ecce Sacerdos Magnus.

The officiating dignitary was assisted in the ceremony by Very Rev. Vincent A. McQuade, O. S. A., Ph. D., president of the college, as archpriest; Very Rev. James M. Hurley, O. S. A., pastor of St. Mary's parish, as deacon, and Rev. Joseph J. Gildea, O. S. A., college dean of men, as subdeacon.

Knights of Malta and Knights of the Holy Sepulchre occupied seats immediately to the front of the church, while visiting monsignori were seated within the sanctuary. Clergy in large number occupied pews at the right front and the student body was seated in a reserved section to the left. Invited guests occupied pews behind the clergy and students.

A choir of the Men of Marrimack under the direction of Rev. Thomas F. Walsh, O. S. A., sang Ave Maria. At the communion the choir sang Panis Angelicus and at the recessional, Regina Celli Jubila. The students sang the Gregorian Mass.

The congregation was blessed by Archbishop Cushing at the conclusion of the Mass. Following his sermon he also gave the students of the college the remainder of the day and Tuesday off as a gesture of his visit.

First master of ceremonies was Monsignor Francis S. Rossiter, D. D. S. S. L., of St. John's Seminary, Brighton; second master of ceremonies, Rev. Joseph P. Murray, O. S. A., dean of business administration; first deacon of honor, Very Rev. Henry E. Greenlee, O. S. A., provincial; second deacon of honor, Very Rev. Patrick J. Campbell, O. S. A., pastor of St. Augustine's Church, Andover. The processional cross bearer was Rev. William G. Cullen, O. S. A., dean of men; metropolitan cross bearer, Very Rev. John B. Martin, O. S. A., pastor of St. Augustine's Church, Tower Hill.

College students have been designated as minor ministers as follows: Train bearer, Eugene Mercier; mitre bearer, George Riley; crozier bearer, Joseph Maney; book bearer, John McDaid; candle bearer, Bartholomew Cahill; gremial bearer, Phillip Doyle; acolytes, Normand Martin and Joseph Sheehan; thurifer, John J. Lee.

Altar boys were torch bearers: George Adyns, Leighton DeTora, George Schruender, Mark Henry, Philip Henry, Francis McNulty, Edward Donahue, and Robert Shann.

College students serving as ushers were Joseph Bachorowski, Gerald Coughlin, John Fleming, William Foley, Arthur Godin, Daniel Hayes, Arthur Johnson, William Kealy, Henry Leyland, John McGeoghegan, Harry Petros, and Thomas Tivnan.

Knights of Malta participating were: Homer W. Bourgeois, Lowell; Wallace Falvey, Boston; Michael F. Flynn, Beverly; Louis H. Hamel, Haverhill; Doran S. Lyons, Lowell; Patrick F. McDonald, Brookline; Raymond McNamara, Haverhill; Joseph Sullivan, Lowell; Francis W. White, Andover; Edward Williams, Boston.

Knights of the Holy Sepulchre: Homer W. Bourgeois, William R. Brennan, Joseph T. Brennan, William H. Daly, Joseph DeMambro, John J. Drummey, Hon. John E. Fenton, John J. Flannery, Louis Julian, George C. MacDonald, Arthur Turcotte, and Alfred C. Wasilauskas.

CLERGY IN ATTENDANCE

Clergy in attendance at the mass for the dedication were:

Rev. Henry E. Greenlee, O. S. A., Augustinian provincial; Rt. Rev. Peter Abouzeid, St. Joseph's, Lawrence; Rt. Rev. Michael J. Coffey, Salem; Rt. Rev. William E. Drapeau, Lynn; Rt. Rev. A. S. Hargedon, Marblehead; Very Rev. Francis M. Juras, St. Francis', Lawrence; Rt. Rev. Ladislaus A. Sikora, St. John's, Salem; Rt. Rev. Michael F. Madden, Bradford; Very Rev. John J. Murray, Cardinal O'Connell Seminary, Jamaica Plain; Rt. Rev. Timothy F. O'Leary, Boston Archdiocesan superintendent of schools; Rt. Rev. William F. Riley, St. John's Seminary; Very Rev. Lawrence J. Riley, secretary to Archbishop Cushing; Very Rev. Francis S. Rossiter, master of ceremonies to Archbishop Cushing; Rt. Rev. Robert J. Sennott, chancellor, Archdiocese of Boston; Rt. Rev. Francis L. Shea, St. Michael's North Andover; Rev. Charles F. Bergstrom, O. M. I., Lowell; Rev. L. J. Boissonneault, S. M., St. Anne's, Lawrence; Rev. Francis J. Boland, president, Stonehill College; Rev. Leopold Brunnelle, S. M., St. Theresa's, Methuen; Very Rev. Patrick J. Campbell, O. S. A., Andover; Rev. C. J. Costello, O. M. I., Tewksbury; Rev. William E. Culhane, Saugus; Rev. William J. Dauphin, S. M., Mt. Carmel, Methuen; Rev. Willima J. Deacy, O. S. O., Carthage, N. Y.; Rev. Armand H. Desautels, president, Assumption College; Rev. James V. Donovan, Lowell; Rev. George Walker, O. S. A., Greenwich, N. Y.; Rev. John Feeley, Dedham.

MERRIMACK COLLEGE

Rev. William E. Fitzgerald, S. J., provincial; Rev. Walter L. Flaherty, archdiocesan director of television; Rev. John L. Gallagher, O. S. A., Drexel Hall, Pa.; Rev. J. Fernand Gallant, O. M. I., Lowell; Rev. Charles F. Glennon, Malden; Rev. John A. Daly, O. S. A., St. Lawrence's, Lawrence; Rev. Edward J. Farrell, M. S., Ipswich; Rev. M. A. Hopkins, O. S. A., Staten Island, N. Y.; Very Rev. James M. Hurley, O. S. A., St. Mary's, Lawrence; Rev. George P. Gallivan, St. Patrick's, Lawrence; Rev. William L. Keville, St. Patrick's, Lowell; Rev. Eugene L. Labrie, O. M. I.; Lowell; Rev. John J. Lane, North Reading; Rev. Paul K. Lynch, Assumption, Lawrence; Rev. Peter J. McDonough, Swampscott; Very Rev. John B. Martin, O. S. A., St. Augustine's, Lawrence; Rev. Gerald F. McCarthy, O. S. B., St. Anselm's College, Manchester, N. H.; Rev. Joseph R. N. Maxwell, S. J., president, Boston College; Rev. Lionel F. Beaudoin, Sacred Heart, Lawrence; Rev. J. A. McCartin, O. M. I., Tewksbury; Rev. George M. Murphy, S. J., Bradford; Rev. Joseph F. O'Connor, O. S. A., Flint, Mich.; Rev. Leo P. O'Keefe, S. J., Campion Hall, North Andover; Rev. James Reilly, O. S. A., Ardmore, Pa.; Rev. Thomas Roland, O. S. A., provincial's secretary at Villanova; Rev. Henry B. Smith, O. S. A., St. Augustine's, Andover; Rev. Raymond J. Stengel, O. S. A., Bronx, N. Y.; Rev. John J. Twiss, St. Peter's, Lowell; Rev. Dennis Walsh, St. Gabriel's Monastery, Brighton; Rev. Henry A. Caffrey, O. S. A., New Hamburg, N. Y.; Rev. Edmund W. Croke, St. Thomas', Wilmington; Very Rev. Lorenzo Andolfi, Holy Rosary, Lawrence.

ARCHBISHOP'S ADDRESS

The address by Archbishop Cushing follows:

"As often as we witness an occasion such as this, when we gather to make open profession of our faith, we have reason to thank God for the innumerable graces by which He has sanctified us, and for the assurance afforded by our loyalty to the church that we will continue to be a force for good in the human society in which we live and move. For it is of the very essence of our Catholic faith that it serves to bring God from heaven to earth and to prepare with men's souls the dispositions through which God may transform the world into a replica of His heavenly kingdom.

"No one has really penetrated the meaning of Christianity unless he has understood its mission in relation to the ever-changing problems of the present as well as its ultimate purpose of directing us to the world to come. Those who would erect a barrier between the church and the world are either lukewarm Catholics who resist the diffusive energy of God's love, or dedicated advocates of a worldly kingdom, bent on destroying religion as the only obstacle in the way of the triumph of an irreligious humanism. The enemies of the church know well that the best way to crush it is to drive it out of the market place and confine it within the limits of the sanctuary. Catholics who yield to the persuasions of their worldly associates that religion should be kept out of their education, business, and social life are not only false to the demands of their faith, but active cooperators in a campaign to substitute a man-made code of morality for the Ten Commandments and to raise man himself to the dignity of supreme lord of the universe."

IMPORTANT PLACE IN WORLD

"It is clear, therefore, that Catholics have an important place in the modern world and must always be mindful of the demands of their faith, even while they discharge the

duties which make them useful members of the civil community.

"It is not enough to carry one's share of the economic prosperity of the Nation, though this is one of man's important functions. It is not enough to be, as head of a household, a generous provider. The position of husband and father involves man's share in the development of the ideas and character of his children. But there is more still. There remains man's position in society, his obligation as a citizen of a municipality, a state, a nation, and his duty as a human being to be interested in and make what efforts he can toward the peace and happiness of the world.

"In all these phases of his life, he must act in accordance with the laws of God and the catholic way of life. We need not stress the obvious fact that it is becoming increasingly difficult to be successful in the world while remaining close to God, nor that being close to God is really our only source of happiness here as well as hereafter. Only by living his religion completely can man keep the unity of his personality that is essential to happiness. There are many Catholics in America who bluster around trying to convince themselves, as well as their neighbors, that they are big wheels in the social structure of American life, who really don't count at all, and precisely for that reason that their ambitions, purposes, and efforts are at variance with the religious teachings in which they have been raised. Believers in God, they act as they who have no faith.

"But now I am concerned more with the practicing Catholic of today and tomorrow, honest in business, devoted husband and father, forthright citizen, who weighs the qualifications of candidates, reads the press, listens to commentators, and holds himself in agreement or disagreement by drawing, consciously or unconsciously, upon his moral principles, as well as upon his political views and general information. Most of his fellow citizens call him a fine American. I agree with them. But I could call him a great American except for the limitations he sets up for himself. What limitations you ask? A limitation of action and of influence. When in disagreement with a policy, trend, act—either political or social—he leaves his armor on the wall, and, with a lack of confidence in the extent of an individual's influence, he fails to see that in our country the individual can influence opinion, can act. How, I ask you, is real public opinion made except by a concert of individuals?"

LABOR WAS EXPLOITED

"Let us look back for a moment upon the industrial conditions rampant in the 19th century; child labor, slave labor, inhumanity springing from greed, exercised against the toiler. Eventually—after nearly 100 years—these conditions were remedied by organizing those who were exploited and who refused to contemplate their children stepping into their indefensible shoes. Eventually, after nearly 100 years, a situation that had obtained on two continents, in half a dozen or more countries, was remedied. Against men whose moral and business codes discountenanced any slight advantage for a competitor, the revolution was effected. But for nearly 100 years, children died at tender ages, mothers obliged to work wasted the strength that belonged to offspring, fathers went prematurely to their graves, while fortunes were made at the expense of their very lives; 100 wasted years because western man did not compel the implementing of his principles through force of public opinion.

"The 20th century has witnessed wars which even prior to Nagasaki, were in magnitude beyond the imagination of former centuries. Few believe that the cause of these wars was so narrowly a problem of injustice, insoluble through any other means, that the wars were justifiable and unavoidable. You will say: we were in a position where we had to choose to fight or go down into a sort of vicarious defeat. This I grant. You will say that these wars had to be won by antitotalitatianism or the freedom won by 20 centuries of Christian thought must be lost. This also I am willing to accept.

"But what if western man had built up public opinion—not just in one country, but in all Europe and America—outlawing war until every other remedy had been tried? What if there had been a world conscience operative that would have prevented these wars, working not on their eve but in the generations when their causes were brewing?

"Then came Nagasaki. Great discoveries, great new techniques diverted from the arts of peace. Slaughter of the innocent. Bomb or be bombed, you say. Perhaps. But what if the world—composed ultimately, as it is, not of groups, nor of states, but of individuals, had made such slaughter literally unthinkable?

"What, I ask you, of the present?"

THREAT TO WORLD

"The great problem that faces us today is to prevent the tremendous power of the American Nation from plunging the whole world into ruin. It is impossible to deny that the scientific progress of the last century has brought the idea of the end of the world, hitherto seriously discussed only by theologians, into the deliberation of hardheaded statesmen, and has revealed possibilities of widespread destruction that previous generations could not have known even by conjecture. I do not propose to discuss the morality of the newly devised methods of warfare. Let me simply point out that their very existence makes it possible for them to be used, and that unfortunately we have no assurance that they will not be used, whether by our own Nation against others or by other nations against ourselves."

SOVIET ANSWER BETTER

"Let me now propose the question: Can any organization of society afford effective protection against this very real and imminent danger? Must we assume, as we are confronted by it, an attitude of defeatism that would regard a third world war as inevitable, or have we any hope that the planning of our economic experts and the interent vitality of our democratic way of life will save us from destruction?

"I am drawn to the conclusion that the rulers of the Soviet Union have a better immediate answer to the problem than we have. With danger threatening from without, they are taking every possible precaution against possible treachery from within. An efficiently policed state, a totalitarian regimentation of society, a rigidly supervised system of relations with foreign nations and their subjects—these measures represent a cold and realistic effort to meet force with force, and to provide for the nation itself, if not for its individual subjects, a safeguard against destruction, which the so-called free nations of the world have not been able to develop.

"The Soviet policy has at least the merit of being consistent. If whole nations threaten to annihilate one another, the nation's resistance should be organized from top to bottom, and the influence of partisan factions should be ruthlessly suppressed. If no question is raised as to the morality of the new methods of making war, no question should be raised as to the morality of meeting the danger in the only way which affords any hope of success.

"To the argument that tyrannical governments violate human rights, the answer is given by the Communists that the only source of human rights is the power of the state, and that the state must not be questioned in relation to any measures which it deems necessary to assure its continuance in existence. To the argument that the despotic state violates the principles of democracy according to which freemen must be governed, Russia answers that democracy in capitalistic nations has become an instrument for the suppression of the masses, and that the freedom of future generations can be assured only by violent elimination of those forms of government that guarantee freedom only to the ruling classes."

UNITED STATES POLICIES

"If we admit the promise that the relations of nations are not subject to restrictions based on moral principles, the logic of the Soviet point of view is hard to escape. In any event, it brings us face to face with a serious question relating to the policies of our Nation. Can we consistently bolster up our national prestige to the use of force, and at the same time remain faithful to the constitutional principles upon which the Nation was founded? Can we commit ourselves to the use of newly invented weapons of mass destruction without adopting the Russian policy of meeting force with force, and protecting ourselves from enemies within and without by gradually transforming our Government from democracy to dictatorship?

"There are not merely academic questions. They are imposed upon us by the facts of contemporary history. Betrayal of our national interests by unscrupulous private groups can be prevented only by farflung system of secret police. Organization of our national resources for worldwide military expeditions can be effected only by whittling away, bit by bit, the charter of liberties by which our Nation has prospered in the past and substituting for our present constitutional government a single-party state that will relentlessly crush all opposition to its policies."

INCOMPATIBLE PHILOSOPHIES

"In short, it seems that we are at present following two completely incompatible philosophies of government. On the one hand, we are not only preparing to meet force with force; we are working furiously to create the crude, irresistible military power against which other nations will be driven to defend themselves. On the other hand, we are making plans for the future of our country which contemplate the continuance of forms of government which can survive only in a peaceful world, in which nations concentrate their efforts upon the improvement of the human condition of their subjects. Sooner or later these conflicting tendencies must clash. If we choose to be a military power, and strive to reduce the rest of the world to subjection by force, we must be prepared to let loose the fierce human passions which make war successful and which find vicious gratification in the moral degeneration which follows upon war. If we have any thought of remaining a peace-loving people, and of maintaining the human dignity which our forefathers have bequeathed to us, we must learn to control military power by moral restraint than by governmental pressure, and we must to this end revise drastically the philosophical principles upon which our national life is being organized at the present time."

LEARN TO LIVE IN NEW WORLD

"Here is the fundamental problem with which we must now come to grips; to learn to live in the new world which science is creating for us without turning its power to our own destruction. The answer to the problem is to be found in the development of the sciences of man which will parallel that of the sciences of the material world. By the sciences of man I mean not those which consider his relation to the material world and his reactions on a purely material level, but those which draw out the implications of the obvious fact that man knows both the world and himself through the eternal light of intelligence as well as through the changing images of sense. To be intelligent, to be educated, means first of all to be

something essentially superior to the food one eats and to the body which responds to an externally observable environment. To be intelligent means to be possessed of a soul—to be spiritually alive—to be able to discover the causes of our experience in realities which cannot be measured with yardsticks or clocks or scales—realities which share in the changeless reality of an infinitely perfect Being who is the ultimate cause of everything else."

MUST RETURN TO THEOLOGY

"These sciences of man, capable of elaboration by reason alone, comprise what we know as philosophy. When the conclusions of philosophy are fortified and elevated by the revealed word of God, they constitute the noblest subject of investigation with which the mind of man can be concerned, and they open up a vision of human dignity which transcends the fondest hopes of human speculation. Theology, the study of God and of God's creation, as God Himself has revealed it—this is the proper study of mankind. Modern science has rejected theology, in a vain effort to substitute man for God. Only by returning to the study of theology in strictest sense can man hope to conquer the threat of force which scientific progress has made so ominously real. And that, my friends, is the significance of this chapel. It symbolizes the integration of religion, of theology, of the teachings of Christ, the Teacher, in the training of students of the present and leaders of the future at Merrimack College."

MUST RECOGNIZE GOD

"The real danger that threatens our Nation today is not the possibility of war but the growth in men's minds of the kind of thinking that makes war first possible and then inevitable. No two men who respect the human dignity in which they both share will settle their grievance by resorting to weapons. Wars among nations give evidence that men are still wolves to one another, and that both those who rule and those who are ruled, have failed to learn the lesson of men's inherent value as the noblest creature of God below the angels. This is the lesson that philosophy and theology teaches here at Merrimack College. It is to these sciences that we must look for the inspiration that will move men to revolt against the horrors of war. Individual men, autonomous and independent in relation to one another, can be kept together only by a power that transcends them all. Only when God is universally recognized and God's law universally obeyed can there be agreement among men on the principles of social organization and the policies of human statesmanship."

CATHOLIC FAITH LIVING REALITY

"My dear Catholic students, this is the reason why you mean so much to the modern world. You are being taught to restore all things to God. You are Catholics by conviction; your membership in the church is more than an expression of loyalty to your ecclesiastical superiors. Your whole life reflects the beauty of God's grace which makes you adopted brethren of Christ our Lord; your every relation with your fellow men is governed by principles of morality which God Himself has imposed and which His church has infallibly applied. You have tremendous power for good, among the members of our own church who are indifferent and faithless; among religious men and women of other denominations, who need the support of your example as perchance they waver in their religious beliefs; among the millions of those for whom God is either a myth or a meaningless symbol, and who yield readily to the specious arguments of materialistic philosophies merely because they have not experienced the persuasive reasonableness of faith in God. The cause is not yet lost. Precious time is being gained simply because the next war threatens to be so devastating, so completely beyond control that even warlike nations shrink from provoking it. Let us use these next few years to make our Catholic faith a living reality in the world, which is so sorely in need of God and the redeeming grace of Christ our Lord. Let us make our faith count in every sphere of our individual lives, in every group and government act in which we have a due part. Now is the acceptable time—tomorrow may be too late. For your inspiration I give you this Collegiate Chapel of Christ the Divine Teacher."

Marshall, Warren, and the Presidency

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. MULTER. Mr. Speaker, the following very interesting article, written by Roscoe Drummond, which appeared in his column Washington, in the April 24, 1955, issue of the New York Herald Tribune, is deserving of our attention:

WASHINGTON
(By Roscoe Drummond)

MARSHALL, WARREN, AND THE PRESIDENCY

Within the decade, two great Americans have deliberately, decisively, and patriotically put the Presidency outside their reach. They are General of Army George C. Marshall and Chief Justice of the United States Earl Warren. They did it because each was convinced that he could only perform the high national service to which he had been called if he put elective politics irrevocably aside. Such an act takes great character and dedication.

It was in 1947, with the menacing storm of the cold war gathering its full force around the world, that President Truman appointed General Marshall Secretary of State. General Marshall told the Senate Foreign Relations Committee that he wished to be confirmed only on the unshatterable understanding that he was intent upon serving the Nation, not a party, and would never enter upon a political career. He took this decision because he wanted his service to be free from all partisan implication, and himself free from any possible partisan motive. It was his first civil appointment in a long and distinguished military record. He began his Army career at the bottom; he began his civil career at the top—and did equally well in both. The time will come when his great stature will be more popularly appreciated.

Earl Warren is a man of the same mettle.

It came as no surprise to those who know him that last week he served notice, unequivocally, that he intended to live out his years in service to the Supreme Court.

No Chief Justice has ever laid aside his robe to step into or to step back into the arena of party politics. No Chief Justice has ever had a presidential nomination so temptingly within his possible reach.

Chief Justice Warren said no.

He said no for three resplendent reasons: (1) Because he cherishes the Supreme Court as an independent branch of the Federal Government; (2) because he wants to keep the Court untouched by partisan politics; (3) because he wants to keep the Chief Justice totally removed from partisan controversy in light of the Court's historic, follow-up decisions on desegregation which will soon be forthcoming.

There is nothing wrong in having the ambition to be President. I suspect that General Marshall never did wish elective office at any time under any circumstances. I think he believed that military leaders should stick to the military.

Earl Warren did have presidential ambitions and he might well have been elected if he had been the presidential, instead of the vice presidential nominee in 1948. To put aside all political ambition obviously takes greater moral stamina than to acquire it. This is why the present Chief Justice emerges as one of our great public servants.

From the purely partisan standpoint, Mr. Warren's withdrawal comes at a particularly interesting juncture in Republican Party affairs. It comes at a paradoxical moment. The paradox is that while the record of the Eisenhower administration continues to win overwhelming public approval, the Republican Party is a minority party.

No more than about 40 percent of the Nation's voters record themselves as Republicans, but fully 70 percent of the Nation's voters record themselves as Eisenhower supporters. There is no evidence yet that the Republican Party is repairing this disparity.

The evidence is to the contrary. The elections last November showed that the party could not hold for more than 2 years the extra voters who were drawn to it in 1952 because of General Eisenhower's monumental popularity.

And now the Gallup poll shows that Republican voters by substantial margin, and independent voters even more so, would like to nominate Mr. Warren if President Eisenhower does not run.

But every political writer knows that the senior Republican professionals would fight a Warren nomination to the last ditch. He's too liberal. He's too much like Eisenhower. The party's dilemma is that the senior Republican leaders are out of step with the Republican voters.

If the United States Were To Run Out on Nationalist China, Its Proved Ally, Who Anywhere Will Trust Us Again?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the final article in a series on the Far East by Brig. Gen. Frank L. Howley, former military governor of Berlin, who has just completed the 6 weeks' observation tour of Formosa and the Far East. General Howley is the present vice chancellor of New York University. His observations and judgments are especially valuable because based not on wishful thinking but on long experience in dealing with Communists:

EXPECTANT AIR GRIPS CHIANG'S LITTLE ISLAND
(By Brig. Gen. Frank L. Howley, U. S. Army (retired))

NEW YORK, April 4.—Time is running out on Quemoy, the little Asian island with the hourglass shape.

You can feel the air of expectancy as steel-helmeted, camouflaged Chinese Nationalists soldiers sight down their automatic weapons across the 2,000 yards of quiet water to the island next door and the rugged coastline beyond.

Over there are Chinese of another hue—Red. They are the enemy. They keep reminding you with occasional bursts of light artillery fire.

Nationalist foxholes and Communist shells have honeycombed most of the 70 square miles of this ugly, brown clay island at the entrance to Red-held Amoy Harbor. Only the airfield has escaped. It nestles conveniently behind a ridge of giant boulders—just where the Red guns can't reach it.

Quemoy is the southern anchor of Chiang Kai-shek's 200-mile chain of islands blockading the Red China coast across the 100-mile strait from Formosa.

It is defended by 50,000 of Chiang's crack Nationalist troops against that oft-threatened Red invasion from the mainland only 5 miles away.

The northern anchor is tiny Matsu and its 7 satellite islands defended by another 20,000 Nationalists. It is against Matsu that the Communists are believed to be preparing their first assault.

OUT OF OBSCURITY

Like Iwo Jima and Tarawa and the other pinpoints that flared from obscurity during World War II, Quemoy and Matsu seem destined to make history.

For it is on these offshore islands flush against the Red coast that the United States must halt its retreat from communism and make a stand.

Here, on the Red Chinese doorstep, the destruction of communism must begin before it can destroy us.

To guard Formosa and the nearby Pescadores is no longer enough. We have announced to the world that Chiang Kai-shek is our friend and ally in our common fight against the Communist menace.

His Nationalists troops on Quemoy and Matsu wear the same Nationalist uniforms as those on Formosa. They, too, are friends and allies.

A six-week personal observation tour of the Far East has convinced me that this is the turning point in our relations with the rest of the world.

If we Americans now allow Chiang Kai-shek's troops—our allies—to be annihilated on Quemoy and Matsu, we won't have a friend left in Asia. All of Asia, I am convinced, would go Communist.

Until my visit to the Far East, I was not aware of the terrible blow our prestige suffered throughout Asia through our appeasement of the Communist enemy in Korea.

SEEDS OF CYNICISM

The Korean disaster gave our morale at home a terrible blow as well. It planted many dangerous seeds of national cynicism.

In the interests of our relations with our allies and our faith in ourselves, we cannot afford another withdrawal. We cannot give respectability again to men with blood on their hands. We cannot endure their insults around another propaganda table.

If we do not now live up to our obligations with the only powerful anti-Communist military forces in Asia, how can we ask other countries to be our trusted allies?

We must say to the Chinese Reds and to their masters in the Kremlin:

"Chiang Kai-shek is our ally. If you strike him you have struck us—on Quemoy, Matsu, Formosa or anywhere else."

Do we have a choice? If we didn't want to help defend Quemoy and Matsu, if we were not ready to oppose the world Communist conspiracy anywhere and everywhere, then we should not have signed a mutual defense pact with Chiang.

WITHDRAW DEFENSE

We should have pulled off Formosa and withdrawn our Asian defense line to Pearl Harbor, or even San Francisco.

Since my return, I have been asked many times if I agree with the personal views and beliefs of Chiang Kai-shek. This is beside the point.

I do not consider Chiang's personal views to be any of my business. I do not care whether he is a Methodist instead of a Buddhist, or whether he eats with chopsticks instead of knife and fork.

The views and beliefs of Chiang Kai-shek should be judged today only insofar as they affect our foremost and gravest responsibility: to get rid of the military threat that aims to destroy us from the outside and the subversive threat that aims to weaken us from within. That threat is communism.

There is further evidence that Moscow is not prepared to back Mao in a shooting war, any more than the Red army did in Korea. The Soviets, we know, work according to a long-range timetable. They are cunning and realistic in their planning. They may even anticipate an occasional reversal.

Nothing we do to Mao would make the Soviets change this long-range plan. Of all the enemies we have ever faced, this one cares the least about what we say or think or even do. The Kremlin has its own special pattern for our destruction and intends to follow it.

What, then, are the practical steps? What should we do?

STEPS TO FOLLOW

We must supply encouragement, training, and all available weapons, including our tactical atomic weapons, to our allies who are struggling against Soviet threats and domination. The place to begin is Formosa, with a dedicated leader and a powerful fighting force.

The Sabrejets we have just delivered to Chiang should be only the beginning. We should provide him with more planes, more ships, more of our top military instructors, more military supplies and equipment.

We should support the organization of volunteer air units and equip them with our newest planes, just as we fought the Japanese with the famed Flying Tigers before Pearl Harbor.

TERMS FOR MAO

The surest way to settle this matter is to announce to the world the absolute minimum conditions under which we could recognize the Red regime. Those terms should be:

1. That Mao resign as head of the government.

2. That the Peiping regime agree to free elections throughout China under international supervision.

3. That the Communists free immediately all United States prisoners and that they pay in full for the thousands of lives and the billions of dollars damage their volunteers cost us in Korea.

4. That the Chinese Reds turn over to international tribunals all war criminals guilty of atrocities and acts against humanity, particularly in Korea.

TIME IS NOW

Now is the time to hasten the destruction of the Communist regime in China, while it is still too weak and internally rotten to rally support.

I am convinced that the fall of Mao would set the pattern for the collapse of other flimsy Communist regimes, in North Korea, Indochina, the Balkans, and the Baltic.

The Communist house of cards can collapse all the way back to the Soviet borders, and even within Russia itself.

This is not just wishful thinking; it is feasible and possible; if we recognize our great opportunity and seize it. But if we permit the Communists to gain equality with us, there will be no peace on earth.

NEED NOT DESTROY

In that event, we may find ourselves confronted with the situation described by a retiring American ambassador who predicted gloomily:

"We will give up our way of life because we will not be willing to destroy the world and the Soviet Union will be willing to destroy it."

I don't buy that. There is still time for us to win without the world being destroyed.

Formosa can be our great opportunity for peace. But we must stop confusing those who sincerely would be our allies. We must recognize them and help them.

We must above all, lead with strength and determination, not weakness and vacillation.

Israel Asks Urgent Security Council Meeting — Intolerable Situation on Egyptian Border

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following news item which appeared in the April 6, 1955, issue of Israel Digest:

ISRAEL ASKS URGENT SECURITY COUNCIL MEETING—INTOLERABLE SITUATION ON EGYPTIAN BORDER

UNITED NATIONS, NEW YORK.—Israel this week requested an urgent meeting of the Security Council to discuss the mounting toll of attacks by Egyptian regular and irregular forces in the border area.

Ambassador Abba Eban, Permanent Representative of Israel to the United Nations, addressed the following letter to the President of the Security Council on April 4:

"I have the honor, on instructions from my government, to submit the following complaint for consideration by the Security Council at an urgent meeting:

"Complaint by Israel against Egypt concerning:

"Repeated attacks by Egyptian regular and irregular armed forces and by armed marauders from Egyptian-controlled territory against Israel armed forces and civilian lives and property in Israel, to the danger of the peace and security of the area and in violation of the general armistice agreement and the resolutions of the Security Council, with special reference to:

"1. The armed assault at Patish on March 24, 1955 (S/3376);

"2. Repeated attacks by mining and gunfire on Israel Army units patrolling the Israel-Egyptian border at the Gaza strip between March 26 and April 3, 1955.

"In the 10 days which have elapsed since the assault by armed Egyptian marauders on a wedding party at Patish on March 24, which was condemned by the Mixed Armistice Commission on March 27 as a brutal and murderous act of aggression, another 15 incidents of a particularly serious nature have occurred on the border between Israel and the Egyptian-controled Gaza strip. Most of these have taken the character of well-planned attacks on mobile Israel patrols by means of land mines laid in Israel territory followed by fire from fixed Egyptian army positions. Two such attacks in the neighborhood of Kisufim, on March 12 and March 19, were subsequently condemned in strong terms by the Mixed Armistice Commission, which noted the aggravation of the situation caused by Egypt's continued noncompliance with her obligations under the

armistice agreement. The rulings of the Mixed Armistice Commission, however, have had no effect whatsoever on the Egyptian authorities, with the result that the last week has witnessed a mounting tide of such attacks culminating in a violent assault on an Israel army patrol near Nahal Oz and on the village of Nahal Oz itself on April 3, in which 2 Israeli soldiers were killed and 16 wounded.

"A list of the attacks since March 26 follows:

"1. On March 26 an Israel patrol northwest of Nirim was attacked by automatic and rifle fire from Egyptian positions. The patrol returned the fire. The exchange of fire continued for 1½ hours.

"2. On March 26 Egyptian marauders attacked an Israel patrol southeast of the demilitarized zone of Nitzana. In the exchange of fire 1 soldier was wounded.

"3. On March 27 4 Egyptian soldiers from the Gaza strip penetrated into Israel territory north of Sheikh Nabhan. An Israel patrol drove them back across the border.

"4. On March 27 an Israel patrol in the vicinity of Nitzana was attacked by a group of armed infiltrators. When the patrol returned fire, fire was opened upon it from an Egyptian position across the border.

"5. On March 27 an Israeli soldier was wounded in a clash with an armed group of marauders near Be'eri.

"6. On March 28 an Israeli army command car was blown up by a land mine west of Nirim. Two Israeli soldiers were wounded, one of whom died later. Egypt was condemned by the Mixed Armistice Commission on March 31. The Commission noted with great concern that, despite Egypt's obligations under the general armistice agreement and previous Mixed Armistice Commission decisions the reported Egyptian attacks against Israel had not ceased. The Armistice Commission called upon Egypt to terminate such attacks.

"7. On March 28, at noon, an Israel patrol in the vicinity of Kissufim was attacked by fire from an Egyptian position across the demarcation line.

"8. On March 28, in the afternoon, Egyptian positions attacked with automatic fire an Israel patrol southwest of Kissufim in Israel territory. The patrol did not return the fire.

"9. One March 30 an Israel patrol in the vicinity of Bikeat Abu Arif encountered armed marauders preparing to place a land mine under cover of armed Egyptians across the demarcation line. The marauders opened fire on the patrol. At the same time an Egyptian Army position opened mortar fire. The Israeli patrol returned fire and forced the marauders to retreat across the border.

"10. On March 31 an Israel Army command car was blown up by Egyptian raiders north of Sheikh Nabhan.

"11. On March 31 an Israel command car struck a demolition nail placed by marauders on the road near Nahal Oz.

"12. On April 1 an Asrael Army command car was blown up and damaged by a land mine north of Kissufim. One Israeli soldier was injured. Following the explosion an Egyptian Army position opened fire on the Israel patrol.

"13. On April 1 an Israel patrol chased away an Egyptian marauder digging a placement for a land mine on a road west of Nir Yitzhak.

"14. On April 2 an Israel command car was blown up by a land mine near Nahal Oz. Five Israeli soldiers were injured. After the explosion three Egyptian Army positions directed mortar, machinegun and rifle fire at the wreckage wounding another Israel soldier. Only after returning fire were the Israelies able to reach the wounded and administer first aid.

"15. On April 3, at approximately 1730 hours, machinegun fire was opened on an Israel patrol consisting of 3 command cars in Israel territroy, from 2 Egyptian Army positions, at MR 10431016 and MR 10131013. Israel reinforceemnts, sent to extricate the patrol, were subjected to heavy Egyptian fire. The Egyptians directed mortar fire against the Israel units and against the village of Nahal Oz. As the heavy Egyptian shelling made withdrawal impossible, and casualties on the open ground were mounting, the Israel unit commander was forced to advance upon the Egyptian post with armored cars. The exchange of fire lasted till 1905 hours. Israeli casualties were 2 soldiers killed and 16 wounded, 4 of them seriously.

"My Government has instructed me to lay the details of these incidents before the Security Council, and to seek relief from the intolerable situation created by this continued and purposeful Egyptian aggression against Israel.

"I have the honor to request that this letter be circulated to all the members of the Security Council."

Delaware River Channel Improvement

EXTENSION OF REMARKS
OF

HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article relative to the deepening of the Delaware River Channel from Philadelphia to Trenton:

[From the Marine News of April 1955]

AS THE DELAWARE GOES

The last Congress authorized the deepening of the existing channel in the Delaware River from Philadelphia, Pa., to Trenton, N. J. In authorizing this channel improvement, the Congress turned down the specific request of the Bureau of the Budget that local interests should be required to contribute to the cost of the project.

However, contrary to the expressed wishes of the Congress, the current Budget message proposes only a supplemental request for funds to start the deepening of this channel after local interests agree to a contribution of at least $18 million.

At a press conference on January 19, the President endorsed the proposal that local interests should share the cost of major Federal waterway improvements—such as the Delaware River—as a new national policy. The President emphasized that he would not specify whether the new policy should be achieved through tolls on shipping, by direct local contribution, or some other method.

As every reader of Marine News knows, any toll or share-the-cost program would reverse the historic policy established in the founding days of our country: That the Federal Government assumes full responsibility for developing and maintaining our major navigable waterways and that our waterways should be free to the use of all commerce.

It is along these lines that the Delaware River port area's campaign for an improved channel has developed into a national issue, a fight in behalf of all waterway interests to sustain the historic policy of Federal responsibility for the development and improvement of our Nation's navigable waterways.

This campaign centers today on legislation introduced in Congress to appropriate $25 million for the first year of work on this project recommended by the Corps of Engineers.

In support of this legislation, the Joint Executive Committee for the Improvement and Development of the Philadelphia Port Area through its chairman, Harry G. Schad, has called on all waterways interests to support the Delaware River Channel fight before the Appropriations Committees of the House and the Senate to assure the continuance of full Federal responsibility for the improvement and development of the Nation's navigable waterways.

The Marine News supports this call for concerted action in the belief that all who maintain an interest in the future of the Nation's waterways owe unqualified support to the principles for which those of the Delaware River area are fighting.

True, the battle is being waged over the Delaware, but the results will have far-reaching effects on all our waterways.

Because of the overall implications, this, then, ceases to exist as a local issue, for on the outcome rests the future of big and little waterway projects across the length and breadth of this Nation.

Should the false doctrine of user tolls or local participation prevail on the Delaware, it could—and make no mistake, would—then be applied on all our waterways, in all our harbors, from the Great Lakes to the gulf, and the Atlantic to the Pacific.

It is because of this that all waterways interests must pick up the challenge, for, in this instance—

As the Delaware goes, so go the Nation's waterways.

[From the Saturday Evening Post of April 30, 1955]

HARBOR IMPROVEMENT IS ONE FEDERAL JOB THAT HAS PAID OFF

The administration has declined to include in this year's budget an appropriation for a deep-water channel in the Delaware River above Philadelphia as far as Trenton, N. J., unless the project includes a stipulation that "local interests" must assume part of the cost.

The total sum involved in dredging the channel to 40 feet as far as Morrisville, Pa., and 35 feet from there to Trenton, is about $91 million. It is estimated that $18 million of this amount represents half the difference between a 35-foot channel and one that would permit large ocean-going ships to unload ore at dockside. Therefore, the Army Engineers argue, this is a "local benefit" and should not be a charge on the Federal budget. Although the "local interests" are not specifically mentioned, various statements by administration spokesmen indicate that United States Steel Corp., whose huge new Fairless plant is located on the river just below Trenton, is meant.

In his press conference of January 19, the President supported this position, adding, if it was a new policy, he thought it should have been considered long ago.

Although the principle of local participation in large public improvements involving Federal expenditures is a sound one, harbor maintenance and improvement are not a happy place to apply it. Unlike programs for road or hospital or school construction, the maintenance and improvement of navigable rivers and harbors have been an exclusively Federal concern since the foundation of the Republic.

It was precisely the question of foreign commerce and navigation—over which the original Confederation had no control—that led to the movement for the Constitutional Convention of 1787. In the end, the States renounced the right to collect import duties, ceding that source of revenue to the new Federal Government, which in turn was forbidden (art. I, sec. 9, par. 6) to discriminate among the ports of the several States.

Maintenance and improvement of harbors, under control of the War Department, have normally been carried out at Federal expense, insofar as deep-water channels are concerned. That would be no reason for continuing the policy, if it were wrong or financially burdensome. But the reverse is true. Adequate ports and channels are not a liability but a gilt-edged investment. In the case of harbors along the Delaware, the Federal Government, during the last 15 years, has collected over $14 for every dollar spent on development.

It is true that, for the moment, a 40-foot channel may be represented as a benefit to United States Steel, although other plants along the river would benefit, too. But that argument could have been advanced at any time in the past 168 years against any of the industries that line the shores of our great ports. The record of American enterprise indicates that opportunities to locate on an improved waterway are seldom neglected. It is hardly fair to impose the cost of creating them on the first user.

The responsibility of the Federal Government, in any case, does not go beyond the cost of deepening and clearing channels. A productive harbor, obviously, is much more than just a waterway. Local interests provide and always have provided piers, rail connections, loading and unloading facilities, truck highways, police, and all the other necessities that go into the complex of services that make a port. Without them the huge Federal revenues from customs could never have been available.

Sympathy is due residents of the upper Delaware who view with alarm the inevitable transformation of river bank from charming residence and recreation areas into grim industrial and commercial areas. We are not debating the issue of whether this particular project is necessary but, if the channel or any similar one is to be deepened, there would seem to be no valid reason to change the policy, buttressed by specific constitutional mention, which makes channel costs a Federal concern.

THE DELAWARE PORT AREA: ITS ECONOMY AND THE CONGRESSIONALLY AUTHORIZED IMPROVEMENT OF ITS SHIPPING CHANNEL

The Delaware is one of the world's great estuarial harbors. Already it is the leading port of the United States in the handling of import tonnage. And it stands second only to New York in total waterborne commerce.

As a harbor, the Delaware reaches from the open sea at Cape May, N. J.-Cape Henlopen, Del., north to Morrisville, Pa.-Trenton, N. J., a distance of 132 protected miles. But, as a first-class international seaport capable of handling all types of cargo vessels, the harbor's vast potential has been only partly realized, because its 40-foot channel ends abruptly at the southern edge of Philadelphia.

This leaves 37 miles at the upper end of the harbor in urgent need of modernization and improvement. (Seventeen of these miles pass through Philadelphia.)

The Congress of the United States, in August 1954, recognized the urgency of this need when it passed legislation authorizing the deepening of the upper Delaware. And it further recognized that this harbor improvement should be the full responsibility of the Federal Government in the national interest and in keeping with long-prevailing national policy. The bill carrying the authorization was signed into law on September 3, 1954.

Legislation is now before the 84th Congress to appropriate funds to begin the channel deepening. The ratio of benefits from this project to the cost of it will be almost 2 to 1 (1.93 to 1.00).

STRONGLY RECOMMENDED BY THE CORPS OF ENGINEERS

The deepening of the upper Delaware has been strongly recommended by the Corps of Engineers and has been endorsed at every level of the Federal Government concerned with responsibility for such an improvement.

The present Chief of Engineers, Maj. Gen. S. D. Sturgis, Jr., has officially appraised the improvement of the Delaware Estuarial Harbor this way:

"The present impetus of the national defense program, the accelerated demands of defense and civilian needs, and the strategic location of the Trenton-Philadelphia-Camden area with respect to sources of materials and labor and markets for processed goods, together with the definite possibility of increasing the national wealth in this highly industrialized area, now combine to require further modernization of the waterway."

The United States Bureau of the Budget has described the projected 40-foot channel as "the only satisfactory solution" and has advocated that the project be carried out as a single undertaking in the interest of construction and transportation economies.

Similar endorsements have come from the immediate past Chief of Engineers, the Board of Engineers for Rivers and Harbors, the North Atlantic Division engineer, three successive Philadelphia district engineers, State and local officials, civic groups, labor unions, newspapers, and the citizenry of the Delaware Port area.

DETAILS OF THE AUTHORIZED IMPROVEMENT

As recommended by the Corps of Engineers and authorized by the 84th Congress, the Delaware shipping channel would be dredged to 40 feet for 32 miles upstream from the southern limits of Philadelphia to Newbold Island and to a depth of 35 feet from there to Trenton Marine Terminal, a distance of 5.5 miles. (Depths of 25 to 37 feet were provided by past authorizations.)

In authorizing this channel improvement, the last session of Congress debated and rejected an unprecedented administrative proposal that local interests make a large cash contribution (of at least $18 million) to the cost of improving a seaport of established and long-proven national and international importance.

That same proposal, however, has been advanced again by the executive branch of the Federal Government, contrary to the clearly expressed wishes of Congress. Again, the Joint Executive Committee is asking Congress to uphold the historic congressional position that the development and maintenance of our waterways of demonstrable economic and military importance is, and should remain, a Federal responsibility.

A BULWARK OF NATIONAL SECURITY

The diversified industrial power of the Delaware port area—and the highly visible potential for greater industrial and maritime activity—constitute an important bulwark of the Nation's security. That is so because much of this well-balanced industrial capacity is equipped for military production.

The Delaware Harbor is protected by a bastion of land extending for as much as 60 miles back from the coast line. It is a natural fortress for protected loading of supplies and embarkation of military personnel in the event of a national emergency. The Delaware breakwater where the bay meets the Atlantic Ocean, plus almost 100 miles of deep water to Philadelphia, and the projected deep channel to Trenton are impediments against penetration by enemy warships and underseas craft. During World War II, the port facilities of greater Philadelphia alone handled 15 to 20 percent of all the goods shipped in and out of the United States.

The Delaware offers, in fact, a higher guaranty of security than any other port in the Nation.

Another great advantage to national security offered by the Delaware port area is the dispersed industrial construction that has taken place—and will take place to an even greater extent when the channel is deepened to 40 feet over the upper reaches of tidewater.

In a report on the bill that became part of the Rivers and Harbors Act of 1946, the House Committee on Rivers and Harbors of the 79th Congress wrote: "We should prepare now for the probable trend of the postwar era to decentralize major national activities by making available innumerable sites for the dispersal of industrial expansion along the banks of our important waterways and ship channels."

In keeping with this policy, one of the larger steel works in the United States has been built on the upper reaches of the harbor—away from the traditional areas of concentration of steel production. Other industries, attracted by the easy availability of steel, will be installed along the upper harbor in sections reserved for industrial usage. Others will be drawn by deep-water shipping just as soon as the 40-foot channel is assured.

The deepening of the Delaware Channel to facilitate efficient, low-cost transportation of imported raw materials for industry is in accordance with national defense policy calling for the conservation of those materials against time of emergency. The President's Materials Policy Committee put it this way in mid-1952: "The overall objective of a national materials policy for the United States should be to insure an adequate and dependable flow of materials at the lowest cost consistent with national security and with the welfare of friendly nations."

THE ECONOMIC PICTURE IN BROAD STROKES

The Delaware has constituted an important seaport for domestic and foreign commerce for more than 300 years. Along its shores have grown dozens of important cities—such as Philadelphia, Wilmington, Camden, Trenton, and Chester—and hundreds of thriving enterprises representing 87 percent of all the official categories of American business and industry.

The 14 counties in 3 States (Pennsylvania, New Jersey, and Delaware) that form the Delaware port area will yield the Federal Government in taxes during the next fiscal year more than any of 40 whole States. Federal tax revenues from those 14 counties for fiscal 1956 will total an estimated $2,100,000,000. That supplies a new and graphic measure of the economic importance and potency of the area flanking the harbor.

In this same compact area, 88,000 business and industrial establishments are situated. And business is growing in the area faster than in almost any other section of the country. This is attested by the fact that industrial construction in Philadelphia and seven adjacent counties of Pennsylvania and New Jersey ran 12 percent above the nationwide average in 1954.

Three-quarters of the way through 1954, the Delaware port area surpassed New York in tonnage of imports—22.4 million tons for this port area in the first 9 months of last year to 21.01 million tons for New York.

The value of imports and exports handled in the Greater Philadelphia port area was recently calculated at more than $1 billion a year. It was estimated that more than 14,000 workers in just Philadelphia and 4 peripheral counties of Pennsylvania were directly dependent on export sales for their livelihoods. And a total of 341,000 workers were found to be employed in firms engaged wholly or partly in import-export trade.

Customs collections in this area (totaling over $2 billion since 1874) have averaged $45.75 million annually for the last 5 years. While it has never been suggested, nor will it be, that customs revenues be committed to waterway improvements within the port area where they are collected, the plain fact is that the total estimated cost of deepening the Delaware (approximately $91.4 million) is the equivalent of less than 2 years' cus-

toms collections in the Philadelphia district.

In all the growth that has taken place along the Delaware Harbor, there is a striking contrast which is directly tied to channel depth. Below Philadelphia, where a 40-foot channel project has existed for many years, industries of all types and sizes have located at the water's edge. Desirable sites for further expansion are steadily diminishing.

To the north of Philadelphia, however, where the previously authorized channel depth has been only 25 feet, the economy has remained predominantly agricultural. Yet this section of the Delaware Harbor offers as fine an area of opportunity as the Nation possesses for creating more commerce, more industry, more jobs—more production of goods and services to help carry the American people to the goal of healthy economic expansion—and higher standard of living—envisioned by the President of the United States.

Jerusalem's University Is Reborn

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1955

Mr. MULTER. Mr. Speaker, I believe the following article written by Harry Gilroy, correspondent for the New York Times in Israel, is of universal interest. Mr. Gilroy has watched the rebuilding of the University of Jerusalem. The American Friends of the Hebrew University has done much to bring this worthwhile project to fruition.

The article follows:

JERUSALEM'S UNIVERSITY IS REBORN

(By Harry Gilroy)

JERUSALEM.—Thirty years ago on Friday the Right Honorable Earl of Balfour spoke to 7,000 persons on Mount Scopus. A little stooped with his 76 years, silver-haired, robed in Cambridge scarlet, the former Prime Minister of the United Kingdom seemed to many like an Old Testament prophet. Ending his address, he paused, looked over his quietly attentive audience, then announced:

"With supreme confidence in its future, I now declare the University of Jerusalem to be open."

During the next 22 years the building of the Hebrew University of Jerusalem continued along the sharp crest of Scopus. The buildings were beautiful, spacious and well equipped, and there was an invaluable library of 500,000 volumes. From every window the view was world famous—eastward to the purple mountains of Moab and to Gilgal, where the Israelis crossed the Jordan into the country 3,400 years ago, westward to Jerusalem from which they were scattered in 70 A. D.

Then in 1948 came a terrible blow. The conflict that swelled into the Arab-Israeli war raged for months around Scopus. Students guarded the ramparts on the ridge and faculty members steadfastly traveled through hostile quarters to their classrooms. On one April day a Scopus-bound bus convoy was halted, set afire, and raked with bullets. Seventy-seven teachers and staff members of the university and the affiliated Rothschild Hadassah Hospital were slaughtered. Thereafter the United Nations established a demilitarized zone around the university to save it from destruction by Arab guns.

Ever since then the great buildings have stood on the northeast skyline of Jerusalem like ghost castles. Israeli police and a caretaker force occupy them. But they are denied to the university community. It is a sight that stabs the heart, especially for those men and women only a mile away who toiled on the heights in the name of universal knowledge.

Yet nothing could have so justified Lord Balfour's supreme confidence as the way in which the university bore the blow. It has lived in makeshift halls within the new Jerusalem. Now, on a stony little ridge inside the Israeli sector of the city, the first lecture hall of a new campus is almost completed. Seven other buildings are going up as the nucleus of a new academic city. This week the board of governors will visit the new campus and briefly mark the university's second beginning.

Foreign observers are impressed by this tenacious vitality. After the convoy slaughter there was heavy pressure to move to the safer locale of the Mediterranean shore. Yet the university has stayed in Jerusalem and expanded despite its cramped quarters. Something spiritual, it seems to outsiders, must be the force within this vitality.

The university seems to thrive on dislocation and compression. When it came down from Scopus it had an enrollment of 870, and 190 teachers. There were two faculties, which gave degrees in the humanities and in science. This year there are 3,200 students, more than 300 research workers, 500 teachers, and 6 faculties. The new faculties are a whole university in themselves—social sciences, medicine, agriculture, and law—and there are also new schools of education, dentistry, and pharmacy.

Apart from engineering, which is left in the capable hands of the Israeli Institute of Technology in Haifa, the university now provides the fields of study offered at other big centers of learning. In one way it is unique; it conducts its education in Hebrew. "There is a great difference between Isaiah and microbiology," Balfour observed, in speculating whether the language of poetry could cope with terms of modern scholarship. Yet professors who 30 years ago had to learn Hebrew before they could begin to teach here have turned the biblical language into a felicitous medium of modern thought.

There are students at the university from 40 countries. Nearly every land that has contributed its victims of religious prejudices to Israel's growth is represented. There are blondes and brunettes, the pale faces of Northern Europe and the coffee-colored faces of the Middle East. But there is no splitting into groups of origin—they impart a wonderful feeling of one healthy family. The basic factor is the linguistic feat that has given them from the Bible a common voice in place of the babel of tongues which marked the coming of their parents to this country a few years ago.

The life the students lead is, nevertheless, all confusion and rush. Its basic purpose is to educate the largest possilbe number of young Israelis to be the future intellectual leaders of the nation. The circumstances under which this is done strike the onlooker as bizarre.

The present campus (not the new one being developed) is all over new Jerusalem—a community mostly built in the last 50 years that has an air of age because it is made of stone. Facades are handsome, but some of the interiors are as cheerless as tombs. The one proper instruction building rented by the university is Terra Sancta College. Here the Franciscan order formerly ran a preparatory school for Arab boys, so on the roof of this Hebrew university center is a silvered, haloed statute of the Virgin Mary.

In the medical building, close to the Jordanian old city, Prof. Saul Adler, a world-renowned parasitologist, is asked if some vital research is going on in his laboratory. He smiles—"This is a time for teaching." White-gowned students are crowded so closely in the laboratory that it is a miracle they do not bowl over all the test tubes. Out on the streets students hurry to classes. On inquiry one learns that they are trying to get to class ahead of time because there are not enough seats to go around.

The student dormitories are in Allenby Barracks, former quarters of British troops. They look out over the adjacent no-man's land, and they have few amenities.

Many of the students are married. Talk with the student's wife about the life they lead. He is away all the time, either at the university or working at odd jobs to support the 2 of them and their small daughter. She has a joke to fit the occasion about the student whose wife says she might as well get a divorce since she never sees him. She is entitled to a divorce, he agrees, but he's sorry that he simply can't take the time to go with her to the rabbinical court.

These students look quite like American undergraduates and they dress somewhat the same. One difference is that the clothes they wear are not designed to look like old clothes—when they look that way they are old clothes. Another difference is that a small percentage wear the skull cap of orthodoxy. The girls rarely use make-up, and glamour is as rare about the university as Cadillac station wagons. Most of the young people are at the university by great personal sacrifices of their parents, and they must pinch every pruta.

Student life is completely unlike the American collegiate scene in the absence of flirtations. A girl sits down next to a man in the library and he never lifts his head, let alone proposes a date. A girl's books are carried by the girl. There is no such thing as couples strolling arm in arm.

The only general social club the students have is the B'nai B'rith Hillel Foundation House, run by Rabbi Maurice Pekarsky of Chicago. There students hear record concerts and lectures. (The majority prefer classical music.) Recently Rabbi Pekarsky staged 4 lectures on the philosophy of Judaism—against the advice of those who thought that no one would attend a lecture on religion—and 150 students and professors came each time.

Student social life, otherwise, is organized mostly on a political basis. Each Israeli political party—ranging from religious through bourgeois to labor and then to the extreme left wing—puts up a list of candidates for the students' organization, which handles scholarships, jobs, housing and the usual campus activities. Undergraduates seek social relaxation in their party clubs—not quite as if a Columbia boy were to spend his evenings playing chess in Tammany Hall, but something like it.

Each year the students organization stages a strike against the university. One administrative official describes it as a ritual. It serves to draw the student community together. This year the students stayed away from the first week of the term in protest against fees. There was much dissatisfaction after the strike; the medical students voted to leave the student organization, and there are signs the party system may be on the way out.

It might be thought that the students would be tense because they are on the edge of the Arab world. If they are they do not reveal this to their elders. Most of them, for one thing, have done military service. The boys have known the tensions of border patrols and the girls have toiled with immigrants over problems of settlement life. Another factor is that Jerusalem—because of the presence of the Government, the character of the people and the nearness of the border—is the calmest town in Israel.

What is the essential spirit of the university? It comes from many things, but two

elements can best be identified by going back to the utterances of the inaugural day 30 years ago.

In the opening prayer the Palestinian Chief Rabbi Abraham I. Kook voiced a hope that was in the minds of many in the audience. He prayed that at last would come true the prophecy of Isaiah: "Out of Zion shall go forth the law and the word of the Lord from Jerusalem."

Chaim Bialik, chief poet of Zionism, voiced another aspiration. He said: "Knowing that true wisdom draws from all people, we shall open wide the gates and windows of this institute in all directions to admit all the good and sublime thought which has ever been and is being created by the mind of man."

Potentially, there existed a conflict between these two conceptions. Could a university devoted to Judaism also apply itself to universal knowledge? In a measure, a conflict over these ideas did develop between the two men who shaped the university. They were Dr. Chaim Weizmann, the Russian-born chemist and leader of World Zionism who became Israel's first President, and Dr. Judah L. Magnes, the American-born rabbi.

Dr. Weizmann, who had influenced Lord Balfour to issue the Jewish homeland declaration, gave the university a symbolic start by laying foundation stones in 1918, soon after the British troops took Jerusalem from the Turks. But until the inaugural in 1925 this was only a gesture. Dr. Magnes, a native of Oakland, Calif., came to Palestine in 1922 after making the hard choice of giving up an American career that included such distinctions as being the senior rabbi of Temple Emanu-El in New York. In Jerusalem he plunged into the work of creating the university. His first great service was raising much of the money for its buildings.

Dr. Weizmann became the president of the university's board of governors. Dr. Magnes became its chancellor, the actual administrator. "Weizmann would have established a great research center of science," a member of the university family said recently. "Magnes would have done the same for religion and the humanities. Together, they made a university."

But in the university today has the harmonious fusion been achieved? A professor who has watched the whole development of the university says it has not. The university has not attained a harmony, as he sees it, but rather tolerance. No one inquires into a professor's belief in Judaism nor asks where he stands on the claims of religion and science.

The two architects of the university clashed in another way. Dr. Weizmann saw it as an essential part of the "Nationalist Renaissance." The Magnes view was, to use Dr. Weizmann's expression, a romantic notion about "a great center of Hebrew learning and literature." Fortunately, both views fused when it came to raising money for the university.

Dr. Magnes took the American, Felix Warburg, to Mount Scopus. They spoke of the fresh wisdom that could arise if Judiasm were studied in such surroundings. Mr. and Mrs. Warburg started off the Institute of Jewish Studies with $500,000. The American Jewish Physicians Committee began the Institutes of Chemistry and Microbiology and lated contributed money and skill to the Faculty of Medicine. The members of Hadassah, the American women's Zionist group, put up a beautiful hospital and nurses' training school. From 1925 onward the American Friends of Hebrew University have channeled such a flow of gifts that for many years more than 60 percent of the university's budget was covered by American funds.

Americans may ask just why this struggling university should be regarded as a source of enrichment for Judaism and humanity. They may know that anyone who stands awhile on the austere, theatrically lighted Judean hills becomes full of poetic imaginings. But there is something more real than that, something connected with studying the Bible and the Talmud in the Hebrew language, in the land from which these rich cultural growths took their substance.

The university's president, Prof. Benjamin Mazar (formerly Maisler) speaks of this from experience. Born in Russia, he studied at the Universities of Berlin and Giessin, and came to Palestine in 1928. He is a noted archaeologist and historian.

"I studied the history and languages of this region in Germany," he said recently. "Also the Bible at a theological institute. But it was all a study of an ancient language without the light which comes from familiarity with the language and the land and the stories of the past that we learn here every day from archeology and other sciences."

As an example of what is accomplished, he showed the first two volumes which he and other scholars have produced of the Encyclopoedia Biblica. Every reference in the Bible is treated by the full concentration of the university's scholarship. The work of the Institute of Jewish Studies, Professor Mazar said, is the pride of the university. There is also great satisfaction about the leading part which the university plays in solving such practical problems of the country as where to find more water or how to make the basic fuel of an atomic pile from the Negev phosphates.

Next fall part of the university will move to the new campus. A year later, when the library will be ready, the university proper can move. Students' quarters will go up and social gathering places, as well as all the needed academic structures for a university population of 10,000.

"We have the right students for the future," Professor Mazar said. "I see them as not so interested in politics as their predecessors were, more devoted to books. I believe they're the best students in the history of the university." And he added, "They have a sense of creating. That is the most important of all—the sense of creating."

Here, it suddenly becomes plain, is the ultimate explanation of the tenacious vitality that has so impressed foreign observers, and that has resulted in the second beginning after the Mount Scopus catastrophe. The university—its administrators, professors, students, and the friends who support it—has been and continues to be imbued with the spirit of creating.

Page 10 of the New York Times, a Study in Contrasts

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1955

Mr. SIEMINSKI. Mr. Speaker, page 10 of the Monday, April 25, issue of the New York Times carries 6 stories. They deal with forces that affect our behavior as human beings—economic, religious, and engineering.

The question is, in the days ahead, which of the forces will do more to promote harmony? Or will it take a strong share of all three—economic, religion, and engineering—to keep the peace and promote progress?

In story No. 1, reading from left to right, on page 10 of the Times, authorities are concerned over possible permanent split in West world economy. Pound sterling and dollar countries appear headed for a rift. Dollar competing countries like West Germany, Belgium, and the Netherlands have struggled for years to hoist themselves to the level of economic strength that enables them to participate freely in trade competition with the dollar. Will they be pulled into the antidollar system despite dislike of everything it implies? The story concludes that "there is a strong feeling here"—Bonn, Germany—"and in other West European capitals that very few of the consequences of an American failure to join the free world trading system embodied in GATT"—General Agreement on Tariffs and Trade—"are understood in congressional circles in Washington."

Or will effective peace and progress best come as story No. 2 would indicate, "Not by great political sermons from the pulpit, nor by religious speeches by our governors. It will be accomplished when you and I as individuals assume this responsibility in our own lives."

Or will it come, as story No. 3 might indicate, from a spark ignited by any one of 100,000 hydrogen-filled balloons carrying bibles behind the Iron Curtain?

Or does story No. 4 carry the key? Satisfy demands for higher pay to meet the needs of life?

Or will it take a new philosophy yet to be gleaned from the book of nature that might enable us to discover better the intentions of God, as Pope Pius appears to indicate in story No. 5 when he asserts that man is confused and science needs a philosophy to explain its discoveries.

Or should we be content, as story No. 6 might indicate, to clip more and more time from our labors? Canadian trains speed up; 12 to 14 hours to be cut from cross-continent trip?

For possible interest to the House, under unanimous consent, page 10 of the New York Times follows:

EUROPE PONDERS UNITED STATES TRADE STAND—AUTHORITIES CONCERNED OVER POSSIBLE PERMANENT SPLIT OF WESTERN WORLD ECONOMY

(By Michael Hoffman)

BONN, Germany, April 24.—The possibility of a permanent split of western world economy into 2 rival trade and monetary systems is beginning to be taken seriously by the highest European trade and monetary authorities.

Failure of the United States Congress to approve President Eisenhower's program for continuing to fix tariff duties by international negotiation and for United States adherence to the proposed Organization for Trade Cooperation would make such development almost inevitable, in the opinion of many continental and British experts in such matters.

There has long been powerful advocacy of a European regional monetary trade system, whose essential characteristic would be legalization of permanent discrimination against United States trade and against the dollar in all international transactions.

Such a system would encompass a substantial part of the world, including India, the Middle East and most of Africa, where currencies are tied to the British pound, French or Belgian franc.

SCOPE OF SYSTEM

Such a system would cover at least two-thirds of all the free world's trade and nearly

all of the trade between the free world and the Communist world.

This vision of a trading system without the dollar has always been very attractive to European Socialists on one hand and owners and managers of Europe's most highly protected industries on the other.

It has been a nightmare to central bankers and most ministers responsible for direction of the economic and monetary policy of Western European governments, who see in the permanent split of the dollar from the nondollar world a sure recipe for an economic decline of Europe in the long run.

But to hold the dikes against tide of sentiment favoring permanent discrimination against the dollar, forces of conservatism in Western Europe have had to assume and argue that the United States itself wanted a "one-world" economy in the West.

They have been successful up to now largely because they have been able to point to the United States adherence to two sets of international rules designed to maintain order in world trade and monetary relationships and based on the principle of ultimate all-around acceptance of nondiscrimination.

One of these rule systems is embodied in articles of agreement of the International Monetary Fund and the other in the General Agreement on Tariffs and Trade (GATT). They are twin systems and neither is either meaningful or enforceable without the other because of interconnections between national trade policies and national policies affecting interchange of different major currencies.

The United States is in the fund system, but only half in the GATT system because Congress has never approved the latter. Congressional approval of the Organization for Trade Cooperation, which is the organization to administer GATT, would put it fully in the latter. Congressional rejection of OTC would mean that the GATT system would never be firmly established. This would knock flat the vital argument of those European forces opposing economic and monetary regionalism.

These are the terms in which West German monetary authorities are discussing the future of trade and monetary developments in the West. No country in Western Europe has more dislike for the notion of a trading system that excludes the dollar than Western Germany.

MINISTERS DIVIDED

Within that Government there is a struggle between ministers who want to abide by GATT rules that prohibit discrimination against American farm products and ministers who want such discrimination. The dominant opinion now is that Germany's interest lies in supporting GATT rules.

But the Germans are realists. Recent contacts with the British convince people here that the failure of the United States to join OTC would force any British Government to abandon resistance to forces favoring permanent antidollar discrimination.

The pound sterling would inevitably become the currency around which European regional trade and the payments system would be built. Other countries, like West Germany, Belgium, the Netherlands that have struggled for years to pull themselves up to the level of economic strength that enables them to participate freely in trade competition with the dollar, would be pulled into the antidollar system despite dislike of everything it implies.

There is a strong feeling here and in other west European capitals that very few of the consequences of an American failure to join the free world trading system embodied in GATT are understood in congressional circles in Washington.

CELEBRANTS OF ST. GEORGE'S DAY MARCH TO CATHEDRAL

A special service in celebration of St. George's Day was held yesterday in the New York Cathedral (St. John the Divine). Bishop Horace W. B. Donegan of the New York Protestant Episcopal Diocese presided. The attendance was 5,000.

The service was arranged by the American Order, Sons of St. George, Independent Daughters and Daughters of St. George.

A parade of 40 organizations and patriotic societies with American and British banners was curtailed by rain. They were led by the Yonkers Kiltie Band in a re-formed procession inside the cathedral.

Bishop Donegan welcomed the congregation. The sermon was by Canon Edward N. West. F. B. A. Rundall, British consul general, took part in the devotions.

The doxology was followed by a color guard salute. The national anthems of the United States and Great Britain were played by the cathedral organist. A message from Queen Elizabeth was read.

Canon West said in his sermon:

"The world that is to be will be just as Christian and just as effective as is its ability to draw the best from the old and from the new.

"This won't be accomplished by great political sermons from the pulpit nor by religious speeches by our governors. It will be accomplished when you and I as individuals assume this responsibility in our own lives."

BALLOONS TO CARRY BIBLES TO REDS

STUTTGART, GERMANY, April 24.—A United States evangelist said today the first of 100,000 hydrogen-filled balloons to carry Bible pamphlets to Iron Curtain countries would be launched tomorrow. Billy James Hargis, of Tulsa, Okla., said here the project sponsored by the International Council of Christian Churches would take 4 or 5 months.

ITALIAN TEACHERS MAY STRIKE

ROME, April 24.—About 50,000 teachers of Italy's state secondary schools today threatened to begin a 4-day strike on Wednesday unless their demands for higher pay were met.

POPE PIUS ASSERTS MAN IS CONFUSED—SCIENCE NEEDS A PHILOSOPHY TO EXPLAIN ITS DISCOVERIES, PONTIFF TELLS ACADEMY

(By Arnaldo Cortesi)

ROME, April 24.—Pope Pius XII said today that present-day man lived in an age of monumental scientific development but also in one of intellectual confusion and anguish. He addressed the Pontifical Academy of Sciences.

What is needed, he said, is that philosophy step into the breach and evolve an overall theory of the universe capable of interpreting and explaining all the facts that science discovers.

The occasion for the Pope's speech was afforded by the seating of 14 new academicians appointed by the Pope. With this addition, the membership of the academy, which is limited to 70, was brought up to 66. The Pope spoke in French. Official translations of his address into the principal languages of the world were made available by the Vatican press service. Summaries of the speech in many languages were broadcast by the Vatican radio.

DOZEN CARDINALS ATTEND

The meeting addressed by the Pope was held in the comparatively small hall of the Consistory in the Vatican. About 100 persons were present. They included a dozen cardinals, members of the diplomatic corps accredited to the Holy See, all the academicians present in Rome and a score of biologists and botanists who are to participate in a scientific symposium in the Vatican tomorrow.

The Pope spoke for more than a half hour. It was the longest speech he has delivered since his severe illness at the end of last year. Members of his household said he stood the strain well and was not excessively fatigued when he returned to his private apartment.

Throughout his speech the Pope spoke in high praise of scientists and found eloquent words to describe their mission. "The mission confided to you," he said, "ranks among the most noble, for you should be in a sense the discoverers of the intentions of God. It pertains to you to interpret the book of nature, to describe its contents and to draw the consequences therefrom for the good of all."

DISCUSSES SCIENTISTS' ROLE

Near the end of his speech the Pope addressed the scientists with the following words: "Teach others to behold, to understand and to love the created world so that the admiration of splendors so sublime may cause the knee to bend and invite the minds of men to adoration. Never betray these aspirations, this trust. Woe to them who make use of falsely taught science to make men leave the right path. They are likened to stones placed out of malice on the road of the human race; they are obstacles whereon men stumble in their search for truth."

In the body of his speech the Pope said that in any synthesis of all knowledge it is philosophy which with its broad concepts states precisely the distinctive traits of vital factors, the necessary character of the underlying principles of unification, the internal source of action, of growth, of multiplication, the true unity of the living being.

He deplored that science and philosophy had become separated and described this development as detrimental.

CANADA TRAINS SPEED UP—TWELVE TO FOURTEEN HOURS TO BE CUT FROM CROSS-CONTINENT TRIP

OTTAWA, April 24.—Two new trains designed to cut the surface distance between the Canadian east and west coasts left here today for Vancouver.

They represent a $100 million investment by the Government-owned Canadian National and the privately owned Canadian Pacific railroads.

Both trains started for the west coast within hours of each other. With their diesel locomotives they are expected to cut the running time between Montreal and Vancouver by 12 to 14 hours.

In other words, passengers who left Montreal this afternoon are scheduled to arrive in Vancouver Wednesday morning. This cuts a whole night off the old schedule.

Back in 1886 it took 5½ days to reach Port Moody, then the western terminus. Now a round trip will take only a few hours more time than the 1-way journey 69 years ago.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Economic Consultant Sees Dixon-Yates Profit of 100 to 200 Percent

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a letter I have received from Mr. Walter von Tresckow, 400 East 52d Street, New York, who sets forth an analysis of the Dixon-Yates contract and comparison of Dixon-Yates and Von Tresckow proposal. Particularly interesting and startling is Mr. von Tresckow's assertion that Dixon-Yates will earn 100 to 200 percent on their invested capital instead of 9 percent as claimed.

Mr. von Tresckow's letter follows:

NEW YORK, N. Y., *April 8, 1955.*

Hon. MELVIN PRICE,
Member of Congress, House Office Building, Washington, D. C.

DEAR MR. PRICE: Only since the publication of the record of the hearings before your committee on November 4, 5, 6, 8, 9, 10, 11, 12, and 13, 1954, have all the amendments and pertinent facts of the Dixon-Yates contract become available for public examination.

A detailed analysis of the contract, entered into by the AEC at the direction of the President, brings to light some startling facts which are widely at variance with statements made by Dixon-Yates, the AEC and the Bureau of the Budget.

A detailed examination of the record shows:

1. Dixon-Yates indicated that the cost of power would be 3.990 mills per kilowatt-hour. The actual cost of power will be 5.352 mills per kilowatt-hour, or 34 percent higher than the indicated figure.

2. Dixon-Yates claimed that their profit would be limited to a maximum of $600,000 per year. The actual profit will be a minimum of $5 million more per year than the claimed minimum and may reach as much as $12 million more.

Dixon-Yates claimed that they would receive no more than a 9-return on their investment; whereas, they will actually receive from 100 to 200 percent per year return on their investment.

This sum is $125 million more for the minimum period of the contract (25 years) than claimed by them.

3. The statement was made by the AEC and the Bureau of the Budget that power costs under the Dixon-Yates proposal would probably be cheaper than under the Von Tresckow proposal.

The actual facts are that the von Tresckow proposal would cost $125 million less and that, in addition, Dixon-Yates would make a profit of $125 million more. The difference between the two proposals is actually a minimum of $250 million (and could be as much as $400 million) for a contract period of 25 years.

4. Memphis has announced that it will build its own generating station if the Dixon-Yates plant is built. Under those circumstances there would be no market for Dixon-Yates power in the western Tennessee area of the TVA system. To meet the needs of this area is the specific purpose of the Dixon-Yates plant.

Even though not 1 kilowatt-hour of electricity is delivered by Dixon-Yates to the TVA, the AEC will be required to pay $11,058,800 per year to Dixon-Yates. This amount pays for the cost of the plant and a profit to the Mississippi Valley Generating Co.

Before proceeding to give you the evidence in the record to prove the above statements, we would like to illustrate the great importance of small things in this contract.

Electricity is measured in kilowatt-hours, which is a very small unit of measurement. Costs per kilowatt-hour are stated in mills, which are one-thousandth part of a dollar, and fractions of mills. The Dixon-Yates costs per kilowatt-hour are stated in the customary millionths of a dollar—$0.003900. These are also very small units of measurements.

However, when these small units of costs are used in connection with enormous quantities of electricity—5.2 billion kilowatt-hours per year—as in the Dixon-Yates contract, they come to mean large amounts of money.

In the Dixon-Yates contract each one-thousandth of a dollar (one mill) becomes $5 million per year and $125 million for the minimum contract period of 25 years. Each one-millionth of a dollar becomes $125,000.

This is rather startling, but is easily verified on pages 688–9 of the record. In this tabulation, Dixon-Yates estimates the total cost of power to the AEC to be a little more than $20 million per year. For 25 years this would amount to $500 million.

For ease of calculation, let us call the cost figure of 3.990 mills per kilowatt-hour 4 mills. Four divided into $500 million is $125 million; this is 1 mill per kilowatt-hour for 25 years. One mill per kilowatt-hour for 1 year would be 25 divided into $125 million, or $5 million.

1. DIXON-YATES POWER COSTS WILL BE 34 PERCENT HIGHER THAN STATED

Dixon-Yates, the AEC and the Bureau of the Budget have deliberately misrepresented the cost of the power to be delivered by Dixon-Yates to the TVA. The claim has been made that the cost of power would be 3.990 mills per kilowatt-hour. The actual cost will be at least 5.352 mills per kilowatt-hour.

This is verified simply and easily from the set of estimates provided by Dixon-Yates on page 688 of the record of the hearings Annual Estimated Cost of Power to AEC Over Term of Contract, column 3, under plant cost of $107,250,000.

The total cost of power under the Dixon-Yates contract is made up of the fixed items under the—

Capacity charge, which amounts to	$9,052,050
Tax costs in Arkansas, which amounts to	1,455,150
And replacement costs of	551,600
For a total of	11,058,800

Of a cost per kilowatt-hour of 2.126 mills.

These amounts are payable regardless of the number of kilowatt-hours produced.

In addition, there are the amounts payable under the energy charge for fuel and variable maintenance, which are $9,688,000 per year.

Here the rate per kilowatt-hour is fixed at 1.863 mills, but the total amounts under this heading vary according to the number of kilowatt-hours produced.

In the estimates on page 688, immediately under the headline, it is stated that the estimates of Dixon-Yates are based on a production of 5.2 billion kilowatt-hours per year. This is a use of 98 percent of 600,000 kilowatts of capacity.

It is known to Dixon-Yates, as well as the AEC and the Bureau of the Budget, that the western Tennessee area can only use about 60 percent of the capacity of the plant, or about 3.2 billion kilowatt-hours per year.

Under the Dixon-Yates contract, however, the capacity charge, tax costs, and replacement costs always remain the same, regardless of the number of kilowatt-hours used. The only thing that varies are the two items under the energy charge (fuel and variable maintenance), which amount to 1.863 mills per kilowatt-hour produced.

The fixed charges to the AEC under the Dixon-Yates contract per year are	$11,058,800
The energy charges are 1.863 mills per kilowatt-hour for 5.2 billion kilowatt-hours, or	9,688,000
For a total of	20,746,800

This sum divided by 5.2 billion gives a cost of 3.990 mills per kilowatt-hour.

The energy charge for 3.2 billion kilowatt-hours would be:

3.2 billion times 1.863, or	$5,961,600
Plus fixed charges of	11,058,800
For a total of	17,020,400

This sum divided by 3.2 billion gives a cost of 5.352 mills per kilowatt-hour. This is 34 percent more than the 3.990 figure.

What can be said about this is that Dixon-Yates misrepresented the facts and that the AEC and the Bureau of the Budget did not disclose all of the pertinent factors to the Congress.

2. DIXON-YATES WILL EARN 100 PERCENT TO 200 PERCENT ON THEIR INVESTED CAPITAL INSTEAD OF 9 PERCENT AS CLAIMED

Dixon-Yates did not accurately state the facts about the profits they would make under the contract. Their claim is that they are limited to a maximum profit of $600,000 per year.

They conveniently do not draw attention to the fact that the Mississippi Valley Generating Co. may be limited to $600,000 per year in profits, but that this does not apply to the Dixon-Yates combine as a whole. Actually, the Dixon-Yates combine will make a profit of $5 million to $12 million per year in addition to the $600,000 which their wholly-owned subsidiary, the Mississippi Valley Generating Co., will make.

The AEC and the Bureau of the Budget must have known this and therefore aided and abetted in the misrepresentation of the facts to Congress and the country.

Since the western Tennessee area of TVA can only use 60 percent of the capacity of the Dixon-Yates plant, there remains 40 percent of the capacity which can be sold to their own, also wholly owned, subsidiaries at 1.863 mills per kilowatt-hour. These wholly owned subsidiaries are Arkansas Power &

Light Co., Mississippi Power & Light Co., Louisiana Power & Light, New Orleans Public Service Corp., Alabama Power Co., and Georgia Power & Light Co.

This sale, at this rate, is specifically permitted under section 2.02 of the Dixon-Yates contract, in the last five lines of this section, and can be found on page 981 of the record of the hearings of the joint committee.

This 1.863 mills per killowatt-hour rate would permit the subsidiaries to make a profit of about 5 mills for every kilowatt-hour bought at that rate. Forty percent of the capacity of a 600,000-kilowatt plant is about 2 billion kilowatt-hours. Actually, however, the Government is paying for the construction of a 650,000 kilowatt plant, and Dixon-Yates has about 2.5 billion kilowatt-hours available for the subsidiaries at the very low rate of 1.863 mills per kilowatt-hour.

The profit is made by shutting down the generating plants of the Dixon-Yates subsidiaries, whose production costs are between 6 and 8 mills per kilowatt-hour, and using instead this cheap Government-subsidized power. This power is bought at less than half the actual cost of production—purchase price 1.863 mills—cost of production 3.990 mills.

If the AEC and the Bureau of the Budget were not aware of these facts, they are not fit to make power contracts in behalf of the Government. If they were aware of them, it raises much more serious questions.

3. THE DIFFERENCE BETWEEN THE VON TRESCKOW PROPOSAL AND THE DIXON-YATES CONTRACT IS ACTUALLY $250 MILLION

The TVA asked for 600,000 kilowatt of additional capacity. The AEC and the Bureau of the Budget worked out and signed a contract with Dixon-Yates for 600,000 kilowatts of firm power. The TVA did not need, nor did it ask for or want, 600,000 kilowatts of firm capacity. They already have enough generators in the system so that, in case one broke down, they themselves could replace the temporary loss of power due to any breakdown, instead of purchasing this service from Dixon-Yates. TVA can, with its present equipment, "firm up" the 600,000 of capacity they asked for.

This change, on part of the administration, will cost the AEC a minimum of $125 million more than is necessary to pay for power. Under the von Tresckow proposal to supply 600,000 kilowatts of added capacity, the cost of power would be a minimum of $125 million less than under the Dixon-Yates contract. (See the attached cost comparisons.)

In the past these savings have been estimated to be much smaller; however, now that the complete Dixon-Yates figures are available, the savings under the von Tresckow proposal can be determined quite accurately.

The AEC and the Bureau of the Budget have advocated as the best and cheapest the Dixon-Yates contract, which will cost $125 million more. Furthermore, as the western Tennessee area of TVA can only use 60 percent of the capacity of the Dixon-Yates plant, the balance of 40 percent, not needed by TVA, will be sold by Dixon-Yates to their other subsidiaries at a rate which will result in a minimum of $125 million in profits in these subsidiaries This giveaway is startling and unbelievable.

In view of these huge benefits to Dixon-Yates, it is not surprising that the Senate Antimonopoly Committee, in its investigation of the Dixon-Yates contract, comes to the conclusion that: "* * * the testimony before this committee shows that every obstacle within and without the Government was placed in the way of the von Tresckow group and it was finally brushed off unceremoniously * * *." Dixon-Yates and their adherents were fighting for $250 million.

Under the Von Tresckow proposal all excess power profits would be retained by the Government.

So the real difference between the two proposals is a minimum of $250 million.

This huge sum, which Dixon-Yates will receive over a period of years, will be paid for by not only the consumers of electricity in the TVA area, but by taxpayers all over the United States.

What is happening here is that the favored friends of the administration, Dixon-Yates, are being subsidized to the tune of over $200 million under the guise of a power contract, which is not even required any more because Memphis will build its own plant.

4. DIXON-YATES WILL MAKE A HUGE PROFIT EVEN THOUGH NOT ONE KILOWATT-HOUR OF ELECTRICITY IS DELIVERED TO THE AEC OR TVA

The Dixon-Yates plant is specifically designed to meet the needs of the western Tennessee area of the TVA system.

Memphis has decided that it will build its own generating station, if the Dixon-Yates plant is built.

Therefore, the need for the Dixon-Yates plant will not exist and the market for the power to be produced has vanished.

Under these circumstances the Government (AEC) will pay for the cost of the plant and pay Dixon-Yates a guaranteed profit, even though Dixon-Yates does not produce a single kilowatt-hour of electricity for the Government. Dixon-Yates can sell all the power—5.2 billion kilowatt-hours per year—to its subsidiaries at 1.863 mills per kilowatt-hour. This would mean a profit of $26 million per year to Dixon-Yates, or $650 million for the minimum contract period of 25 years.

Specifically, in the contract, the Government has agreed to pay Dixon-Yates $11,058,000 per year, regardless of whether Dixon-Yates ever furnishes a single kilowatt-hour of electricity to the Government.

The items involved are:

1. A capacity charge of	$9,052,050
2. Tax costs of	1,455,150
3. Replacement costs of	551,600
Total	11,058,800

This can be verified simply and easily, without any technical assistance whatsoever, by looking at the record of the hearings of the joint committee, page 688, "Annual estimated cost of power to AEC over term of contract," column 3, under plant cost of $107,250,000. These figures were furnished by Dixon-Yates.

The payment of these items is covered in the contract as follows:

Capacity charge, section 4.01, page 984.

Tax costs, section 5.08, page 986, paragraph 1.

Replacement costs, section 4.11, page 988, first 6 lines.

Due to the carefully planned lack of information publicly available before the contract was signed, none of the above facts were brought to the attention of Congress and the country as a whole.

Now that the facts are available, it is the belief of our group that the best interests of the country would be served if the Joint Congressional Committee on Atomic Energy gave the whole matter a thorough airing.

Sincerely yours,

WALTER VON TRESCKOW.

WHY CAN THE CITY OF MEMPHIS AND THE WESTERN TENNESSEE AREA ONLY USE 60 PERCENT OF THE CAPACITY OF THE DIXON-YATES OR ANY OTHER GENERATING STATION?

If a generating station of 600,000-kilowatt capacity is used at its full capacity, day and night and every hour of the year, there would be 100-percent use. This is the way the AEC uses a powerplant. They are working 3 shifts—24 hours a day—to produce fissionable material for the defense of the country.

That, however, is not the normal demand on a powerplant in any community. The whole 600,000 kilowatts, or 100 percent of the capacity of the plant, would only be used during the hour from 5 to 6 in the afternoon. At that time lights go on in the factories, offices, stores, homes, and on the streets, traffic is at its evening peak, radios and television sets are turned on, and things are cooking on the stove. It is the peak hour of electricity use.

A generating station has to be large enough to be able to supply the peak demand, even though only 80 percent of its total capacity is used during the remainder of the daylight hours and perhaps only 30 percent of its capacity is used from 12 midnight to 6 a. m.

Therefore, the station has to have a capacity of 600,000 kilowatts to meet the peak demand, even though that is needed for but 1 hour during the day, and the average use for the 24-hour period is but 60 percent of its total capacity. This is the normal condition all over the country.

Comparison of Dixon-Yates and Von Tresckow proposals

Pennsylvania Electric Co.

SPEECH

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. GAVIN. Mr. Speaker, I want to call to the attention of the House the 38th annual report of the Pennsylvania Electric Co. in my district, a report which I consider worth your time to read. Here is a company that in the past 10 years has spent $188 million in expansion programs. They recognized the needs for increased power requirements in the area in which they are located, and they immediately proceeded to develop a program to produce it. They didn't come to the government to ask that it subsidize their program; they did not request to be exempt from taxes; they raised their own money to finance and to carry out their expansion program to meet increased demands.

One significant matter I wish to call to your attention is that this company's operating revenue increase 1.9 percent in 1953—to $56,219,000; while at the same time the company's total tax bill went up 8.8 percent—to $12,485,000 in 1954, which was higher than the 1953 taxes by $1,010,000. Taxes for the company in 1954 took 22 cents of every dollar received by the company. Net income was $11,012,518, or 11.8 percent less than the tax bill.

So one can readily recognize why Pennsylvania is losing its industries—a State where companies such as the Pennsylvania Electric Co. have to compete with the Tennessee Valley's federally subsidized, tax-exempt, steam powerplants, having also the additional advantages of the low-paid labor and advantageous freight rates. It is not difficult to see why, in this highly competitive situation, that an industry will prefer to go to the TVA to locate rather than in Pennsylvania. Certainly I say to the Members of the House, we must be fair and equitable to all sections of the country. Why one section of the country should be subsidized with steam powerplants which are tax exempt, in competition with the rest of the Nation, is beyond my powers of comprehension. How the TVA ever got away with this program at the expense of every American taxpayer I am unable to say. For

the past number of years I have been calling to the attention of the House this situation that has given the Tennessee Valley advantages over the other parts of the Nation.

I want to take this opportunity to compliment the administration for the very firm and determined stand that it has taken regarding further subsidization of steam powerplants in the Tennessee Valley. The TVA has now grown into a lusty giant from an infant child of 20 years ago. It is about time it stands on its own feet and not be given preferred consideration over any other competing utility company.

All we have been doing in my State, Pennsylvania, has been paying the money in taxes into the Federal Government to have it siphoned off into projects such as the TVA. Or in other words, we are sharpening the razor that cuts our economic and industrial throats.

If they want to build steam powerplants in the Tennessee Valley, let them build steam powerplants in the same manner in which we build them in Pennsylvania. Certainly we have no objection to their financing and developing their own steam power projects to meet their industrial requirements, provided they use their own money the same as any other section of the country. If they need steam powerplants in the Tennessee Valley, let them go out and raise their own finances and build them, and discontinue asking the American taxpayer to put the cash on the barrelhead to build steam powerplants, federally subsidized, tax exempt, in the Tennessee Valley.

The TVA started as a flood-control project. When they found that in the summertime that they did not have sufficient water to generate the power necessary, they had to supplement water power with steam power. So they conceived the idea to let the Government build them—and a generous Government certainly has made a great contribution in this respect. Also being tax exempt, they could produce cheap power, which naturally attracted industry to the valley.

One would think, after the generosity of the American taxpayer over a period of years, that they would be content, but no, they are not. New ideas are being developed—new programs to involve the Government in their financing plans.

We have coal in Pennsylvania, and we have just as much right as the TVA to ask the Government to subsidize steam-power plants, tax exempt, adjacent to a coal mine where we could feed the coal into the boilers and produce cheap power. This arrangement would not only be helpful to Pennsylvania's coal industry and its thousands of unemployed coal miners, but at the same time, cheap power would attract industries to our State the same as it does down in the Tennessee Valley.

This report of the Pennsylvania Electric Co., of Pennsylvania, is worth your reading. It will give you an idea of how other companies have to compete with the TVA to stay in business.

PENELEC SPENDS $16 MILLION IN IMPROVEMENTS—GREATER RESIDENTIAL USE OF ELECTRICITY IS REFLECTED IN REPORT

The 36th annual report of Pennsylvania Electric Co., released today, indicates that 1954 was a record sales year for the utility.

Signed by President O. Titus, the report also carriers the prediction that the company's 340,000 customers in 24 counties of western and south-central Pennsylvania will use even more electricity in 1955.

Penelec customers used 2,495,195,000 kilowatt-hours in 1954, an increase of 29,470,000 over the previous year's 2,465,725,000 kilowatt-hours. The number of customers Penelec serves increased by 3,950 during 1954.

To meet increasing demands for power, the utility is spending $16 million this year to improve and expand its facilities. Penelec's generating capacity was increased by nearly 50 percent last year with the completion of the 276,000-kilowatt Shawville generating station near Clearfield, built at a cost of $40 million. Because engineering studies indicate that still more capacity will be needed in the near future, construction will start this year on a 137,500-kilowatt addition to Seward generating station near Johnstown, which will be completed in 1957 at a total cost of $20,600,000. The new unit will increase Seward's capacity to 2,295,000 kilowatts and bring the company's total capacity to almost 1 million kilowatts.

SPEND $188 MILLION IN 10 YEARS

By the end of 1955, Penelec will have spent $188 million for expansion since January 1, 1946. To continue its construction program, the utility sold $12 million in first-mortgage bonds and $6,235,000 in common stock in 1954, and plans call for the sale of an additional $17,500,000 in securities this year.

The company's average residential customer used 2,331 kilowatt-hours in 1954, for which he paid $77.44. The year before, the average residential use was 2,177 kilowatt-hours. The average rate per kilowatt-hour to residential customers last year was 3.3 cents, 1 mill lower than the 1953 rate.

Greater residential use of electricity helped to offset a 9.6-percent decline in sales to industrial customers in the past year. Metals and metal products industries accounted for the largest single share of Penelec's industrial sales, taking 15.4 percent of the total. Coal mining was second at 13.8 percent and machinery industries third with 9.5 percent. An improvement in industrial sales has been noted since the end of the year.

OPERATING REVENUE INCREASES

Penelec's total operating revenue increased by 1.9 percent over 1953 to $56,219,000, while at the same time the company's total tax bill went up 8.8 percent to $12,485,000, higher than 1953 taxes by $1,010,000. Taxes in 1954 took 22 cents of every dollar received by the company. Net income was $11,012,518, or 11.8 percent less than the tax bill.

Penelec's operating expenses dropped by 10.1 percent in 1954 to $22,735,000, mainly because of operating economies resulting from the improvement of generating facilities. For 1954, the total wages and cost of welfare benefits for all employees, including those engaged in construction, amounted to $15,480,000. Of this amount, $2,852,000 represented costs of employees' benefits such as pensions, insurance, hospitalization, paid vacations, holidays, etc. The number of employees at year end, including 22 in military service, was 2,902 or 41 less than the previous year. The total of all fringe benefits in 1954 was equivalent to $1,000 for the average employee. At the end of 1954, the average Penelec employee had about 15 years of service with the company, and for each employee's job Penelec had an investment of $93,000.

FUEL BILL HIGHER

Fuel was another major expense item, although the total fuel bill decreased by 1.9 percent to $9,485,000. A total of 1,842,437 tons of coal was used last year as compared with 1,713,084 in 1953.

In addition to the Shawville project, Penelec last year completed a number of installations important in maintaining good service to its customers. Early in 1954, the last section of the company's first 230,000-volt transmission line was energized. The line extends 87 miles from Shawville station to Montebello, Pa. The line and accompanying substation at Lewistown cost $6 million. Another line, a 115,000-volt installation connecting Penelec and Northern Pennsylvania Power Co., was completed in June of last year. This 50-mile line is now supplying about 30,000 kilowatts or two-thirds of North Penn's electrical needs and will be supplying practically all of its requirements by the end of 1955. An application is pending before the Securities and Exchange Commission to merge North Penn into Penelec. Both are subsidiaries of General Public Utilities Corp.

Late in 1954, work was completed on a new northwestern division service center at Erie. The modern building, erected at a cost of $2,300,000, replaces six separate buildings formerly occupied in downtown Erie and will bring about greater operating efficiency in the division. Also, remodeling of the utility's office building in Oil City was completed last year.

SUBSTATIONS IMPROVED

Along with the Seward expansion, numerous improvements in transmission distribution and headquarters facilities are planned for this year. Transmission lines from Geistown to Hooversville, Philipsburg to Westfall, and Warren to the border of New York State are being built or improved, and major substation improvements will be started or continued in or near Johnstown, Altoona, Oil City, Erie, Corry, and Punxsutawney.

Penelec employees established the best safety record in the company's history in 1954, winning several honors for their accident prevention achievements. Employees worked a total of 6,057,288 man-hours with 16 lost-time accidents, for an accident frequency rate of 2.64 accidents per million man-hours. That was the third-best record among the 21 largest electric utilities in the Nation, and earned a certificate from the National Safety Council. The average frequency rate for the 21 companies was 5.53.

Penelec had the best safety record of all the major electric companies in the State for the year ended June 30, 1954, and won a Pennsylvania Electric Association award for that accomplishment.

Seward and Warren generating stations won General Public Utilities president's award plaques for their record of no lost-time accidents in 1954, and Seward won additional recognition for having amassed more than a million consecutive man-hours without a lost-time accident in the form of certificates from GPU an Edison Electric Institute.

The southern division, with headquarters in Johnstown, had the best record among Penelec's four divisions last year, winning the Penelec president's award plaque for the second time in 3 years.

Management changes in the past year included the appointment of F. W. Womer, vice president formerly in charge of the northwestern division, to the position of vice president in charge of division operations for the entire company. Mr. Womer was succeeded as northwestern division manager by K. H. Ishler, former northwestern division operating superintendent.

Penelec continued its participation in GPU site-service, a program to attract new in-

dustries into the area the company serves, and also continued to take part in a 33-company group known as Atomic Power Development Associates, which is studying the use of atomic fuels in generation of electricity. The latter is a long-range program, since it is not expected that atomic power will be commercially feasible for several years.

Concluding the report, President Titus says that Penelec is well equipped to supply all anticipated power needs of industry and other customers and to meet the increasing use of electricity throughout its territory. He said Penelec's expansion program assures continued good service to all customers and observed that present trends indicate that 1955 will be another good year for Penelec.

[From the Derrick, Oil City-Franklin-Clarion, Pa., of April 21, 1955]

NEW FINANCING PROPOSAL FOR TVA WOULD PUT SOCIALISM IN FOREFRONT

(By Walter Chamblin)

WASHINGTON.—The Tennessee Valley Authority can kick up a fuss on Capitol Hill at any time, but it appears to have outdone itself with its proposed new financing plan.

Critical Members of Congress now accuse TVA of a grandiose empire-building scheme. Charges are made that TVA now seeks to change its original purpose into an unblushing socialistic electric-power business far bigger than had generally been foreseen.

The new power-financing scheme seems likely to overshadow the Dixon-Yates controversy. Critics say that TVA plans now make President Eisenhower's reference to it as "creeping socialism" a gross understatement.

Under the new financing plan, TVA would cling to the Federal Treasury. It would continually seek Federal appropriations for the billion-dollar project.

But in addition it would have authority to issue its own bonds. Critics say there is another catch here. While the bonds would not be guaranteed by the Federal Government, they would be issued by a Government agency and the Federal Government would be said to have a moral obligation to make them good if TVA defaulted. Further, TVA wants the Treasury to be authorized to buy its bonds, presumably if there is difficulty in selling to private investors.

Still nother gimmick favors TVA. It wants authority to lease new electric steam plants. These could be built by counties, cities, or public-power districts. Thus, TVA would get the advantage of the tax exemption accorded these governmental units.

One reason for the proposed new financing plan is that Congress has been growing more reluctant to appropriate money to provide electric powerplants for TVA with taxpayers money when in most parts of the country private utilities or local governmental units provide for needed expansion of electric power.

Representative GEORGE DONDERO, of Michigan contends that TVA has departed from its original purpose. It was claimed in the early thirties that TVA would be a yardstick by which the country outside its area could decide whether or not electric utility rates were too high.

But TVA, he pointed out, has now become a billion-dollar utility empire, which is a far cry from a yardstick project. It has also declined to put itself on a tax basis identical with that of public utilities and thus the yardstick is again abandoned. And one of the early acts of TVA was to force private utilities out of business in its area so that there could be no yardstick competition.

Originally, TVA was authorized as a navigation and flood-control project, with hydro-electric power being produced and sold. However, the navigation and flood-control program was finished long ago, and TVA has tended to become more and more a Government power-producing project.

In 1938, hydro-electric power produced 85.5 percent of the total power output. But within a few months from now hydro-electric power will be but 33.5 percent, with 66.5 percent produced by steam plants.

TVA critics say that if the new financing plan goes into effect, there will be no limit on TVA expansion and that eventually at least 90 percent of its power would be produced by steam.

Federal taxpayers have spent more than a billion dollars on it, but TVA wants to continue to expand at the rate of $150 million a year.

The Farm Depression

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a notable editorial by Fred V. Heinkel, president of the Missouri Farmers Association and one of the outstanding agricultural leaders of the Nation.

The editorial appears in the May issue of the Missouri Farmer and is particularly pertinent at a time when the income of Missouri farmers has dropped to the lowest point in many years, and the Committee on Agriculture, of the House, under the leadership of Chairman COOLEY and the ranking minority member, former Chairman HOPE, are supporting a bill just reported out by the committee for the alleviation of this pressing situation.

The editorial follows:

MUST HALT FARM DEPRESSION

(By Fred V. Heinkel, president, the Missouri Farmers Association)

The terrible farm depression seems to grow worse every day. In the 3½ months that the new Congress has been in session nothing has been done about it, and there is little prospect of anything being done.

The parity ratio for March hit a 15-year low of 86 percent. The index of prices paid by farmers for living and operating expenses was fractionally higher than both a month and a year ago. Since 1951 farm prices have declined 25 percent, and farmers have lost millions in the decline of inventory values.

Officials in USDA now predict that 100,000 farm families, most of them young people just getting started, will lose their farms this year. They will be uprooted from the land and forced into urban areas where conditions are strange. Handicapped through lack of skill and training in the trades, they will be compelled to try to take city workers' jobs away from them, or else join the growing ranks of the unemployed.

We learn from Washington that USDA officials are worried about the farm situation, and well they might be, because it is frightening.

FLEXIBLE SUPPORTS NOT THE ANSWER

They are beginning to see that the flexible farm plan is not going to work. Lower flexed support prices were supposed to curtail farm production and bring supply into line with consumer demand. They were also supposed to cause prices to consumers to become lower, and thereby increase consumption.

But, to the consternation of USDA officials, farmers indicate that they intend to plant 3.2 million acres more in crops this year than last. Milk production has steadily increased since Secretary Benson, on April 1 a year ago, reduced prices from 90 percent to 75 percent of parity. Production of practically every other farm product has increased. Weather and insects have been the only influences to have any deterring effect whatsoever on the volume of good things to eat and wear.

USDA officials shared the belief of many economists that a high level of business activity would keep farm prices up, and that so long as business in general remained good farmers need not worry.

This belief is not substantiated by the record. In a recent article in Successful Farming, Jim Roe had this to say about it: "In 1947, the gross national product in this country was $232 billion. Farmers' net income was $16.7 billion. In 1953, the gross national product had climbed $132 billion to $364 billion. But farmers' net had dropped over $4 billion to $12.5 billion. Thus, while the general level of prosperity went up 57 percent, farmers' dropped 25 percent."

But farmers are well aware of this simple fact, without having statistics quoted to them. All they have to do is read the daily newspapers to see that business in general is prosperous; then feel their own pocketbooks, look at their own books, or ask their bankers for a loan to realize the financial status of farmers.

PREDICTED FAILURE OF FLEXIBLE PRICE PLAN

In my statement on the farm question, before the House and Senate Committees on Agriculture, in March a year ago, I predicted that the flexible price plan would not bring about the results Mr. Benson and his friends claimed it would. We have never seen proof that this theory would work, but we did see a good example of its failure during the depression years of the 1930's, when farmers greatly increased production in the face of ruinous prices.

As prices go down, if farmers are to hang on to their farms, they have no choice but to produce more. The volume of production must be proportionately greater in order for total income to be sufficient to pay fixed costs and to maintain the living standards of their families.

Although officially denied by Secretary Benson, it has been the thinking among his friends and people in his Department that the best way to curtail our so-called farm surpluses is to get rid of some 2 million farm families.

In fact, this very topic was discussed last year by the President's Advisory Committee on agricultural matters. The Advisory Committee applied the term "marginal farmers" to operators of family size farms, and said that they live mostly in the Ozarks and the Appalachian regions. It is these marginal farmers, the committee contended, who produce the surpluses. Theoretically, the troublesome farm problem would be solved by forcing these farmers off the land and into the cities, thereby reducing production proportionately.

CONTROL THROUGH BANKRUPTCY

We are struck with the cruelty of thinking which might well be termed crop control through bankruptcy. The conception by some people that our small farmers constitute merely a seven-digit figure on an economist's work sheet is completely at variance with the Christian and American belief in the worth and dignity of each human individual.

This thinking is as fallacious as it is cruel and un-American. In the first place, the surpluses are not being produced by the small farmers. They are produced by the big, so-called efficient farmers. Furthermore, curtailment of production would be only temporary. The land from which the small farmers were up-rooted would grad-

ually be taken over by large factory-like farms. Prices might rise some during the period of adjustment while production was being reduced. But then the big farms would rapidly increase production again.

And while that plan is proving itself a failure, what is happening to the hundreds of thousands of persons who are forced from their small farms? Their prospects are not pleasant to contemplate.

Neither is it pleasant to imagine what America would be like if the great farm population, which has traditionally been a strong anchor for democracy, should in time be reduced to few in numbers and in the place of farm life as we have always known it, were substituted factory-like farms, owned by wealthy residents of big cities, whose sole interest in the land is the profits they can make from it.

DON'T THEY KNOW WHAT TO DO?

If USDA officials are worried about the deepening depression in agriculture and the probable political and social consequences of the policies they have been advocating, they show no evidence of doing anything about it. The truth probably is that they don't know what to do.

There are men in the Congress (both Republicans and Democrats) who understand the farm problem and who know how it should be solved. But they have been hampered by Mr. Benson, who is upheld by President Eisenhower.

The hour is getting late. Next year several hundred thousand more farm families will follow the 100,000 who are leaving the land this year. Meantime, all the businesses and workers in our towns and cities are losing the benefits that could be had from rural purchasing power if the farm problem were solved.

Congress and the administration had better face this blight upon the economy squarely and take action this year. Farmers cannot hold on and keep solvent for long under circumstances so adverse to their welfare as those existing at present.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BYRNE of Pennsylvania. Mr. Speaker, I am proud to speak today in behalf of the postal workers of the United States for the benefit of whom the legislation we are considering has been introduced.

It is my firm conviction that a postal pay increase is long overdue. As the cost of living has gone up, salaries of postal workers have remained comparatively static. The net effect has been that as the standard of living of other work groups has been raised, that of the employees of the Post Office Department has dropped to a level not in keeping with the American way of life. Indeed, many families of postal workers in my district would find it impossible to subsist were it not for the fact that the wives in the households are working, too. In many cases postal employees hold outside jobs, in addition to their regular full-time postal duties, in order to maintain a living family wage. Such conditions are a breeding ground for disharmony in the home as well as for juvenile delinquency. Surely, we have a duty to do our utmost to alleviate this situation, and it lies within our power to do it.

I am sorry that the bill reported out of the Post Office and Civil Service Committee does not contain provisions for a 10-percent salary increase. However, I feel that an equitable and satisfactory adjustment between the Senate bill and this bill will come out of committee. Having waited so many years for a pay raise, the postal workers must not be disappointed again.

Let me call to mind here and now that the postal employees serve us, one and all. We help ourselves when we help them. We are assuring ourselves of more efficient mail service by making every effort to see that this legislation becomes law.

Seventh Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, I commend to the thoughtful attention of Members and citizens, the address of Hon. JOSEPH W. MARTIN, JR., Republican leader of the House, delivered last night at the second national dinner of the American-Israel Society at the Willard Hotel in Washington, D. C.

The occasion was held on the eve of Israel Independence Day and marked the observance of the seventh anniversary of Israel's independence, which falls on this date, April 27. Gov. Theodore R. McKeldin, of Maryland, president of the American-Israel Society, was master of ceremonies and introduced Speaker MARTIN.

His address bespeaks the friendly interest of Americans in the State of Israel and its people. He spoke as follows:

Governor McKeldin, Mr. Ambassador, Dean Pike, ladies and gentlemen, it is an honor to appear before you tonight, for this is an unusually important occasion, the eve of the seventh anniversary of the establishment of the State of Israel.

Four years ago, on July 19, 1951, I appeared before the House Committee on Foreign Affairs in support of my bill, H. R. 3483, to provide a grant of $150 million to the State of Israel.

You will bear with me, I know, if I recall part of what I said to the committee at that time:

"The devotion of the people of Israel to liberty is one of the bright spots in the Old World today. We have seen how the gallant young people of that country bravely fought through a war of independence, a struggle which stirred the American people, for it recalled the epic chapters of our own history."

At that time, I also said:

"The Israelis have not relaxed their vigilance. They live in a tense and troubled area; they know that they are on the frontier of danger. They are prepared for any eventuality. The young army of Israel, with more than 200,000 men and women, is one of the strongest forces for the survival of freedom in the Near East."

In concluding my statement before the House committee, I said:

"The expanding industrial plant in Israel, steadily growing in quantity and diversity of output, can make that country the industrial workshop of the Near East. By word and by deed, the young State of Israel has demonstrated its willingness to stand firmly and resolutely against the forces of tyranny and despotism. It can be an outpost of American strength and influence in the Middle East. There is no doubt in my mind that to help Israel is to make America more secure."

Nothing has happened since then to alter my estimate of the importance of the State of Israel to the United States of America and to the entire free world. On the contrary, much that has taken place since has not only confirmed my conviction but deepened it.

The development of the agriculture and the industry of Israel has exceeded my fondest expectations. The devotion of the people of Israel to democratic institutions and to the protections of the rights of her citizens without regard to race, color, or creed has been steadfast.

But what seems to me to be equally remarkable is that the people of Israel, pressed on every side by economic stress and constant dangers, have found time and energy to evolve a flourishing and, in some respects, an original culture.

It is true that Israel has the resources of an ancient Hebrew tradition and is the inheritor of the experience of the Jews in more than threescore countries.

Yet it is well-nigh amazing that, in the midst of irrigating the desert, draining the swamps, building new cities, and establishing factories, the Israelis still have a flood of energy to release in a surge of painting, sculpture, music, literature, drama, and all the sciences, including archeology, the science that gives us insight into our own origins.

Many of you may have attended the Land of the Bible exhibition when it came to the Smithsonian Institution not long ago here in Washington, and I know you were as thrilled as I was by the many reminders of the sources of our religions.

The Israel Symphony Orchestra has visited Washington and toured the major cities of our country. It has been acclaimed widely by our critics. Soon Americans will have an opportunity to see the Inbal dancers. Not long ago an exhibit of paintings by Israeli artists was shown in leading museums of art across our country. At least one Israeli play has been produced in English on Broadway.

Unfortunately, not all Americans can read Hebrew or, as I believe it is now called in Israel, Ivreet. For that reason, I cannot speak with personal knowledge of the literature of Israel. Yet, when I visited the bookshops of Jerusalem, Tel Aviv, and Haifa 3 years ago, the shelves were full. Hundreds of American classics, translated into Hebrew, were there—books by Walt Whitman, James Melville, Mark Twain, and many others. Lately, I am told, a Hebrew edition of the autobiography of Benjamin Franklin has been having a lively sale.

Soon, I predict, translation of original works by Israeli authors into English will become a commonplace. I believe the little State of Israel has so much to say that its mark will be as great in modern as it was in ancient times.

It is admiration for this creative spirit of the people of Israel that has brought us together—Americans of all faiths—to dine on the eve of Israel's Independence Day. As an American, I am proud to pay my tribute.

It is one of the privileges of being an American. In fact, encouragement of other peoples and nations with similar ideals and aspirations is the highest expression of loyalty to ourselves.

The people of Israel, in the first 7 years of the existence of their state, have set an example of industry, energy, devotion to the principles of genuine democracy, and creative effort from which any nation in the world could take inspiration.

True, there have been many incidents of stress and strain. However, I have learned over a lifetime in public affairs that one should not judge a man or a nation by what is exceptional, nor what happens under abnormal conditions.

The abnormal condition that makes the achievements of the people of Israel almost unbelievable is absence of peace in the Middle East. This state of uneasy armistice is a heavy burden. It is damaging not only to Israel but to the surrounding Arab States.

The Middle East is one of the most underdeveloped areas in the world, but it has enormous resources as a region. These resources, without genuine peace, can be developed only in a patchwork fashion. With peace, they can be developed on a wide scale.

Arid acres can be blessed with the fertilizing gift of water—water now runnig to waste in flash floods or evaporating on salt-hard ground. The ribs of mountains can be fleshed with forests as in the old days. Empty lands can provide livelihood and homes for the hungry and the destitute. The Middle East has been the place of miracles. It can be so again.

This may sound like a dream, but it is a dream based on the solid, hard-eyed estimates of engineers, geologists, and agronomists. It is a dream that has been realized to an unexpected extent already in Israel. It is a dream that can become reality throughout the whole region.

Israel is showing the way. This young nation has demonstrated its capacity to survive. It has had help from individual American citizens and from the Government of the United States. The promise that we would help to establish the Jewish State was made by a Republican Congress; and the fulfillment of that promise, in a Democrat Congress, was supported by our party at every crucial moment over the years.

If ever the Congress of the United States truly reflected the wish of the American people, it has done so in keeping its pledge to the people of Israel. The people of the United States have had the satisfaction of playing a large part in bringing comfort and peace to those once living in the displaced persons camps of Europe—in bringing them to our shores. The people of Israel, with utter selflessness, have kept open their doors for all who knocked upon them. No greater act of sacrifice and love has ever been recorded in the history of the world.

The expressions of the creative spirit that we honor here tonight have come not only from the pioneers but also from the new immigrants from the oriental lands. Just as the United States has built its own culture from the resources of many lands, so it is in Israel. The result is good. Israelis have a right to be proud. We should be thankful for the opportunity we have had to help.

Israel has proved itself. In its reception of the stateless, it has put the world in its debt. In its initiative and determination, it has shown that it has the ability to be not only a stable entity but a nation which has much to give to the society of free nations.

Seven short years after the establishment of the State of Israel, it is hard to recall the dark events before its birth and the misery to which it gave relief. What American would tolerate a return to that darkness?

One thing is certain: The State of Israel has proved its permanence and its value. I can tell you that the overwhelming majority of the Congress of the United States, in my opinion, is determined to see to it that the people of Israel shall have the opportunity to build their homes and evolve their culture in peace and safety.

In saying this, I do not mean that I have conducted any poll to ascertain sentiment. But I have been in Washington long enough to sense the sentiments of my colleagues at the Capitol. The support of the ideals that gave birth to the State of Israel by the people of the United States is rooted in our history.

Now, as much and perhaps more than at any other time, Israel should be a concern of all Americans. On other occasions before and since the statement I made before the House Committee on Foreign Affairs, I have stressed the value to the United States of having in the Middle East a vigorous, genuine democracy linked by spiritual heritage to us and to the freedoms for which we stand.

This struggle to maintain a free world is not an easy one. Great forces seek to destroy freedom and progress. In this struggle, we must all work together for a common cause. And it is gratifying to know that in this fight, Israel and the United States will be on the side of freedom.

Within the last few days, Communist threats have been made against Israel, voiced by those who have been holding American airmen in illegal imprisonment. These are threats of further restriction or even dismemberment of Israel's territories. It is clear that the Communist menace is worldwide. They would destroy the free countries one by one.

Israel faces the same threat as we do. We shall not yield in the face of this threat and neither will Israel. We have the same common foe, and we will be united in our defense against world communism.

Peace is the great need of the hour. Peace that will permit nations to consolidate economic gains and achieve greater spiritual and material blessings for all. Peace and a better understanding among the different peoples of the world will banish the black clouds of doubt and fear, and usher in a golden era of progress.

We, in the United States, have no malice toward any people. We wish all, in their own way, to have the kind of life they desire. At the moment, we are spending billions upon billions for peace. We know that only the strong can be free, and only the free can be strong. And it is only a strong free world that can preserve the freedoms gained through hundreds of years of sacrifice.

Here tonight, I emphasize the common tradition of the United States and Israel again. Material strength is vitally important in preventing the spread of Communist aggression. Also important is spiritual strength. It is upon mutual understanding of ways of living, upon mutual standards, upon mutual modes of thought, upon mutual aspirations, that mutual good faith must rest.

That good faith exists between the peoples of the United States and the peoples of Israel. I congratulate Governor McKeldin, the founders, sponsors, and members of the American-Israel Society upon their efforts to deepen and strengthen it, here and in Israel.

Mayor Wagner and the Jewish Tercentenary

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. DAVIDSON. Mr. Speaker, on Thursday last, April 21, 1955, I had the very great pleasure of joining in a celebration honoring Rabbi David de Sola Poole on his 70th birthday and commemorating the establishment, 300 years ago, of his congregation, Shearith Israel, as the first Jewish congregation in America. Robert F. Wagner, the inspired and dedicated mayor of New York City, made some brief remarks there. Mr. Speaker, I wish that you and all my colleagues here could have heard Mayor Wagner speak. He simply and directly and with heartfelt and moving conviction told the American story.

In discussing the immigration of those first 23 Jewish refugees and Peter Stuyvesant's attitude toward them and other minority groups, the mayor made a very timely and telling point when he said:

History has passed severe judgment on Peter Stuyvesant. Actually, of course, he fell into the common error of officials since time began; he interpreted his mandate too severely. Responsible administration calls not merely for the enforcement of law; it requires intelligent and judicious application of human principles.

Mr. Speaker, with the permission of the House, I include here the full text of Mayor Wagner's masterful speech:

Mr. Chairman, Rabbi Poole, distinguished guests, and fellow citizens, as mayor of the city of New York, it is my pleasure to bring you formal greetings on this happy occasion when you are celebrating the 300th anniversary of the founding of the first Jewish settlement in the United States and, at the same time, of the establishment of congregation Shearith Israel on the shores of Manhattan Island.

As a private citizen, it is a privilege to break bread with you at such a time of joy. As a fellow American who is a member of another faith than yours, I find it heartwarming to be able to congratulate you on having remained steadfast in your own faith and in continuing to revere and worship the God of your fathers, and in following the ethical precepts of your great teachers. Where else but in the United States of America, a Nation predominantly Protestant, could a mayor, whose personal faith is Catholic, extend, officially and as a good neighbor, the hand of fellowship to the leaders of the Jewish community, and do it with a free heart and a mind clear of every feeling except admiration and good will?

There is another and, to me, most appealing reason why I consider it a privilege to be with you this evening. For this is also the occasion when you are honoring Rabbi David de Sola Poole on the attainment of his 70th birthday. For 48 years, Rabbi David de Sola Poole has been the rabbi of Congregation Shearith Israel, the Spanish and Portuguese Synagogue of New York. For these nearly five decades, he has not merely been one of the outstanding spiritual leaders of the American Jewish community but his dignity, his quiet wisdom, and his profound scholarship have helped to enrich all of us who dwell in this vast community.

The city of New York is, of course, one of the most astonishing material creations that the hands of man have fashioned on this planet. But it would be a dull wilderness of steel and stone were it not for the humanity, and the attention to human problems that it increasingly pays. Nor could it be so vital and exciting were it not for the spiritual forces that constantly stimulate that humanity. To these spiritual forces, the man we honor tonight has contributed earnestly and devotedly. He has not merely been a leader in Jewish welfare affairs and a worker in war relief and reconstruction work in Israel as long ago as the time of the Balfour Declaration; he has also been a valued adviser in national youth

problems and a national director of USO. The honors that have come to him have been his due, and he has accepted them humbly.

While we in New York join in these felicitations, we recognize that his contribution has been indeed to humanity at large.

I confess that the American Jewish Tercentenary celebration has stimulated me personally to look back at the history of that earliest of New York known then as New Amsterdam. You are, no doubt, familiar with the facts. When that first band of 23 Jewish refugees landed at Fort Amsterdam in September of 1654, they were not entirely welcome. There was no immigration legislation in those days—happily for them, perhaps. There is no record that the Dutch burghers were unfriendly; far from that. It seems that the deacons of the Dutch Reformed Church extended alms to those newcomers to enable them to endure that first hard winter.

The greatest obstacle was the Director-General of New Netherlands, His Excellency Peter Stuyvesant himself. It was he, a narrow though God-fearing man, who wished the newcomers to leave at once. It is of record, however, that when this Jewish band petitioned the Dutch West India Company, Stuyvesant was instructed that the Jewish people might reside in and trade in New Netherland. That instruction was dated April 26, 1655—just 300 years ago.

History has passed severe judgment on Peter Stuyvesant. Actually, of course, he fell into the common error of officials since time began: he interpreted his mandate too severely. Responsible administration calls not merely for enforcement of law; it requires intelligent and judicious application of human principles. Peter Stuyvesant was hampered less by ill will than by personal narrowness. The Jewish people were not the only ones against whom he tried to discriminate. He did not like the English who were pressing down from New England. He feared the Swedes who were dwelling in their new Sweden on the Delaware River. He persecuted the Quakers, often in a most cruel and inhuman fashion. He would not permit the Lutherans to have a minister or a house of worship. As for Catholics—he would not have them at all.

When the English captured New Amsterdam and renamed the settlement and the colony New York, after the Duke of York, Stuyvesant went back to Holland to report to his superiors. I find it significant that he did not choose to remain there. A year or so later, he returned to these shores and lived out the rest of his life here. His remains lie buried in a vault at St. Mark's. Evidently, his own love of the community and the new land was so great that it exceeded his feelings against the English and the others among whom he would have to reside.

I do not know whether Peter Stuyvesant ever changed his mind about any of his neighbors. I would like to think so, but I doubt it. Yet even in his day, New Amsterdam had been a melting pot of the nations. In addition to the Dutch, the Swedes, the English and the Germans, there were Frenchmen and even Bohemians, and the proverbial seven languages could be heard in the public houses where seamen and travelers gathered.

There must have been something especially inviting about New York to continue to attract so many minorities; and all prospered. All had their trials, all their tribulations. In the story of the Jewish twenty-three, however, there are certain elements which I like particularly. When the Dutch West India Co. finally granted them permission to remain, they suggested that the Jewish settlers dwell in a quarter of their own, as was the custom in the Old World. That suggestion was apparently never implemented. The Jewish families resided wherever they could find homes. And no regulation was ever passed to require them to do otherwise. In short, there never was a ghetto imposed by law in the city of New York. The atmosphere was free, the people were free.

One cannot deny that, in later years, economic circumstances caused people to crowd together in certain areas, but the law itself permitted men full freedom in that respect. It remained, of course, for our times to see to it that the general welfare should be so improved that even economics should not restrain and narrow the living horizons of Americans, of whatever race, religion, or, indeed, color. We know how much remains to be done, but officially as well as privately we strive to keep the American atmosphere clear and free.

Another element in that story of the first Jewish settlers concerned the right of a free citizen to bear arms in the common defense. Stuyvesant denied Asser Levy and Jacob Barsimson and the others the right, even in times of trouble, to stand watch with the burghers. Their guilders were acceptable for the common defense fund, their services were not. Again, they were invited to leave if they did not like it. But they persisted and they remained. In time their services were accepted as freely as their guilders had been.

Their greatest victory came when they petitioned for the right to be burghers or citizens. Of course, they were rebuffed at first. But on April 20, 1657, Stuyvesant yielded and authorized the burgomasters of the city to admit the Jewish residents to the burgher right. Technically then, Asser Levy was the first Jewish man to be a citizen of what later became the city of New York.

That is the beginning of the story of the Jewish tercentenary. But, in effect, it is also an important part of the American story. It is certainly the New York story. For no metropolis is so teeming a melting pot of races, nationalities and creeds, and nowhere has it been more important that men should have the freedom to worship apart from one another in their religious devotions, while still enjoying the privileges of mingling together freely in trade, employment, and education.

Reflect what old Peter Stuyvesant might think if he could see our New York City today: Jews, Catholics, Lutherans, Quakers, and the many other great Protestant denominations, and, yes, Moslems and Buddhists, and the followers of the other great faiths of the East and the West, worshipping as they please, living privately, mingling publicly, enjoying the common American freedom to the fullest extent.

Every people that has reached these shores has made a unique contribution to the enrichment of American life. The Jewish settlers brought not only their own stamina and vitality but also those tenets of faith to which all western civilization is historically indebted to them. In these 300 years they gave even more than the lives of their young men who died in the common defense, or the incredibly vast sums that they have poured out so generously for every good cause. I say that they, at least, gave equally in merely living among us, and in remaining loyal to those spiritual truths without which man's life can have no meaning.

That is why I call it a privilege to welcome you to a new tercentenary; to hail Congregation Shearith Israel as a citadel of the spirit; to you, Rabbi David de Sola Poole, to say, "Happy Birthday!" and to wish you many more years of fruitful service to our community.

John Day Dam on the Columbia River

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. COON. Mr. Speaker, I have here an editorial from the Dalles Chronicle of April 24, 1955. This editorial concerns H. R. 5789, legislation for construction of the John Day multi-purpose dam on the Columbia River, which I introduced in the House on April 21, 1955. The writer of this editorial shows a clear and concise understanding of the legislation and a sound knowledge of the need which this bill proposes to correct, and I want to take this opportunity of expressing my appreciation of the analysis which he has made.

The Dalles Chronicle published at The Dalles, Oreg., has for many years been one of the leading newspapers in the community in which this dam will be built, and its editorials are widely read and highly respected. The part that our American journalists have taken in the development of this country and its resources is well established and therefore it is with pride that, under unanimous consent, I include this editorial in the CONGRESSIONAL RECORD:

A SOUND PROPOSAL

Representative SAM COON's new bill for construction of the John Day Dam is the most attractive proposal yet for Federal-partnership financing and construction of the multi-purpose Columbia River project.

The public interest in comprehensive development of the site is protected and the means are provided for early construction of the dam by the Army engineers.

A close reading of the 10-page bill reveals that the sponsor has included provisions that should prove acceptable to Congress and the people of the power-short Pacific Northwest.

Equally important, the bill goes far to meet the objections raised by those who opposed the original John Day partnership bill introduced in Congress last year.

Opponents of the original bill contended that the partners would receive the benefits from the revenue features of the dam, while the Government would bear the cost of the nonreimbursable items such as the navigation lock.

They noted that the partners would advance $164 million, or little more than half the estimated $310 million cost. The new bill raises the partnership contribution to $273 million or more. That means the Government is to receive $109 million more than under the 1954 bill.

Reports from Portland indicate that the $273 million would include 97½ percent of the cost of the fishways and most, if not all, of the nonrevenue spillway portion of the dam.

In addition, the partners would pay for operation and maintenance of the dam chargeable to power production.

All that Congress would appropriate is an estimated $37 million—12 percent of the entire project. This $37 million would finance the navigation lock and any other features considered of general public benefit.

It can be argued that the Government would be stuck with the navigation lock and flood-control features of the dam. But these

features, benefiting the entire Nation, are nearly always considered nonreimbursable. That is why the Government pays for the navigation and flood-control portion of Bonneville and other Federal dams, without expecting to have the cost repaid.

Another objection to the original partnership bill was that it represented a departure from the Army engineer plan for a comprehensive development of the Columbia River. This objection has been met by requiring the dam to be built as an Army engineer multipurpose project making maximum, comprehensive use of the dam site.

The fear that power rates from a partnership dam would be higher than present Bonneville rates has been another objection. The proposed partners, however, believe they could sell John Day power at competitive rates. Advent of natural gas in the region would do much to keep those rates competitive.

Construction of the John Day Dam without the partnership angle would be preferable. But it must be remembered that Congress is reluctant to provide funds to start new Columbia River dams. Last year the House eliminated a Senate-adopted planning fund for the John Day Dam.

Congress may this year again reject John Day planning funds unless the dam is made a partnership project. But the region still needs new power-generating capacity to meet growth and industrial expectations.

Despite this demonstrated need, however, only one major Pacific Northwest dam is to be started in the near future. It is the Priest Rapids Dam, which the Grant County Public Utilities District is to start building next year as a partnership project.

The Dalles Dam was the last major dam started in the Pacific Northwest and that was nearly 4 years ago. Since then, the only major dam to be given the green light is the Priest Rapids partnership project.

The moral appears clear—a partnership proposal is the best means of obtaining an early start on a multipurpose project needed to meet the needs of a power-short Pacific Northwest.

Sugar Quotas

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. TEAGUE of California. Mr. Speaker, the domestic sugar producers of this country are the victims of an extremely unfair set of circumstances. Our Nation is growing by leaps and bounds and is consuming more sugar each year. And yet our domestic sugar producers are denied the right to grow and sell one single pound of this increased consumption. I have introduced a bill which will correct this situation.

Under the 1948 Sugar Act, domestic sugar producers can market no more than 2,300,000 tons in 1 year, while Cuba was given the right to market 95 percent of the amount by which the war-damaged Philippine industry would fall short of its quota while rebuilding. At the same time, Cuba continued to share with domestic areas in making up deficits. Thus Cuba has marketed some 5,250,000 extra tons of sugar in the United States, almost 30 percent more than its basic quota.

The domestic producers relinquished their own just rights to give Cuba an opportunity to reduce production. What has happened? Cuba not only did not reduce but increased production, and in 1952 it produced 8 million tons, one-third more than could be marketed anywhere in the world.

Here at home, due to improved technology and better farming methods, sugar beet tonnage yield per acre has increased 20 percent since 1948. Last year sugar beet acreage was 10 percent less than before the first Sugar Act went into effect, but production was 14 percent more. The fixed quota of 2,300,000 tons is forcing further acreage cuts of 10 to 15 percent by established growers. Hardly any other farmer will be permitted to plant sugarbeets at all, and many of the latter are war veterans on newly opened reclamation projects of the West, where sugarbeets are vitally needed in the crop rotation.

If we now increase the 1955 marketing quotas for domestic beet and mainland cane areas, as I have proposed, we do no more than to restore a just and basic right to a domestic farmer, that of sharing in the economic growth of his own country. Right now, in spite of the acreage cuts, production is exceeding marketing quotas, although the markets exist. The prime beneficiary, Cuba, has had ample opportunity to comply with the spirit of the 1948 Sugar Act by reducing production from wartime levels. In contravention of this spirit, Cuba has increased production. We now feel that the right to share in our own growth, which we temporarily relinquished, should be restored to our growers.

Passage of this bill will not be a repudiation of the historic rights of Cuba to market sugar in this country. It will only restore what has been the historic right of the American producer.

Transmission Line From Fort Randall to Grand Island

EXTENSION OF REMARKS
OF
HON. JACKSON B. CHASE
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. CHASE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION FOR CONSTRUCTION OF 230,000-VOLT TRANSMISSION LINE FROM FORT RANDALL TO GRAND ISLAND

Whereas the economy of the State of Nebraska is dependent primarily on the production of foods and fiber products from its lands; and

Whereas Nebraska is blessed with the priceless asset of an abundant underground water supply in much of its area; and

Whereas the productivity of much of Nebraska has already been materially increased by means of pump irrigation; and

Whereas the United States Bureau of Reclamation has recently initiated a special rate for electric power used for irrigation pumping, by which large quantities of surplus power available during the summer months from the Missouri River Basin project can be put to beneficial use for irrigation and reclamation purposes; and

Whereas there will also be blocks of low-cost firm power available from the hydroelectric developments on the Missouri River; and

Whereas there is and will be definite need for such blocks of firm power as they become available for agricultural, industrial, and defense-plant purposes in Nebraska; and

Whereas to effect delivery of such low-cost power from the hydroelectric plants on the Missouri River to areas of Nebraska where it can be most effectively used requires the construction of a 230,000-volt transmission line capable of carrying some 150,000 kilowatts of power from the Fort Randall hydroelectric powerplant site to the vicinity of Grand Island, Nebr.; and

Whereas the United States Bureau of Reclamation has built many similar transmission lines in other States in the Missouri Basin, and being interested in all programs which further expand the economy of the State, is vitally interested in the development of additional pump irrigation, rural electrification, and industrial and agricultural development: Now, therefore, be it

Resolved, That the South Platte United Chambers of Commerce of Nebraska endorses and supports construction of the proposed 230,000-volt Fort Randall-Grand Island transmission line; be it further

Resolved, That we urge the Congress of the United States to give support to this line and appropriate the necessary funds for the construction and completion of this line in 1956 fiscal year; and be it further

Resolved, That copies of this resolution be transmitted to our Members of Congress requesting their support of this important project.

Resolution adopted at the regular April meeting at Superior, Nebr., on April 14, 1955.

THE SOUTH PLATTE UNITED CHAMBERS OF COMMERCE,
ORAN KING, *President, Superior.*
CLETUS NELSON,
Secretary-Manager, Holdrege.

Must the Farmer Always Pay?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following article appearing in the Rural New Yorker of April 16 points up the involved problems of the dairy farmer in the Empire State.

Mr. Speaker, too many people seem to believe that the dairy farmer is at the receiving end of the line. This is very far from the truth and the question is well worth asking again and again: Must the farmer always pay?

MUST THE FARMER ALWAYS PAY?

Hearings are now held in Washington to consider programs designed to handle the alleged dairy surpluses.

Briefly, the two ideas receiving the most consideration propose the establishment of boards to spend farmers' money. One contemplates a $40 million fund, contributed by farmers out of their milk checks at the rate of 4 cents a hundred pounds, to promote the sale of dairy products. It is offered by the cheese and butter manufacturers to supplement the program of the American Dairy Association. The second measure sets up a

dairy stabilization board, financed at the start by a Government subsidy of $500 million, which would buy surplus dairy products in order to guarantee a stabilized milk price to producers. The cost of operating such a stabilization program shall be paid wholly by producers.

Why it is that farmers are always supposed to pay—assuming they can pay at all—to bale someone else out of a situation for which that someone else, not they, is responsible, has always been difficult to comprehend. It is the milk dealers, not the producers, who elect to manufacture milk products, and it is the dealers who are constantly encouraging producers to supply them with as much milk as possible. Why, therefore, should producers be asked to guarantee a profit to those who divert milk from its most logical and most nutritional channels—fluid sales—into the manufacturing channels that are already overloaded because the dealers choose to overload them?

It must never be forgotten that the dairy farmer is barred from the field of milk distribution by those who want that field for themselves alone, and that therefore the farmer is in no way responsible for an oversupply of certain types of milk products. Why, then, would it not be more logical to penalize the dealers for the sins of their own making, instead of placing a further load on the shoulders of innocent parties?

Indochina Presents Problem for the United States

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, the ill-fated Geneva Conference to which the United States was a party is plagued now with a situation that seems hopeless. The partition of Indochina was a sad affair. Under leave to extend my remarks, I am including an article by Mr. James E. Roper, which appeared in the Washington Star on April 18. He points out the refugee problem which involves Indochina. I am sure the American people are shocked by this problem.

The article follows:

VIETNAM REFUGEE FLOOD BECOMES UNITED STATES PROBLEM

(By James E. Roper)

SAIGON, SOUTH VIETNAM.—The human flood of refugees fleeing from communism in North Vietnam is turning into an economic commitment and a diplomatic trap for the United States.

The United States, having helped encourage 550,000 refugees to move to South Vietnam, now faces the moral responsibility of seeing that they get settled properly, regardless of the expense in the years to come.

The United States also faces the problem of what to do about the refugees if the Reds move to take over South Vietnam. The United States can hardly abandon them to the Reds even though otherwise we might want to quit South Vietnam.

GAVE MORAL SUPPORT

The first American involvement was innocent enough. We gave our moral support to the refugee clause in the Geneva agreements of last July 21 that in theory ended the Indochina war.

The agreement which provided for sorting out of Communist and non-Communist forces stated that until May 19 any civilians residing in a district controlled by one party who wish to go and live in the zone assigned to the other party shall be permitted and helped to do so by the authorities in that district."

Under that clause, tens of thousands of North Vietnamese immediately asked to go south. The Vietnamese Government was overwhelmed. It asked the United States to help. On humanitarian grounds, we responded.

During the current fiscal year, the Foreign Operations Administration is spending $45 million for this emergency refugee program. But FOA officials concede that the hardest year for the refugees is about to begin.

About 165,000 refugees still haven't reached the areas of resettlement. Many of the 385,000 refugees who in theory are nicely taken care of probably won't be able to earn a living for a year or longer.

SEEK $35 MILLION

FOA officials here disclose they are asking that the budget for the next fiscal year include about $35 million for these refugees. One idea is to give each farmer a cash grant of 2,000 Vietnamese piastres, or nearly $60.

The proposed program also would have FOA supply hand tools, fertilizers, seeds, and fishing equipment. Another proposal is to supply credit so the refugees could buy and import from Cambodia and India water buffalos as beasts of burden.

FOA officials here suggest the United States spend up to $1,000 per village to build churches for the refugees in order to help them cling together and remain settled.

"Congress may scream at that one," an American official said, "but it's the best morale-builder we can think of. So far, the refugees have kept up their spirits because of the adventure of moving, but I don't know how long it will last."

NEED TO DIMINISH

Even after the next fiscal year the refugees probably will need economic help in diminishing amounts.

The American financial involvement, however, is infinitesimal compared to the diplomatic influence that the refugees may have.

The United States and other allied powers have made a great propaganda show of the exodus from the Communist-run north. Indeed, the spectacle must have impressed millions of Orientals who are wavering between Western democracy and communism nominally led by orientals.

Because of this spectacle, however, the United States seems morally committed not to abandon the refugees once again to Communist rule. To do so would produce another of those loss-of-face situations. It presumably would shock Orientals in direct proportion to the way they were impressed in the first place.

ONE MORE SHACKLE

The United States is not committed to fight to save Vietnam unless our allies join the struggle. But the unilateral refugee problem has the diplomats worried. It adds one more shackle to American policy in the Far East. It also raises the question of why the United States actively encouraged the exodus from the north.

On humanitarian grounds, of course, the civilized world is obligated to help fellow humans in distress. The United States, and South Viet Nam, however, have actively propagandized the peoples of North Viet Nam—not only to tell them about the choice they were entitled to make, but also to persuade them to come south.

The refugees came from an area where food is short and where they were an economic and political burden to the Red regime. Now they are an economic burden to the south, which doesn't need the extra manpower.

Some cold-blooded diplomats feel the south has gained nothing but propaganda from the refugee movement, the likes of which are not encouraged elsewhere along the Iron Curtain—in Eastern Europe, for instance.

The refugees eventually may have an impact on domestic politics in South Viet Nam. Premier Ngo Dinh Diem is known politically as a northerner and as a Catholic. The refugees are from the north and 90 percent are Catholic. Once they get their own personal lives settled, they may become consistent supporters of Premier Diem.

Over the Great Circle

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. CURTIS of Missouri. Mr. Speaker, some of our distinguished colleagues in the California delegation have recently petitioned President Eisenhower to authorize Pan American Airways to operate to the Orient from Los Angeles and San Francisco through Seattle over the great circle route. As of the present Pan American is forced to fly to Tokyo and beyond by way of Honolulu and Wake Island, which puts this great carrier at a considerable disadvantage in its competition with Northwest Airlines, which now enjoys exclusive rights to fly the great circle route.

Pan American Airways was the Pacific pioneer, having first flown the route in 1935. Since then, both Pan American and Northwest have acquired long-range equipment which makes nonstop service from Seattle to Tokyo possible.

Our country's progress has been possible because the spirit of free enterprise has prevailed. It seems to me that an inconsistency exists when one carrier, which did the Pacific pioneering, is deprived of an equal opportunity to compete with another.

The St. Louis Globe-Democrat of April 19 carried an editorial which points up this philosophy and in which I heartily concur.

Mr. Speaker, under leave to revise and extend my remarks, I include the editorial in the RECORD, as follows:

OVER THE GREAT CIRCLE

Passengers who wish to fly via Pan American World Airways from the west coast to Tokyo, are forced to make a detour of some 1,000 miles to Hawaii, instead of using the great circle air tracks which is the shortest distance between the two points. Pan American says two-thirds of its passengers between the United States and the Orient do not wish to make the Hawaiian stop. Hence, they are inconvenienced and the airline is put to unnecessary expense which is paid by the taxpayers because of the Federal subsidy under which it operates, as do other lines. The more plane-miles flown, the greater the cost. Pan American says the waste flying costs the taxpayers $220,000 per weekly round trip per year.

At present the great circle route is used by a competitor, the Northwest Airlines, and

President Eisenhower has been requested to lift the restriction against Pan American and permit it to operate on the short line. He has the appeal under consideration. The request seems logical because both airlines serve the same markets in the Orient and there is no issue over serving additional markets.

Pan American has set out several reasons in addition to wasted operation costs, why its request should be granted. GI mail to the Orient is delayed and there are additional costs to the Defense Department, one estimate being $1 million a year. Further, the restriction is actually an aid to foreign airlines which are expected to start service soon. Over all looms the possibility of discrimination in diverting passengers in the Orient from Pan American.

Certainly Pan American has a case. Its giant Clippers go around the world, and in 1931 the great circle was surveyed for the line by Colonel Lindbergh. Had landing rights been available in Japan, it would have operated over the route before World War II. Hence, it may claim pioneer rights.

Competition among the airlines is so keen that any hint of monopoly must be carefully considered by the President.

Israel's Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. O'HARA of Illinois. Mr. Speaker, the seventh birthday of the new nation of Israel is being observed today by addresses of congratulation and good wishes by members of this body. This reflects the close ties between our country and Israel.

I am extending my remarks to include some observations additional to those in my remarks earlier in the well of the House and which time did not suffice for their utterance then.

Our interest in the Near East is in the importance of the area in defending and strengthening the free world. Our faith in democracy impels us to see Israel as a center of creative civilizations and the cultural enrichment of the world community.

We support Israel in her struggle to attain cultural freedom for dispossessed and persecuted Jews. We hail Israel's advances in founding a democratic society and in reclaiming a neglected land.

The Near East is emerging from its ancient patterns and seems destined to secure a greater measure of good life for all the people in the Mediterranean.

The Jewish people throughout the world have provided immediate relief for the 750,000 Israel newcomers—350,000 of them from the Arab and the Moslem lands of the Near East and Africa—and are helping to settle them on farms and in factories with a reasonable standard of living for all, Jews and Arabs alike.

We applaud Israel's acts of friendship and good faith—

First. In releasing Arab-blocked bank accounts of former Palestinian Arabs despite the failure of the Arab states, notably Iraq, to release the blocked accounts of their former Jewish residents;

Second. In offering to pay for Arab lands abandoned in Israel as part of a peace settlement, taking into account the lands and property abandoned by Jews in Arab lands;

Third. In offering Jordan the use of a free port in the newly constructed Kishon River Harbor in Haifa Bay;

Fourth. In accepting as citizens some 28,000 Arabs who have illegally returned to Israel since hostilities in 1948;

Fifth. In voting for the admission of the Arab State of Libya into the United Nations; and

Sixth. In offering to redraw the Israel-Jordan boundary lines in major trouble areas, so that farm homes might be reunited with farmlands, and so that the constant human pressures to break across artificial and arbitrary boundaries will not continue to be the cause of daily depredations from both sides.

We applaud Israel for seeking to establish a democratic society with full civil, religious, cultural, and political freedom for all its citizens.

First. Eight Arabs are members of the Israel Parliament.

Second. There is in Israel universal education, universal franchise, equal wages for equal work.

We applaud the Zionists and the friends of zionism throughout the world who have long sought to provide a homeland so that Jews who felt the sting of discrimination and the lash of persecution might live in freedom and dignity.

Like their Nazi predecessors, the Communists portray Israel as an agent of British and American expansion because they recognize that the stability, trade, and mutual help flowing from an Israel-Arab peace would forever doom Russian imperialist designs on this strategic and oil-rich area.

The future of the free world hangs in the balance in the Near East. Israel is the light in the darkness.

There are many citizens of Israel who are Christians, Mohammedans, and agnostics. It is a nation of predominantly Jewish population that practices no discrimination and accords complete freedom of religion.

Illinois Audubon Society Opposes Echo Park Dam

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose the letter of Raymond Mostek, conservation committee of the Illinois Audubon Society, Chicago Natural History Museum, Roosevelt Road and Lake Shore Drive, Chicago, Ill., relating to the construction of Echo Park Dam. The letter follows:

ILLINOIS AUDUBON SOCIETY,
CHICAGO NATURAL HISTORY MUSEUM,
Chicago, Ill.

DEAR SIR: The Illinois Audubon Society strongly opposes the construction of Echo Park Dam in Dinosaur National Monument in the Utah-Colorado area. This proposed dam is part of the upper Colorado River project supported by Secretary McKay and President Eisenhower.

We feel that this is being kicked around as a political issue. Ever since the National Park System was adopted and under the tenure of Coolidge, Hoover, Roosevelt, and Truman, no dam has been built in any national park or monument. Congress has vigilantly protected our National Park System, which has often been called the greatest in the world.

To gain cheap political ends, propopents of Echo Park Dam have advanced many distorted arguments. For example, Secretary McKay, who has never been a friend of the conservation movement, declared that but 1,200 people visit the area. Actually over 70,000 came here in 1954. The National Park Service, before it was gagged by Secretary McKay, declared that the effect of the dam on the park would be deplorable.

We feel that should a dam be built at Echo Park, other grand areas, such as Yellowstone, Yosemite, and the Grand Canyon, will also be invaded. Lest such a protest be ignored, one has only to recall that engineers planned to build a dam at Mammoth Cave, Ky., only a few years ago. This would have destroyed forever that grand park as one of the scenic wonders of our Nation. We have also not forgotten that engineers once planned to invade Grand Teton National Park. We have learned long ago that their words cannot be honored.

Furthermore, we condemn the tactics that proponents have used to push this unnecessary project. They have declared that the dam at Echo Park will not destroy any dinosaur remains. That is not now, nor ever was the issue. The main issue is whether a scenic canyon shall forever be destroyed, or a superior national park system, gutted by men who cannot or will not understand why it was created in the first place.

Time and again at previous hearings the Reclamation Bureau has had to revise their figures because they were in error.

So desperate have the dam proponents become that they now declare that unless the dam is built the national defense will suffer. As an added deception, they no longer use the name Echo Park, but refer to the area as Yampa-Lodore.

Our national park system has always been above cheap and petty politics. We urge you to carry on the noble tradition of Congress and vote against Echo Park Dam.

Truly,

RAYMOND MOSTEK,
Conservation Committee, Illinois Audubon Society.

Voting and Attendance Record

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report

of my voting and attendance record during the 1st session of the 81st Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan; 81st Cong., 1st sess.

Roll call No.	Date	Measure, question, and result	Vote
	1949		
1	Jan. 3	Quorum call	Present.
2	Jan. 3	Election of Speaker	Martin.
3	Jan. 3	H. Res. 5, calling for adoption of an amendment to the rules of the House permitting chairmen of committees which have favorably reported legislation to move for the adoption of a resolution providing for the consideration of such legislation if the Committee on Rules has adversely reported or failed to report within 21 calendar days such a resolution for consideration. On adoption. (275–142).	Yea.

196	Aug. 24	Quorum call	Present.
		H. R. 6070 to amend the National Housing Act:	
197	Aug. 24	Motion to adjourn. (Adopted, 186–132)	Nay.
198	Aug. 25	Quorum call	Present.
199	Aug. 25	H. Res. 342, providing tha motions to suspend the rules may be in order on Aug. 25, 1949. (Adopted, 270–1.)	Yea.
200	Sept. 27	Quorum call	Present.
201	Sept. 27	Quorum call	Present.
202	Sept. 27	H. R. 4498, providing additional benefits for certain postal-service employees with respect to annual and sick leave, longevity pay, and promotion. (Passed, 332–2.)	Yea.
203	Sept. 28	Quorum call	Present.
		H. R. 5895, providing military assistance to foreign nations:	
204	Sept. 28	On recommittal of conference report. (Rejected, 113–213.)	Yea.
205	Sept. 28	H. R. 5895—Continued On adoption of conference report. (224–109)	Yea.
206	Sept. 29	Quorum call	Present.
		H. R. 4830, foreign-aid appropriations for 1950:	
207	Sept. 29	On amendment providing that the Administrator of ECA be authorized to issue $150,000,000 of notes for purchase by Secretary of the Treasury for the purpose of providing loans. (Passed, 177–124.)	Nay.
208	Oct. 3	Quorum call	Present.
		H. R. 5903, amending the Hospital Survey and Construction Act, to extend its duration and to provide double amount Federal financial aid for assistance in the construction of hospitals:	
209	Oct. 3	On suspension of rules and passage. (236–43)	Yea.
		H. R. 5739, providing for advance planning of public works by providing for Federal loans to States to aid in surveys and plans for State and municipal public works:	
210	Oct. 3	On suspension of rules and passage. (210–69)	Yea.
211	Oct. 3	Quorum call	Present.
		H. R. 3734, the Army civil-functions appropriation bill:	
212	Oct. 3	On motion to instruct conferees to insist on disagreement to an allocation of any funds for flood control for Gavins Point Dam on the Missouri River. (Rejected, 101–153.)	Nay.
213	Oct. 4	Quorum call	Present.
		H. Res. 372, providing for consideration of H. R. 6000, the Social Security Act, under closed rule prohibiting amendments:	
214	Oct. 4	On adoption of motion ordering previous question on resolution. (175–154.)	Nay.
215	Oct. 4	On adoption of resolution. (189–135)	Nay.
216	Oct. 5	Quorum call	Present.
		H. R. 6000, amending the Social Security Act:	
217	Oct. 5	On recommittal with instructions to report provisions of bill H. R. 6297. (Rejected, 112–232.)	Yea.
218	Oct. 5	On passage. (333–14)	Yea.
		H. R. 3734, making appropriations for civil functions administered by the Department of the Army for 1950:	
219	Oct. 6	On adoption of conference report. (269–18)	Yea.
220	Oct. 10	Quorum call	Present.
221	Oct. 10	Quorum call	Present.
		H. R. 4146, the National Military Establishment appropriation bill for 1950:	
222	Oct. 10	On disagreeing to Senate amendments providing for 48 air groups instead of 58 air groups as passed by the House. (Adopted, 305–1.)	Yea.
223	Oct. 10	Quorum call	Present.
		H. R. 4146, the National Military Establishment appropriation bill for 1950:	
224	Oct. 10	On disagreeing to Senate amendment rescinding $275,000,000 previously approved by Congress for stock-piling strategic materials and banning long-range contracts for the purchase of critical or strategic materials abroad. (Adopted, 305–0.)	Yea.
225	Oct. 10	Quorum call	Present.
226	Oct. 11	Quorum call	Present.
		H. R. 6008, making supplemental appropriations for fiscal year 1950:	
227	Oct. 11	On recommital of conference report with instructions to insist on disagreement to amendment relative to $3,000,000 for National Capital Sesquicentennial Commission. (Rejected, 158–165.)	Yea.
		H. R. 1370, authorizing the appointment of 3 additional judges of the municipal court for the District of Columbia and prescribing the qualifications of appointees:	
288	Oct. 13	On recommital. (Rejected, 30–286)	Yea.
		H. Res. 390, for consideration of S. J. Res. 134, to extend certain provisions of the National Housing Act under a rule prohibiting amendments:	
229	Oct. 13	On adoption. (290–34)	Nay.
230	Oct. 14	Quorum call	Present.
		S. 1008, legalizing basing-point system when not in conflict with antitrust laws:	
231	Oct. 14	On recommital to conferees. (Rejected, 138–178)	Nay.
232	Oct. 14	On adoption of conference report. (200–104)	Yea.
233	Oct. 17	Quorum call	Present.
		S. 2105, authorizing an appropriation of $240,000,000 to stimulate the exploration for strategic and critical ores, metals, and minerals:	
234	Oct. 17	On motion to suspend the rules and pass. (Rejected, 176–118.) (⅔ majority required.)	Yea.
235	Oct. 17	Quorum call	Present.
236	Oct. 18	Quorum call	Present.

The IMUA

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. PILLION. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from the Hawaii Residents' Association, also known as IMUA. This association consists of a group of patriotic citizens in Hawaii dedicated to combating the extensive communistic influences in that Territory. They deserve our highest commendation and our encouragement for their effective efforts to promote Americanism and to expose the foreign subversive infiltrations in Hawaii.

The letter follows:

HAWAII RESIDENTS' ASSOCIATION, INC.,
Honolulu, Hawaii, March 25, 1955.

Representative JOHN R. PILLION,
Old House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE PILLION: This letter is in confirmation of our long-distance telephone conversation as of this date.

As per your request, several items of material available from this office are being sent to you via air mail, special delivery, under separate cover.

We wish to reiterate with emphasis that IMUA, as an organization, is 100 percent

strictly neutral on the question of statehood for Hawaii.

We conduct our fulltime, Territory-wide program strictly on the basis of the three principles listed at the bottom of this page.

Individuals joining IMUA do so for the purpose of carrying out our three point program; and we know that among our membership, are those who are in favor of statehood as well as others who are personally opposed.

In order to keep the record straight, IMUA will appreciate this letter being officially entered in the CONGRESSIONAL RECORD.

Sincerely,

JOHN T. JENKINS,
Executive Vice President.

(Program: 1. Combat communism and all un-American subversive activities. 2. Live and work together in racial harmony. 3. Demonstrate and maintain the American way of life.)

The Screen as a Free Institution

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the most important mediums for mass communication of our ideals and ideas both in the United States and throughout the world is, without question, the motion-picture industry. Because it is so important, it is vitally necessary to keep it free of censorship of a type which could only lead to its deterioration. The industry has long prided itself on its ability to set its own standards on the highest level and to serve the public in manifold ways and in many fields.

That it is an important cultural medium is shown by listing a few of the outstanding pictures of 1954: The Barefoot Contessa, The Caine Mutiny, Carmen Jones, Carnival Story, the Country Girl, Deep in My Heart, Dial M for Murder, The Egyptian, The Glenn Miller Story, Hansel and Gretel, The High and the Mighty, Johnny Guitar, The Last Time I Saw Paris, The Magnificent Obsession, Riot in Cell Block 11, Sabrina, Miss Sadie Thompson, Rear Window, Romeo and Juliet, Seven Brides for Seven Brothers, The Silver Chalice, Susan Slept Here, Three Coins in the Fountain, Vera Cruz, A Star Is Born, There's No Business Like Show Business, 20,000 Leagues Under the Sea, and White Christmas.

I should like to commend to the attention of the Congress two editorials by the President of the Motion Picture Association of America, Eric Johnston, and some short articles discussing various activities of the film industry. These appear in the annual report for 1954 of the association:

THE SCREEN AS A FREE INSTITUTION—A STATEMENT BY THE PRESIDENT

As a medium of international communication, motion pictures are exhibited to a worldwide audience of some 12 billion persons each year. Covering a variety of themes and activities, ranging from history to musical comedy, the primary objective of theatrical films is to furnish entertainment to the public.

In the course of entertaining, motion pictures also portray the cultures, customs, traditions, and values of many lands. By so doing, they make enduring impressions on the hearts and minds of vast audiences the world over.

Whether motion pictures appeal to base taste or high standards, whether they are a force for good or evil; whether they are an instrument generating international understanding or spawning national frictions and distrust—all this depends on the motivations and ideals of those who make films and of those who view them.

Public rejection of unwholesome presentations makes itself strongly felt at the box office, so that movie patrons vote on the kind of entertainment they want and do not want.

To gain public favor, the film need not pander to cheapness, to the lower levels of public taste. Popularity is not in conflict with creativeness and craftsmanship.

FILM INDUSTRY SERVES PUBLIC

To win public acceptance, film industries must serve the public. To flourish in modern society, motion pictures must be true to their function as a mass art. They must heed public need and demand.

If the film industry is to be a force for good, a promoter of the interests of men of good will, it must stand as a free institution. Freedom of the screen must be as zealously guarded and as jealously preserved as freedom of the press.

Freedom of the screen is frequently impaired seriously by governmental interference—even by democratic governments. This interference usually takes three forms—crippling taxation, import quotas, and censorship.

Unreasonable taxes hurt a film industry in its own homeland, but even if there were no such domestic burdens, there is no free film industry in the world that could pay its way on an adequate scale without foreign markets.

Import quotas and taxes may be designed to protect local film enterprises, but in fact they damage them. Discriminations against foreign films only invite arbitrary barriers against the local industry abroad. Even if motion pictures did not require foreign markets, they would not be able to carry out their function as a medium of international exchange were the flow of films around the world to be impeded.

FREE SCREEN VITAL IN OUR SOCIETY

As for censorship, there is no more justification for the governments of freemen to bridle the screen than there is to curb the press. The excuse that motion pictures make a more dramatic impact on people and must therefore be policed by bureaucrats is only further tribute to the importance of films as a medium of communication, of information, and of entertainment. There are adequate and democratic laws to protect the public from unwholesome films, just as there are to protect society from unwholesome books. Prior restraint on movies is neither needed nor welcome. It can only do a disservice to integrity and to understanding.

Responsible film industries recognize their obligations to the public. Our motion picture production code, which is a quarter-century old in 1955, is striking evidence of that.

It takes no special nobility of aim and purpose for film-makers to dedicate themselves to wholesome public interest, to reflect good taste and good judgment. It is in their self-interest to do so.

FILM INDUSTRY LOOKS FORWARD WITH CONFIDENCE

It is not smart to pander to low taste, for though cheap standards would draw audiences for a while, in the long run movies would fall into general disfavor and freedom of the screen would vanish—and so would audiences.

It is not smart to run to the Government for protection. This leads to further official interference and to retaliation by other governments.

It is not smart to seek subsidies, for then filmdom invites invasion by special interests, and loss of patronage and respect.

Nor is it smart for governments and pressure groups to censor, unfairly tax, or pressure their film industries. The price is too high. Then, motion pictures could have a dangerous influence. Then, motion pictures as a free institution would disappear—and free institutions, under attack everywhere in the world today, are too precious to be undermined.

As a free institution, the screen should be supported and defended. The principle is clear. Freemen can remain free only so long as their institutions are free, and the screen is one of them.

It is in this spirit of freedom that the American motion-picture industry has completed another year and looks confidently forward to the future.

Early signs point to economic gains in 1955 which should top the notable progress made the preceding year.

Several factors, first noted in 1953, developed more forcefully through the year and contributed importantly to the brighter prospects for the coming 12 months.

These included significant gains in technological developments and their wider acceptance by the public; increased output of high quality pictures, and record earning for American pictures in overseas markets.

These advances were reflected at the theater boxoffices and there is cause for continuing confidence in the outlook for 1955.

As always there are causes for caution in the industry's future. The costs of picture making have risen. In many spots there are indications that the important foreign market may be tightening up.

Another dampening influence is the continuing high volume of antitrust suits which plague our industry.

As the new year began, however, new efforts to come up with a workable arbitration system seemed to be bearing fruit. While it is still too early for certainty in this area, there is good reason to believe that the industry for the first time is on the threshhold of an arbitration forum where many of its family problems and tensions can be thrashed out in reasonable and friendly fashion.

All in all, I believe the industry will continue to turn out the finest kind of entertainment—and the public will continue to show its appreciation by increasing the totals at the world boxoffice.

ERIC JOHNSTON.

FREE FLOW OF FILMS VITAL TO ALL NATIONS—A STATEMENT BY THE PRESIDENT

The leading position of the American film industry in the field of international entertainment was reinforced over the past year as boxoffice response in other countries continued to be substantial.

The growing volume of paid admissions abroad to American motion pictures is eloquent evidence of the worldwide appeal of our films. The attendance figures also reflect the importance of foreign markets from which our members now derive a revenue that has been substantially beyond 40 percent of their total rentals.

Comforting and complimentary as international popularity may be, it is not without its mixed blessings. In its wake have come mounting problems of exchange, taxation, import restrictions and other forms of discrimination against the American film industry.

To meet such problems or to prevent new ones from arising, the Motion Picture Export Association must enter into continuing negotiations with the governments of many countries and must establish an understanding relationship with the leaders of other film industries.

It is essential that such negotiations and consultations be carried on adequately in future. Countries which think they are protecting local film enterprises by erecting barriers against outside competition, are in fact, damaging their own industries, and this must be made clear to them.

The reason is clear. No nation's film industry can continue to operate independently and on an adequate scale without foreign markets. Nobody's domestic patronage is big enough to permit the industry to flourish as it should. Hence the free flow of films around the world must be of mutual concern to all responsible film producers.

In this regard, despite the fact that a considerable portion of the world's screen playing time is devoted to American motion pictures, our industry has taken the lead. We have a real interest in the welfare of other filmmakers and we have shown this interest in most concrete terms.

There are no restrictions against the import and presentation of foreign films in the United States and whenever barriers have been proposed, our industry has taken a firm stand against them.

What is more, as many of our colleagues abroad can confirm, we have given genuine support and no little assistance to the circulation and exhibition of foreign films in the United States. To demonstrate this point, last year about 190 foreign films were theatrically exhibited in the United States. Many of these were screened by our association for leading American distributors. Other forms of practical assistance were likewise offered to foreign producers.

This is a healthy stimulus which aids the industry to perform its functions as a mass art medium, meeting and helping to elevate public entertainment standards, reflecting the values, customs and practices of society, and serving as an instrumentality of understanding among the peoples of the world.

ERIC JOHNSTON.

COMMUNITY RELATIONS

The community relations department's activities constitute another facet in the association's program of self-regulation. It provides the opportunity for interested national organizations to appraise the result of the earlier steps in the program to the end that they may give their support to approved pictures. It interprets the operation of the program to public groups and the public's reaction to pictures. The result is a continually growing national recognition of motion pictures as an essential medium of entertainment.

Over the past 20 years local organizations, concerned exclusively with the influences of films, have grown up in small as well as large cities. They have called themselves Motion Picture Councils, Cinema Clubs, Endorsers of Photoplays, Film Forums, depending upon the accent of their interest in general culture, art, entertainment, or education.

At a conference in New York in March 1954, they voted to federate and are now incorporated as a national organization known as the Federation of Motion Picture Councils. They have in common an antipathy to legal censorship, and the desire to further the constructive influence of the commercial theater in the community.

PREVIEWING ACTIVITIES

An integral part of the association's community relations program is the dissemination of Joint Estimates of Current Entertainment Films. This bulletin is produced every 2 weeks by the film estimate board of national organizations (FEBNO), made up of the motion picture chairmen of the following 13 organizations: American Association of University Women, American Jewish Committee, American Library Association, Children's Film Library Committee, National Council of Women, National Society of the Daughters of the American Revolution, National Federation of Music Clubs, General Federation of Women's Clubs, Girl Scouts of the United States of America, Protestant Motion Picture Council, United Church Women, National Congress of Parents and Teachers, and Schools Motion Picture Committee.

By providing previewing facilities for films in advance of release dates, MPAA enables this board to appraise and rate movies for the guidance of their 40 million members, as well as many more community groups, schools, churches, and other institutions. This work on the part of FEBNO is entirely voluntary and provides American families with an objective, unbiased guide to moviegoing.

In summarizing their motion picture appraisals for 1954, FEBNO noted that there was a higher percentage of outstanding pictures than in any year since 1947. Thirty-two films, 14 percent of the 232 subjects reviewed, received starred ratings. These films, according to the board, represent a consistently greater degree of artistic perfection than those starred in previous years.

It was noted that the year showed a trend toward more mature treatment of stories in films, but at the same time almost half of the pictures were rated suitable for all theater patrons 13 years and over.

CHILDREN'S FILM LIBRARY

The Children's Film Library offers a permanent reservoir of top entertainment films for children from the ages of 8 to 12. These pictures, which are made available for Saturday matinee showings, are drawn from the theatrical pictures that have completed their regular runs and have been recommended by the Children's Film Library Committee.

This technique of selecting films for children on the basis of suitability plus entertainment value as demonstrated by the "wiggle test" was devised by MPAA and has been utilized for the past 8 years. The "wiggle test" consists of a series of special test previews in which reactions of the children viewing films under regular theater conditions are carefully observed and charted.

In Canada, the Children's Film Library, a sister group to our own, has extended its activities to include the recommendation of family films. As a result of cooperative work, carried on by the United States-Canadian groups, an expanded organization, the Canadian Consultants on Entertainment Films was formed by our neighbor to the north.

EDUCATIONAL SERVICES

The growing use of motion pictures in the Nation's schools and colleges has increased the significance of the MPAA's educational services program.

Under this program, carefully-selected short subjects and special-purpose films excerpted from feature pictures after their theatrical runs have been made available to education. Success of the program is seen in the growing recognition by the educational world of the motion picture as a close and effective ally.

Education's acceptance of the value of the theatrical film through the association's affiliate, Teaching Film Custodians, also has opened the doors to a greater flow of special films from the 16-mm. departments of the member companies to the classrooms of the Nation.

Due to the helpful cooperation of the cataloging division of the Library of Congress, a standard printed card catalogue has been developed in which information about the industry subjects is recorded for distribution to schools and to the 2,700 film libraries throughout the country.

Films for the TFC program are selected by special committee of teachers who are chosen through the cooperation of several national educational organizations. These committees provide technical advice on picture selection and on excerpting pictures in their specialized fields.

The association's educational services department is actively extending and improving the use of the motion picture and is bringing to the attention of the educational public the prestige, content and usefulness of the industry's product and service.

Two examples of the association's activities in 1954 are these:

A statewide conference was held in Iowa to which were invited top executives from State-supported and private colleges, the diocesan schools systems, the State department of public instruction, the County Superintendents' Association and from the State audio-visual group. After 4 days of planning and discussion, a permanent committee was formed to administer a program for improving classroom instruction through the use of motion pictures.

A similar conference was held in joint sponsorship with the Conference of Presidents of Negro Land Grant Colleges in May 1954. Negro educators from 41 colleges were in attendance—presidents, deans, librarians, audio-visual executives—to discuss program development and administration in this educational motion picture field. The colleges represented train most of the Negro teachers. The permanent committee which was set up at the conference is planning activities which it feels will bring many improvements in meeting educational responsibilities.

Veto Threats

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. McCORMACK. Mr. Speaker, the within editorial Veto Threats and opposing a Presidential veto of the postal pay raise bill, appearing in the Boston Post of April 23, 1955, is a sound and logical one:

VETO THREATS

Threats of Presidential veto of the postal-raise bill passed by the House 224 to 189, which provides a raise of 8.2 percent at a cost of $171 million, must be ignored by the Congress. The postal workers deserve and should be given the higher increase proposed by the House.

While the vote adhered fairly closely to party lines, the fact that 22 Republicans and 17 Democrats voted in opposition to the party position shows that there is some irresolution.

In simple justice to the postal workers, who are notoriously underpaid and overworked, the Congress must not on this issue be intimidated by White House veto threats. If the Senate-House compromise, which will probably be somewhere in the vicinity of 8.5 percent, is vetoed, the Congress is urged to have the courage to pass the postal pay-raise bill over the veto.

The President made a partisan issue of the postal pay raise by setting an arbitrary figure which he would approve. The issue should have been decided by the Congress on its merits, and its merits are such that the postal workers would have been given an equitable increase.

Educating the Public

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I take the liberty of including the following speech delivered by Dr. G. Keith Funston, president of the New York Stock Exchange, before the governors of the Association of Stock Exchange Firms. As a Representative from the city of New York, I deem it my pleasurable duty to inform the country of the importance to our economy of the continued healthful existence of the New York Stock Exchange.

The speech follows:

I welcome the opportunity to talk with you about the stock exchange and some of our most important work.

Today in Washington the curtain rolled down on the first phase of a Senate committee study which I suspect you have been following with interest.

From the start, the exchange approached this hearing in a spirit of full cooperation and with feelings of hope. It was a wonderful opportunity to furnish the committee—and the public—with a detailed picture of what the exchange is, how it operates, and how vital is its role. This educational story is, after all, one we are striving hard to tell day after day. The hearings provided for viewing on a much wider stage than ever before the essential facts about the stock market. We think that the study will result in greatly increased public understanding and in creating a more informed investment climate.

It is, of course, too early to assess the impact or results of the hearings. But already one thing is apparent: the need for public education—to protect the public against emotional and uninformed actions—is even greater than we thought. For the hearings have made clear that through laws and regulations safeguards can be set up to protect investors against many things, but not against the hazards of their own lack of knowledge or imprudence. This means that if we are going to achieve a more enlightened economic democracy more education is essential.

GOAL—AN INFORMED PEOPLE

Now education is a painstaking process. Knowledge cannot be legislated or shot into the bloodstream. All of this puts a correspondingly greater burden on the exchange's educational program. In undertaking it we have for many years been as proud of its development as we are aware of our responsibilities. Our long-term goal is a nation of financially able shareowners—an informed people able to exercise a greater and greater role in the country's economic growth—guarding their economic democracy as jealously as their political democracy.

We hope that some day shareowners will regard their right to a corporate vote as an obligation to vote.

It is with this view in mind that the exchange insists that all common stocks listed thereon carry the right to vote. It also explains why we urge that proxies be solicited so that the right to vote can be exercised conveniently. Getting out the corporate vote is very much a part of our program.

UNDERSTANDING SHARE OWNERSHIP

As a result of our efforts, well over 90 percent of our listed domestic companies regularly solicit proxies. To give impetus to this program, just a few days ago the board of governors of the exchange authorized a new listing requirement bearing on this subject. Effective June 1, 1955, any corporation which seeks initial listing on the exchange must agree to solicit proxies for all stockholder meetings. Companies whose stock is now traded and who desire to list additional securities will be expected to conform to this new standard unless there is good reason for exception.

The exchange's educational work is significantly different from the merchandising efforts of our member firms and from their activities in buying and selling securities for their customers. It should be clear the exchange is not, never has been, and never will be, in the business of recommending the purchase or sale of any specific stock, or the timing of any market transaction.

The exchange's educational program is institutional, designed to encourage every American to understand the meaning of bonds and common stock, to know what the stock exchange represents, to realize the part shareownership can play in our economy and even perhaps in one's own investment program.

We think that with such understanding will come a wholesome and perfectly healthy desire on the part of millions of people to invest some of their funds, directly and with an intelligent appreciation of the risk, in our great businesses. We think this is necessary if American business is to obtain the huge amounts of equity capital which it will need to bring about full employment and a continuing rise in the standard of living.

INSEPARABLE RESPONSIBILITIES

Our educational program arises from our basic responsibilities to member firms, listed companies, the individual investor, and the Nation at large.

These responsibilities are: First, to operate a market place, and second, to maintain a healthy market. As a practical matter the two are inseparable. Through our facilities millions of Americans can carry out their investment decisions quickly, conveniently, and at low cost. Without these facilities industry's task of raising new capital would be enormously complicated and frequently impossible.

MAINTAINING A HEALTHY MARKET

But this is only part of the story. Our physical market place is only as good—or only as effective—as it is efficient in meeting investors' needs. For investors need a liquid market—a place where the number of buy-and-sell orders, executed by open outcry, are present in large enough numbers to keep price fluctuations at a minimum.

A healthy, liquid market just doesn't happen. Probably the least understood of the exchange's functions are the self-imposed standards, rigidly enforced, that enable the exchange to do its part in keeping the market healthy. I think these standards are unique and we have a right to be proud of them: we require listed companies to meet and maintain exacting standards; we urge investors to seek sound advice, recognizing risks as well as rewards; we concern ourselves vigorously with problems of taxation, regulation, and economic developments, as they are reflected in our market place; and we insist that member firms adhere to a bookful of stringent regulations.

The exchange is more than a large hall enclosing a mechanism where shares are bought and sold. It is a living thing—the heart of an economic system that is modern, workable, and free—an instrument vested with broad public interest.

BROAD PROGRAM DEVELOPED

Not many people realize that the New York Stock Exchange, usually thought of as the essence of bigness, is really a voluntary association of small businesses which provide professional services. We estimate that about 40 percent of our member firms dealing with the public have fewer than 50 employees. With their limited personnel and resources they must concentrate on research and selling activities. In an effort to do collectively that which could not be done individually, the exchange, representing all its member firms, properly began a broad educational program on a national basis, devoted to explaining the fundamentals of security ownership.

Today, the exchange's educational story is centered on the theme, "Own your share of American business." This story has reached more people, more effectively than ever before. Many persons, freshly aware of it, assume this effort is a new one.

REWARDS AND RISKS

Actually, it traces back to the close of World War II. Then, studying the Nation's enormous industrial expansion, the exchange along with many others saw very clearly industry's need for more and more equity capital.

Where was it to come from? What better or healthier place than the accumulated savings of millions of Americans—providing always that they understood in broad terms the values of wider share ownership, and recognized in bread-and-butter terms its risks as well as rewards. In 1945 my predecessor, Emil Schram, introducing a new long-range advertising program, authorized by the board of governors, commented: "We shall discuss the risks and responsibilities inherent in all forms of ownership, including securities. We shall preach against reckless use of our facilities, and for the use of available facts."

The exchange's program is drafted for the millions of people unfamiliar with the share ownership story. We departed from the drab economic phraseology that mystifies most people and discourages many. We are exploring new channels of communication. We are asking for help in spreading this story, particularly from organizations and companies like yours who share our general objectives. That help is frequently and generously forthcoming.

PIONEERING RESEARCH UNDERTAKEN

We have embarked on pioneering research that provided the first full-length portrait of the United States shareholder. Incredible as it may seem now, until the 1952 Brookings report neither the exchange community nor the Nation knew how many people owned our public companies, or where they lived, or what their incomes were.

As part of our efforts to expand the services of member firms to broader segments of the public, the monthly investment plan was developed in 1954. It enables people to buy shares of American business regularly in small cash amounts on a sound basis. Also late in 1954—and with the governors of this very association of Stock Exchange firms carrying the ball—the first steps were taken to seek legislation facilitating gifts of stock to children. It promises wonderful results—the State of Georgia has already adopted the recommended uniform State law.

As the exchange's program developed it rested on the basic premise that broader ownership of our public corporations would move the United States closer to a true economic democracy, and this would inevitably strengthen the belief in our free enterprise system here and abroad. We believe that every American has a right to own stock and that this right should be made achievable and not merely be theoretical.

It is our conviction that in a Nation of 160 million people the privilege of owning our industrial might should be drectly exercised by more than the 7½ million people—who presently are shareowners in public corporations.

WHAT NYSE EMPHASIZES

The only restaints on this ownership which I would suggest, are those emphasized in our educational program, but which the investor must, in the final analysis, impose on himself: Does he have adequate knowledge about the risks and the rewards of common-stock investments; does he obtain sound advice and information; does he assume no greater risks than his financial capacity to bear them?

The exchange is presenting these facts fully and completely. Because we place such over riding importance on informed investors, and because we fully recognize the hazards to the public itself of intemperate action, all our educational efforts focus on these long-established themes: Stock ownership has its risks as well as rewards; sound investment programs need cash reserves and life insurance; any investment should be based on facts, reliable advice, periodic review.

HUNCH-PLAYERS NOT WANTED

We don't want hunch-players in the market, or people who heard a hot tip in the elevator, or those who can't afford the risk of owning common stock. Their presence will only hurt themselves, the exchange, the securities business, and the economy in general.

While we stress these themes we also make very clear the two facts I mentioned earlier: The exchange never recommends the purchase or sale of any specific securities. It has no knowledge or opinion as to whether the market in general is too high or too low at any given time. I emphasized this in my testimony before the Senate Banking and Currency Committee and added: "The best that anyone can do is to assess whether the price asked for a particular stock is too high in relation to its apparent value." Such guidance is obviously in the province of our member firms. They deal with each investor's personal problems and requirements.

PROGRAM STRESSES FUNDAMENTALS

Market studies form a continuing part of our program. By revealing public knowledge and attitudes, research points the direction in which educational efforts move. We have built our program, guided not so much by what we would have liked to tell, but by what we learned needed to be told. Much of our work still must be devoted to the ABC's of stock ownership, dividends, the need for increased equity capital, and the work of the exchange.

As these fundamentals are better grasped, risk-taking is seen as one of the things that developed the country * * * people understand that today progress and expansion grow out of the pooled savings of millions. In this light, the role the exchange performs takes on new significance, as do the services and facilities offered by our member firms.

I'm pleased that the exchange has broadened its efforts without materially increasing costs. Advertising expenditures since 1946 have remained about the same—at approximately $500,000 a year. This is indeed a modest budget weighed against the impressive $1,480,000 spent in 1953 for advertising by the Institute of Life Insurance, the $1,375,000 spent by the American Petroleum Institute, and the $1,400,000 spent by the Association of American Railroads.

You may wonder, can results be measured?

I think they can, though I grant the difficulty of trying to pin a precise measurement on an educational effort.

Over the years we have noted improved public understanding of the essential functions of the exchange. Similarly, people's knowledge of bonds and common stock is slowly but surely increasing. Testimony before the Senate committee, and editorial comment in the Nation's press, lead me to believe that today more people appreciate the vital contribution of the exchange than ever before.

What we have learned in our surveys about new shareowners, also provides us with encouraging data on the success of our educational efforts.

First, shareowners are interested primarily in long-term investment. There was dramatic evidence of this in a study made on 2 selected days last December, during a period of high market activity. Some 80 percent of shares purchased for new accounts, it was found, were for long-term investment. Long-term transactions for both old and new accounts were, in fact, the most important single source of volume.

THE NEW SHAREOWNERS

Of the million new shareowners which we estimate have been added in the past 3 years, a sizable portion are accounted for by company stock purchase plans. Since the Brookings survey was made available, American Telephone & Telegraph will have added, by the end of this month, an estimated 100,000 employees to its stockholder list; General Electric another 45,000. Certainly many of these represent "first-time" stockholders and I think you would agree they are for the long pull.

Second, few new investors are buying on margin. Our December public transaction study revealed less than 12 percent of new investors were opening margin accounts. This suggests new investors are not adding significantly to the amount of credit outstanding.

A profile of monthly investment plan participants adds to the picture. These people are buying well-established stocks for the long term. Eighty-one percent of them are also making regular purchases of life insurance and 55 percent are banking savings regularly. Moreover, a sample cross-section of MIP investors shows they are convinced of the soundness of their programs—95 percent say they would recommend similar plans to friends; 90 percent stated they would continue their plans should prices drop. They recognize, perhaps in a nontechnical way, the principle of dollar cost averaging.

FINE STOCKS—QUALIFIED INVESTORS

The weight of evidence as it relates to securities listed on the New York Stock Exchange, and transactions by our members and member firms, shows shareownership today generally attracting qualified investors for the right reasons.

As a rule new investors are seeking good dividends and long-term growth. They are buying fine stocks, using credit sparingly. They seem to understand the risks as well as the rewards of stock ownership. And they are contributing to the market's liquidity.

Despite this, there is nothing to suggest we can relax our efforts. The job ahead is enormous.

We recently completed three major research projects assembled in a new report called "The Public Speaks to the Exchange Community." Summarized, these studies show the great need for public education—and a great desire for it as well.

WHAT THE PUBLIC THINKS

We found only 23 percent of the adult population know what common stock is, and only 24 percent can describe correctly the exchange's functions. Only 10 percent indicated they would even consider common stock as a way to invest extra money.

We were struck as we examined the survey results with two findings that seem to belie each other: some 40 million adults favor wider shareownership, yet only about 23 million can adequately define common stock. We see in these two findings an evidence of a need for much greater education. But more than that, we see that the concept of ownership sets up a healthy and attractive image. People are biased, favorably, toward the idea of ownership even when they are unable to define it adequately. This underlines the importance of assisting them, through education, to achieve the right kind of ownership in the right way.

Education, of course, is an evolutionary process. Because some 40 million Americans believe in the principle of broader shareownership, it doesn't follow that they will, or should, invest in common stocks. But we believe everyone ought to be encouraged to find out about stock ownership, to get the facts, and to seek competent advice before deciding to buy or to sell.

TOMORROW'S SHAREHOLDERS

As the ownership base is broadened—as I think it must be if industry is to obtain the funds to expand—greater participation is most apt to come from the high and middle income groups.

For example, 4 out of 5 professional men, executives, engineers, merchants, and salesmen—5½ million strong—own no stock in public companies. Their accumulated savings are large.

How many people will choose to invest in stocks? I wouldn't hazard a guess. A decision to own shares should be the last of a series of steps, preceded by information and deliberation. We know that 4 million nonshareowning families actually considered stock purchases last year. Half of this group earned over $5,000, and this may suggest the size of our immediate, interested audience. It also underscores our educational responsibilities.

These responsibilities take many forms. Last year the increased activity of phony Canadian and United States stock brokers dealing in unlisted mining shares prompted us to denonuce these rackets. The public response was an illustration, more dramatic than most, that we must discourage tips, hunches and flights of fancy, and substitute for them a solid educational program.

AN EXCITING PROSPECT

We are under no illusions about the size of the job ahead, or the responsibility we share with member firms, listed companies, educational and civic organizations to see it carried out. It is big enough to keep us all occupied for many years; important enough to warrant a steadily greater effort.

Through education we have the chance to help people everywhere evaluate the shareownership story.

This is an exciting prospect. We are happy to dedicate ourselves to it.

Grand Rapids Learns About the Aging

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. FORD. Mr. Speaker, there is wide concern in our country relative to the sociological and personal problems of our senior citizens. Senator CHARLES E. POTTER, senior Senator from my State, has asked that a special commission be established to study these problems of the aged.

I was pleased, therefore, to read in the May 1954 issue of Adult Leadership, a story about what is being done in Grand Rapids, Mich.—which I have the privilege

of representing—to meet certain aspects of the problems of our older citizens.

Under permission to extend my remarks in the RECORD, I include the article written by Wilma Donahue and entitled "Grand Rapids Learns About the Aging":

GRAND RAPIDS LEARNS ABOUT THE AGING

(By Wilma Donahue)

The community of Grand Rapids, Mich., has a population of 175,000, of which more than average are 65 years and over. These older people have helped build the community; they have worked in its furniture factories which have brought fame to their city; they have built its churches and its schools, and have helped establish its local traditions; they have raised their families who have, in turn, continued to reside in the community.

The older people of Grand Rapids do not want to leave their city. Yet they, like older people in almost every other community, have a number of serious unmet needs. They need jobs but find it hard to get employment because of their age; they need housing better suited in size and design to their changing family size and diminishing energies; they need companionship because they have lost spouses and friends and have met social rejections; they need special health and housekeeping services but find that the community has little awareness of the importance of these services to their well-being; but most of all, they need to have their community and fellow citizens know, appreciate, and use their skills.

In 1952 a group who had been meeting together in an adult education class on education for maturity decided that they were ready to do something to create more opportunities for older people like themselves to meet their own needs and show the community that its older people were still an asset. They asked for a course in which they could learn the techniques needed for developing programs to serve the needs of the older people in the community. Accordingly, an 8-week course entitled "Learning for Longer Living: Practice in Community Service for the Aging" was scheduled.

The first step in arranging for the course was taken by Miss Helen Gleason, director of the Grand Rapids Extension Center, University of Michigan. She appointed an advisory committee of interested citizens to review plans for the total project and to offer continuing counsel and guidance in the identification and utilization of community resources.

The next step was to secure the services of the staff of the division of gerontology of the university as teachers of the skills needed and as supervisors of field projects. Working within the framework of an established university extension program, this staff and the advisory committee developed this fourfold plan of action:

1. The student body would work in project groups, with each group under the immediate supervision of one of the university staff. Students would choose the type of project they wanted and select their group.

2. Each of the project groups would analyze the community in order to make recommendations for community programs for older people. These students would later constitute a source of trained leadership for future work.

3. Each project group would appoint its own consultant committee composed of people in the community having concern and responsibility in their project area.

4. Each project would cooperate with existing community plans and organizations. Every effort would be made to integrate the project with the community's planning for its older people and not let it be simply a superimposed laboratory exercise.

In consultation with a group of the prospective students, the staff and advisory committee developed the meeting plan which follows. The class convened at 5:30 p. m. At this time the students and staff had a box supper. The boxes were supplied by one of the churches at 50 cents each. The university provided free coffee. Following the meal there were a few minutes' recreation under the supervision of a weekly student committee. At 6:30 a 15-minute general session of the class gave time for a discussion of matters of concern to all project groups. Individual groups then met to plan their work for the ensuing week. Shortly before the close of the class period at 8 p. m., the entire group reconvened to hear progress reports and future plans.

Most of the 25 men and women who enrolled had been members of previous courses dealing with adjustment to later maturity, and thus had already acquired considerable knowledge about the problems of the aging. Although the average age of the student group was slightly more than 60 years, the range extended from the late thirty's through the seventies.

At the first session the class reviewed census data for Grand Rapids, and a study of available community programs and facilities for older people.

For example, the Council of Social Agencies had established a committee on aging more than 2 years before to make studies of the needs of old people and make recommendations to the council. The recreation department had sponsored several community parties for older people and had established a number of "over-sixty clubs" to provide social outlets.

General concern about living arrangements and shelter had led to the building of a generous number of old-age homes under the auspices of churches and other private groups. Many nursing homes were established to fill the need for sheltered care of the chronically ill. The museum and public libraries were offering programs suitable to the interests of older people, such as special exhibits, hobby classes, and great books courses. The public schools had a rich program in which adults could learn new skills and could keep mentally alert through participation in discussion. The University of Michigan extension service had for a number of years offered preparation for retirement through its courses in living in the later years.

Although it appeared from the listing of programs and services that much had already been done for the older people in Grand Rapids, the students declared there was too little being done in the areas which had already received attention, there were other important problems which had been overlooked altogether, and there had been too little education of the community about the existing programs and about the unmet needs of older people.

The students selected three projects which they felt would make a definite contribution to the community and be within the range of their abilities to execute. The three projects were: (1) employment opportunities for older people; (2) friendly visiting for older people; and (3) education of the community about the values of older citizens.

How did the working groups set about obtaining their goals and what did they accomplish? Let us illustrate by describing in some detail the education project.

Seven people selected the education project. At the first meeting they elected a student as chairman and decided that the faculty supervisor should serve in the role of adviser and resource person. They also defined four goals for their project: (1) To inform the community about the problems arising from the aging of the population; (2) to call attention to older citizens as assets to the community; (3) to demonstrate the contribution which older people make to the work and culture of the community; and (4) to illustrate the persistence of skills and abilities of older people and to show the relationship to health and happiness of the use of such skills in purposeful activity.

With these goals established, the students considered ways of attaining them. They decided to issue a weekly bulletin describing the work of all three project groups. Because they considered it imperative to use the regular channels of mass communication, the students planned as part of their first assignment to interview representatives of the press, radio, television, library, museum, and advertising agencies to invite them to serve on their consultant committee.

Each student assumed responsibility for at least one project and agreed to serve also as a member of the planning committee for one or more of the other activities undertaken by the education group. Some of the projects were to be carried out during the 8-week period in which the class was meeting; others were to be planned during this time but were to be carried out in the several months following the official close of the course.

At subsequent class meetings the students reported their progress, and developed plans for the next week's activities. The consultant committee met with the group upon several occasions; and the group also kept a liaison with the other project groups in order to represent their work adequately in the programs and news presented to the community.

Here is what this project group of seven people did:

Publications: Two local newspapers ran a total of 10 stories about various phases of the class projects. A full-page spread of pictures appeared of older people at work in community service. The University of Michigan Extension News, reaching thousands of people throughout the country, carried a detailed report of the course.

One of the most important efforts of the group was the publication of the weekly Bulletin, which was distributed to all members of the class, to all consultant committees, and to other people who requested it. The circulation reached a peak of 150 copies per week. The Bulletin contained weekly progress reports and pertinent items of information about the problems of the aging.

A directory of recreational opportunities for older people in Grand Rapids was published with the following sections: social recreation; arts, crafts, music, and literature, museums, art galleries, and zoo; education; radio and television; local tours. The Grand Rapids recreation department, city library, and other community agencies distributed copies of the directory widely.

Radio: The class arranged with the local radio station for a series of six 15-minute broadcasts. The students selected the topics, developed the content of the programs, and took part in the broadcasts. The following topics were discussed: friendly visiting; occupational opportunities for older people; homes for old people; what churches can do to serve the aging; recreation for older people; cultural interests as a source of enjoyment for older people. The students managed to secure the dinner hour for these broadcasts, although to give them this time, the station had to cancel the time of a popular radio news commentator.

Television: The students used the theme of the persistence of skills learned in early life for a 30-minute telecast. Two older people demonstrated skills which they had learned early in life, and 3 members of the

class held a discussion about the importance of engaging in constructive activities throughout life.

Exhibits and demonstrations: A hobby a week library program was carried out after the close of the class. A committee from the library worked with the education project committee in the planning and presentation of this activity. The class members assumed responsibility for identifying the craft to be exhibited, for collecting the items to be shown, and for a live demonstration by an older craftsman at least twice during each week. The library displayed books describing the craft on exhibit and served punch during the afternoons on which the demonstrations were held. Some of the students served as hostesses. This project lasted for 16 weeks.

Another project which was planned during the class but which was carried out several months later was the Grand Rapids senior skill show. Working with the local museum, the class held a 2-week exhibit, displaying the work of over 100 senior citizens. The students planned the show, collected the items to be exhibited, and made arrangements for all types of publicity. The museum staff arranged the exhibit, which over 8,000 people viewed during the 2-week period. The senior skills show has since become an annual event in the community.

Community conference on aging: As a final effort, the Education Group decided to hold a 1-day Grand Rapids Conference on Aging, at which each of the three project groups would report its finding and make suggestions for further community action.

For the first time during the work of the class, the faculty advisers became somewhat anxious and suggested that the group might want to invite some of the so-called experts in fields of employment, friendly visiting, and education to take part in the conference program along with the students. This suggestion was a mistake because the students quite stole the show from the experts.

At this conference, the community learned that the social agencies had reported at least 829 older people in need of friendly visitors. The students recommended, and the Council of Social Agencies subsequently established, a friendly visiting service through the Volunteer Service Bureau of the Council.

The group surveying occupational opportunities for older people reported that 50 percent of the large Grand Rapids industrial companies surveyed would not employ workers 65 and over under any circumstances. The survey also revealed, however, that the older workers currently employed were considered by their employers to have better attendance records and to show less job turnover than younger workers; and in no single work characteristic were the older workers generally inferior.

The students recommended that special counselors be appointed in private and public employment agencies whose duty it would be to advise older job applicants and to develop job opportunities for them.

There can be little doubt that the older people who participated in this course felt needed, not because they were made to feel needed, but because they found that they were needed. They had discovered that there were important tasks to be done which they, more appropriately than any other group, could undertake and carry through successfully. They had pointed out needs; they had initiated community action; and they had acquired the cooperation of important organizations and individuals in carrying forward their plans. And most importantly, they had played a role familiar to them in the past, one in which they had responsibility and opportunity for exercising personal initiative and individual choice.

Hostile Neighbors Still Ring State

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. MULTER. Mr. Speaker, on this, the seventh anniversary of Israel's independence, I direct the attention of our colleagues to the following article written by Miss Ruth Gruber, which appeared in the April 24, 1955, issue of the New York Herald Tribune:

ISRAEL'S SEVENTH BIRTHDAY—HOSTILE NEIGHBORS STILL RING STATE

(By Ruth Gruber)

Seven years have passed since Israel was born—the proud first child of the United Nations. And once again, as on that warm Friday afternoon when David Ben-Gurion proclaimed the new state, the people of Israel are set to celebrate the miracle of freedom—surrounded by hostile neighbors.

This year the birthday—always the fifth of Iyar in the Hebrew calendar—falls on April 27. So on Wednesday, 1,500,000 Israelis will parade, or cheer paraders, down the sun-drenched streets of Tel Aviv, Jerusalem, and Haifa.

TEMPERED ENTHUSIASM

From the Galilee, in the north, to the Negev, Israel's wild south, pioneers will lay down their shovels and divining rods, put on their best clothes and dance, sing and orate, much like the pioneers who opened America's wild West, danced, sang, and shot off firecrackers on July 4.

But the celebrations will be tempered. For Israel, caught in the ring of Arab hostility, is more acutely aware than any other nation on the globe, that she is part of a world shrunken by jet planes and electronically tapped by radar.

Israel's tensions are not only military—they are political, too. Israel was the only nation in the Middle East not invited to the Asian-African conference at Bandung, Indonesia. Those who called the conference were unwilling to resist Arab pressure to keep Israel out.

THE GAZA STRIP

There have been many military incidents on Israel's borders in the years since its founding. But those of the last 6 months have been largely pinpointed on the Egyptian frontier near the Gaza strip. Thus Gaza, a Bible memory since Samson, blinded and shorn of his strength, pulled down the pillars of the Temple of Dagon, killing himself and the Philistines, has become front-page news.

Gaza, a 28-mile strip of land directly south of Tel Aviv, has been Egyptian only 6 years, being part of the Palestine mainland prior to the 1949 armistic agreement, which left it under Egyptian control.

Today, Gaza mirrors the tensions in the Middle East—political and human. Here are the two sides of the refugee coin.

ARAB AND JEW

On the Egyptian side, still idle and fed by the U. N., live some 200,000 Arab refugees, the victims of the invasion of Israel 7 years ago. On the Israel side are Jewish refugees from the Arab states, changing the face of the desert and making their own homes. Joining others from Africa and Europe, they are building, drilling for water, prospecting for minerals.

Two weeks ago, the 72d settlement in this area, with the name Eshbol, was founded by a group from Iran. They found shelters, a hospital clinic, a store, school, and kindergarten waiting for them.

Arab raids, infiltration, and reprisals have been marking life along the Gaza strip. Most U. N. nations agree there will be no peace in Gaza—or in the Middle East—until the Arab States sit down at a conference table with Israel to talk peace, and a settlement of the refugee problem. This the Arabs have consistently refused to do.

Just a few months ago, Egypt's Minister of National Guidance declared: "Egypt will strive to erase the shame of the Palestine war. Even if Israel should fulfill the U. N. resolutions, we will not sign a peace with her. Even if Israel should consist only of Tel Aviv, we will not put up with that."

NEW DEFENSE LINE

America and Britain, though eager for peace in the area, are now attempting to fortify the northern tier of states in the Middle East against Communist expansion. The line runs from Turkey to Pakistan.

The Israelis have no quarrel with this policy, but if there is an alliance, they want to be included. Meanwhile, they contend, American arms for Iraq, and British equipment for Egypt, can have a sinister meaning for Israel in another Arab war against the young state.

The Israeli man in the street has a western outlook, and feels that his country is pro-American because democracy, too, is the new state's way of life. But he fears Israel may be the victim of its own virtue. She is already on the western side; it is the Arabs who must be wooed.

He feels that Israel's only recourse is to strengthen its own army—second in strength only to Turkey's—tighten its border patrols, and go ahead with the job of national housekeeping.

FANTASTIC GROWTH

Seven years in the life of a nation are short, and often quickly forgotten. But the first 7 years can be as fateful as in the life of a child. This period has seen fantastic growth and incredible changes in Israel. Israel took in more than 750,000 new immigrants, doubling her population. It was one of the largest mass rescues of people in history.

There still isn't one cohesive Israel, but it is gradually being formed. The early "pressure-cooker" method of absorbing newcomers, getting them to discard their costumes and forget their past, has been replaced by the "slow-broil" process. Under this theory, each native group keeps its own flavor, but the juices of all groups are merged.

Thus cave dwellers from Tripoli continue to weave magnificent rugs, but they learn new skills, too. Yemenites, innocent of the mysteries of electricity and flush-plumbing, now navigate ships.

It is a startling experience to enter a plant in Yuval Gad, for example, and see the welders wearing face shields as protection against the arc, then see them lift the shields and reveal faces with side curls—faces from the pages of Genesis and Exodus.

UNEXPECTED SKILLS

Many immigrants have revealed badly needed skills. Iraqui Jews largely operate the railroad; Moroccans and Iraquis are in the post and telegraph system; doctors, nurses, and attendants from Baghdad, trained in British hospitals, run the Health Ministry.

For skilled people, there is no unemployment. There is some seasonal unemployment, but those affected are unskilled workers.

Israel could not have done this job without help. It came from America, through the United Jewish Appeal, through the sale of Israel bonds; medical help from Hadassah and other women's organizations. Grants-in-aid helped, and money and experts through America's point 4. So did German reparations for the property of 6 million Jews plundered by Titler. All of this helped Israel to reclaim a once broken people and a once broken land.

JULY ELECTIONS

This year, Israel faces the greatest responsibility of a democracy—free elections. They will be held at the end of July for the third Knesset (Parliament). In a spectacle all too rare in the Middle East, the country's citizens—Jews, Christians, Moslems—men, and women, too, veiled and unveiled, will go to the polls to choose their representatives as a free people.

There are no all-embracing blueprints in nation building. Nations, like people, grow by trial and error. Israel has made its own quota of errors. But they have always been open to the scrutiny of a free press and a freely elected Parliament.

Israel now looks to its eighth year of independence with pride—and with more wisdom and experience. There is a new spirit of the first 7 years.

This new nation fervently hopes, too, that the Western World will understand that in Israel it possesses its most dependable ally in the Middle East.

The Issue Before Idahoans on Water

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1955

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows the editorial comment of the Jerome North Side News under date of April 21, 1955. The North Side News is published at Jerome, Idaho, in the heart of the irrigated acreages along the Snake River in Idaho.

THE ISSUE BEFORE IDAHOANS ON WATER

"The snow and from that snow, the water, belong first under the Federal as well as State law to the residents of the State of Idaho and should be first used by them as the drops of water traverse the State. By controlling the speed of that travel they can first be used during their journey across the State and later used after they pass beyond our State," said Representative HAMER BUDGE in a recent address at Idaho Falls.

Representative BUDGE set the issue well for Idaho in those words. On the sloping prairies east of King Hill are 869,000 acres of new land and 746,000 acres in need of supplemental water. In the lower basin, west of King Hill, there are 763,000 acres of new land which can be irrigated by gravity flow and 557,000 acres by pumping. These, with other potential irrigation tracts, aggregate well over 2 million acres of new land which can be watered from the inexhaustible flow of the mighty Snake River.

A great number of new storage reservoirs can wellup the tremendous supply of water which passes through Idaho and is the greatest heritage the people have, endowed by constitutional right of our State charter.

Upstream reservoirs on the Owyhee, Payette, Boise, Bruneau, Weiser, Big and Little Wood Rivers, and the upper reaches of the Snake at the Narrows, Johnny Counts, Hoback, and others offer nearly 3 million acre-feet of additional storage for the people of Idaho with which to develop these fertile and virgin plains.

These reservoirs and these lands are the ones Representative BUDGE had in mind when he said we should "control the speed" of the water across the State.

In the meantime, Idahoans should never falter in their effort to thwart the downstream grab of storage rights. Hells Canyon Dam would be the first major inroad which could bar the future development of our plains with the bounteous water which Idaho possesses. Basically, this is the whole argument against Hells Canyon. And basically, it is the alarm signal for the people of Idaho.

Israel's Seventh Anniversary

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. ANFUSO. Mr. Speaker, Israel is today celebrating its seventh anniversary as an independent and sovereign state. Seven years are but a fleeting moment in the annals of human history, but in this instance the rebirth of the State of Israel after a period of 2,000 years of exile and oppression constitutes a unique event in world history. It is the realization of the prophecy of Isaiah, who said:

The people that walked in darkness have seen a great light; they that dwell in the land of the shadow of death, upon them hath the light shined. For Thou hast broken the yoke of his burden, the staff of his shoulder, the rod of his oppressor.

We in the United States take note of this event with much pride because it was our country which played an important role in the creation of Israel and in helping it during these 7 years to attain a more solid economic foundation and greater political security. By now Israel has attained political maturity. Its people are possessed of an indomitable spirit to restore their ancient homeland and their long-persecuted coreligionists to an honored position in the family of nations.

The United States has found in Israel a great and devoted ally in the Middle East. It is shaping its way of life along the standards and concepts of our country. Its people believe in the same principles of freedom, democracy, and human dignity as the American people. During Israel's 7 years of independence a warm friendship has developed between the two countries.

Unfortunately, of late our State Department has embarked upon a policy in the Middle East which is endangering this relationship. In its efforts to gain Arab favor, the State Department is going all-out to appease the Arab States. Israel is being gradually isolated, its national security is threatened, and its very existence is at stake.

This is an erroneous policy. While we are anxious to gain Arab adherence to a defense pact in the Middle East, it should not be done at the expense of Israel. As we enter into alliances with the Arab States and agree to extend military assistance to them, we should do the same with Israel. The United States should grant military aid to Israel and enter into an arrangement whereby the security of Israel would be guaranteed and the integrity of its borders respected.

Freedom-loving people everywhere join with the Jews of America and their coreligionists in Israel in celebrating this memorable event—the seventh anniversary of the Jewish State. I extend my greetings to the Jews in this country for their great devotion and sacrifices in helping Israel solve many of its economic problems. I pray that the relations between Israel and the United States will continue as friendly and cordial as ever and that both countries will prove to be a great force for the good of all mankind.

Court Sets Aside Constitution

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Jackson (Miss.) Clarion-Ledger-Daily News on April 24, 1955:

COURT SETS ASIDE CONSTITUTION

When it decreed segregation illegal in the public schools of this Nation, the United States Supreme Court left the field of interpreting the law and entered the field of lawmaking, and thus became itself a law violator.

The Court decree dealt with what is fundamentally a social problem, not a legal problem.

It also violated that clause of the Constitution wherein it is held that the function of government shall be divided between the executive, legislative, and judicial departments. The judicial department is last named, from which it is logical to conclude that the framers of the Constitution regarded it as the least important.

Just now the Supreme Court, having perpetrated an unlawful act, seeks to establish machinery for the enforcement of that act—a function quite beyond its jurisdiction.

More bewilderingly, the Eisenhower administration, which is to say the executive branch of the Government, has seriously proposed that the Federal court system serve as a sort of glorified school board in communities all over the land to enforce the law in tailormade fashion to fit local situations.

"Bewilderingly" is not too strong a word to use—certainly not for laymen who have studied the basic plan of American Government and who have watched with increasing wonder the tendency of the Supreme Court to go further and further afield.

Perhaps lawyers find it completely logical and explainable. If so, the rest of us would like to know the reasoning by which such a conclusion is reached.

To those who stand outside the legal cloister only these circumstances can be seen:

The Supreme Court, interpreting the Constitution and the laws, said that it is unconstitutional to require white and Negro children to attend separate public schools.

The Court having ruled, it then became the obligation of the executive branch to enforce. In this case, it would logically fall to the Department of Justice to prosecute violations of the Court's interpretation of the law.

If any conference of State attorneys general, Federal attorneys, and school officials were to be held, it would seem that it would be at the call of the Attorney General of the United States.

If any agreement as to gradual or immediate enforcement were to be reached, it would presumably be worked out between those who enforce the law and those charged with compliance—State officials and school trustees.

Instead, we have the somewhat puzzling action of the Supreme Court not stopping at interpreting the law, but calling upon the States, and private individuals, and attorneys of the Government to advise it how it should enforce its own decree.

Never in its history has our Government faced such a sorry mess, such a miscarriage of justice.

Members of the Supreme Court, if they have any semblance of commonsense, should know by this time that its decree cannot be enforced in Southern States and that serious trouble will inevitably follow any effort to do so.

Oddly enough, the Solicitor General of the United States, supposedly our highest law-enforcement official, seemingly resents this effort of the Supreme Court to invade the realm of law enforcement. Last week he suggested that Federal district courts be directed by the Supreme Court to call for segregation plans to be submitted by school officials. The district court would then sit as a sort of supreme board of education to direct law enforcement.

Mississippi, of course, is not highly interested in any plan for enforcement of the Supreme Court decree that may be formulated inasmuch as this State has definitely made up its mind to continue its present segregated system, but the suggestions offered last week were quite interesting.

Tre Arkansas chief attorney ventured the thought that the making of specific segregation laws might be left to Congress, while the South Carolinian offered the idea that the passing of such rules and their subsequent enforcement seemed to be functions of the legislative and executive branches, respectively.

As the South Carolina brief voiced it, "The Supreme Court cannot constitute itself a super board of education to direct the schools according to a judicialy devised plan."

Those nine old men who constitute the Nation's highest tribunal must somehow be made to understand that they do not possess the power of a dictatorship; that they are not a lawmaking, a law-interpreting, and a law-enforcing body. It may take a long time to wrest from the tribunal the power it has usurped. That can and must be done by Congress, and the needed statutory enactment to bring this about should be made an issue in the Presidential election next year.

Chou's Peace Proposal Aimed To Cover Rebuff

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

CHOU'S PEACE PROPOSAL AIMED TO COVER REBUFF

(By Edgar Ansel Mowrer)

The peace proposal of Red China's Prime Minister Chou En-lai is a shrewd attempt to cover up the rebuff to Communist imperialism received at the Bandung Conference, to steal Asian leadership from India's Nehru and, most important, to achieve by negotiation that victory in the Formosa Strait which he has been unable to gain by threats.

With this move, Chou once more showed himself perhaps the cleverest of world's double-talking diplomats. His impeturbability and drawing of the latest peace rabbit from his mental hat makes Nehru's petulance look amateur.

Long before Nehru caught on, Chou at Bandung saw that he was in a tough spot. Despite India's assumption that "Nehru spoke for Asia" and that the "Asian African bloc wanted only to remain neutral," a majority of the 29 governments present lit into Communist imperialism as worse than dying western colonialism. A number defended their joining the anti-Communist bloc that gives poor Nehru nightmares. If the conference had gone on much longer, the nakedness of the Communist and neutralist champions would have been revealed.

Even as it is Nehru may never again exert the influence he had before. Certainly, the Communist-neutralist phrase that the "United States was losing all influence in Asia" was shown to be without foundation.

For in the present world situation, any country that manfully opposes communism is a friend of the United States whether it says so or not, just as any country that slants neutralism in a pro-Communist direction is an enemy of America.

This does not mean that the victory at Bandung was won by the United States. It was not. Full credit goes to those sturdy Asians from Ankara to Manila and Tokyo whose views were collectively expressed by Ambassador Romulo of the Philippines:

"I do not think we have come to where we are only to surrender blindly to a new superbarbarism, a new superimperialism, a new superpower."

The delegates knew what he was talking about. While since 1939 western colonialism has released 646 million people, communism has enslaved 740 million. There is, thanks to the U. S. S. R., more colonialism in the world than ever before.

Yet American policies in recent years have made such independence possible. By linking Turkey, Iraq, and Pakistan with Britain, Washington encouraged Lebanon to defy neutralist Egypt. By his Pacific alliances, chiefly SEATO, Secretary Dulles encouraged Far Eastern countries to speak out. By refusing to yield to Red China in the Formosa Strait, President Eisenhower emboldened all non-Communists.

As a result, sensitive Chou En-lai backed down. But only nominally. Chou—as I said above—expects to win at the council table what Red China is not big enough to seize in the Formosa Strait, namely, the disputed islands, Matsu and the Quemoys. Why should he not?

Three times as Red China's spokesman, Chou has obtained by diplomatic skill things that his country was too weak to take. (And I do not include his skill at Chungking during the war in duping American officials and newsmen into believing we could do business with Chinese communism.)

He made a monkey of General Marshall in 1946 when Red China had virtually nothing that could have stood up to a National China fully backed by the United States.

He started negotiations in Korea in 1951 at a time when his armies were on the verge of disaster—and managed after 2 years to come off with something better than a draw.

At the Geneva Conference last year he not only got North Vietnam but terms that almost surely will give him the rest of that country, leaving Laos and Cambodia in precarious independence.

Each time he did the same thing—trade verbal promises for actual occupancy of territories.

This is what he seems to be seeking in the Formosa Strait—trade a promise of not trying to take Formosa or the Pescadores by violence for the relinquishment of Matsu and Quemoy by National China. Once he gets the islands, he will, of course, decide whether or not to risk an attempt to take Formosa by force—just as though he had never made any promises.

The question is, therefore, whether Washington will be silly enough to let Chou get away with the trick a fourth time.

Our chief protection would seem to be the presence of National China at any coming negotiations. American negotiators, we may be sure, will be under pressure to "avoid war by yielding useless islands." National Chinese like stubborn Chiang and intelligent Foreign Minister George Yeh can, however, see right through Chou and one may hope that they will yield nothing.

It is even possible that Chou's latest trick could turn to our advantage. For we are on the point of offering "to beef up" Chiang enough so that he can defend Quemoy and Matsu alone. Since this, in my judgment, Chiang can never do, substituting a conference with Chou and Chiang for any veiled surrender could be a real benefit for our side.

This time Chou En-lai may have miscalculated.

Address by Hon. Robert B. Anderson, Deputy Secretary of Defense, Before the National Rifle Association of America.

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following very fine speech made by the Deputy Secretary of Defense, the Honorable Robert B. Anderson, upon the presentation of a 19th century rifle by the National Rifle Association of America:

You have all honored me greatly this evening. Not only am I privileged to be your speaker, but you have seen fit to bestow upon me this beautiful work of the gunsmith's art in the early 19th century period.

I shall treasure this memento of our evening together—the more so because it has been presented to me by a friend and fellow Texan, Davy Crockett. I might add that I shall also respect the veiled hint its presence conveys, and accordingly shall make my speech rather shorter than longer. In all seriousness, however, let me say once again: I am honored by your invitation; I am deeply appreciative of the handsome object your kindness has bestowed upon me; and I am genuinely glad to be here with you.

In many respects, Davy Crockett and the long-barreled rifle are symbolic of a particular phase in American history deserving more attention than we tend to give it, for certain of its important elements have now returned to shape and form some of the con-

ditions of our own existence here in the 20th century. For nearly 300 years, there existed somewhere in our country a live frontier, and a considerable number of our people lived intimately and continuously with its hardships and dangers. In the beginning, the wilderness lay just behind the tidewater settlements on the Atlantic Seaboard, so that in truth every resident was a frontiersman.

Later, our forefathers resolutely pushed the boundaries of civilization into the uplands of the Atlantic plain, then over the Alleghenies into the Mississippi Valley and beyond.

They reached the Pacific Ocean and then finally closed in from all directions upon the mountains, plains, and deserts of the western plateau. And always in the van were the hardy souls, both men and women, who braved the hazards of the known and unknown, and who endured their hardships and privations. Their fortunes, and quite often their lives, literally depended upon the readiness and determination with which they were able to resist sharp and sudden attack, and upon the wisdom and stamina which they displayed in the presence of continuous danger.

Since well before the turn of this century, no American has had to contend with the historic problems of a live frontier. More than that, until a few years ago, we had little to fear from the possibility of attack by an external enemy. Thus blessed with the physical security of our homes and families in a way few other great nations had ever been, we tended to confuse a historical accident with a law of nature, and to suppose that freedom from danger was the rule, rather than an exception in human experience.

The events of the past 10 years have offered increasing proof that danger does indeed exist, that it is comprehensive and continuing, and could be virtually total in its implications. We are back again to the day of the live frontier; only today's frontier is not discernible as a ridge or a river or a tree-line.

It is as broad as the blue sky and as encircling as the sea coast, extending the length and breadth of our land. Perhaps not since 1607 could it be said that the total American community has been so eminently and equally exposed to the possible rigors of a hostile environment as it has come to be over the past few years.

So long as a few evil men have the power to threaten our security, we must in our turn learn to live under the shadow of danger, and we must prepare ourselves materially and morally to meet the exigencies which an uncertain future may present. We must retain the strength and readiness to meet any challenge, yet we must integrate our defensive preparations into our recipe for living in such a way that they do not displace the normal healthy preoccupations of a peacefully disposed people.

For us, maintaining combat readiness must not be an extraordinary adventure, but the routine response to unpleasant, but nonetheless persistent demands of possibility.

The maintenance of a people's readiness to meet the exigencies of a fluid and developing situation requires a continuing regard for certain aspects of whatever means are adopted. We must in reality be as much concerned with what things may become as we are with what they are as of a given moment. This in turn means that we must give great care to those influences which will bear importantly upon what we are able to do 1 year from now, 5 years from now, 50 years from now.

First, we are concerned, and vitally so, with the planning processes from which we are able to formulate the basic concepts for the employment of our resources to the best advantage of our defense. Policy can be no better than the planning which procedes it, and upon which it depends for its direction and meaning.

There is truth in the saying, "Who wills the end must will the means." It has no more intensive application than to the manifold processes by which the complex and massive political, military, and economic factors affecting our world situation are reduced at any given point of time to specific concepts, immediate plans, and current actions. We must maintain a continuous review of all these factors; we must constantly adjust our plans to be responsive to the inevitable changes which are sure to occur.

There is thus the need for flexible, responsive military concepts, capable of smooth and rapid adaptation to a variety of strategic situations—concepts looking constantly toward all foreseeable future developments.

Second, we are concerned with the military applications of our technology. Here we can spare no effort. The development of new weapons and techniques is a race whose stakes may be life and death. We cannot know the detailed plans of the evil few who threaten world peace, so we cannot precisely gauge their progress in weapons technology.

But we do know that they are formidable opponents, capable of scoring technological break-throughs in major weapons systems which could have dire consequences for us.

Knowing this, we have no alternative but to press forward with all possible speed on the continued development of our own weapons. Not only is this true but we are determined that the American fighting man always has for his use the finest possible products of our science, technology, and production.

There is, finally, the all-important area of personnel. The best weapon in the world contributes nothing to the national defense in the hands of a man unable ot use it.

The best conceived plan may fail for the lack of people with the capacity to execute it. Everything depends upon the man.

Our first attention must therefore be given to those measures which will insure a permanent nucleus of spirited, competent, highly trained, career military personnel in our Armed Forces. We need the best people we can get, both men and women, officer and enlisted.

Once they prove themselves worthy, we want to keep them. We want them to have a place of honor and respect in the community.

We do not want them to be unduly penalized by the personal hardships which in troubled times fall disproportionately upon them as a group.

In an effort to mitigate some of these undeserved difficulties the Department of Defense has sponsored legislation before the present Congress designed to increase the availability of medical care to dependents, provide more and better family housing, relieve some of the financial handicaps of frequent and expensive moves, and granting selective pay increases according to a carefully scaled career incentive plan. I am indeed happy to note here that the legislation adjusting the military pay scale has been passed by Congress and was signed by the President yesterday afternoon. Within the limitations set by national security considerations, we are doing what we can to relieve the handicaps of necessary separations of families and loved ones. We hope by these measures and others to adjust certain inequities and to create a more satisfactory material basis for the careers of our service people; but we must see clearly that we are in no way able to "buy" their patriotism and morale. Most of our people are in the service because in spite of the difficulties and handicaps it imposes, it represents to them a way of life and an opportunity to serve their country.

They are the ones whose acts and lives give common currency to the uncommon expression "above and beyond the call of duty." They are the ones who not only stand ready to serve but do serve, directly and indispensably, in the one undertaking upon which all others depend for their meaning and significance—the physical and military defense of the United States.

They are the ones—the only ones—who can give meaning to the billions we have allocated to our defense, for the point always comes when the efforts of the homefront can exert no further influence upon the turn of a battle or a war. At that point the issue is delivered into the hands of those who have spent their lives in preparation for just such a moment, and the very life of the Nation may owe to the foresight, the skill, and the patriotism of those who recognized this truth in the easy years of peace and who made themselves ready to meet its fateful consequences.

If everything depends upon the man, it depends particularly upon the trained man. Armed forces exist in peacetime for little more than to train and ready themselves for the hard and uncompromising test of combat. Life in the Armed Forces begins and ends with training, whether it be the simple Manual of Arms of the highly sophisticated studies pursued at the National War College.

There is individual training, unit training, technical training, training in the form of drills, exercises, maneuvers, and indoctrination. Daily thousands of aircraft rise in training flights, from the light primary trainers to the gigantic B–36's of the Strategic Air Command. The Navy relentlessly drills its crews in the tasks necessary to keep its ships at peak operating efficiency, with each able to discharge its part of the overall mission of assuring command of the sea. The Army and Marine Corps concentrate upon the multitudinous problems associated with land and amphibious warfare. Joint maneuvers and exercises among all services are regularly held and we have successfully conducted combined exercises with the forces of our allies on many occasions during the past few years.

There is a logic which sustains this incessant and burdensome routine—as clear and concise as the reality of life and death with which it is so intimately associated. In battle there is no time to rehearse the signals—to reflect back over the lessons half learned in some training base far ramoved in time and space.

The soldier can take into combat with him only that part of his experience which has become so firmly ingrained within him that it becomes second nature for him to act according to its teaching. Moments of great stress have the effect of expelling from his consciousness all but the stark objects of the battlefield within the range of what he can see and hear and feel—the enemy ahead, the man to his right, his leader, his pack, and his rifle.

In these moments his capacity to act—and hence his effectiveness as a soldier—depends upon that fraction of knowledge which has been drilled and hammered and pounded into his subconsciousness by months and years of constantly repeated training and practice. If his training has been ineffective, he becomes a cipher at a critical moment when his very life may be the forfeit of his unpreparedness. Moreover, a man in imminent peril of death can be held in place only by the strongest of moral compusions—among them a conviction of the rightness and ultimate triumph of his country's cause, a desire for the respect and approval of his comrades, an abiding faith in his leaders, and confidence in his own ability to take care of himself. Any action which contributes to any of these basic determinants of human behavior means a more effective fighting man regardless of where he may be or what uniform he may wear.

Conscience, comradeship, and confidence are the indispensables to combat morale. All depend to a greater or less extent upon what a man knows and believes. What he

knows and believes depends largely upon what he has been taught.

What I have just said relates most obviously to those who wear the uniform in our active forces. But it relates no less to our Reserves and to those who may wear it at some future time. Our Nation has in the past and will continue in the future to rely upon its civilian armed components for effective defense in periods of general emergency.

This has meant in the past, and it may mean in the future, that the young man at the corner grocery dons a uniform and takes his turn in some grim quarter where there is no second chance, and where the price of his failures and inadequacies may be exacted in flesh and bone and blood.

As you know, the President, in a special message to Congress on January 13, 1955, recommended a 5-point national reserve plan to strengthen our Reserve Forces. For the past 2 months a subcommittee of the House Armed Services Committee, under the chairmanship of Congressman BROOKS, of Louisiana, has labored tirelessly in its study of legislative proposals in support of the President's program.

The subcommittee, deeply conscious of its responsibility to the Nation, has evolved legislation which represents a great forward stride in providing the kind of Reserve needed in these perilous times. We are hopeful of early congressional approval of the national reserve plan, with all its principal provisions, which will provide us with the means for developing effective Reserve Forces.

The national reserve plan deserves your understanding and support. It is one of the most essential parts of our effort to work toward peace from a realistic position of strength.

Never have we had a greater need for an effective, highly trained, readily available Reserve, nor was the need ever more urgent for men who, in General Pershing's laconic phrase, "can shoot and salute." There is a continuing need for the fully developed capability of all the services. Each has an indispensable place in our total military posture, as we strive to make the most out of our resources. The defense of our country is a job deserving and needful of the efforts of all our people. In an age when the price of survival may demand the total effort of the Nation, our success or failure will depend upon the willingness of our citizens to concern themselves actively with the measures for our defense, not only in the Regular Forces, but in their everyday lives as civilian members of the national community.

Here we enter an area in which the National Rifle Association has since 1871 rendered a distinctive, deeply appreciated service to our country. For our citizen soldiers to be effective in an emergency there must be a large repository of shooting skills within the civilian population. The development of these skills is the objective of your organization. Toward that objective you have patiently and consistently labored for some 84 years. I cannot express how pleased I was to learn of your newest contribution—your sponsorship with the United States Marine Corps, of a training program for the improvement of marksmanship among volunteer members of the Marine Corps Reserve.

This is but the latest of many efforts which manifest your continuing interest in the promotion and improvement of marksmanship training both within the armed services and among interested civilian groups.

On behalf of the Department of Defense, let me say that we are sincerely grateful.

In your 84 years you have contributed greatly to the safe and productive exercise of a basic right of American citizens: the right to keep and bear arms.

It is a right exclusive among free peoples. Nowhere except in a free country, where the people share a common love of liberty, could the political authority tolerate the possession and use of firearms by the citizenry.

Of its very nature, totalitarianism requires a state monopoly of all instruments of force. Organizations such as yours would be proscribed, and its members suspect.

But here in America, we have the situation in which your activity constitutes a positive force on the side of the Government, for you are directly contributing to the development and spread of one of the most basic military skills necessary to its defense.

Throughout our history, the trained rifleman has ever been a mainstay in our struggles for independence and security in a world which has not yet found its way to an orderly existence.

We must continue to rely upon him in the future, just as we must rely upon your efforts to improve his competence and readiness. As we look back upon the lives of those courageous and resourceful Americans who wrested an empire out of the wilderness, we are able to see that the efforts they made and the hardships they endured were part of the price they paid for the ultimate objective of a peaceful, stable community, in which men under just law would be free to apply their energies to a rich new land, bringing forth its fruits in ever increasing measure.

Even as we face the challenge to our own lives, we are able to see the same purpose emerge in the vastly larger context of our modern world. For we, too, pursue the ultimate objectives of peace and stability on a worldwide scale—under which men may in justice and freedom direct their marvelous creativeness into constructive channels for the betterment of mankind. The frontiers of our 20th century are the limitless frontiers of the human mind, and it is in the widening and deepening of the possibilities for man's material and spiritual well-being that our best hope lies and toward which our efforts must be dedicated.

Let us, then, look to our new frontiers, as the Davy Crocketts, the Daniel Boones, the Kit Carsons and all the others looked to theirs in days gone by: with courage and resolution, and the faith in our own capacity to prosper and grow in the face of an uncertain and seemingly hostile environment.

Let us do so with the confidence bred of the knowledge that it was the very act of surmounting the awesome challenges of the past that has made us the great Nation that we are and must continue to be if freedom is to prosper in our world.

The Sad Plight of Slovakia

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter which I have received from Dr. Joseph Mikus, head of the Slovak League press bureau in Washington, setting forth pertinent facts regarding the 10th anniversary of the occupation of Slovakia by the Red army. I am sure, Mr. Speaker, that this letter will be of interest to the membership of this House:

WASHINGTON, D. C., *April 20, 1955.*

The Honorable LAWRENCE H. SMITH,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. SMITH: Aware of your deep interest for the sad destiny of the peoples of the Communist dominated Europe, I would like to draw your attention to the 10th anniversary of the occupation of Slovakia by the Red Army. Those days of April 1945 will remain ill-fated in the history of our people. At that time the Soviet Army entered the territory of the Slovak Republic and, in agreement with the prescriptions of the Czecho-Slovak-Soviet Treaty of December 12, 1943, handed over this central European country to the Marxist dominated Prague Government. When, April 3, 1945, Mr. E. Benes came to Kosice, in eastern Slovakia, he was accompanied by Mr. Zorin, the new Soviet Ambassador to Prague, and Klement Gottwald, the Vice Premier of the Czecho-Slovak Government who had been appointed some time before in Moscow and cleared by Moscow. Since that time E. Benes was a captive of these two men.

On April 5, 1945, Gottwald proclaimed the so-called Kosice agreement that the Communists and some liberals have designated as a "Magna Carta" of Slovakia. In this document many nice promises were made to the Slovak people. But there was no enthusiasm for either Mr. Benes or Mr. Gottwald. All the Slovaks were aware of the fact that they had been deprived of their national state and government. Even though the Slovak Republic may have had certain imperfections inherent to the war conditions in central Europe, it was however generally considered as a fulfillment of the Slovak aspirations to self-determination.

While on April 3, 1955, the day of the commemoration of the tenth anniversary of the liberation of Slovakia, President Zapotocky and the present Soviet Ambassador in Prague, Firjubin, were inaugurating a monument to the Soviet soldiers fallen at the pass of Dargov, in the Carpathian Mountains, all the Slovaks in the free world were mourning the lost independence of their brothers enclosed now behind the Iron Curtain, between the Tatra Mountains and the Danube and Tisa Rivers.

But one conviction is strongly rooted in the hearts of the Slovaks: that the Communist regime in their country, regime which had been imposed by force upon the Slovak people, will not be able to withstand the test of the times to come. Even the darkest night is always followed by a new sunrise.

With pleasure I avail myself of this opportunity to present you, dear Mr. SMITH, the assurances of my highest respect.

JOSEPH A. MIKUS,
Director of the Slovak League Press Bureau, Washington, D. C.

Truth Is the Persuading Ingredient of Propaganda

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. DONOHUE. Mr. Speaker, at this time I would like to include a most timely and pertinent editorial entitled "How We Subverted the Polish Reds," which appeared in the March 11 issue of the Worcester (Mass.) Telegram.

This splendid article, written by Mr. Albert B. Southwick of the paper's editorial staff, emphasizes, by relation of the most interesting story of Jozef Swiatlo, that the persuasiveness of propaganda derives only from the presentation of truth.

The article follows:

HOW WE SUBVERTED THE POLISH REDS

(By Albert B. Southwick)

If you think that our progapanda is a waste of time, take a look at Jozef Swiatlo. By means of a few dozen broadcasts over Radio Free Europe, he has ended the career of the powerful Polish Minister of Security and has shaken the Warsaw government with fears and suspicions.

Jozef Swiatlo fled to the West in 1953, turning himself over to allied authorities in West Berlin. He was one of more than a thousand Poles who fled their unhappy homeland in that year, but he was by far the most important. For Swiatlo was not only a high security official; he was also deputy head of the department responsible for the protection of the Communist Party leaders. He had access to the most personal and secret files in the nation. He knew all about the bloody factional fights within the Polish Communist Party itself. He was the man who had arrested Gomulka, former secretary of the party, and also Marshal Rola-Zymierski, former minister of defense, and many others.

For some months, Swiatlo was kept in hiding by allied authorities, who eagerly collected and analyzed his vast store of information. Then, late last year, Swiatlo was "surfaced" at a press conference, where he startled reporters by saying that he had personally arrested Herman Field, the American architect who had disappeared without a trace in Poland in 1949.

The Communists had long denied knowing the whereabouts of Field, but they could not ignore this. Suddenly, with abject apologies from the Polish Government, an emaciated Herman Field was released. He was given a $50,000 indemnity, rehabilitated in a sanatorium, flown to Switzerland, and is now in England.

Just as suddenly, the Czechoslovakian Government opened up one of its prisons to disgorge Mr. and Mrs. Noel Field, who had suffered the same fate. Noel Field, however, has selected to stay in Czechoslovakia. He has long been linked with the Alger Hiss espionage ring in the State Department.

This was a considerable accomplishment, but Jozef Swiatlo's work was just beginning. For the past 3 months he has been broadcasting regularly to Poland from Radio Free Europe in Munich, and his revelations have had some startling effects upon the Polish people and the Polish Government.

Truth is the one thing that Communist regimes most fear—especially the truth about the sordid personal lives and scheming ambitions of the Communist leaders themselves. But Swiatlo was loaded with just this sort of information. He started off by telling the Polish people that their Prime Minister, Boleslaw Beirut, had deserted his wife and children and was living with his mistress, Wanda Gorska. "Why don't you marry her?" Swiatlo asked contemptuously, while 4 million Poles listened.

COMPROMISED MISTRESS

That was bad enough, but much worse was the information that the Polish Security Ministry had an extensive file on Miss Gorska, whose brother had been a notorious Nazi collaborationist during the war. It must have grieved Prime Minister Beirut to learn that this file was compiled on instructions from Jacob Berman, Communist No. 2 in Poland, and the man whom Beirut had thought was his best friend. But Swiatlo assured the Prime Minister that, at least, there was no Beirut file in the Polish Security Ministry. His file was in Moscow.

And what about Mr. Berman, who played such a mean trick on Mr. Beirut, his best friend? Well, he learned that Mr. Beirut was not such a good friend after all, and that the ministry does have a file on him, Berman. What is more, the Berman file shows that Berman's brother-in-law was a big black marketeer in medicines while he was an official in Health Ministry.

Swiatlo then turned to bigger game. Beirut may be prime minister, but the man who really runs Poland is Marshal Rokossovsky, commander of the Polish Army and Moscow's gauleiter in the unhappy satellite. Swiatlo revealed that Rokossovsky's brother served in the Nazi criminal police during the war. To a Pole, there is no worse crime.

But Swiatlo's greatest triumph came when he began to analyze the sordid career of Stanislaw Radkiewicz, the Polish Minister of Security. Radkiewicz was probably the most hated man in Poland, which is saying a lot. He was the man who made Poland a police state, who sent thousands to die in the slave labor camps, and who made a bitter mockery of justice by torturing countless victims in his infamous prison cells.

CORRUPTION AND INFAMY

By revealing Radkiewicz's past, that he had collaborated with the police of the old Polish regime before the war, and by revealing further that Beirut had a copy of a document that proved it, Swiatlo exposed the utter corruption and infamy of the Warsaw regime. Such alarm and confusion was caused that Radkiewicz was dismissed from his powerful position. This event has been called by the British magazine Time and Tide, "one of the most important events to take place behind the Iron Curtain last year."

Swiatlo still is broadcasting, exposing the rottenness that is communism. Millions of poverty-stricken and fear-ridden Poles tune in every week to hear about Prime Minister Beirut's 10 palaces and his 230 servants. Public officials and secret police tremble as Swiatlo tells of wives and mistresses reporting on their husbands and lovers to the secret police. As the vast spider web of intrigue and deceit is exposed, the prestige of the regime sinks to the vanishing point.

Don't ever discount the power of propaganda—as long as it tells the truth. The Swiatlo case is an important victory for our side. The same thing could happen in other countries. Imagine the sensation that would be caused in Moscow if some powerful Kremlin figure should defect to our side and start telling what he knows.

For instance, someone like Georgi Malenkov.

Hon. Joseph S. Clark, Jr., Mayor of Philadelphia, Presents Clear and Convincing Reasons for Defeat of Bills To Exempt Field Price of Natural Gas From Federal Regulation, Stressing Need for Protection of Consumers

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. GRANAHAN. Mr. Speaker, the mayor of Philadelphia, the Honorable Joseph S. Clark, Jr., speaking both for the people of the city of Philadelphia and also for the mayors of more than 50 other major American cities, testified yesterday before the Committee on Interstate and Foreign Commerce of the House of Representatives on pending natural-gas legislation.

Mayor Clark took the position that bills intended to remove the Federal Power Commission's jurisdiction over the field price of natural gas would seriously harm the natural gas consumers of this country.

The House Committee on Interstate and Foreign Commerce, on which I serve, has been considering this legislation for many, many weeks. We have heard testimony from representatives of the oil and gas industry, from distributing firms, and other groups. I believe—and several other members of the committee concur—that Mayor Clark's statement has been one of the outstanding contributions to the committee's deliberations.

Because of the clear and convincing reasoning behind his testimony, and the excellence of the presentation, I herewith include it, Mr. Speaker, under unanimous consent of the House to have it inserted in the Appendix of the CONGRESSIONAL RECORD, as follows:

TESTIMONY OF JOSEPH S. CLARK, JR., MAYOR OF PHILADELPHIA, BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE OF THE HOUSE OF REPRESENTATIVES IN OPPOSITION TO H. R. 4560 AND SIMILAR BILLS TERMINATING FEDERAL JURISDICTION OVER THE FIELD PRICE OF NATURAL GAS SOLD FOR RESALE IN INTERSTATE COMMERCE, TUESDAY, APRIL 26, 1955

I am the mayor of Philadelphia, and jointly with Mayors Robert Wagner, of New York, and David Lawrence, of Pittsburgh, have organized a mayors' committee to oppose the legislation presently before you. Fifty mayors, representing cities with a combined population of over 30 million, are now members of this committee. A list of their names and of their cities is being filed with your committee. A number of these mayors will appear before you during the next few days; others, unable to appear, have prepared statements which will be presented to you by their designated representatives. As mayors, we stand agreed that the millions of natural-gas consumers in the communities we represent have a tremendous stake in the issue now before you; and we have united in this effort to insure that the interests of these consumers are adequately expressed and protected.

It is our firm belief that Federal jurisdiction over the field price of natural gas sold for resale in interstate commerce must be continued if the consumers' interest is to be adequately protected.

In outlining my position, I would like to speak first about the situation in Philadelphia. Philadelphia has a municipally owned gasworks in which our citizens have invested over $100 million. It is operated on a fixed-fee basis by a division of the United Gas Improvement Co., a public utility corporation. Its operations are supervised by a gas commission of 5 members, 2 of whom are members of city council, 1 of whom is appointed by the mayor, and another by the city controller, an elected public official. The fifth member of the gas commission is a representative of the United Gas Improvement Co.

One hundred and fifty thousand Philadelphia householders have an average investment of $1,000 each in house heating, cooking, and water-heating appliances. Four hundred thousand additional Philadelphia householders have cooking and/or water-heating gas appliances representing an average investment of $250. The total invest-

ment in gas appliances of 550,000 Philadelphia consumers is accordingly $250 million in addition to the $100 million investment in the municipal gas works.

These figures do not include the large number of industrial and commercial users of gas in Philadelphia whose investment would run to many more millions of dollars.

Natural gas first came to Philadelphia through the pipeline of Texas Eastern Transmission Corp. in 1948. Subsequently an additional supply was brought in through the pipeline of Transcontinental Gas Pipeline Co. The initial price averaged 30 cents per thousand cubic feet. By reason of rate increases secured by the pipeline companies it has now risen to 39 cents a thousand cubic feet, an increase of nearly one-third. Philadelphia is currently purchasing 40 billion cubic feet of natural gas annually from these two pipeline companies. This increase in the rates charged our municipal gasworks means that the city of Philadelphia is paying $3,500,000 a year more for its natural gas than it would have at rates which prevailed in 1948. This money is moving out of Philadelphia principally to Texas, Louisiana, and other Southwestern States. The pipeline companies, of course, have no alternative but to raise their price to our municipal gasworks when the field price of the producer is raised.

Despite this increase in the price of natural gas it has not yet been necessary for the city to raise the price of gas to the consumer. The contract between the city and UGI provides that gas shall be furnished to the consumer at cost, but broad leeway is given to permit modernization and extension of the gasworks plant on a pay-as-you-go basis, thus reducing the amount of bonded indebtedness required to pay for the capital improvements.

Efficient management, prompt installation of cost-saving equipment—such as cyclic catalytic reforming furnaces—the large increase in the number of new house-heating customers (100,000 householders since 1948) have permitted us to absorb this large price increase without passing it along to the customer.

However, the day of reckoning is close at hand. Gains in house heating are diminishing. Almost the last drop has been squeezed from the orange of savings due to efficient and economical operations. The city of Philadelphia, which as owner of the municipal gasworks is receiving $5,200,000 a year, is concerned lest this annual addition to our already inadequate municipal revenues be threatened or, in the alternative, an increase in rates to the consumer required by reason of any further increase in the field price of natural gas.

While testimony before this committee indicates that the average field price is presently 10 cents per thousand cubic feet, our pipeline suppliers are paying substantially more; and it is necessary as a practical matter to pay as much as 13 cents, 15 cents, or even 16 cents per thousand cubic feet for new supplies. Moreover, we hear alarming rumors that it is the intention of the oil companies and other large producers to push the field price to 25 cents per thousand cubic feet if this bill passes and the authority of the Federal Power Commission to regulate field prices is revoked.

At the current rate of consumption, every penny added to the field price of natural gas adds $400,000 to the annual gas bill of Philadelphia, and adding 10 cents would increase that bill by $4 million.

I am sure the members of this committee will appreciate from the foregoing why Philadelphia is intensely interested in the legislation now being considered by the committee.

Next, I should like to speak on the general reasons why consumer interests are opposed to this legislation. You gentlemen have listened long and attentively to the voluminous testimony presented to you both in support and in opposition to this bill. I suspect all the arguments have been covered many times. May I then summarize the consumer position, hoping that in being brief I may help clarify the real issue.

First, the issue before you is not whether the business of transporting natural gas in interstate commerce from wellhead to gas range all over the United States is affected with a public interest. That question was decided in the affirmative by this committee and by the Congress in 1938 when the Natural Gas Act was passed. The authority of the Federal Power Commission to regulate such a business from start to finish has been affirmed by the Supreme Court of the United States in a number of cases, of which Phillips Petroleum is only the latest.

Second, there is no issue before you as to whether the field price of natural gas is presently reasonable. No showing has been made by the proponents of this legislation that prices now being received by the producer are not adequately compensatory; and this indeed from the point of view of the producer must be the ultimate test of reason.

The third issue, which is not before you, is whether present retail rates for gas are fair and reasonable—or indeed whether, as the proponents of this legislation have so attractively phrased it, it is unreasonable or unfair for the producers to ask, and the consumers to pay, "but a few more cents" for their gas a day. (If we are to cite figures, we should cite aggregates; and the aggregates we are dealing with here are billions and millions of dollars, and not pennies. For every penny added to the field price of natural gas adds $2 billion to the value of present reserves owned by the producers, and millions of dollars to the total annual bills of our Nation's gas consumers.)

The real question before you is whether there is any justification for increases of this size. And the real issue raised by this regulation which we oppose is whether a group of producers, the fulcrum of whose power rests in the hands of the large oil companies in this country, should be permitted to determine the price of a commodity passing in interstate commerce and affected by the public interest, unilaterally and without policing in the consumer interest by a Federal regulatory body, the Federal Power Commission. If we can fasten our attention on that issue I would hope it would be a relatively simple decision to reject this bill on the ground that the public interest requires regulation of natural gas prices at the point where the gas reaches the pipeline as well as after. Indeed it seems almost incredible that we all should admit not only the right but the duty of Government to regulate the price at which pipeline companies may sell gas to distributors and the price at which distributing companies, be they municipally owned or not, may sell gas to the consumer, while leaving wide open and without regulation the price at which the gas is sold by the producer to the pipeline.

Much has been said about the natural operations of the law of supply and demand. I do not pretend to be an expert on so complex a question as whether free competition will keep the price of gas at the well-head at a reasonable figure. I can only state what seems to me to be a common-sense conclusion—that where an article is in short supply and where buyers are rendered relatively immobile by the huge investment required to bring gas from new fields to pipelines and on to consumers, a prima facie case has been made for, at the very least, standby powers of regulation by the Federal Power Commission. Surely this is a case where the legislative arm of our Government should not arbitrarily remove from an existing regulatory body power to protect the consumer vested in it by existing legislation as interpreted by the Supreme Court of the United States. Is it not far wiser to leave the authority to determine the extent of regulation in the Commission, trusting to its administrative discretion to handle the matter in the public interest, and appreciating that any time this discretion is abused, the legislature retains its ultimate power to act to eliminate the abuse?

I cannot take seriously the claim of proponents of this bill that if the duty of the Federal Power Commission to regulate these prices is continued there will be in effect a sitdown strike which will result in an even shorter supply of natural gas. That the oil companies will continue to drill for oil, I would think, is obvious. That a great deal of gas will be discovered in conjunction with newly discovered oil is certainly the history of the industry today. That private capital not controlled by oil companies will continue to drill for gas found not in conjunction with oil, the record now before you seems to make clear. That despite all this the product appears to be in short supply by reason of constantly increasing demand from our cities would seem to prove the need for Federal regulation.

Two elements would seem to me to be missing from that ideal state—the utopia of advocates of laissez faire—where natural forces of demand and supply result in a reasonable price of a commodity without the necessity for governmental regulation. The first element is that there is no inexhaustible supply to produce competition between sellers. The second element which is lacking is freedom of choice on the part of the buyer. His pipeline is fixed and represents a large investment. He cannot turn away and buy from somebody else without a large additional investment. The ultimate consumer of natural gas is in the same situation. If he does not like the price of eggs at the American Store, he can go across the street to the A. & P. and all he loses is 5 minutes of his time. But if he is a new householder in Philadelphia using gas for cooking, house heating, and water heating, he must scrap a $1,000 investment in order to turn to coal or oil as a substitute.

It is important to recall the process by which this has come about. In the late thirties and after World War II, those in possession of large reserves of gas in the Southwest could find no suitable market for their gas in that region, and they organized one after another of the large pipelines, in some cases by direct ownership and in other cases through the formation of legally independent companies. These pipelines went to the market places throughout the country and said to the local distributing companies, "We have large blocks of gas which can be had at 20 cents or 25 cents. We will agree to provide you with this gas for a 20-year period at these prices. The price may change as taxes are imposed or if there is a marked increase in the general commodity index; but substantially our business is under the regulation of the Federal Power Commission and the reasonableness of our rates will be determined by the Commission." The distributing companies calculated whether or not these prices were satisfactory and would justify the expenditure of millions of dollars to ready their systems for the use of natural gas. In almost all cases, the answers were in the affirmative. The Federal Power Commission ruled the projects were economically feasible and certificated the pipelines. The lines were built and the gas turned on. Often rates to the ultimate consumers were reduced as the result of the coming of natural gas. Millions of customers were attracted by the advantages of gas and the rates which made it economical, or in some cases less costly, to use; and they spent hundreds of millions of dollars on equipment to heat their homes with gas.

The process was complete. Those in control of the reserves had found their market; and an unbreakable chain had been welded which erretrievably ties the fortunes of the consumers to the producer in the southwest. Few house-heating consumers indeed can afford to jeopardize the thousand dollars or more which they have in gas appliances. Faced with an increase in gas rates, their hands are tied by this investment; in the market place of fuels, they cannot choose as they will.

The consumers in Philadelphia are no exception. Regulatory bodies in Philadelphia and Pennsylvania cannot protect us. They must approve reasonably compensatory rates to local utilities. Local distributing companies are helpless. To get natural gas at all they have to agree to purchase from the pipeline companies for 20 years at rates considered reasonable by the Federal Power Commission. They have not authority under their contracts to reject new and higher prices. Indeed until the Phillips case the FPC considered itself helpless and reluctantly passed on hundreds of millions of dollars in field price increases in the form of higher transmission rates to distributing companies.

To summarize and conclude, I suggest the logic of the situation is clear. This is a business affected with a public interest. It is a business in interstate commerce and therefore a Federal responsibility. The Congress has established the FPC to regulate this business. This bill would tie its hands and prevent it from regulating adequately the price of the very product which all admit needs a substantial measure of regulation.

The clear conclusion I submit is that this bill should not pass and that the FPC should continue to exercise the authority given to it by the Natural Gas Act of 1938, as interpreted by the Supreme Court of the United States. If the consumer interest is to be protected this regulation must include adequate control of the prices paid by producers to pipelines which carry the gas to distributing companies and to the ultimate consumer.

In Dealing With Communists the United States Must Never Again Take Words as a Substitute for Deeds

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following article by Stewart Alsop. Whenever the Communists see they cannot gain an objective by force, they propose a cease-fire—not as a means of ending the struggle for that objective, but as the means of winning it. In the past they have succeeded. We must not fall for the same phony peace trick again. If we were to do so, I fear Mr. Alsop's guess would prove tragically accurate.

The article follows:

[From the Washington Post and Times Herald of April 27, 1955]

MATTER OF FACT

(By Stewart Alsop)

GUESSING GAME IN ASIA

For those who enjoy guessing games, the following projection of events may have some interest. It may be of course, dead wrong—it might be rather bitterly entertaining to read what follows 6 months from now. Yet it does represent the best guesses of what are called informed circles in Washington.

First, the Chinese Communists will not now attack the offshore islands of Quemoy and Matsu. The reasoning here is that, having made an ostensibly peaceful gesture in Chou En-lai's carefully imprecise offer to neogtiate on the Formosa Straits crisis, the Chinese Communists could hardly turn right around and kick off a war.

This may turn out to be a very bad guess indeed, of course. The Communist buildup opposite the offshore islands continues unabated. Yet, it is being rather confidently—perhaps much too confidently—assumed that the Communists will not soon attack.

Instead, what is now believed to be in prospect is a long feeling-out period, a time of negotiating about negotiating—very much the same sort of thing that went on after Soviet Ambassador Malik made his famous offer in the United Nations to negotiate a truce in the Korean war. The feel-out period is believed likely to continue for months, with many an alarm and excursion.

While it is going on, a rather embarrassed but nevertheless eventually effective effort will probably be made to persuade Chiang Kai-shek to pull back from the offshore islands. This, of course, could be a bad guess, too.

Chiang will certainly resist—and with excellent reason, especially as he was first persuaded by emissaries of this country to make his heavy commitment of troops in the offshore islands. But eventually, it is believed, he will agree, simply because he has no alternative—just as eventually Korean President Syngman Rhee agreed under pressure to accept the Korean truce.

The offshore islands will thus in time be turned over to the Communists, on certain conditions. Condition No. 1 is that the Communists will make some sort of vague promise not to attack Formosa, at least for the present.

No one seriously believes any more that the Communists are going to agree to any formal, permanent cease-fire in the Formosa Strait. Such a cease-fire would amount to abandonment of Chinese Communist claims to Formosa, and if anything is clear, it is clear that the Communists will not abandon these claims.

What is now hoped for, instead, is some sort of facesaving formula. The face to be saved is, of course, that of the United States, simply because the United States cannot easily agree to abandon the offshore islands to the Communists without receiving anything whatsoever in return. But a vague statement by Chou En-lai, promising to seek a peaceful solution of the Formosa question, or something of that sort, will probably suffice.

Another likely condition is the kind of British commitment on Formosa recently forecast in this space. For British domestic political reasons, no such commitment can be made before the May 26 elections. But after that, a carefully hedged British and Commonwealth promise to come to the defense of Formosa, if the island is attacked by the Communists, is more probable than possible. As one British spokesman has remarked, "It looks as though we'd have to get into the Formosa act somehow."

The purpose would not be to please Chiang Kai-shek, who would not be pleased at all, but rather to put the best possible face on the kind of settlement outlined above. The British commitment would make it possible to argue that a reasonable deal had been made, since British support would be worth more to Formosa than the small and exposed offshore islands.

All this, it should be hastily and rather nervously repeated, is strictly a guessing game. But if things do work out this way, at least war will be avoided. And at least there will be another area in the world in which the lines are firmly drawn, and both sides know where they stand. Moreover, unless the Pentagon grossly overestimates the capabilities of the Seventh Fleet, a de facto cease-fire will be imposed on the Formosa Straits, and a cease-fire has been the object of American policy in the area since the start of the crisis.

Yet there can be no disguising the cruel fact that this kind of settlement will be another big retreat in the face of Communist pressure. The extraordinary twistings and turnings of American policy in the last 6 months, moreover, will have the effect of making the retreat look even bigger than in fact it is.

For a Trained Reserve

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to have reprinted hereinbelow an editorial appearing in the New York Times, on Monday, April 25, 1955, entitled "For a Trained Reserve." I feel this will be of interest to all Members of the Congress. The editorial is as follows:

FOR A TRAINED RESERVE

After some weeks of languishing the bill to provide for the training of a Military Reserve is expected to get into the status of a full committee hearing in Congress tomorrow. That in itself is a forward step, but there are others to be taken and missteps to be avoided.

In the first place it is imperative that this measure get to the floor and not be smothered in committee. It is equally important that it should not have the kiss of death of so many amendments as to make it meaningless. The tagging of this measure as a form of universal military training has evoked both political and emotional responses. This is not a time in which national security can be sacrificed to either politics or misguided sentiment. This is not the time for sloganeering.

It has been decided that there will be some numerical reduction in our regular Armed Forces. This fact, in itself, makes it more important than ever that we have an adequate reserve force. Even if we make a cut in the number of combat divisions we are required to face the simple fact of the division slice, that is, the number of men actually required to keep a combat division in combat. This can be reduced but it cannot be ignored. There must be a trained reserve to meet this manpower need. We can't maintain combat divisions in a vacuum.

This means that we are obliged to go to our so-called manpower pool. We have been able to do so in the past because our allies have held the line while we brought this pool into action. There is no reason to hope or believe that this fortuitous circumstance will recur. Our enemy, next time, will not give us time to prepare. This means, in turn, that an important part of this manpower pool must be pretrained. It must be ready for effective use at the earliest possible moment. We cannot expect to have the grace of time in which to make our preparation.

The reason for this argument is humane as well as military. We can cut losses if we put trained men into action. We are all too familiar with the other side of the picture. We have seen too many cases in which good men paid for the lack of foresight with their lives. It need not happen again if we are prudent and forthright.

Moreover, we cannot build such a reserve upon a puny base. If it is not universal it must, at the least, be comprehensive. If we could substitute in our thinking and writing the word adequate for the word universal we might get a healthier approach. We believe that common responsibilities should be shared by all and that this is the way of democracy. The present measure is designed to broaden the base of the share. It demands our full support.

A National Better Material Handling and Packaging Week

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herein certain correspondence addressed to Mr. J. Wellington Hall, national secretary of the American Material Handling Society, Inc., together with his comments, relative to a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I am in receipt of a letter from Herbert S. Blake, Jr., secretary, Power Crane & Shovel Association, a copy of which is enclosed.

This organization is composed of a group of manufacturers of powered cranes for all types of industrial applications. The manufacturers guarantee under the seal of P. S. C. A. that every machine meets the requirements of commercial, domestic, and export standards developed by the trade under the National Bureau of Standards and issued by the Department of Commerce of the United States.

As the varied operations of this equipment in the material-handling field is indicative of the scope of the function within industry, I would request that this letter be used for the RECORD in the effort to establish a National Better Material Handling and Packaging Week.

Very truly yours,
J. W. HALL,
National Secretary, AMHS,
Westinghouse Electric Corp.,
Meter Division, Newark, N. J.

POWER CRANE AND SHOVEL ASSOCIATION,
New York, N. Y., February 14, 1955.

Mr. J. W. HALL,
Assistant Division Staff Supervisor, National Secretary, A. M. H. S., Westinghouse Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: In response to your request of February 4, I enclose herewith material that may be in line with the request for history, aims, and purposes of this association.

Very truly yours,
HERBERT S. BLAKE, Jr.,
Secretary.

ADVANTAGES OF FREE-MOVING CRANES IN INDUSTRIAL PLANTS AND YARDS

The tremendous wartime and postwar development of our industrial plants has seen a similar expansion in outside storage and warehousing facilities.

Such expanded use of outside storage operations has been made possible largely by the increased application of free-moving cranes. These are lifting cranes which have two basic operating characteristics—(1) ability to revolve through 360° and thus to handle loads in any position of swing, and (2) a mobile mounting, of a crawler or wheel type, which is free to move at will, free of the restrictions of tracks, overhead structures, etc. Thus, they are able to reach and utilize all parts of the storage area and, further, permit revision of the storage plan at any time that improvement presents itself without interferences caused by fixed or predetermined layouts.

Free-moving cranes with lifting capacities of 5 to 60 tons lend themselves to the efficient production handling of a wide variety of materials, whether they be bulk, packaged, or unit pieces. It may be said free-moving cranes can handle as many different types of materials as there are handling attachments that may be attached to the crane hoist line.

1. They go anywhere: The free-moving crane goes wherever there is work to be done—in storage yard, on stockpiles, at loading platforms, or inside any buildings where a track crane could go. It can travel from plant to plant, servicing several separated units, either your own or those of neighboring industries. Overhead or track cranes are tied to fixed structures which limit their operating range.

2. Require no investment in fixed structures: Each free-moving crane is a complete working unit. There are no tracks to build, no foundations to lay, no overhead structures to set up. Crawler-mounted cranes move over any ground surface where a man can walk; machines on rubber go anywhere a truck can drive. There are no extra installation costs, no costly plant or yard modifications to add to initial machine cost.

3. Diversified application: The wide variety of lifting and material-handling attachments available and the short time required for change from one to the other lifting device adds to the free-moving crane's industrial versatility and diversification. The basic booms available are shovel, trench hoe, and lifting crane. The crane boom is by far the most widely used industrial attachment. Illustrations at the left represent a number of the basic lifting devices for crane booms. They are adapted for most any shape or weight object.

4. Increase work range and capacity of storage area: With a track crane, working range is measured from center line of track. The free-moving crane works independently of the track, doubles the piling area available on each side. It also can rehandle economically to the full diameter of its working range. Frequently it can save aisle and track space because of its ability to work from truck driveways, plus its long working range.

5. Outswitching service and delays: With track or overhead cranes, cars to be loaded or unloaded must be switched frequently. A free-moving crane can work a whole trainload of cars without switching, either traveling parallel with the track as it works or spotting cars as they are needed. Working independently of other units, there is no waiting time as long as you have work to be done.

6. Pooled use of cranes for small plants: Just as the free-moving crane can go anywhere there is work to be done in a single large operation, the advantages of this versatile working tool can be shared by a group of small industries in a common location by dividing time and cost of operation. Rubber-tired units are especially suitable for this type of application that involves interplant travel over public streets.

7. A safer investment for the future: With free-moving cranes a change in plans leaves no fixed structures to tear down and scrap.

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I am forwarding to you the enclosed letter from Mr. Roy H. Stewart, secretary of the operations council, American Trucking Associations, Inc.

As a result of the studies made by this organization the whole concept of material handling has been revised and improved in the shipping and receiving depots of the over-the-road carriers. It has resulted in some of the finest materials handling systems to be found in the Nation, in an operation, which for complexity, has few equals.

In support of your resolution—House Joint Resolution 231—A National Better Material Handling and Packaging Week, I would request that this letter be included in the RECORD.

Very truly yours,
J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

THE OPERATIONS COUNCIL,
COUNCIL OF AMERICAN TRUCKING ASSOCIATIONS, INC.,
Washington, D. C., April 1, 1955.

Mr. J. W. HALL,
National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: This is in reply to your letter of March 22, 1955, inquiring about the contribution made by the operations council of ATA towards better material handling.

One of our important functions has been to furnish advice to TOC members on new methods of handling. This has been done both at our regular annual meetings, where this has been a point of discussion, and through bulletins, letters, and other methods of disseminating information. As a result of some of the papers and panel discussions at our TOC meetings, there has been a considerable trend toward the use of four-wheel carts, both manual and dragline.

I am personally a member of the ASA Committee B69, on standardization of pallets, and as such have participated to a great extent in the work of achieving such standardization.

I hope that the above gives you some idea of what we have been doing, and will be useful in providing you with material for your program.

If we can be of further service to you, please do not hesitate to call upon us.

Yours very truly,
ROY H. STEWART,
Secretary.

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I am enclosing a letter of endorsement written by Mr. Arthur

Sanders, executive secretary of the National Association of Scale Manufacturers, Inc., which I would request be entered into the record in support of your House Joint Resolution 231 "A National Better Material Handling and Packaging Week."

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

NATIONAL ASSOCIATION OF SCALE MANUFACTURERS, INC.,
Washington, D. C., March 30, 1955.

Mr. J. W. HALL,
National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: The possibilities of a National Better Material Handling and Packaging Week are certainly most interesting. It is good to learn that there may be such a tribute to the numerous industries encompassed in the fields of material handling and packaging.

We in the scale industry consider weighing equipment as a part of the material handling and packaging group and are certainly interested in the progress made toward the proclamation of a national week and in the ultimate success which will certainly be achieved.

Very truly yours,

ARTHUR SANDERS,
Executive Secretary.

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I would like to enter, in support of your resolution, House Joint Resolution 231, "A National Better Material Handling and Packaging Week," the following letter from Mr. William H. Sardo, Jr., secretary-manager, National Wooden Pallet Manufacturers Association.

This organization and its members have made possible tremendous advances in the material-handling field through the use of pallets and the unit-load method of movement of materials.

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

NATIONAL WOODEN PALLET MANUFACTURERS ASSOCIATION,
Washington, D. C., March 25, 1955.

Mr. J. W. HALL,
Assistant Division Staff Supervisor, Western Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: This association wishes to heartily endorse the efforts which the American Material Handling Society, Congressman RODINO, and yourself are spearheading to have President Eisenhower declare a National Materials Handling Week. We shall do everything possible on our part at this end to help this drive, and trust that we will meet with success.

It is only fitting and appropriate that the Nation should salute the many people who have made possible the blessings and multitudinous savings of the modern science of materials handling.

The writer personally will call attention of Congressman DEWITT HYDE, of my native State of Maryland, to House Joint Resolution 231.

If we can be of further assistance in any way, do not hesitate to let us know.

Very truly yours,

WILLIAM H. SARDO, Jr.,
Secretary-Manager.

Resolutions of AMVETS

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Resolutions 1 and 3 of the AMVETS executive committee adopted at a meeting on April 2 and 3, 1955, in Washington, D. C., calling attention to the recommendations of the Hoover Commission and the opposition of AMVETS to government by commission, and expressing appreciation of the action of the Committee on Veterans' Affairs in compiling information on the need for additional funds on nonbed betterments as reported in House Committee Print 27. I am sure that Members of the Congress will find both of these resolutions of interest.

RESOLUTION 1

Whereas the so-called Hoover Commission has proposed to the Congress of the United States that the existing medical care benefit structure for disabled and ill veterans be seriously whittled; and

Whereas the numerous recommendations of the Hoover Commission made in the field of medical services for veterans have been built on an economy base without even passing reference to the Nation's oft-expressed and oft-demonstrated moral obligation to these defenders of our freedom; and

Whereas the Hoover Commission has in its report to Congress drawn upon a motley collection of half-truths and antiquated information on which to base its unconscionable proposals; and

Whereas the Hoover Commission starkly typifies the growing prevalence of government by commission instead of government through law—law based on just and considered thinking: Now, therefore, be it

Resolved, That AMVETS National Executive Committee, meeting in Washington this 3d day of April 1955, do hereby officially express its repugnance at the distorted thinking which led to the recommendations; and be it further

Resolved, That AMVETS expresses its confidence that the Congress of the United States will neither abrogate its treasured right to enact wise and just legislation to a Commission bearing the name of an honored American, nor accept recommendations made under the thin guise of economy.

RESOLUTION 3

Whereas the House Committee on Vterans' Affairs recently completed an extensive investigation to develop factual information on the state of maintenance and repair of Veterans' Administration hospitals (House Committee Print 27); and

Whereas the committee's investigation disclosed that there are 56 VA hospitals which require major modernization; and

Whereas it is apparent that the results of this investigation played a major part in the action of the House Appropriations Committee in increasing by $16 million the funds for renovating and repairing older VA hospitals: Now, therefore, be it

Resolved, That the House Committee on Veterans' Affairs be commended for their action in making this critical situation known; and be it further

Resolved, That the specific action of the House Appropriations Committee in increasing funds for the renovation and repairs program be viewed with approval, and be it further

Resolved, That we urge the appropriate congressional committees and the Administrator of Veterans' Affairs to continue their efforts to accomplish the successful completion of this project at the earliest possible practical date.

Firmness and Strength Have Brought the Shift in Chinese Communist Tactics From Hard to Soft—Only Continued Firmness and Strength Can Prevent the Reds From Once More Turning a Defeat Into Victory

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following timely and wise editorial from the Washington Star, April 24, 1955:

STOP, LOOK, AND LISTEN

It still is much too early for anything but the most guarded kind of optimism over the proposal made by Premier Chou En-lai for negotiations between Red China and the United States. The hard and bitter lessons learned by the free world in past dealings with the Communists, in both Europe and Asia, should be warning enough on that score. After all, to cite the old maxim once again, the proof of the pudding is in the eating thereof, and this particular serving needs to be approached with caution because it could well be stuffed with a lot of ground glass.

Yet, with that said, the fact remains that the news from the Asian-African Conference at Bandung seems decidedly hopeful. For Mr. Chou, if his words may be taken at face value, has announced—in effect—that Peiping is ready to stage a long retreat from the policy line it has held so uncompromisingly and so belligerently for many months past. It is ready, that is, to negotiate with our Government for the purpose of "relaxing tension in the Far East," especially in the critical area of Formosa. And Mr. Chou, as if to give emphasis to the striking character of this development, has allowed himself to be quoted as saying, "I respect the political and economic systems of the United States, and China has no intention of going to war with the United States."

If words mean anything, here is a truly spectacular change of policy. Gone now is Red China's old and frequently repeated threat not only to seize the offshore Quemoy and Matsu Islands but also to liberate Formosa itself—by armed force if necessary. Gone, too, is the arrogant vow to do all this under any and all circumstances—the vow plainly and contemptuously suggesting that Peiping would never negotiate the issue with the United States, but would instead teach a lesson to that "paper tiger" if it dared to intervene with its power on the side of Chiang Kai-shek. But Mr. Chou has suddenly begun to sing a different tune. Why? What has led him to indicate that the Peiping regime may be willing, at long last, to listen to reason?

The precise answer is anybody's guess. Presumably the impressive anti-Communist sentiment at Bandung has had something to do with the change. And conceivably

Red China—which in itself is an extremely weak nation—has been told by the men of the Kremlin not to count on them for support if it gets embroiled in war with the United States. But without doubt, assuming that the Chou statement really represents a genuinely significant change in Peiping's attitude, the greatest single factor in the situation has been our Government's solemn and firm Formosa policy—a policy put in force, against the counsels of a timid minority, with powerful congressional support made virtually unanimous under the leadership of Democratic Chairman GEORGE of the Senate Foreign Relations Committee.

This firmness must continue to govern us in whatever dealings we now may have with the Chinese Communists. Certainly, if we are to negotiate with them, if they actually are prepared to be reasonable, we must make our bargaining as hard as principle and reality demand. For Peiping, like Moscow, does not respect weakness or a soft eagerness to buy peace at almost any price, and if a sound settlement is to be achieved, we must speak and act, without wavering, from a position of strength.

Our Increasing Population Is a National Problem

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1955

Mr. DONOHUE. Mr. Speaker, I would like to include a most thought-provoking editorial entitled "Babies and More Babies," which appeared in the March 13, 1955, issue of the Worcester (Mass.) Telegram.

This article points out with startling statistical vividness the prime necessity of the Nation to begin planning now for the economic and educational future of these citizens of tomorrow.

The article follows:

BABIES AND MORE BABIES

Since 1945 there have been 40 million babies born in the United States. This high birthrate, as Peter Drucker pointed out recently, is a factor of central importance to the future of the Nation.

Our present rate of increase is phenomenal. A baby is born every 8 seconds. This adds up to 11,000 new Americans every 24 hours, or 77,000 every week. In a year, more than 4 million arrive on the scene, outnumbering deaths by 2,700,000. By 1975, the demographers estimate that our population will be 206 million. But they freely admit their estimates could be way off. The figure might well be as high as 250 million.

What this means to the economy and culture of the country is already beginning to be felt. Hardly a community in the United States has not felt the impact of the tidal wave of youngsters since the end of World War II. But this is only the beginning. By 1960, it is estimated that the elementary-school population will be at least 20 percent higher than it is today.

Both the pessimists and the optimists are busy interpreting these figures. The pessimists fear that there won't be enough jobs, schools, houses, roads, or anything else to satisfy the wants of the myriad new Americans. The optimists see a wonderful new era, with all sorts of opportunities. They predict expanded markets, $50 billion worth of added buying power, and an age of scientific automation, with more of everything for everybody—and on a 30-hour work week.

One thing seems sure; the future is bound to be interesting. In the meantime, the schoolboards of the Nation will do well to make plans to cope with the army of youngsters now in diapers. Babies have a way of growing up—fast.

Tidelands Situation: No. 4

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith the fourth editorial in the series on the tidelands which appeared in the Times-Picayune, New Orleans, La. It has been my hope in presenting these editorials to the Congress that a clear picture of Louisiana's position would be known. The last editorial is entitled "Should Resist Bureaucrat Attempts To Fix Boundaries."

SHOULD RESIST BUREAUCRAT ATTEMPTS TO FIX BOUNDARIES

Several years ago, during the Truman administration, an agent of the United States Department of the Interior prepared a map of the coast showing where the Department believed Louisiana State jurisdiction ended and Federal jurisdiction began.

This newspaper published that map, with the comment that, by strange coincidence, the line drawn by the agent to divide State lands from Federal lands cut across the entrances of bays in which there was no oil production but drove deep into bays and coves where there were producing oil wells.

Judging by dispatches from Washington, there still are employees in the Interior Department who think that they have the power to determine where Louisiana's lands stop and where Federal lands begin.

As a matter of record, the Federal Government had little, if any, interest in the so-called tidelands until oil was discovered in submerged lands off the shores of California and Louisiana.

Also as a matter of record, the Federal Congress never has given to the Department of the Interior the power to establish State boundaries or, for that matter, to fix coast lines. Congress first made the President responsible for establishing coast lines. Later the responsibility was shifted, by law, to the Secretary of the Treasury and then to the Secretary of Commerce and, finally, in 1946 to the Commandant of the Coast Guard.

An attempt was made to legally authorize the Secretary of the Interior to define and publish lines marking areas of State jurisdiction, but this authority was taken out of the Tidelands Act of 1953 before its final passage.

Nevertheless, Washington correspondents, including this newspaper's Paul Wooton, have been informed that the Department of the Interior is having its agents make aerial pictures, draw maps, and perform other work to establish State boundaries." This apparently is being done on the theory that the Department of the Interior has authority to decide what oil belongs to the States and what oil belongs to the Federal Government when petroleum is produced from offshore lands.

This theory, we contend, has no basis in law and should be discarded, in addition, on the basis of practical considerations. The record of the Department of the Interior in handling Federal oil lands, before the adoption of the Tidelands Act of 1953 and of the companion statute which provided for the Department's leasing of mineral lands in the outer Continental Shelf, was far from brilliant. Federal oil lands were leased for 50 cents per acre when adjoining State and private lands were leased for many dollars per acre.

Just because the Federal Department received a surprising $250 million when it opened its first bids for leases on the outer Continental Shelf—after adopting bidding procedures formerly used only by the States—is no justification for it to follow bureaucratic precedent and try to take in more territory than the law allows.

The only authority which the Interior Department has to justify its recent actions is an interim agreement reached with Gov. Robert F. Kennon and members of the State mineral board.

This interim agreement was reached, dispatches reported, in an atmosphere of mutual cooperation on September 28, 1954, to prevent State and Interior Department officials from seeking bids for leases on the same tracts of land.

At that time Governor Kennon said that the State government and the Federal Government should seek some agreement on what is the shoreline of Louisiana. Since the Tidelands Act is concerned with the State's coastline, rather than its shoreline, and since the Coast Guard definitely has established the State's coastline, it is difficult for us to comprehend why officials of either the Federal Government or the State government should be bothering about a shoreline.

The Tidelands Act itself defines coastline as the seaward limit of inland waters. This is the line as defined and established by the Coast Guard and, obviously, is a definite line. In most places the Louisiana shoreline is an indefinite, shifting line—depending on tides, wave wash, accretion and other factors.

The full definition of coastline contained in the Tidelands Act is: "The term 'coastline' means the line of ordinary low water along the portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters."

As we view the situation, there is nothing vague or complicated about this definition.

Since the act of Congress which admitted Louisiana as a State in 1812 fixed its seaward boundary within 3 leagues of coast, since the Coast Guard established the State's coast line, and since the Tidelands Act restored to the States lands within their historic boundaries, there seems to us no justification for discussion of shorelines or other factors which should have no bearing on the matter.

The interim agreement reached by the State and Federal officials, we believe, should be discarded in favor of a permanent agreement, in which the Department of the Interior should recognize the realities of both the letter and spirit of the Tidelands Act of 1953.

Secretary of the Interior Douglas McKay, in an appearance before the House Appropriations Committee, recently said that 3 leagues, instead of 3 miles, applied to Louisiana as well as to Texas—in the determination of off-coast State boundaries.

The printed report of the executive hearing contained the following:

"Mr. MAGNUSON. Mr. Secretary, I would like to ask you further about the drilling off the coast of Louisiana. This is, of course, outside the limit of 3½ miles.

"Secretary MCKAY. It is 3 leagues down there, Congressman MAGNUSON.

"Mr. MAGNUSON. I was under the impression that the 3 leagues only applied in the case of Texas.

"Secretary McKAY. It applies both in the case of Texas and Louisiana.

"Mr. MAGNUSON. It applies in both States?

"Secretary McKAY. Yes, sir."

An attorney for the Interior Department immediately expressed belief that Secretary McKay had made a "slip of the tongue." Next day Secretary McKay wrote the committee chairman saying that the Department supports the contention that the Federal Government owns lands "3 geographical miles off the coast of Louisiana."

Secretary McKay, it seems to us, was correct when he said, "It is 3 leagues down there, Congressman MAGNUSON."

New York State Bar Association Favors Social Security Coverage

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KEOGH. Mr. Speaker, at its annual meeting held in January, the New York State Bar Association adopted a resolution favoring inclusion of self-employed lawyers in social security, indicating that the recommendation is based on a poll of the local bar associations which it is believed reflects the sentiment of the great majority of lawyers in New York State. I am in favor of giving to this professional group such coverage but that does not diminish my hope that the Congress will give consideration to legislation permitting the establishment of the voluntary retirement systems for such groups as provided in the Jenkins-Keogh bills, H. R. 9 and 10. The report is as follows:

REPORT AND RECOMMENDATION OF THE COMMITTEE ON SOCIAL SECURITY LEGISLATION

To the Members of the New York State Bar Association:

During the last session of Congress when amendments to the social security statutes were being considered it was proposed that self-employed lawyers should be covered under the Federal old-age and surivivors insurance law on the same basis as other self-employed persons. The House bill as passed included such a provision.

The Senate, however, excluded self-employed lawyers from such coverage. When this action was taken by the Senate the members of this committee were polled and expressed themselves unanimously in favor of the inclusion of self-employed lawyers as provided in the House bill. Unfortunately, while such poll was being taken the conference committee of the House and Senate agreed upon a bill which omitted coverage for self-employed lawyers.

The question of inclusion of self-employed lawyers under the old-age and survivors insurance law has aroused considerable interest and controvery among attorneys throughout the country. The American Bar Association has in the past taken a stand against such extension of social security legislation. This year, however, a proposal to take a similar stand was defeated with the result that the American Bar Association has taken no official position.

In recent years both our association and the Association of the Bar of the City of New York approved the inclusion of self-employed lawyers under the Federal old-age and survivors' insurance law on a voluntary basis. Objection has been made to the voluntary feature of such proposal on the ground that group insurance cannot be actuarially sound if individuals of the group have the option of taking or refusing coverage. This objection appears valid and, accordingly, it appears proper to reexamine the problem on the basis of compulsory coverage for self-employed lawyers, thus placing them upon the same basis as other self-employed individuals now covered.

Some opposition in the past has been based upon the thesis that social security is not a satisfactory solution for the retirement problem for self-employed lawyers and that, accordingly, the efforts of the bar should be directed toward procuring the passage of legislation which would permit some form of group retirement plan for lawyers analogous to the retirement plans now in effect in most large businesses, under income tax law provisions permitting a deduction from taxable income (within stated limits) of amounts paid for future retirement. However, there is no inconsistency between social security coverage and the attempt to procure additional provision along the lines suggested. In fact, in business such retirement plans are all superimposed upon social security.

In order to obtain an expression from the body of the bar in this State this committee has asked local bar associations to ascertain the position of their members, preferably by polling them. Several local bar associations have responded to that request.

Of the replies so far received only the Tompkins County Bar Association has reported its members opposed to the compulsory coverage of self-employed lawyers under the Federal old-age and insurance law.

The following bar associations have reported their membership in favor of such inclusion: Association of the Bar of the City of New York, Bar Association of Erie County, Inc., Bronx County Bar Association, Brooklyn Women's Bar Association, Chemung County Bar Association, Chenango County Bar Association, Cortland County Bar Association, Delaware County Bar Association, Fulton County Bar Association, Livingston County Bar Association, Madison County Bar Association, New York County Lawyers Association, New York Women's Bar Association, Oneida County Bar Association, Onondaga County Bar Association, Otsego County Bar Association, Peekskill Bar Association, Rochester Bar Association, Schnectady County Bar Association, South Nassau Lawyers Association, Suffolk County Bar Association, Sullivan County Bar Association, Ulster County Bar Association, Washington County Bar Association, Wyoming County Bar Association, Yates County Bar Association.

Most of these associations reported substantial majorities in favor of such inclusion. The Seneca County Bar Association reported an even division among its members. The Erie County, Onondaga County, and Rochester Bar Associations reported their members overwhelmingly in favor of the proposed inclusion.

This committee believes that the results so far reported indicate that by far the majority of lawyers in the State favor the extension of coverage even on a compulsory basis. For younger members of the bar it is certainly true that insurance comparable to that afforded by the Federal old-age and survivors' insurance law is unobtainable elsewhere, and that the cost of such coverage is considerably less than the cost of the nearest comparable insurance.

Accordingly this committee recommends the adoption by the association of the following resolution:

"*Resolved*, That the New York State Bar Association approves and urges the adoption of legislation to extend coverage under the Federal old-age and survivors' insurance law to self-employed lawyers on the same basis as other self-employed persons are now afforded coverage under that law."

The commitee wishes to take this opportunity to thank the local bar associations which have cooperated in determining the attitude of their members on this important question.

December 15, 1954.

Respectfully submitted.

MORRELL S. LOCKHART, *Chairman.*

Dallas Morning News Pats Mr. Sam on the Back

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Walter Hornaday, the very capable Washington represetnative of the Dallas Morning News, wrote a fine article for his paper with regard to the recent testimonial dinner given in your behalf by the Democratic National Committee.

Under leave to extend my remarks in the RECORD, I think it only fitting that the article from a great Texas paper be included in the many tributes already appearing in your behalf:

MR. SAM KEEPS ROLLING ALONG

(By Walter C. Hornaday)

Democratic National Committee officials make plenty of mistakes, but they hit the jackpot when they decided to pay tribute to Speaker SAM RAYBURN.

The traditional $100-a-plate dinners have long honored Thomas Jefferson and Andrew Jackson.

The latest affair, held in Washington Saturday night, turned to one of the latter-day figures.

SAM RAYBURN would be the last to claim rank with Jefferson and Jackson, but his admirers are not so sure that he shouldn't be placed on that pedestal even in his lifetime.

RAYBURN has been at this business of politics for a long time. To him it is an honored profession and certainly his career in his chosen field has brought credit to the profession.

Presidents come and Presidents go, Democratic and Republican, but Mr. SAM keeps rolling along. He guides the Democrats in the House with the least turmoil, in spite of the widely divergent views held by the Members.

The Rayburn dinner came at a time when there's subdued talk about peace among warring factions of the Democratic Party, particularly in Texas.

To those who know RAYBURN, it will seem strange to consider him in a role that would call for inviting back Democrats who deserted the party. Mr. SAM has some decided opinions about men who leave the party and join the enemy. On the face of things, he would appear hardly the man to try to bring back in the fold such "rebels" as Gov. Allan

Shivers of Texas and former Gov. James F. Byrnes, of South Carolina. RAYBURN probably doesn't even want them back.

RAYBURN is held in high respect by virtually all factions of the party. That is his strong point if he should choose to take the part of harmony maker. Friends and enemies know him as a man of integrity. He also has a record of acting as a peacemaker when he has considered that necessary.

He was largely responsible for preventing the 1952 National Democratic Convention from imposing a loyalty pledge on the delegates. A rollcall was practically completed on this issue and had carried when RAYBURN's boys began circulating among the delegations. State after State called to be polled to give the RAYBURN peacemaker forces time to get votes changed. Enough switches were made to prevent the pledge from being voted, and saved the party from a southern walkout. In place of the pledge southerners promised to do all they could to see that the Democratic ticket went on the State ballot under the party banner.

RAYBURN didn't step in because of any love or affection for the delegates who threatened to bolt. He undoubtedly acted for what he thought was the good of the party. This strong party feeling could induce RAYBURN to do his best again to restore unity among the Democrats.

The only result of internal strife in 1956 would be a Republican victory, and what good could that be to the Democratic Party or the country? RAYBURN could say.

The dinner could well be the start of real harmony. The fact that Democrats flocked in from all parts of the country showed they can be solid when the cause and the man appeals to them.

Democratic National Chairman Paul M. Butler must have had some of these thoughts in his head when he arranged the RAYBURN dinner.

It could have been in honor of Adlai Stevenson, the 1952 Presidential candidate. But a howl might have gone up from the South, and $100 donations might have been meager from that section.

Then there was former President Harry S. Truman, the only living Democratic ex-President. There might have been no harmony promoted and practically no money raised from the South if the affair had been in Mr. Truman's honor.

RAYBURN therefore was a natural. Texas responded in a big way. Some Eisenhower Democrats of 1952 got up a special train, on which the so-called Loyalists who supported Stevenson were welcomed to ride if they wished.

Resolution of General Court of New Hampshire

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a concurrent resolution adopted by the General Court of New Hampshire, and passed April 12, 1955:

Resolved by the senate (the house of representatives concurring), That the General Court of New Hampshire urges the Congress of the United States to enact House bill 5255, entitled "A bill to authorize the coinage of 50-cent pieces to commemorate the construction of the New Hampshire Marine Memorial as the first memorial in the United States in honor of men and women who lost their lives at sea in all wars, which is to be erected at Hampton Beach, N. H.," now pending in the United States House of Representatives, as introduced by Representative CHESTER MERROW, of New Hampshire; and be it further

Resolved, That the secretary of state transmit certified copies of this resolution to the Senators and Representatives of New Hampshire in the Congress, and to the Speaker of the House of Representatives and the President of the Senate of the Congress of the United States.

Passed April 12, 1955.
Attest:

ENOCH D. FULLER,
Secretary of State.

Extending and Strengthening the Water Pollution Control Act

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I introduced a bill today to strengthen and extend the Water Pollution Control Act of 1948. Although this bill is similar to other measures already introduced in the House, it contains a new section to provide for incentive grants and loans to speed up the program of constructing sewage treatment plants.

In this connection, I wish to point out that the additional provision which my bill contains has the full support of the National Wildlife Federation, an organization composed of conservationists throughout the United States and in the Territory of Alaska. Mr. Charles H. Callison, conservation director of the National Wildlife Federation, recently testified before the Senate Subcommittee on Flood Control, Rivers, and Harbors on S. 890, a similar bill on water pollution abatement. Mr. Callison has made a very thorough analysis of S. 890 and the proposed amendment which my bill adds to the legislation already introduced in the House and Senate. Mr. Callison's testimony follows:

Mr. Chairman and gentlemen, the National Wildlife Federation is composed of State wildlife federations and sportsmen's leagues in 47 States, the District of Columbia, and the Terrtory of Alaska. These State organizations and their affiliated local clubs represent some 3 million members, making the Federation the largest conservation organization in the United States. They are representative further of the more than 30 million citizens who buy hunting and fishing licenses annually, as well as many other millions who do not hunt or fish but yet depend upon clean waters in the out-of-doors for the recreation that keeps them healthy in mind and body.

Mr. Chairman, the hunters and fishermen of America have long been noted for their crusading and constructive interest in water pollution abatement. More than any other segment of our citizenry, they have worked and fought for clean waters upon which the health and economic welfare of every citizen depends.

There are several good reasons why hunters and fishermen are so keenly interested in the problem before this subcommittee. In the first place, the sportsman naturally tends to become a conservationist. He soon learns that his own sport depends upon fertile lands and clean waters.

Secondly, the sportsman gets out on the streams and lakes and along the shorelines more than the rest of the population. He gets out where he can see and smell the pollution.

Thirdly, the typical sportsman is especially endowed with the kind of energy and enterprise that makes this Nation great. He is not the kind to sit idly by and say nothing when there is a mess that needs cleaning up.

Mr. Chairman, if the organized sportsmen of America are convinced of a single fact with respect to water pollution, it is that the whole abatement program needs a drastic shot in the arm. We think it needs speeding up manyfold over its present halting pace.

I do not need to repeat the alarming evidence. The figures and charts already have been presented to you. You know about the population trends—200 million Americans expected to be needing and using water for a variety of vital purposes by 1975. The prodigious and growing demand of our new technologies and new industries for water. The increasing need for irrigation. And all of these facts set against the harsh reality that our water resources are not increasing, a reality brought shockingly home by water shortages in recent years. Water shortages are not a passing phenomenon, gentlemen. I'm afraid they are here to stay.

You know these facts. They are the same facts that have convinced the conservation-minded sportsmen of America that our present pollution-control programs—State and Federal—are like trying to fight a forest fire with a flit gun.

Some States have made a lot of progress compared to their neighbors. But not a single State—if it is looking the facts honestly in the face—can claim to be doing the job that must be done to lick the pollution menace.

The National Wildlife Federation agrees with the philosophy of the 1948 Water Pollution Control Act, a philosophy that is reaffirmed in S. 890, the bill before you. We believe that as a general proposition, the pollutor—whether he be private citizen flushing his water chamber, or Government institution, or industry—must pay for controlling his own effluent. We believe that the consumer must expect to pay slightly more for the manufactured product in order to protect the water upon which both the industry and his own personal welfare depend. We believe the public business of enforcing abatement and control is primarily a job for the States.

But we believe also, as did the Congress in passing the Taft-Barkley Act of 1948, that the Federal Government has both a stake and a responsibility in water-pollution control. It is the same responsibility which for generations has dictated the Federal programs for the conservation and development of our great river basins. And we believe that abatement of pollution in interstate waters is peculiarly a task for the Federal Government in cases where the States cannot or will not do the job.

The National Wildlife Federation does not wish to see any provision of Federal law enacted that would handicap or retard the several States in their own pollution-control programs. Spokesmen for a few States have raised, or will raise, that question with respect to certain provisions of S. 890. We do not necessarily share their fears about S. 890, but we do recommend that this subcommittee, in its wisdom and with the best legal counsel available to it, examine that question very carefully. We believe that if needed, corrective amendments can be writ-

ten that will safeguard the legal position of the States without jeopardizing the important objectives of S. 890, namely, to extend and strengthen the present Federal law, to increase the volume and efficiency of research, to meet more adequately the Federal share of the cost of pollution cleanup, to provide Federal incentives for the strengthening of State laws and programs, and to streamline the procedures in cases where it is necessary for the Federal Government to move against the pollutors of interstate waters.

I should like to repeat, Mr. Chairman, that the goal of the National Wildlife Federation is to speed up the work. We want to see the laws improved and realistic appropriations made available for pollution abatement in every State. We like S. 890 because one of its main purposes is the stimulation of better State programs and better State laws.

At this point in the record, Mr. Chairman, with the permission of the subcommittee, I should like to insert a copy of a resolution adopted by the National Wildlife Federation at its recent annual convention held last March 11–13 at Montreal, Quebec.

I should like also, with your permission, to place in the record at this point our analyses of S. 890 and our section-by-section comparison of the bill with existing law, showing how the law would be revised.

ENFORCEMENT

As indicated in the Montreal resolution, the federation does not believe the enforcement provisions of Public Law 845 are adequate. Evidently this view is shared by Members of Congress. I should like to call attention to House Report 228, reporting on the Public Health Service appropriations in this session. On page 11 under caption "Sanitary Engineering Activities" for fiscal year 1956, the committee stated, "The major item disallowed was a request for an increase of $145,000 for enforcement of the Water Pollution Control Act. The committee would have looked with favor on such a request were it not for the fact that the act is, in the final analysis, almost unenforceable."

On this same page in explaining the elimination of a request for grants to States for water-pollution control, the committee stated that it was impressed with the need of enforceable legislation in this field and would be ready to review such a program and the need for funds when such legislation was provided.

It is of interest that the late Senator Taft in his testimony on Public Law 845 in 1948 stated that "The general theory has been that pollution control would be effected by the States through their own laws and through their own controls. But, as I say, there are cases where the Federal Government comes into it; there are cases where a State may not comply with its general obligations or do a good job. But there may be cases in which States do not take the action they should simply because it doesn't happen to be of particular interest to the citizens of that State. Therefore, I think we have a clear case for Federal interference. From a constitutional standpoint, as far as the Ohio River itself is concerned, there isn't any question about the Federal Government's interest. There is a constitutional question as to how far the Federal Government is interested in the pollution of upper branches of the Ohio which are entirely within one State."

Whereas the federation would prefer legislation authorizing a more active role by the Federal Government in enforcement, we are agreeable to giving S. 890 a trial, reserving our position as to its adequacy in this respect after observing its effectiveness in operation.

LOANS OR GRANTS FOR CONSTRUCTION OF TREATMENT WORKS

Now for the important purpose of speeding up the program, Mr. Chairman—of getting more sewage-treatment plants constructed—we should like to recommend an amendment to S. 890 to provide for incentive grants and loans.

"SEC. 6. The Surgeon General of the Public Health Service is authorized to extend financial aid in the form of grants, loans, or both to any State or municipality for the construction of necessary treatment works to prevent the discharge by such State or municipality of untreated or inadequately treated sewage or other wastes into the surface or underground waters in or adjacent to any State and for the preparation of its engineering reports, plans, and specifications in connection therewith. Such grants and loans shall be made upon such terms and conditions as the Surgeon General may prescribe, subject to the following limitations: (1) no Federal financial aid shall be made for any project unless such project shall have been approved by the appropriate State water pollution control agency or agencies and by the Surgeon General and unless such project is included in a comprehensive program developed pursuant to this act; (2) no grant shall be made for any project in an amount exceeding 10 percent of the estimated reasonable cost thereof as determined by the Surgeon General; (3) the total amount of Federal financial aid, including both loan and grant funds, shall not be made for any project in an amount exceeding 50 percent of the estimated reasonable cost thereof as determined by the Surgeon General; (4) all loans made under this section shall bear interest at a rate of 2 percent per annum. Bonds or other obligations evidencing any such loan must be duly authorized and issued pursuant to applicable State, local, or other law, and may, as to the security thereof and the payment of principle thereof and interest thereon, be subordinated (to the extent deemed feasible and desirable by the Surgeon General for facilitating the financing of such projects) to other bonds or obligations of the obligator issued to finance such project or that may then be outstanding."

DISCUSSION OF FOREGOING PROPOSED AMENDMENT

In the absence of widespread enforcement, financial aid as an incentive for construction is an effective Federal means to accelerate abatement progress. Financial aid is consistent with the limited exercise of Federal jurisdiction over the Nation's navigable waters, the Federal interest in pollution, and its control, the widespread benefits accruing to health and welfare through abatement, and the policy of the Congress to assist the States in abating pollution. The public at large benefits from pollution abatement.

Water supply protected by adequate pollution control is one water resource development not now subsidized by the Federal Government. As declared previously in this statement, we believe that pollution abatement is equally in the national interest with other resource development and can meet established criteria of eligibility for Federal aid. There is need for accelerating the abatement progress, and the effectiveness of Federal grants in accomplishing this result has been well demonstrated.

The need for concentrated abatement effort is attested by the increase in magnitude and complexity of pollution for over one-half century. A Federal financial incentive would be uniform throughout the country and would be an alternative to rigorous enforcement in effecting substantial progress in abatement of pollution.

Federal loans at 2 percent, which could be subordinated to private loans, would help bring down the cost of financing for cities experiencing high interest rates in the market. Thus competition for the city's tax dollar would no longer be more favorable to other, more popular public works improvements.

In order that the desired rate of progress might be made, the States need strong support in their responsibility for pollution control. We believe they have not done well in the past and that they will not succeed in the future without Federal help. This water pollution problem should be attacked now rather than delayed until conditions become so bad that a popular cry will be heard for the Federal Government to buy the solution at tremendous expense.

Mayors Clark, Wagner, and Lawrence Organize Opposition of Nation's Major Cities to Legislation Intended To Remove Consumer Protection on Natural-Gas Rates

---

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. GRANAHAN. Mr. Speaker, the mayors of more than 50 major American cities of 100,000 population or more, having a combined population of more than 30 million Americans, have joined with the mayors of Philadelphia, New York, and Pittsburgh in launching a consumers' fight against pending natural-gas legislation.

This legislation is now before the House Committee on Interstate and Foreign Commerce, on which I have the honor to serve, in the form of bills to remove the power of the Federal Power Commission to regulate the so-called field price of natural gas. If this price—the price paid by the pipelines to the producers—is removed from Federal regulatory jurisdiction, the price can, of course, shoot up drastically and be reflected in the monthly gas bills of every American consumer whose household is supplied with gas shipped in interstate commerce.

The Honorable Joseph S. Clark, Jr., of Philadelphia, was the originator of this consumers' movement by the mayors of our major cities. He enlisted the early support of the Honorable Robert Wagner, Jr., of New York, and the Honorable David L. Lawrence, of Pittsburgh. The three then invited mayors of all large cities to join them in this endeavor. Following is the list of mayors who accepted their invitation, and who have joined in representations before the House Committee on Interstate and Foreign Commerce, and I think it fair to say they have been making a most convincing case on behalf of the consumer:

MEMBERS OF MAYOR'S COMMITTEE TO OPPOSE H. R. 4560 AND SIMILAR EXEMPTION BILLS (CITIES WITH POPULATIONS OVER 100,000)

Philadelphia, Pa.: Joseph S. Clark, Jr.
Pittsburgh, Pa.: David L. Lawrence.
New York, N. Y.: Robert F. Wagner.
Akron, Ohio: Leo Berg.
Birmingham, Ala.: J. W. Morgan.
Baltimore, Md.: Thomas D'Alessandro, Jr.
Boston, Mass.: John B. Hynes.
Bridgeport, Conn.: Jasper McLevy.
Buffalo, N. Y.: Steven Pankow.
Cambridge, Mass.: John J. Foley.
Camden, N. J.: George E. Brunner.
Chicago, Ill.: Richard J. Daley.

Cincinnati, Ohio: Carl W. Rich.
Cleveland, Ohio: Anthony J. Celebrezze.
Columbus, Ohio: Maynard E. Sensenbrenner.
Denver, Colo.: Quigg Newton.
Detroit, Mich.: Albert E. Cobo.
Duluth, Minn.: George D. Johnson.
Elizabeth, N. J.: Nicholas Sylvester LaCorte.
Erie, Pa.: Arthur J. Gardner.
Fall River, Mass.: John P. Kane.
Flint, Mich.: George M. Algoe.
Gary, Ind.: Peter Mandich.
Grand Rapids, Mich.: George W. Welsh (city manager).
Kansas City, Kans.: Paul F. Mitchum.
Knoxville, Tenn.: George R. Dempster.
Louisville, Ky.: Andrew Broaddus.
Milwaukee, Wis.: Frank P. Zeidler.
Minneapolis, Minn.: Eric G. Hoyer.
Montgomery, Ala.: W. A. Gayle.
Nashville, Tenn.: Ben West.
Newark, N. J.: Leo P. Carlin.
New Bedford, Mass.: Arthur N. Harriman.
New Haven, Conn.: Richard C. Lee.
New Orleans, La.: deLesseps S. Morrison.
Paterson, N. J.: Lester F. Titus.
Portland, Oreg.: Fred L. Peterson.
Providence, R. I.: Walter H. Reynolds.
Richmond, Va.: Thomas P. Bryan.
Sacramento, Cal.: H. H. Hendren.
Springfield, Mass.: Daniel Brunton.
St. Louis, Mo.: Raymond R. Tucker.
St. Paul, Minn.: Joseph E. Dillon.
Syracuse, N. Y.: Donald H. Mead.
Tampa, Fla.: Curtis Hixon.
Toledo, Ohio: Ollie Czelusta.
Utica, N. Y.: Boyd E. Golder.
Waterbury, Conn.: Raymond E. Snyder.
Yonkers, N. Y.: Kristen Kristensen.
Youngstown, Ohio: Frank X. Kryzan.
Jersey City, N. J.: Bernard Berry.

STATEMENT BY MAYORS' GROUP ON H. R. 4560

Mr. Speaker, on Monday, a group of these mayors met with the chief city attorneys of many of our major cities to work out the details of their presentations before the House Committee on Interstate and Foreign Commerce in opposition to the pending natural-gas exemption bills.

Following is the statement issued that day in the name of the mayors' group by the Honorable Joseph S. Clark, Jr., mayor of Philadelphia:

[For immediate release—April 25, 1955]

STATEMENT OF MAYORS' COMMITTEE TO OPPOSE THE HARRIS BILL REMOVING POWER OF FEDERAL POWER COMMISSION TO REGULATE NATURAL-GAS SALES BY PRODUCERS

On behalf of the committee, Mayor Joseph S. Clark, Jr., of Philadelphia, made the following statement at the close of an all-day conference held in the Jefferson Room of the Mayflower Hotel:

"This group here today represents most of the natural-gas consumers of the United States.

"Representatives of mayors of more than 50 cities having a total population of over 30 million people have been meeting with the chief city attorneys and representatives of mayors of many other cities, large and small. Our purpose has been to organize presentation of the consumers' case against the Harris bill and similar legislation now pending before the House Committee on Interstate and Foreign Commerce. The purpose of these bills is to remove the authority presently vested in the Federal Power Commission to regulate the price of sales of natural gas by producers and gatherers to pipeline companies which transmit gas to our city borders.

"Protests against this legislation are national in scope. Cities from Oregon to Alabama, from Louisiana to Massachusetts have joined our committee to oppose this legislation. The interests of all gas consumers require that it be defeated.

"Huge increases in the price of natural gas during the last few years are largely due to the fact that the Federal Power Commission has heretofore failed to exercise the powers given to it by the Natural Gas Act of 1938 as interpreted by the Supreme Court of the United States in the Phillips case. If this legislation passes, the power of the Federal Power Commission to exercise its obvious duty in the consumer interest will be removed. Gas bills all over the country will inevitably increase in an aggregate of hundreds of millions of dollars.

"Experience has amply demonstrated that the unregulated operation of the law of supply and demand with respect to a national resource in as short supply as natural gas, whose ownership is monopolistic in character, results in one thing only: higher prices to consumers and unwarranted profits to the big oil companies of the country who control over a third of the supply of natural gas.

"It is clear that reegulation of the profits of pipeline companies and retail distributors of natural gas is not enough. The weak link in the armor of consumer protection is failure to regulate the initial sale from producer or gatherer to pipeline company.

"A priceless national resource such as natural gas affected as it is with a public interest and in increasingly short supply must be subject to effective regulation from wellhead to the tip of the burner if the interest of the average American consumer is to be adequately protected.

"We are accordingly united in our opposition to legislation which would remove this key protection to the consumer which exists in the present law."

A Bill To Amend the Internal Revenue Code

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DODD. Mr. Speaker, I have today introduced a bill to amend the Internal Revenue Code of 1954 to provide a partial tax credit for certain payments made to a public or private educational institution of higher education.

This bill is identical to the bills already introduced by the gentlemen from Louisiana and California [Mr. BOGGS and Mr. JACKSON].

Many parents have told me that they are finding it extremely difficult to afford higher educational opportunities for their children.

Educators have informed me that most of our colleges and universities have reached the limit of their scholarship possibilities.

There is no more valuable asset of this Nation than the development of the minds and characters of our young people.

This is the best proposal that I have seen because it will insure freedom of choice with respect to educational opportunities and will preserve private initiative and family interests in the educational future of our young people.

Intelligent Voters Are the Best Protectors of Our Two-Party System

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1955

Mr. DONOHUE. Mr. Speaker, a most instructive and informative article explaining the dilemma of our electoral-college system appeared in the March 12, 1955, issue of the Worcester (Mass.) Telegram, which I would like to include at this time.

The precise explanation of the technical operation of this system, written by Mr. Myron M. Johnson, of the paper's editorial staff, very pointedly reminds us that "laws can't compel wisdom."

The article follows:

LAWS CAN'T COMPEL WISDOM

(By Myron M. Johnson)

At his news conference last week President Eisenhower answered a question about plans for changing the system of electing the President and Vice President. There are now two such plans.

One is sponsored by Senator MUNDT, of South Dakota, and Representative COUDERT, of New York. It would require presidential electors to be chosen by the people of the congressional districts.

The other plan is sponsored by Senator DANIEL, of Texas, and others. It would abolish the electoral college and divide the electoral votes of each State among the different candidates in proportion to their popular votes. This is practically the same plan which Henry Cabot Lodge, Jr., sponsored when he was Senator.

President Eisenhower neither endorsed nor opposed any plan for electoral changing. He did speak of the danger of splinter parties.

Under our present system, electors are chosen by popular vote in each of the 48 States, and these electors vote for President and Vice President. The electors taken together are called the Electoral College. At first the electors used their own free judgment in voting for President and Vice President. But they soon became agents of their parties. They vote for the candidates who have been nominated by their party conventions. So our presidential elections are indirect in form but direct in fact.

The Constitution says that the person having the greatest number of electoral votes for President "shall be the President, if such number be a majority of the whole number of electors."

It further says that if no person receives a majority of electoral votes for President, then the House of Representatives "shall choose immediately" the President; that each State shall have one vote, and that a "majority of all the States shall be necessary to a choice."

In 1824 the electoral vote for President was split four ways, and nobody got an electoral majority. The House chose John Quincy Adams. But since then, third parties or splinter parties have not upset the electoral applecart.

Theodore Roosevelt and his Bull Moose Party in 1912 divided the Republicans and gave victory to the Democrats under Woodrow Wilson. In 1924 the third party under Robert M. LaFollette and Burton K. Wheeler did not prevent a Republican landslide under Calvin Coolidge. In 1948 the Dixiecrats under J. Strom Thurmond and the Progres-

sives under Henry A. Wallace failed to prevent a sizable electoral majority for the Democrats under Harry S. Truman.

The Constitution does not say that a candidate lacking an electoral majority cannot become President. It merely provides that such a candidate cannot become President unless the House of Representatives chooses him.

The Constitution does say that when the House chooses a President, its choice must be limited to 3 persons, the 3 candidates receiving the highest 3 numbers of electoral votes. Of these three men, the one with the lowest number of electoral votes might still be the winner in the House.

So the Constitution really sets up this rule: When each presidential candidate gets only a minority of the electoral votes, then one of those candidates with only an electoral minority shall become President.

Hence this is the way things stand: A person can become President without getting a majority of the electoral votes.

It could not be otherwise, under the present system or under anything similar to it. For there is no natural or easy way to compel or give a majority to any party or candidate.

Under the Lodge plan, which the Senate revised and accepted, but which the House rejected, if no presidential candidate got as much as 40 percent of the electoral votes, Congress would choose the President, from the highest two candidates.

That would not end the possibility of minority candidates becoming President. Something could be done by a runoff election, between only two candidates. Also, something might be done by a system of proportional representation, in which voters would express their first, second, and third choices for President. But there is no sign that either one of those ideas will be tried. Probably neither the existing system nor present plans for changing it can prevent the rise of splinter parties, if people should become really tired of both of the two major parties. Intelligent and patriotic voters, not laws, are the best protectors of our two-party system.

House Joint Resolution 231

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. RODINO. Mr. Speaker, I wish to include in the RECORD a communication addressed to Mr. J. Wellington Hall, national secretary of the American Material Handling Society, Inc., by Mr. Nathaniel Warshaw of the materials handling division of the Market Forge Co., Everett, Mass., commenting on a National Better Material Handling and Packaging Week, together with the comments of Mr. Hall:

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I would like to offer, in support of your resolution, House Joint Resolution 231, a National Better Material Handling and Packaging Week, the following letter from Mr. Nathaniel Warshaw, manager, material handling division, Market Forge Co. Mr. Warshaw has been in the material handling field for many years and has crusaded for many years for a standardization program within industry.

In that his letter contains a message of great value to the industries and military forces of the Nation, I would request that it be entered into the RECORD as beneficial to the effort to establish a National Better Material Handling and Packaging Week.

Very truly yours,

J. W. HALL,
National Secretary AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

MARKET FORGE CO.,
Everett, Mass., April 6, 1955.

Mr. J. W. HALL,
National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: Thank you for your letter of April 1. I certainly appreciate the fact that you have sent me 50 copies of the excerpts from the CONGRESSIONAL RECORD pertaining to materials handling.

It is my opinion that there is no greater opportunity for service to the American people than in the area of materials handling. Having been in this business since 1922, when materials handling was very far from being considered an industry, I have naturally given the matter a great deal of thought.

I, therefore, feel it would be of interest to you to look over the attached copy of a talk which I delivered October 1953 under the auspices of the Society of Industrial Packaging and Materials Handling Engineers and the sponsorship of the Mechanical Engineering Department of the Massachusetts Institute of Technology.

This talk dealt with integration and standardization of materials-handling equipment and you will note that I specifically suggested that the subject is so broad and of such great importance to the American people that I feel that this particular matter of standardization must be sponsored by the Government itself.

As you know, we are an industry composed of small businesses in general. There are only 1 or 2 large companies in the industry and they, as a rule, only make certain selected items in the industry where it is necessary to provide large floor areas, expensive machinery, and service in the field.

In my opinion, there is no large leader for the industry as there is in other industries such as the automotive industry and the electrical industry.

When there is a great leader in an industry, it is usually found that they develop standards which become standard for the industry and then smaller companies adopt those standards and finally by general agreement the industry has accepted standards available.

In this industry there has been valiant attempts at standardization but progress is very slow and ponderous. There are so many small companies involved that very often their executives simply do not have the time or the financial requirements to engage in a program of standardization.

It seems very important to me, therefore, that the Government itself through the Department of Commerce and the Bureau of Standards, accept the leadership in this great enterprise. Believe me when I say that I do not feel that such a situation would apply to a great many other industries or that it would be advisable in a great many other industries. It is a fact, however, that the United States Government itself is probably the largest user of materials-handling equipment in the world and, therefore, has a definite stake in such a standardization program.

I believe that almost every department of the Government such as the Quartermaster, the Air Force, the Navy, and possibly others already have divisions devoted almost exclusively to matters of material handling. I feel that a great service would be done if these different divisions and the different services were integrated together, and combined with industry to promote standardization and integration of materials-handling equipment.

I realize very much how important it is for the Federal Government to avoid duplication of the work done by industries and also how important it is to keep down the costs of Government. Nevertheless, it is my considered opinion that there are probably many other divisions of Government which could be much better dispensed with than a division composed of capable men devoted to standardization and integration of materials-handling equipment.

Let me also point out that in the consideration of materials-handling equipment it is extremely important that indoor equipment be considered along with outdoor equipment. It is all one problem and we have reached a point in our economy where tremendous savings can be made all along the line by a sensible approach to enable the outdoor machinery and the indoor machinery to be integrated whenever possible.

I know that the ASA appreciate the importance of standardization and have always been willing to help but they are usually involved in many other problems which prevents them from taking over the leadership in this particular field.

Cordially,

MARKET FORGE CO.,
NATHANIEL WARSHAW,
Manager, Materials Handling Division.

A Tribute to Mrs. Sarah Lee Fleming

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. CRETELLA. Mr. Speaker, I take pleasure and pride in paying tribute to Mrs. Sarah Lee Fleming, of 216 Dwight Street, New Haven, Conn., who was recently the recipient of the sojourner truth scroll, an annual award for meritorious community achievement sponsored by the New Haven chapter of the National Association of Negro Business and Professional Women's Club.

Mrs. Fleming is the founder of the Phyllis Wheatley Home for Girls. It was while she was a member of the Twentieth Century Club that she conceived the idea for a place of supervised residence for colored stranger girls those either employed or looking for a job in New Haven. To promote the enterprise she organized the Women's Civic League in 1929 and spread the idea everywhere in spite of the apathy and opposition it encountered. To arouse interest among such girls in a home where they might go for a chat and tea, Mrs. Fleming opened her own home monthly for Phyllis Wheatley days.

Various expedients were used to obtain support and contributions and eventually the league took over the annual charity ball of the Twentieth Century Club, and renamed it the Benefit Follies. Lively programs, appealing to the younger set, made money for it and

finally in 1936, a neighboring building seized by the city for taxes and repaired by national relief funds, was vacated and Mrs. Fleming, alert to the chance, obtained its grant from the city.

This is only one of her many civic and community achievements. In 1952, she was elected Connecticut Mother of the Year. Mrs. Fleming was born in Charleston, S. C., raised in Brooklyn, N. Y., and has resided in New Haven for the past 40 years. She is the wife of Dr. Richard S. Fleming, prominent New Haven dentist. They have a son, Dr. Harold Fleming, also a dentist, with a masters degree from the University of Pennsylvania, and a graduate of Harvard Dental School. Dr. Harold Fleming was the winner of a $3,000 fellowship given by the United States Public Health Service for studies in cancer, heart, mental diseases, and arthritis and metabolic ailments caused by micro-organisms and various dental disorders. The Flemings also have a daughter, Dorothy, who is a social worker and is prominent in working on problems of teenage groups.

Mrs. Fleming numbers among her many personal friends, John Lodge, former Governor of Connecticut, and former Mayor William C. Celentano, whom she has known since he was a small boy in the Dwight Street neighborhood.

A founder of the Connecticut State Union of Women's Clubs and the Women's Civic League, Mrs. Fleming is still actively engaged in her many civic undertakings. More than 400 people watched the recent presentation of the Sojourner Truth Scroll which reads:

In recognition of her meritorious community service, her deep concern for and participation in all activities advancing the status of women, her sincere effort and acceptance of responsibility to advance the brotherhood of man.

H. R. 12

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DIXON. Mr. Speaker, within the last 24 hours, I have been receiving numerous telegrams and letters urging that I actively oppose H. R. 12, which will soon be before this body for consideration. I would like to insert copies of messages from the American Farm Bureau and the Utah Farm Bureau in this regard. Their pleas are similar to the ones received from farmers in my State who are hoping desperately that Congress will not take away their chance for a degree of freedom they have not enjoyed for many years.

WASHINGTON, D. C.

Hon. HENRY A. DIXON,
House of Representatives:

Voting delegates at the last annual convention of the American Farm Bureau Federation in December 1955 representing over 1,600,000 farm families overwhelmingly passed resolutions approving the Agricultural Act of 1954. We are strongly opposed to H. R. 12 and urge that every effort be made to carry out the wishes of farmers throughout the 48 States by defeating this bill.

FRANK K. WOOLLEY,
Legislative Counsel.

SALT LAKE CITY.

Hon. HENRY A. DIXON,
House of Representatives,
Washington, D. C.:

Farm Bureau Board representing a direct membership of 8,000 farm families and 16 federated marketing and bargaining associations urge your continued effort against H. R. 12. This board includes president of each county and representative of each association with combined membership covering virtually every farm family in the State. Federated members include Utah Poultry and Farmers Cooperative, Weber Central Dairy, Utah Sugar Beet Growers, Utah Canning Crops Growers, Producers Livestock Association, Utah Growers Cooperative, Hi-Land Dairy Association, Cache Valley Dairy Association, Utah Horticultural Society, Utah Crop Improvement Association, Federated Milk Producers, Utah Turkey Growers Association, Superior Sugar Beet Seed Growers, Utah Beekeepers Association, and two insurance-service organizations. Over 3,000 farmers participated in 192 meetings throughout the State, resulting in resolution against high fixed supports embodied in H. R. 12. Livestock requiring supported feed constitute 71.9 percent total production, all of which is hurt by supports. Wheat producers very unhappy with support program. We urge your continued work for sound program of flexible supports.

FRANK G. SHELLEY,
Executive Secretary, Utah Farm Bureau Federation.

Machines Make Men's Work Easier

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a communication addressed to me by Mr. J. Wellington Hall, national secretary of the American Material Handling Society, Inc., together with an article entitled "Machines Make Men's Work Easier" which appeared in the magazine Family Circle:

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, April 25, 1955.

Hon. PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. RODINO: I am forwarding to you excerpts from an article entitled "Machines Make Men's Work Easier." It is taken from the magazine Family Circle, published by the Crouse-Hinds Co., Syracuse, N. Y., for their employees.

It is unique in that it is management pointing out to its employees the benefits derived by the installation of an integrated material handling system.

Mrs. Ellen W. Van Dusen, editor, Family Circle, writes—and I quote:

"Our thought behind this story was to point out to our people that mechanization has taken the backbreaking labor out of much of the foundry and factory work; that it has meant greater efficiency of production and greater production.

"Basically, our point was to bring home the economic facts of life to our readers."

May I point out that: This company, not a manufacturer of material handling equipment, but instead of electrical equipment has seen fit to explain to their employees through the medium of their company publication the manner in which the company has managed to remain competitive and secure their fair share of the consumers market. That they attribute it to the keeping abreast of the modern innovations and methods of material handling and its related operations is indicative of the importance they place on this function of their industry.

In support of your resolution House Joint Resolution 231, a National Better Material Handling and Packaging Week, I would request that this article be included in the CONGRESSIONAL RECORD as of benefit to the effort to attain that objective.

Very truly yours,

J. W. HALL,
National Secretary, AMHS, Westinghouse Electric Corp., Meter Division, Newark, N. J.

[From Family Circle]

MACHINES MAKE MEN'S WORK EASIER—CRANES, ELEVATORS, AND CONVEYORS MOVE RAW MATERIALS IN STEADY FLOW

When today's worker goes home after a day's work in the foundry, the yard or the factory, his thoughts do not go readily to laborious methods of yesterday used on perhaps the same job he is doing.

It is only natural that he accept what is, without recalling how industry has arrived at the place where it is today.

This story is not about machines used in manufacturing products, but rather machines and machinery used to take backbreaking labor out of handling materials. Old pictures of men lifting pig iron by the piece and piling it, then lifting and carrying it again to the foundry, are in sharp contrast with what takes place today.

Today's materials handling equipment represents thousands—yes, probably hundreds of thousands—of dollars of invested capital. These were dollars made through the sale of Crouse-Hinds products that were plowed back into the business to make it a better place for workers. To stay up to date it is necessary to reinvest dollars in plant and equipment.

Efficient handling of materials, both raw and finished, has helped place the company in a position where its products can compete in markets of the world. This favorable competitive position has meant continuation of jobs for the 2,300 men and women who look to Crouse-Hinds for their families' livelihoods.

For, after all and in the final analysis, selling Condulets, floodlights, airport lighting and traffic signals is what provides those jobs.

Let's take a look at machines and machinery which, as they have been installed through the years have removed some of the hardest of men's work, and which have made Crouse-Hinds a much safer place to work.

Core sand is no longer shoveled. It is stored in the silo-type bins visible to all Crouse Hinds workers. Sand is brought in dump trucks dropped over a grated hopper, carried by conveyor to 5 great storage bins. It remains in the bins until it is fed automatically to a scale hopper on the balcony over the core room. There, in sand mixing equipment, it is mixed with oil and cereal binders to make the right consistency for cores. After mixing it is taken by small hopper buggies to openings in the floor through which the sand is fed to core makers' hoppers on the floor below.

As these skilled coremakers finish cores, they place them on racks moving slowly by their work places. These racks, suspended from a moving chain-type conveyor, are carried into ovens which bake them for final use. The cores come out of the ovens ready for piling inspection and delivery in molders throughout the foundries.

Raw materials needed in foundries are heavy and bulky. Manual labor of the hardest kind was necessary years ago to keep the foundry in operation. By comparison methods used today for handling raw materials are easier. As pig iron, scrap iron, coke, and limestone arrive in carload lots, railroad cars are emptied by a crane operating along a massive superstructure. The crane's equipment includes a clamshell bucket and a magnet. These lift the material from the cars, storing it in charging bins opening into the foundry, or, if in greater supply, piling it in the yard for later use.

Charging bins feed the charge buckets for the great cupolas which melt the pig iron, scrap steel, limestone, and coke in proper proportions to make Feraloy castings. All day men move along in front of the bins on an electric car equipped with scales, dragging down raw materials into large buckets for melting. When a bucket is filled it is lifted by crane to the top of the foundry and dumped into the cupola.

But using machinery for heavy work does not end there.

Molten metal flows from the cupola into the large reservoir ladle controlled by wheels which slowly turn the ladle emptying part of its contents into transfer ladles, sometimes called "bull" ladles. Overhead tram systems, electrically operated, allow ladlemen to push these transfer ladles to men with pouring ladles. They do not lift the transfer ladles but guide them as they are pushed on overhead trams from station to station.

Men on the pouring ladles, with help of mechanical linkage, raise and lower their smaller ladles to receive the molten metal. Guiding the pouring ladle as it is suspended from the tram, these pourers permit iron to flow into molds which move on an endless conveyor system. This system brings molds from molders' stations to the pourer and on to the shakeout. There molds are broken open, loose sand and cores shaken out. The still hot castings are conveyed on a steel belt through decoring screens to areas for sorting, cleaning, and resorting into containers called tote boxes.

Mechanized handling of materials does not end there either. Electric trucks shuttle back and forth all day moving castings from the cleaning room to Conduiet machine for tapping, threading, or other processes. There materials are handled by electric fork trucks driven by women who are adept as children on kiddie cars. Only a little effort is needed to operate these trucks. By simple operation of controls tons of castings are lifted easily. Operation is almost finger-tip controlled.

In this department recent improvements in handling acids have removed some of the hazards which accompany that operation.

Formerly muriatic acid came in 13-gallon carboys. These were emptied into pails, then lifted over a high cross bar to fill the plating tanks each time they were cleaned which is about every 3 months.

A recent installation of a 12,000-gallon tank has been made on the roof of a sand shed outside the plating room. As the acid is needed in the plating process, and by a system of valves, platers can draw the acid from the tanks.

The acid is delivered by tank car on the railroad siding and pumped into the storage tank. Therefore, this new materials handling device eliminates the dangers of burns to clothing and body as well as eliminating rehandling of the liquid and heavy lifting.

New and modern methods of handling materials make heavy work lighter, move materials with efficiency. An important by-product of modern materials handling methods are greater safety factors. Heavy lifting with its frequent resultant damage, burns from hot metal and acids are lessened by these modern methods.

Many of the original conveyors described in this article were installed more than 25 years ago. They were among the very first and largest used for materials handling by any manufacturer in this area.

A current review of the materials handling methods in effect at Crouse-Hinds indicates that we are keeping pace with modern methods for the purpose of efficiently and effectively producing quality materials that will meet competition in the market today. However, it is only through the wisest use of these methods, exercised by men and women who use their heads to help the company do the best job, that the company will be able to continue to stay in a favorable position and in the end make workers' jobs secure.

Israel's Seventh Birthday

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial which appeared in the April 23 issue of the East Side News entitled "Israel's Seventh Birthday":

ISRAEL'S SEVENTH BIRTHDAY
(By Harry H. Schlacht)

We will salute the state of Israel on Wednesday, April 27, on its seventh anniversary. In America we shall observe it as Israel independence day. In Israel, it will be marked with appropriate festivities. In that fair land there will be firework displays, artistic presentations, boating regattas, military parades, fairs, and many sports events.

To President Ben-Zvi, Prime Minister Moshe Sharett, Defense Minister David Ben-Gurion, and other leaders of Israel, we send our heartfelt greetings. We shout "Mazel Tov": Congratulations.

We hail the unconquerable soul of Israel. We acclaim her great leaders for human liberties. They are symbolized by the strivings and sufferings and sacrifices of such men as Herzl, Weissman, Wise, Einstein, and the other illustrious individuals who consecrated themselves to Zion's cause.

Israel's independence marks the sacrifices of the Chalutzins—the pioneers. It marks the heroism of the soldiers in the Jewish army. It marks the longing of the refugees from barbarism in Europe.

All the terrible tragedies, all the magnificent sacrifices and heroism which fill the pages of Jewish history, were crowned by the rebirth of the Jewish state in the place hallowed by the millenia of tradition Eretz Israel. In generations to come our children and our children's children will find inspiration in the story of Zion's independence.

By the establishment of the third Jewish Commonwealth in the history of mankind, the Jew—the old man of the centuries—has at last come home to the land of his fathers.

He will no longer stand in the corridors pleading for a modicum of justice. He will no longer be trampled and beaten as the sand, but will take his place among the nations of the world.

The Jews are a liberty-loving people. The Jews have unfurled the banner of light across the pages of civilization.

The Jewish state will restore the creative soul of Israel. It will seek to promote stability and independence in the Middle East. It will spread the high ideals of American democracy. It will be a great bulwark against the spread of communistic tyranny.

The youngest nation in the world—Israel—is now the 59th member of the United Nations. Her new-found freedom echoes in the hearts of freedom-loving people throughout the world. We behold her lifting her bright new spires over the hills, where long ago was born the dream of the equality of man.

Here is the strength and sinew, the heart and marrow of a new nation rising at the crossroads of civilization. It is the land of the free, yes, a home of the brave. In her short 7 years of her existence her population has grown from 759,000 to 1,718,000, her land under irrigation and cultivation has jumped from 413,000 acres to 925,000, her electric-power consumption has leaped to 820 million kilowatts. And even her income has risen higher and higher with each passing year.

So here's an all-American salute to the State of Israel, the youngest republic on earth.

May the glory which enshrines the names of her great people grow brighter as the years roll on. May the Lord again go forth out of Zion and the word from Jerusalem. May the people of the Holy Land now beat their swords into plowshares and their spears into pruning hooks. May they, by their example, teach us to live in peace so that nations shall no longer lift the sword against other nations, neither shall they learn war any more.

May the flag of David ever hold an honored place among the banners of free nations.

Long live Israel. Sholom.

A Cow Kicked Pictures Out of the Record

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. MINSHALL. Mr. Speaker, in last Sunday's Cleveland Plain Dealer there appeared an editorial entitled "A Cow Kicked Pictures Out of the RECORD." The editorial follows:

A COW KICKED PICTURES OUT OF THE RECORD

We've wondered occasionally why the CONGRESSIONAL RECORD doesn't relieve some of the eyestrain of its solid pages of type by including some pictures here and there. Cartoons, as well as the articles and editorials picked up from newspapers, might enliven the Appendix section no end. An occasional photograph of a Congressman making an impassioned speech might make his text seem more palatable than it is.

These have just been random contemplations, mind you, when the sheer weight of a few hundred thousand words overpowers.

We've just been made to understand why the RECORD doesn't have pictures, through a feature story dug up by a Washington reporter for the International News Service. It seems that once the RECORD did print pictures—up to 42 years ago. A Member of Congress was permitted to insert a cartoon or other illustration to make a point.

In October 1913 a Colorado representative, George J. Kindel, an upholsterer and mattress maker by trade, made a speech in the House in which he assailed railroads for

discrimination against the West in freight rates.

He included a drawing of an allegorical cow, the 1895 brainchild of South Carolina's Senator Ben Tillman, who had opposed eastern bankers and industrialists. The cow had its feet on various parts of the country and was being milked for the benefit of Wall Street, New England, and the East generally.

The allegory pleased Kindel, but it didn't please the committee in charge of what went into the RECORD. That was the last picture in the RECORD, according to the INS.

Alas. It's too bad. One picture can save a thousand words, they say, and there are a lot of words in the RECORD that could be skipped at a saving of the $86 per page cost to the taxpayer.

The International News Service reporter who first delved into the story of Congressman Kindel and the cow, and the Cleveland Plain Dealer should be commended for bringing this incident to our attention. Now we should do something about it.

Iowa Important in Nation's Industrial Life

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

IOWA IMPORTANT IN NATION'S INDUSTRIAL LIFE

Iowa has long been recognized as the leading agricultural State in the Nation but few realize the extent of Iowa's industrial development, the Iowa Development Commission points out.

Hundreds of Iowa's industries are nationally known, and several rank as the biggest of their kind in the Nation. For instance, says the commission:

Iowa has the largest cereal plant, washing-machine industry, fountain pen manufacturer, door and mill work factory, fresh water pearl-button industry, popcorn-processing plant, processor of honey, plastic fiber skate-wheel plant, silvery iron factory, independent pork-processing business, wringer manufacturer, wheel tractor manufacturing plant, single operated packing plant, manufacturer of portable crushing and screening plants, aluminum plate rolling mill, warm air heating systems manufacturer, poultry equipment manufacturer, cellophane producing plant, rotary pump builders, producer of automatic valves and regulators, 2- and 4-cycle gasoline-engine manufacturer.

With 3,736 manufacturing plants located in 588 cities and towns, there is a wide and even distribution of industry throughout the State. There are 2,278 different products made in Iowa, and world trade carries the products of 539 Iowa manufacturers who are directly engaged in exporting.

Since Iowa produces 10 percent of the Nation's food supply, food manufacturing and processing leads all other industries in the State, accounting for more than half of the value of the State's manufactured products. But food is just one of the major manufacturing industries.

During the post-World War II years, nearly 900 new industries have set up shop in Iowa, the development commission tallies, affording more than 35,000 additional job opportunities and creating an additional annual payroll in excess of $120 million. Commission figures indicate that the growth and development of Iowa is going forward at a faster rate than the Nation as a whole. With the value of Iowa's manufactured products exceeding the value of her agricultural products, the State has a fine economic balance.

H. R. 12

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DIXON. Mr. Speaker, I desire to call the attention of my distinguished colleagues to examples of the correspondence I am receiving in opposition to H. R. 12, which will soon come before this body. These two selected items represent the urban and rural resentment against the proposed return to rigid price controls. The one represents the thinking of a farmer from the northern part of my State of Utah, the other a businessman from New York City. A copy of the letter from Mr. Danahy, vice president of the West Side Association of Commerce, New York, who has given me permission to insert his communication in the CONGRESSIONAL RECORD, was sent to my office.

LOGAN, UTAH, *April 7, 1955.*
Representative H. ALDOUS DIXON,
House of Representatives,
Washington, D. C.

DEAR MR. DIXON: I notice with some concern that the House Agricultural Committee of which you are a member has reported out a bill sponsored by Chairman COOLEY to restore mandatory 90 percent price supports on the so-called basics. I am also aware that you are in opposition to this bill as it was voted upon by the committee. I wish to commend you for your stand in favor of the 1954 Agricultural Act passed by Congress last year. Mr. G. Alvin Carpenter, with whom I am well acquainted, informs me that you are doing excellent work in representing the people of Utah.

The 1954 act is basicly sound, and while I am sure that it will not solve all of the farmers' problems overnight, it represents a change in the direction that we are moving: a change toward less Government regulation to more freedom of individual planning and initiative. Such a program, that of allowing supply and demand to function somewhat in the establishment of price and placing responsibility upon the individual is what has placed this Nation in its enviable position of world leadership. I believe and am sure that the majority of farmers feel that the Government should guarantee to individuals only the right to work and produce for a profit, but should not guarantee the profit.

I view with great alarm the uniting of labor groups and a small group of organized farmers to trade votes for labor's minimum wage proposal and 90 percent mandatory supports for the basics. It will indeed be a sorry day when the farm program sheds its bipartisan approach to the problems of agriculture and becomes a political football. Then the price fixers will have gained their final prize: that of buying the votes of farmers with the golden promise of a Government handout.

I realize that there are strong organized forces trying to influence against the 1954 Agricultural Act, but I want you to know that the majority of the farm people in Cache County are in favor of the basic underlying principle of the flexible price support program now existing under the law.

Again may I commend you for the fine support which you have given to the program recommended by the American Farm Bureau Federation which represents over 75 percent of all the organized farmers in this Nation and encourage you in your work in Washington.

Sincerely yours,
KENNETH R. CARDON,
Chairman, Cache County Farm Bureau Policy Development Committee.

WEST SIDE ASSOCIATION
OF COMMERCE, INC.,
New York, N. Y., April 13, 1955.
Hon. HAROLD D. COOLEY,
Chairman, Agriculture Committee, House of Representatives, House Office Building, Washington, D. C.

DEAR MR. COOLEY: By authority of the board of directors, I am authorized to inform you that this association is emphatically opposed to House Resolution 12 which would amend paragraph 6, section D, of section 101 of the Agricultural Act and which would restore Government subsidies on basic agricultural commodities to 90 percent of parity.

We raise no question at this time in regard to the principle of subsidies but we do express the viewpoint that the country cannot expect to get back on a sound economic base while these subsidies are kept high and on a mandatory level. We believe that the amendment adopted last year making the amount of these subsidies discretionary was of tremendous value to the consumer without being injurious to the agricultural interests. Only a percentage of our citizens are agricultural producers but everyone is a consumer. Consequently, we believe that there should be flexibility in any Government assistance; otherwise a consideration which is being given to the producer will work an injustice and a hardship on the distributor and the consumer.

We sincerely trust, therefore, that Congress will retain the existing, sliding scale of assistance and will disapprove H. R. 12.

Respectfully yours,
JAMES W. DANAHY,
Vice President, West Side Association of Commerce, Inc.

The Austrian Treaty

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. BOSCH. Mr. Speaker, I believe that my colleagues are aware of my concern with regard to the part played by the United States from 1945 to 1947, in the forced repatriation of anti-Communists. We cannot sit idly by and watch this same tragedy occur to those anti-Communists now residing in Austria. I feel that it is my duty and the duty of all of us to demand that the United States not agree to the Austrian state treaty so long as it carries the language now embodied in article 16.

Under leave to extend my remarks, I include the following editorial from the New York Daily News of April 27, 1955:

REPEAT A CRIME OF 1945?

The Big Four Ambassadors in Vienna are to meet there Monday with Austrian representatives to talk over the peace treaty to which Soviet Russia has suddenly consented after 10 years' stalling. Final drafting of the treaty will be done later by the Big Four Foreign Ministers.

All this will be fine, we think, if a certain grisly gimmick in the proposed treaty is removed.

GIMMICK IN THE AUSTRIA TREATY

The gimmick is article 16. It requires Austria to order back to Russia the 30,000 or so former Soviet citizens now living in Austria as displaced persons. Only a handful of these are reported willing to go home. The great majority, if they should go back, wound be liquidated quickly or slowly.

Article 16 further stipulates that Austria is to deny relief or help of any kind to such persons who refuse to go home; if they fought or worked against Russia in the war or are now engaged in any activities unfriendly to Russia. That means nearly all of the 30,000.

If carried out, article 16 would produce a small-scale repetition of the huge crime of 1945, when the Allies forced hordes of Russian war prisoners and deserters to return to their homeland and certain death. Many of these killed themselves rather than go back to the Red paradise.

We hope the Western Powers will insist that this article be kicked out of the treaty in its entirety.

Speaking of parleys with Russia, the Western Big Three have agreed to send their Foreign Ministers to Paris on May 8 to talk about an eventual Big Four discussion of many of the frictions between the West and the Red slave empire.

So how about the Big Three resolving right now to act their strength and size at this powwow, whenever it takes place?

TALK FROM STRENGTH

Soviet Russia now has a bad depression and a serious food shortage. Its railroads are punk. Its slave peoples—Poles, Czechs, Rumanians, and so on, hate the Kremlin gangsters' guts. The best intelligence reports put it far behind the West in atomic and hydrogen bomb stockpiles.

Russia, in short, is in bad shape to fight a war. The West is strong and growing stronger. How about our delegates to any Big Four parley acting on that fact, by talking from strength, not from imagined weakness? Reds understand that kind of talk, and this looks like the chance of a decade to give them a large and healthy barrage of it. Healthy, that is, for our side in the cold war.

Decline of the Red Star

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared under date of April 24, 1955, in the Il Progresso-Italo-Americano:

DECLINE OF THE RED STAR

Another clamorous defeat has put an end to Communist control of the Falck steel plant in Sesto San Giovanni, Italy. In the most recent shop-committee elections the Kremlin stooges were beaten by the free workers who gained a more decisive victory than they did in the Fiat plant several weeks ago. The Marxist debacle is growing and it is spreading to all fields of activity, from the industrial to the agricultural. It appears to be a symptomatic reawakening of labor which is anxious to vindicate its patriotic traditions, betrayed and abused by its enemies. It is a brave and impressive reassertion of a principle, which clearly indicates that the demagogic binge, which had brought about untenable situations, is now over and the defense of the betrayal and desertion shamelessly built up by the party big shots in the newspapers and in Parliament, has been disavowed. The false prophets of bolshevism are being systematically left to their fate and their isolation. The patriotic traditions of the Italian workmen, from Antonio Sciesa to Enrico Toti, have become the banner around which the free workers have rallied. These workers want to immunize class struggle from the criminal corruption of attacks on liberty and on the survival of the Nation.

THE TACTICS OF TERROR

The overwhelming successes in the shop committee elections and in the sick-benefit fund elections and the pitiful failure of the general strike in Rovigo are three concomitant aspects of the rebirth of free labor in Italy. Communism is in retreat all along the line. The courageous action of those who fight it in its greatest strongholds, by documenting its baseness, its crimes, and its shameful objectives, is showing its symptomatic results.

The Communist slave drivers are well aware of this complete reversal of the situation. The attempts to resist the storm by mobilizing the "hard core" lieutenants of Secchia, DeVittorio, Roasio and Cicalini, have brought only complete failure. The Italian people have awakened from their drugged sleep and they are resolute in their desire to make amends for themselves and for the world.

Frightened by what is happening and convinced that they will soon have to account to their Muscovite overlords, for their progressive defeats, the mercenary chiefs of Italian bolshevism have again adopted the brutal policy of terror. The massacre at Carpinati, of the farmers who had gathered to celebrate their victory over the Marxist cutthroats, is the clearest proof of this desperate and bestial decision.

A CHALLENGE TO THE OPPRESSORS

It was not humanly possible that in a nation like Italy the Kremlin fifth column empire could survive these events and survive also the sense of repentance which is one of the most celebrated virtues of the race.

From Turin, from Genoa, and from the other industrial centers of northern Italy comes the admonition that the General Confederation of Labor dominated by the Communists, is losing its power.

In all the provinces the farmers are deserting the Red cells en masse and are joining up solidly with the organization of the working farmers. This is a phantom castle breaking up. This is an instinct of revolt rising in the hearts of men to cause them to break the chains of a brutal dictatorship under whose domination man is destined to lose the best aspects of his human personality. This is a magnanimous challenge hurled by the right to liberty and to survival against the cynicism of the oppressors and the lead of hired gunmen.

The Government has decided to face the internal enemy with the legal weapons of the statutes. There is no doubt whatsoever that the rights of the State and the rights of the citizens will be protected and defended against any vacciliation.

But more than the energetic action of the Government, it will be the mobilization of the people themselves, which will finally free Italy from an insidious menace and will free the working classes from a grievous nightmare and from on unacceptable extortion.

Echo Park Dam

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DAWSON of Utah. Mr. Speaker, much misinformation has been circulated over the alleged "invasion" of Dinosaur National Monument by Echo Park Dam. Actually, it is the monument that is the invader. When the monument was enlarged its area encompassed 11 power and reclamation site withdrawals. These withdrawals preceded the enlargement of the monument by from 34 to 13 years. They are still in effect and the proclamation enlarging Dinosaur from 80 to over 200,000 acres makes the administration of the monument subject to these withdrawals.

It is not difficult to understand, therefore, why the people of this area are outraged by so-called conservationists who are using the existence of the monument as a means of trying to defeat the upper Colorado storage project. They were promised by representatives of their Government that the creation of this monument would not endanger their need for additional water and the projects to bring it onto the land.

For the consideration of the House, I am inserting at this point a statement of the facts by the official spokesman of the Department of Interior who held hearings in the area prior to the enlargement of Dinosaur. The article which appeared in the Deseret News-Telegram, of Salt Lake City, April 23, follows:

UTAHAN RECALLS 1937 VOW ON ECHO SITE

PROVO.—"If you residents approve the expansion of Dinosaur National Monument, your reclamation and power rights in the area will be protected.

"This was the promise I made to Utah and Colorado residents at the time the monument was expanded to take in the Echo Park Dam site."

David H. Madsen, acting supervisor of the Dinosaur National Monument at the time it was expanded, Saturday made this statement in support of the Echo Park Dam, the key unit of the Colorado River storage project.

Mr. Madsen was the National Parks Service representative who conducted hearings at Vernal, Utah, and Craig, Colo., in 1937 on the expansion of the Dinosaur Monument.

INTERVIEWED AT HOME

The veteran parks service employee was located by the Deseret News and Telegram and interviewed at his Provo home, where he is now living in retirement. Although 74 years old, he remembers keenly the details of his Federal and State service. During his long and notable career he held many positions of responsibility.

"Of course we had to promise the residents that their reclamation and power filings, as well as their grazing rights, would be protected," he said. "We knew that if there was any opposition the monument could never be expanded."

"I made these promises on the express orders of the National Parks Service and the Secretary of the Interior," Mr. Madsen said. "I even received direct telegraphed orders from Secretary Ickes himself on this subject."

ENDORSES PROJECT

"Because of my connection with the monument, I think it is safe to say I am as familiar with the details of its expansion as any other living man," Mr. Madsen said.

"In view of the foregoing and of all the pertinent facts involved, I want to endorse unequivocally the building of the upper Colorado River project in its entirety without further delay."

Mr. Madsen was a land purchaser for the parks service from 1930 until 1934 and supervisor of wildlife resources from 1934 until 1941, when he resigned to enter private business.

He recalled Saturday that the parks service then was a small organization and short of manpower. He said it was necessary that many employees were assigned duties temporarily outside their regular activities.

It was in this manner that he became associated with Dinosaur National Monument as acting supervisor.

"We were not to attempt to uncover any fossils but were to clean up the area generally and remove all rock and waste material that had been left by previous expeditions. These expeditions had taken out some 8 to 10 complete fossils * * * All of the specimens had been removed and had been taken from less than one-half acre of ground."

Mr. Madsen said he had nothing to do with proposing the present boundaries of the monument.

"Had I been called on I would certainly have not included the large area now locked up within the boundaries of this monument. At least 75 percent of the area is not national park caliber. There is no interesting scenery within the monument except the canyons themselves.

NO FOSSILS LEFT

"As stated before, there are no known dinosaur remains except possibly one or more within the 80-acre original monument."

Mr. Madsen said that before the monument was expanded and following considerable discussion within the parks service, it was decided that interested persons in the area should be contacted.

"I had been used frequently in public contact work for the parks service and was assigned the duty of holding meetings to present matter to people living adjacent to the area. It was the policy of the parks service to get everything we could reasonably by way of concessions from local inhabitants.

KNEW OF DAMS

"When I approached this task I was fully aware of the engineering work which had been done with the view of establishing sites for dams and reservoirs within the area.

"I was also aware of the fact that certain filings had been made for this purpose by the Bureau of Reclamation. I was made to understand that these filings were all valid and in good standing and that it was not my duty to attempt to persuade the people that these filings could be disregarded.

"The first meeting was held at Vernal, Utah, about 1937, and 2 to 3 days later a subsequent meeting was held at Craig, Colo. Due publicity had been given and these meetings were well attended. So far as I know, every stockman in the area was present, as well as many other interested people."

Mr. Madsen emphasized that he had to speak from memory as his files were returned to Washington when he left Government service.

"It is my recollection that the question of grazing was paramount in the minds of local people and was the first topic to be discussed. This question, of course, was of vital interest to stockmen.

"It led the people to believe that since they had always enjoyed grazing privileges in the area, there was no reason to believe that any hardship would be worked upon grazing permittees in the future. To date this promise has been kept."

Mr. Madsen said area residents then turned to another matter.

"The question of dam sites and reservoirs was also discussed and I was able to tell the people that since sites for dams already had been filed upon in the regular way and since the Secretary of the Interior had indicated that no move would be made to abrogate these filings, they had no occasion for worry on that subject.

"With these representations made to the people of both Vernal and Craig, I was able to secure unanimous approval. * * *"

Mr. Madsen, who served for 7 years as Utah fish and game commissioner, said that in view of the present controversy over Echo Park, he'd like to point out that "like most Americans I love our national parks."

GOVERNMENT PROMISE

"I would not in any way knowingly violate any precedent or any regulation affecting the national parks. But I do believe that our Government should stand firmly on its promises and upon its legal, official agreements in every instance."

He said it is crystal clear that the filings for dam sites were made long before the monument was established, even before it was thought of.

"If more proof were needed that this is true, then the proclamation creating the monument as issued by the President of the United States should dispel all doubts. He specifically stated that the rights for power and irrigation, including building of dams and creation of reservoirs should remain valid."

Mr. Madsen said that every conservationist worthy of the name knows that should the Echo Park Dam be built "the area will be improved for all forms of wildlife 10,000 percent."

History of Armagh, Pa., Post Office

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. SAYLOR. Mr. Speaker, the post office situated in Armagh, Indiana County, Pa., is now in its 150th year of service to the people of this community in my district, and befitting the occasion, I include, as part of my remarks, a history of that office prepared by Mr. Ralph O. Trexler, present postmaster, together with a list of postmasters who have served since its establishment on July 1, 1805, to the present date.

Mr. Trexler has served the patrons of Armagh since April 1933 and is the executive director, Pennsylvania chapter, National Association of Postmasters.

The history follows:

HISTORY OF ARMAGH, PA., POST OFFICE

(By Ralph O. Texler)

This year marks the 150th anniversary of the establishment of the Armagh, Pa., post office.

The first report from this office reached Washington, D. C., on July 1, 1805. Only two Presidents, Washington and Adams, had served their terms in office prior to the establishment of this office.

Jefferson became President in 1801. Joseph Habersham, from Georgia, was Postmaster General at this time. He had served a 4-year term in the same capacity under President Adams, and a 2-year term under President Washington's last 4 years in office. Habersham was soon replaced by Gideon Granger, from Connecticut, shortly after Jefferson was elected to office, 1801, as the third President. It was during Granger's administration that Armagh was granted a post office. This was only 13 years after the town was founded in 1792.

It is a matter of record that Armagh is the oldest existing town in Indiana County. It is quite likely that Armagh has the oldest post office in the county, and is among the oldest in western Pennsylvania. It would appear that there was a need for a post office at this early date, for Armagh in a few short years had become the center of much business activity. It lasted until 1850. President Pierce was our President, and James Campbell Postmaster General. Both were from Pennsylvania. During the 50 years preceding this time, Armgh was blessed with many new business enterprises. There were two tanners, a harness shop, an iron foundry, a distillery, and 3 stores, 1 of which sold everything from pins to coffins. Buena Vista furnace operated at full blast for many years. The output of iron was so great that it often required 20 teams a day to haul the iron to the canal located 3 miles south of Armagh.

The canal provided many men with employment, who worked as mule drivers, boat builders and repairmen, dock workers, and laborers along the right of way. Six licensed hotels and 22 inns were required to house and feed these people and the thousands of those from the East, passing through on the way to the golden West, in search of lands, on which to settle their families.

Many transients headed for the newly discovered gold fields of the West, rested in Armagh. Horses were sold and traded. Horse stealing of that day was nearly as bad as auto thefts of our day.

The present post office stands on the very spot where horses were stabled and fed in connection with the operation of the stage coach. The arrival and departure of the coach was an exciting event in the lives of our early settlers.

The first postmaster was Thomas Carr or Kerr, a saddlemaker, who served until 1810. The longest term in office, of any postmaster prior to 1923, was William Hart, who served from 1861 to 1874. The present postmaster, Ralph O. Texler, has the distinction of having served the longest term of any postmaster since 1805. He was commissioned May 23, 1933, a total of 22 years to date.

It is interesting to not that Postmaster Generals were not considered Cabinet members until 1829. This change occurred during President Jackson's first term in office. William Barry from Kentucky was the Postmaster General at this time. He served 6 years but was replaced by Amos Kendall of Kentucky, who served during the last 2 years of Jackson's second term.

Pennsylvania was the home State of four Postmaster Generals. They were John Wanamaker, under President Harrison, from 1889 to 1893, Robert J. Wynne, under President Theodore Roosevelt, from 1904 to 1905, Charles Emory Smith, under President McKinley from 1898 to 1901, and James Campbell mentioned before.

The present Postmaster General is Arthur E. Summerfield. He had come into office during the greatest period of postal activity since the days of George Washington. He has surrounded himself with capable assistants and advisors, who are working hard to give the patrons the best possible service at the lowest possible rates. The rapid growth

in every line of endeavor has necessitated a complete overhauling of our postal systems. This has gone forward, under the guidance of Mr. Summerfield, who in a few short years, has already proven himself an outstanding Postmaster General. There are at this time approximately 37,665 post offices: 3,494 first class, 6,701 second class, 13,275 third class, and 14,185 fourth class, all working together for the welfare of our people, no matter where they may be.

NAMES OF POSTMASTERS AND DATES OF THEIR APPOINTMENT

Thomas Kerr or Carr, July 1, 1805.[1]
William Parker, October 1, 1810.[1]
James Elliott, June 2, 1813.
Edward B. Patton, November 19, 1818.
John Huey, August 4, 1823.
Thomas Stewart, March 13, 1826.
Fredrick Leyde, March 21, 1831.
William Rankin, February 23, 1835.
James Johnston, September 14, 1836.
John A. Elliott, June 9, 1849.
Joshua M. Barkley, September 2, 1853.
James Johnston, July 11, 1855.
William Hart, April 26, 1861.
Margaret M. Elliott, September 22, 1874.
James Bevlin, June 6, 1876.
Samuel B. Hutchison, July 3, 1882.
James W. Mack, June 15, 1883.
George W. Freed, September 7, 1885.
James J. Tinkcom, October 17, 1888.
Henry M. Elliott, April 1, 1889.
James J. Tinkcom, August 16, 1893.
George W. Freed, May 3, 1895.
David R. Mack, June 21, 1897.
Thomas C. Mack, February 3, 1900.
Howard R. Faloon, July 17, 1901.
Harry M. Elliott, March 7, 1904.
Claude L. Kinsey, August 19, 1914.
Alexander S. Elliott, March 7, 1917.
George F. McCachren, August 11, 1921.
Sylvester J. Lowther, December 22, 1922.
John E. McMullen,[2] October 1, 1928.
George R. McMullen, October 4, 1929.
George F. McCachren,[2] January 1, 1931.[3]
Sylvester J. Lowther, March 30, 1931.
Alexander S. Elliott,[2] February 1, 1933.
Ralph O. Trexler, April 20, 1933.

[1] Date of first return or report from the Deputy Postmaster to the Postmaster General.
[2] Acting postmaster.
[3] Information after 1930 was furnished by the Post Office Department.

Disposition of Surplus Rice

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. GATHINGS. Mr. Speaker, during the January hearings of the Subcommittee on Appropriations under the chairmanship of my good friend and colleague the gentleman from Mississippi, Representative JAMIE L. WHITTEN, the fact was elicited from Dr. Earl L. Butz, Assistant Secretary of Agriculture, that there was no program for the use of rice under the various Federal programs on surplus commodities.

Indeed, at the time of the hearings, as Dr. Butz pointed out, there was no holding of rice under the Commodity Credit Corporation. However, it was known that there would be a carryover, and this surplus of rice had been responsible for the action by the Secretary in establishing rice acreage allotments and calling for a referendum on marketing quotas.

For this reason, I called on the Department to begin the formulation of a program for the disposition of these surpluses of rice under the Federal programs, calling special attention to the school-lunch program.

To indicate the actions of the Department of Agriculture in this matter, I would like to place in the RECORD at this point a communication from Dr. Butz. In his letter, Dr. Butz states that the Department expects to utilize approximately 20 million pounds of rice by the end of June and that the program of the Department calls for the use of an additional 90 million pounds for distribution during the fiscal year beginning July 1, 1955.

Dr. Butz's letter reads as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D. C., April 22, 1955.

Hon. E. C. GATHINGS,
House of Representatives.

DEAR CONGRESSMAN GATHINGS: This will reply to your letter of March 23, 1955, regarding plans to encourage the greater use of rice in the school-lunch program.

Large quantities of rice are now being made available for distribution to school-lunch programs, charitable institutions, and needy persons and families. It is expected that over 11 million schoolchildren, 1 million indigent residents of institutions, and over 3 million welfare recipients will participate in this program. Shipments got underway in late February and are now being made at a rate that will permit utilization of approximately 20 million pounds of rice by June 30. It is anticipated that an additional 50 million pounds will be distributed during the fiscal year beginning July 1.

As an aid to increasing the consumption of rice, the Department has prepared informational material, for the use of schools and institutions throughout the country, on the methods of storage, preparation, and suggestions for the use of rice.

Using this information as well as material developed within the States, local school authorities and institutions are, we believe, doing an excellent job of promoting maximum use of donated rice. Some of the uses of rice actively sponsored, to mention a few, include turkey on rice, rice meat loaf, ham and rice casserole, scalloped rice and cheese, Spanish rice with meat, rice peach pudding, baked rice pudding, cinnamon rice, waffles and rice cake, rice peach loaf, and rice salmon casserole.

You may be interested to know that the Department, working through the Food Trades Branch of the Food Distribution Division, has pledged its full support of the rice industry promotion plans to increase the movement of rice through regular commercial outlets. At the present time, the Food Distribution Division also has in preparation plans for coordinating the Department's participation in the producer-industry-Government merchandising drive this fall. This participation will include the facilities and activities of many other agences in the Department such as the Federal Extension Service, Agricultural Research Service, and the Office of Information.

Sincerely yours,

EARL L. BUTZ,
Assistant Secretary.

I believe that this is a fine start by the Department, and I wish to commend Dr. Butz and the men in the Department on devising this program so rapidly and putting it into motion.

And, Mr. Speaker, in this connection, I would like to call attention to the fine work and cooperation of all the Members of Congress representing rice-growing areas. These gentlemen, without fanfare or publicity, have been working together to endeavor to work out this present problem in rice. As you know, rice growers faced a heavy cutback in rice acreage allotments in 1955 and many of them received acreage allotments that barely give them a margin of economic living. It is evident that if we are to help these rice growers, consumption of rice must be greatly increased.

Together we have worked to aid this program. The Congress has watched closely the operations of the various programs to increase domestic consumption.

And, we have watched even more closely the endeavors of our Government under the provisions of Public Law 480 to dispose of our surplus in the world markets. We have watched the increasing action by our Department of Agriculture in this field and we have studied the work of the agricultural attaches since they have been transferred to the Department from the Department of States. We have watched the actions in connection with the Japanese negotiations, and we will continue to watch just as closely the negotiations with the Government of the Philippines. It is our understanding that our friends in the Philippines are seeking 100,000 tons of rice under the provisions of Public Law 480. Since the Philippines may be considered a part of the southeastern Asia markets, those of us who represent rice-growing areas will want to know for certain that the Department of State has no desire to withhold our rice from this market.

We were pleased last week when the Council on Foreign and Economic Policy, under the chairmanship of Mr. Joseph C. Dodge, cleared the way for the negotiations with the Government of Japan to continue without opposition. We are just as eager that this council approve the policy of making our commodities under the provisions of Public Law 480 available to all friendly nations anywhere on the globe.

A Toast to the South's Gallant Ladies

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1955

Mr. SMITH of Mississippi. Mr. Speaker, the Washington Evening Star has published a very interesting and informative letter concerning the women of the Confederacy, which I believe will be of interest to all Members of Congress. Under unanimous consent, I include it as part of my remarks:

A TOAST TO THE SOUTH'S GALLANT LADIES

To the EDITOR OF THE STAR:

The Sunday Star not so long ago contained an article, Women of Civil War Interest Congressman, by Isabelle Shelton. It quoted Representative FRED SCHWENGEL, of Iowa, as saying, "There were some great

women during the Civil War, some wonderful women, especially on the Union side. • • • Some of the southern women did very well, too. Betsy Sullivan and Mrs. Ella Trader were particularly outstanding. And there was Belle Boyd, who spied for the South. But in general the northern women did much more. The southerners were handicapped by a tradition of leisure. Their women were used to having servants do everything for them."

Since Representative SCHWENGEL is pursuing intensive research on the rights of women and their achievements, I respectfully submit the following facts relating to the achievements of the women of the South during the War Between the States:

When Gen. Robert E. Lee paraded a brigade of South Carolina troops after the battle of Fredericksburg for the adjutant general of Richmond to see, practically all of them were barefooted, without overcoats, warm clothing, and, of course, inadequately fed. The adjutant general said to General Lee: "This is the most remarkable demonstration of patriotism I have ever seen. How do you account for it?" General Lee said, "This is the influence of the Christian patriotic homes, Christian wives and mothers of these men."

William H. Seward, Federal Secretary of State, was asked, after visiting the Winchester region of northern Virginia, what he thought of Union sentiment there. "Well," he replied, "all the men were gone to war, and all the women were she devils."

The war made soldiers out of the men and thereby it affected little less the lives of the women. The restricted confines of the home over which southern women had traditionally presided in the past were by the war extended to the whole Confederacy, and women engaged in almost every activity which could aid in prosecuting the war. Their services were so useful and their support was so powerful as to be recognized by their friends and enemies alike. The newspapers recounted women's deeds, Congress and State legislatures passed resolutions of thanks and praise; and in 1863 H. W. R. Jackson wrote a book entitled "The Southern Women of the Second American Revolution." A southerner wrote in 1861 that never "in any age or country was there ever witnessed such an intense war spirit as that now prevailing among the women of the Confederate States." A Federal soldier wrote in 1864: "The South stands today quite as much indebted for a successful prolongation of this struggle to her women, as to her generals and soldiers in the field. Fully, fiercely, terribly, and malignantly have they entered into this conflict." "It is the part that woman is acting in this great cause that fires the heart and nerves the arm of our soldiery," declared a Confederate captain.

Some southern women acted as spies locally and over the entire Confederacy; among them were Ellie M. S. Poole, of West Virginia; Nora McCartney, of Missouri; Diana Smith, of Virginia; Anne and Julia Lomax, of Maryland and Virginia; and Charlotte Moon, of Tennessee.

The beautiful Mrs. Rose Greenhow, a Washington lady of high social standing, sent much valuable information to the Confederate authorities. She was credited with sending to Gen. P. G. T. Beauregard information as to the route the Federals were following, which enabled him to win the battle of First Manassas. Mrs. Greenhow lost her life by drowning while carrying dispatches for President Jefferson Davis.

Belle Boyd, another noted woman of the Confederacy, made her debut by killing a Federal soldier who entered the Boyd home in Martinsburg and mistreated her mother. She had an incredible career of spy service, arrests, imprisonments and sentences to be shot. She obtained much valuable military information from Union officers which she transmitted to Gens. Stonewall Jackson and Turner Ashby.

Southern women also achieved fame as nurses and in caring for Confederate wounded and their families. Mrs. J. Harmon Brown and Miss Matilda Saunders, of Baltimore, supplied Confederate prisoners in Fort McHenry with food, medicines, clothing, and bedding. After the battle of Sharpsburg, Mrs. Brown with funds donated by Maryland sympathizers converted a large tannery in Frederick, Md., into a hospital and spent weeks in nursing and caring for hundreds of Confederate wounded.

Mrs. Saunders persuaded General Sheridan to agree to her plan to relieve the widespread suffering in the Shenandoah Valley. The Sisters of Charity of the Archdiocese of New Orleans rode in carts, farm wagons, on horseback and muleback to care for sick and wounded Confederate soldiers who fell on the battlefields along the Mississippi River.

Sixteen-year-old Emma Sansom rode behind Gen. N. B. Forrest through gunfire to show him the ford in order that he might capture the Federal forces of General Streight.

A number of southern women disguised as men fought in Confederate regiments. During the first year of the war the women practically took over the problem of clothing Confederate armies, and in the words of a contemporary, "Heaven only knows what the soldiers of the South would have done without the exertions of the women in their behalf."

Southern women engaged in smuggling supplies of medicine, drugs, and small articles hidden under their ample skirts.

The women also provided wayside inns where forlorn and needy soldiers were given beds, food, hospital services, and entertainment.

Tradition, history, poetry, and fiction accord the southern woman beauty, grace, charm, delicacy of feeling. The way she rose to meet the emergency of the war proved her also strong, capable, intelligent, and self-reliant; only by the ignorant was she pictured as lazy, spoiled, and dependent on her black mammy.

By the grace of God, the women of the South throughout 4 years of unparalleled hardship and suffering retained the dignity, the sweetness, the charm, and the graciousness that have made the daughters of the South world famous.

We sincerely regret that Representative SCHWENGEL has drawn such an odious and historically inaccurate comparison of the women of the South with the women of the North during the War Between the States.

WILLIAM M. BEARD,
Past Commander in Chief, Sons of Confederate Veterans, Westfield, N. J.

Max Abelman

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of commendation presented to Max Abelman, of Brooklyn, N. Y., by the United States Navy, at a luncheon given in his honor in New York by the Bankers Club on April 19, 1955. The presentation was made by Rear Adm. H. Rusco Hillenkoetter, commandant of the Third Naval District.

Mr. Morris Goldman, former assistant district attorney, of New York, welcomed the guests and Hon. Maximilian Moss, surrogate of Kings County, acted as toastmaster and in behalf of Joe Weinstein of May's Department Store, of Brooklyn, presented Mr. Abelman with a clock-radio and from Mr. Herman Kahn an attaché's briefcase. Among those in attendance were Marvin Bergen, secretary and counsel of New York, and Mortimer Ehrmann, news editor of the New York Mirror.

I am also inserting three telegrams which Mr. Abelman received at the luncheon.

HEADQUARTERS OF THE COMMANDANT,
THIRD NAVAL DISTRICT,
New York, N. Y., April 19, 1955.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: I should like to commend you for the services performed in connection with personnel of the United States Navy during the many years that you have served in this area so meritoriously and so creditably.

I know of no person who more thoroughly deserves such a public expression than yourself. For practically 50 years you have devoted your energies and your time unstintingly for the development of your fellow men regardless of race or creed.

It is a pleasure for me to present you with this letter of commendation because of your tireless efforts, the generosity of your heart, and the spirit of unfailing good will with which you served not only your community but the Navy.

Please accept this expression of well-merited commendation, and please take my most sincere hope that you will be granted a long and blessed life for the welfare of yourself, your family, and all of those in whom you are interested.

With very cordial good wishes, believe me,
Sincerely,

R. H. HILLENKOETTER,
Rear Admiral, United States Navy;
Commandant, Third Naval District.

APRIL 19, 1955.

MAX ABELMAN,
New York, N. Y.:

Congratulations and best wishes upon receipt of this much-deserved award. Deeply regret that an important meeting of the city council prevents me from being with you on this great occasion.

ABE STARK.

APRIL 19, 1955.

EMANUEL GOLDMAN,
New York:

Regret inability to personally attend and participate in well-deserved tribute to my dear friend Max Abelman. Please extend my congratulations and best wishes to him and all assembled.

Judge GEORGE J. BELDOCK.

BROOKLYN, N. Y., *April 19, 1955.*

Rear Adm. R. H. HILLENKOETTER,
Commandant, Third Naval District,
New York:

Delighted to learn that you are honoring our distinguished fellow citizen, Max Abelman, with a citation for meritorious service. There is no one who has rendered more patriotic and devoted service to his country, State, and borough than he. Sorry I cannot be with you.

Cordially,

NAMM LOESERS,
BENJAMIN H. NAMM.

Appendix

Our Common Mission, by James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at a luncheon meeting of the Empire Club of Canada, Inc., at Toronto, Canada, on April 21, 1955, at which Mr. Farley, in his usual excellent manner, further performs his unofficial role of our ambassador of good will to our friendly neighbor to the north, the great Dominion of Canada:

OUR COMMON MISSION

You need not be told that it is a privilege and a distinction to address this famous organization. The roster of its members and of its speakers, and the importance of its activities through the years, make it one of the great clubs of this continent. You are particularly kind in inviting me to discuss the mission of our two countries in today's world. Diplomats and scholars are discussing this subject throughout the United States and Canada alike. I can only contribute the observations of a man whose life has followed the paths of practical politics and still more practical business. Yet it is possible that politicians and businessmen as well as students can make a contribution to this, the chief problem of our time.

I think this is the best possible place to offer such a contribution. Throughout the entire world no two great, independent countries have more nearly achieved civilized international relations than have the United States and Canada. If everywhere in the world relations between peoples and governments were carried on as they are between the people and Government of Canada and the people and Government of the United States, the world's pressing dangers would be met.

Just before World War II, the German Government circulated a piece of propaganda in Washington, arguing that the Germans had a right to make war on Poland to get back the Danzig corridor. So they printed a map of the Canadian-American boundary. They added to Canada a V-shaped wedge, cutting off Maine, New Hampshire, and part of Massachusetts from the rest of the United States and giving Canada the port of Boston. Would this not, the German Government asked, necessarily cause war between the two countries? Well, the propaganda dodge fell flat. There is a Canadian wedge pushing south between Lake Huron and Lake Erie. It separates New York and Buffalo from Detroit. We are in that wedge now. Canadian and American trains go across it every night, our common commerce moves by the shortest line without interruption. Another wedge separates Alaska from the rest of America but the Alcan Highway crosses it for the mutual pleasure and profit of both of us. Our peoples, and our Governments, are far too wise to let either their friendship or their business be interrupted by the border accidents of ancient history.

We share a common resource—the electric power of the magnificent spillway of the St. Lawrence River. We have borne together the costs and the expenses of developing that splendid gift of nature according to a common plan. There are many other illustrations. It is not too much to say that our two nations have attained the highest level of foreign relations known to civilization.

One other factor makes it, I think, not presumptuous for me to claim that we have a common mission. Both our countries are the product of religion and education far more than they are of politics or war. The United States, like Canada, owes its framework chiefly to great Christian movements which have given form to its institutions. Canada, like the United States, owes an enormous debt to its universities and colleges, founded in hope and now grown great. One cannot think of Canada without thinking at once of your own University of Toronto, of Queens, the University of Montreal and McGill, just as one cannot think of the United States without thinking also of Harvard, of the University of Notre Dame, and of the University of California, and of numberless great and small colleges in between. In both our nations, pioneers built churches and schools. Now, in their maturity, both give us the strong red blood which is the life of great democracies.

So we have a common understanding of each other, and from that comes a common mission in world affairs.

I for one am not as happy about the state of world affairs as some who today are writing and speaking about them. Our free world is under pressure. In the next few years, it is quite likely to be tested as never before. In Europe there is, for the moment at least, an alliance which may serve to hold the Communist powers at bay. But in Asia we have not peace but an armistice resulting from the bloody stalemate of the Korean war and a French defeat in Viet Nam. Both in Indonesia and in Indochina, I am afraid we are slowly losing another major area to Moscow's Chinese partner. Still more disturbing, the Colombo powers with Communist China as the driving force, are holding a conference of some 30 Asiatic and African nations. The Chinese Communists, of course, paraphrase it as a league of peace. What they mean to do is to create a pro-Communist alliance of all the nonwhite races against the white races. Their propaganda agents are entirely frank about this. They are frank, too, in insisting that they consider the United States as an enemy. Perhaps you will not disagree if, as an American, I think that an enemy of the United States is necessarily an enemy of Canada just as we consider an enemy of yours to be an enemy of the United States.

And yet I am sure our two countries will come through the crisis years ahead in quiet, but unquestionable triumph. We shall, I think, make it clear to the world that creative communities of freemen make stronger nations and give more to their own people, and to all other peoples, than any other form of organization man has yet devised. We shall not do this by boasting about it, though the boasts are true. We shall not do it by threat to use atomic or other force, though we do have that force. We shall not do it by new and greater scientific discoveries, though it is clear these are already in sight. We shall do it because by successful example at home, and by cool and resolute maintenance of our rights abroad we will inspire whole peoples to follow our course. We will make membership in a free community of nations more attractive and more advantageous than servitude in any Communist empire.

It is no accident that communism has established no effective bridgehead either in Canada or the United States. The reason is simple: the people of Canada and the people of the United States have already achieved results beyond the wildest promises of Communist dogma. In the light of the achievements of Canadians and Americans, Marxism belongs not in 20th century politics but in a 19th century museum. If, throughout the world, peoples knew that they could live as our peoples do, any Communist empire would promptly begin to contract.

There is evidence that this process is already beginning on Russia's western borders. Hungarians, Poles, or Czechs look across the Iron Curtain and wish they were on the free world side. The stirrings in those captive satellite countries and in East Germany already suggest that Moscow domination there rests now only on besieged and isolated occupation forces; there is no assent of peoples; the promised revolution proved to be only a bloody conquest. To that fact, perhaps, we owe the upsurge of coexistence talk which has emanated from Moscow. Now as our two countries, both great trading nations, increase our understanding and wisdom in the ways of foreign commerce, as we find means of assuring that our trade shall benefit other countries as well as ours, we emphasize the clear advantage of the free world system, not by talking but by doing.

This is apparently beginning to be achieved in the West. I am confident it can be achieved in the Far East. The process there will be longer. The task will be larger. Whole populations there have never known freedom; to such people one master is no worse than another; the lot of the coolie is the same in either case. But if a way can be shown by which those masses of coolies can have themselves a stake, however modest, in the miracle of our 20th century American production, the picture changes. A beginning has been made along these lines in that great archipelago which is today the Philippine Republic. Canadian enterprise has made a beginning in other parts of the Pacific. Our two countries have worked together toward that end in the less favored countries of Latin America. We can, we should, and indeed we must, make it clear that liberty and prosperity go together and that prosperity is not bought at the price of freedom. After all, Russia, struggling desperately to give her own people the most modest standard of living, is not the country which can introduce to Asia the almost limitless production all Canadians and Americans take for granted.

The word "freedom" is used advisedly. In our countries we speak of democracy. Freedom will very likely find different forms in different countries. Here we are devoted to our own democratic form. We will gladly teach it to any who wish to learn from us. But we cannot impose it and have no business to try. What we can do is to make clear that the chief end of any government

is the development of free men in a system by which they work together. Each people has its own wisdom about its own affairs. Probably even the most backward people can teach us something. Their ways are not our ways. But we will be well advised to work with them within the forms which they themselves know and understand.

In thus working for a peace which shall be real and not a double-talk mockery, both of us must increasingly work together and with other nations. Canada was among the first signers of the "declaration by United Nations" on January 1, 1942, which foreshadowed the United Nations organization of today. Sometimes we falter in using that great organization well, but it remains the frame of our hope of the world to be, a world of peace, under law, guaranteeing freedom from fear to the world.

Combined, our two countries constitute in present fact the largest and strongest single regional group in the free world. There are others like it, notably the British family of nations, whether called empire or commonwealth, and the Atlantic group we call NATO. In building these as we have, we cannot forget that at long last statesmanship must bring them all into harmony. This is not theory. In Montreal are the headquarters of the International Civil Aviation Organization, a United Nations agency. Because of it a Canadian pilot leaving Toronto knows he will find the same signals, the same language, the same rules for landing or leaving in Paris or Bombay or Manila that he has in his home airport. This is a measure of real, tangible peace. The time must come when the major human necessities are dealt with is as commonsense cooperation as has been worked out in the air.

Our purpose must be to work toward this goal of world peace and world civilization without war. We know, of course, that this is not wholly our choice.

Such information as we have indicates that the Communist government in China is giving considerable thought to starting a war this year for the purpose of seizing Formosa. The American Government has made it clear that the United States will resist if this happens. In my judgment, the United States Government can do nothing else. Failure to resist an armed attack on Formosa would merely mean a Communist conquest there, and within a few months we should have to fight somewhere else. Even in this grime picture there is still a respectable possibility of limiting the war so that it does not become general. Modern war is so horrible and its results so unpredictable that I do not think any sane group can adopt war as a policy as did Hitler in 1939. Yet, in any event, between us we must maintain such strength that no one will dare challenge with force, or assume that counterforce does not exist. No one can guarantee success in the field of foreign relations, but we shall try for peace and keep on trying and I do not despair of success. In this task, as an old politician, let me suggest that the men running foreign affairs—the men in our State Department and your Department of External Affairs—need all the help and support you and I can give them, whether we are of their political faith or not. They are working amid tremendous hazards and their burden is greater than any in recorded history.

Are we starry-eyed in thinking that the vast task of bringing a reasonable measure of peace to the world may be accomplished in the coming generation? Perhaps, but the example of Canada makes me believe it can be done. Your country was born of diverse races with different languages. History insisted they were sworn enemies, and you refused to accept that decree. You had to build a nation out of different civilizations, customs, and religions. Beyond possible expectation, you nobly accomplished that task. In my own time your great Prime Minister, MacKenzie King, a Scot, steadily worked with Canadians of French ancestry, religion, and custom. I have no doubt that his brilliant successor, Prime Minister St. Laurent, of French ancestry, no less carefully works with his countrymen of English stock. With patience, tolerance, and commonsense, you made a union when elsewhere in the world race rivalries, disorder, and hatred were the order of the day. In my own country Irish and English, Italians, Germans, Jews, and Negroes have steadily moved toward union so that today Americans, the most composite population in the world, are also the most unified. We have done in North America what has not been achieved in any other part of the world.

In virtue of these achievements, Canada and America can claim the privileges, as they must assume the burdens of a common mission. We must enter upon it without superiority. And, with faith, we can justifiably draw assurance and strength from awareness of solid results already attained. "To each and all our equal lamp at peril of the sea," wrote Kipling of the English coastwise lights. No less great is the guiding fire of the fellowship of two great nations in a dangerous but splendid time.

On the Anniversary of Israel's Independence

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. DIGGS. Mr. Speaker, on this day, April 27, the anniversary of independence of the State of Israel, it is fitting that we, as Americans, pay tribute to a courageous people who have added so much to the culture of our United States of America.

Since World War I, America has been lending wholehearted support to the aspirations of the people of the Middle East in their struggle for independence. The knowledge that the Jewish people were the victims of mass annihilation and suffering by anti-Semitic people compelled a response from the American people whose basic philosophy is founded in the principle of man's right to life and liberty. It was approximately in the year 1933 that Adolf Hitler began his reign of terror against the German and Austrian Jews and later traveled on to other European countries spreading destruction. More than 6 million Jews were murdered in his so-called revenge on Jewry.

The path to independence was not smooth and easy but filled with many obstacles. Through the untiring efforts of the Jewish people and their many friends and allies, this independence was finally achieved on April 27, 1948. In the creation of a Jewish state, a national homeland, refugees were given a chance of survival. Refuge, livelihood, and freedom from persecution were offered them. The state became to the Jewish people, the modern day fulfillment of Ezekiel's prophecy, "Behold, I will take the children of Israel from among the heathen, wither they be gone, and will gather them into their own land."

But 7 years after this great beginning, peace does not reign in the Middle East. A great amount of hostility and tenseness exists between the Arab States and the State of Israel. It is highly essential in this day and age that peace come to this troubled area. It is essential that tensions be removed and that peace and harmony be restored to the Middle East as one more defense post against godless communism.

In its democratic thinking, Israel is seeking equal opportunity for its people. With the help of the Western World, this objective can be achieved and peace will ultimately come to the Middle East region so that its people may share in a cooperative endeavor to resolve the problems which now face our world.

Statement by Senator Lehman Before Senate Subcommittee on Labor in Connection With Proposed Amendment of Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. LEHMAN. Mr. President, on April 26 I appeared before the Senate subcommittee on labor in support of S. 662, amending the Fair Labor Standards Act. I ask unanimous consent to have the text of my statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HERBERT H. LEHMAN BEFORE SENATE SUBCOMMITTEE ON LABOR IN SUPPORT OF S. 662 AMENDING THE FAIR LABOR STANDARDS ACT

Mr. Chairman and members of the subcommittee, I am pleased to be here today to testify on behalf of S. 662, which I introduced on January 21, for myself, Senator GREEN, Senator KILGORE, Senator MCNAMARA, Senator NEELY, and Senator PASTORE.

While not a member of this subcommittee, I have, as you know, been present during most of the testimony thus far on these various bills before you dealing with amendments to the Fair Labor Standards Act. I do not intend to speak at length at this time.

During these hearings, I have many times stated the basic sentiments which have guided me in sponsoring this bill providing a $1.25 an hour minimum wage and increased coverage. I would like, on this occasion, to highlight the major political, economic, and moral issues which I believe are at the heart of these proposals, affecting the well-being of millions of Americans, their families, and their children.

Mr. Chairman, I shall not go into the details of my bill, including the substantial increase in coverage which would result from its enactment. Other witnesses have testified on these technical aspects of coverage, and I know that the subcommittee has an excellent staff analysis of S. 662, as well as of the other bills on the subject. I feel strongly that the increased coverage and the elimination of unjustified exemptions are completely consistent with the basic purpose of the act and with the need to provide a fair

amount of economic justice for all Americans.

Mr. President, I remember the arguments that were made against the first minimum wage bill back in the thirties. These same arguments were heard again every time proposals were under consideration by the Congress to raise the minimum wage, or to expand its coverage.

The cry was heard, in the first place, that the establishment of the minimum wage constituted regimentation, and worse: That it would drive many, if not most, of the businesses of America into bankruptcy, that it would result in economic ruin and devastation.

Those arguments were without foundation in fact when they were made 20 years ago, and again 6 years ago. They are without real basis today.

It is generally conceded today—at least no public official of any party would, I think, dare deny it—that a Fair Labor Standards Act is a sound and essential part of our economic structure. It is a necessary safeguard for the bottom ranks of the Nation's labor force.

There is, of course, the question of what a fair minimum wage ought to be. In my judgment, the figures that have been written into law have always been too low. The figure of 75 cents an hour was too low when it was approved in 1949. It is, of course, far too low today.

Since the time the first minimum wage bill was passed, our economy, far from faltering, zoomed ahead with giant strides. Never was progress greater than in the years immediately following 1949. The increase in the minimum wage level in 1949 gave a new impetus to the national economy.

Since 1945 we have had an inflation. It has been a severe inflation. It has been especially marked in the years since 1949, as a result of price increases brought on by the war in Korea.

The minimum wage has not risen since 1949 and the minimum wage in 1949 was already set too low.

It is now more than 5 years since the time the 1949 amendments to the Wages and Hours Act went into effect. During these 5 years, national income has increased from $218.9 billion to more than $303 billion—an increase of over 38 percent. In these 5 years, the gross national product expanded from $265 billion to more than $362 billion—or almost 37 percent. Finally, corporation profits after taxes increased from $16.1 billion to $18.8 billion at the end of 1954—or 16.8 percent.

Most of this expansion took place between 1949 and 1953. The expansion of our economy has proceeded at a slower pace during the last 2 years. If we are to have a dynamic and expanding economy to keep pace with our expanding population, the rate of expansion must be greater than it has been in the last 2½ years.

The passage of the Minimum Wage Bill I have introduced—increasing the minimum wage to $1.25 per hour and expanding the coverage to include about five million workers not now covered—would be a step in the right direction. It would help restore a dynamic quality to our economy. It would be a shot in the arm—a much-needed shot in the arm.

Testimony has been heard from some who complain that this increase in minimum wage would ruin this or that industry. While I am not in a position to comment on any particular allegation to this effect, I know that in general the result would be increased prosperity as a result of increased purchasing power.

Of course, it is generally conceded, even by President Eisenhower, that some increase in the minimum wage is desirable, but the increase recommended by the President is a paltry and insufficient amount. It reflects a backward-looking view of our economy. Ninty cents an hour might have been a fair figure in 1949. It is not a fair figure in 1955. Productivity has increased. There is unemployment as a result of automation and as a result of industries moving to low-wage areas. The increase of the minimum wage to $1.25 an hour would help meet the consequences of these developments.

I do not think it is necessary for me to prove that $1.25 an hour is a reasonable figure. I think it is up to the opponents of this measure to prove their case. Certainly the inflation has been no less than the amount of increase proposed in the minimum wage. And when we take into consideration that the minimum wage set in 1949 was already too low, we can easily see that a minimum wage of $1.25 would not be excessive.

In speaking of the desirability of increasing the minimum wage, I do not want to neglect those provisions of the pending bill providing for increased coverage. They are equally as important as the increase to $1.25 an hour. Too many of our workers are outside the protection of the Minimum Wage Law. I see no reason for many of the exemptions now in the law.

Of course, it should be borne in mind that in the last 3 years much damage has been done to the Fair Labor Standards Act by faulty administration. The law has not been policed as well as it should have been. Enforcement has been weak and tragically inadequate. I hope that these aspects of the situation will be remedied.

One of the most desirable effects of the bill I am proposing would be to establish a more uniform floor under the wage structure of the entire country. It is regrettable that there should be a lower standard in some parts of our country than is the case in others.

In this connection, it is paradoxical that so many Americans who have recently learned that what occurs 5,000 miles distant can affect the lives of every American, have not yet seen that what depresses the economy of one section of this country injures the economy of the entire country.

We all take pride today in stating and restating the lesson we have learned after two great wars—that we live in an interdependent world. When will it be said that all of us realize that we live in an interdependent Nation, and accept fully all the ramifications of that axiom?

One of the most potent arguments for a $1.25 minimum wage is in the finding and declaration of policy of the present law. This states that substandard labor conditions constitute "an unfair method of competition in commerce," and cause "commerce and the channels and instrumentalities of commerce to be used to spread and perpetuate such labor conditions among the workers of the several States."

I need not reiterate to members of this subcommittee the problems of the runaway plants and industries which have been a cause of so much economic and human distress in many areas of the country, including my own, during the past few years. I do wish to emphasize, however, that these plants and industries have not only injured the economic well-being of workers and communities in the areas they have left. They are also an economic drag on the peoples and communities in the areas into which they have fled in their search for cheaper labor and substandard working conditions.

I have heard it said, even in these subcommittee hearings, that the administration's 90-cents-an-hour recommendation and its timid excursion into the field of expanded coverage does not really represent its desires, but is dictated by political considerations and the need for passage of some legislation, however meaningless, in this area. If such is the case, this represents one of the greatest abdications of leadership on an issue affecting the health and welfare of the American people that has ever come to my attention.

Congress, I am convinced, if given the proper leadership, would approve a bill raising the minimum wage to $1.25 an hour and increasing coverage.

I hope, therefore, that this subcommittee, realizing the seriousness of the legislation before it and the overriding need for prompt action in this field, will report to the full committee a bill to raise the minimum wage to $1.25 an hour and to increase coverage, substantially as outlined in S. 662.

Extension of Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding a statement by Mr. George W. Ball, in which he answered some of the allegations and charges made against him before the Committee on Finance in the hearings on H. R. 1, extending the Trade Agreements Act.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I was much disturbed to learn that in the hearings of the Senate Finance Committee, a statement was placed in the record near the conclusion of the hearings that severely attacks the character and motives of certain members of the committee for a national trade policy.

It has been reported that this material, on the basis that it is a part of the Senate hearings, is being circulated. Since it contains many misstatements of facts, innuendoes, personal attacks as "Foreign Agents" on many fine Americans, I feel that the Senate should be advised as to the truth in this matter.

Further, I feel that in sponsoring or opposing legislation, Americans, of whatever political faith they may be, should be allowed to urge the legislation without having their patriotism questioned or being accused of representing foreign governments.

Certainly the Senate, in the consideration H. R. 1, which extends this basic trade policy of this country under both Democratic and Republican administrations, should not have its attention distracted by such personal attacks in the form of statements placed in committee hearings. Because of the lateness of this insertion in the record, I feel that a clarifying statement is not only fair but necessary.

We should debate and even perhaps disagree on issues such as H. R. 1 as Americans and any attempt to allege or insinuate that foreign influence motivates legislation is not in the interest of sound consideration of important legislation. I shall perhaps differ radically from some of those on the committee for a national trade policy on some of the provisions of the act, but I certainly respect their rights to speak as Americans, in this case. Too often in recent years major debates have been thrown off the track by alleging that certain proponents or opponents of legislation were Communists or scoundrels or both. Such interjection of bitterness—or foreign intrigue and smears

damages our standing in the eyes of our friendly allies and of the world.

The material to which I object was levied against the committee for a national trade policy and are of this order. They were largely designed to attack the character of the supporters of H. R. 1 and are malicious, irrevelant and unfounded. The material was placed in the record by a man named Robert M. Burr, who purports to be president of an organization calling itself the National Bureau for Economic Realism, Inc., 270 Park Avenue, New York.

Mr. Burr's attack was filed with the Senate Finance Committee just before the hearings closed, too late for reply or investigation and was included in the published hearings of the committee at pages 2306 to 2331.

I do not know Mr. Burr nor the interests he represents. Who his clients or customers are or who pays its expenses is not disclosed.

Conversely, the Committee for a National Trade Policy is a well-known organization and has made no secret of its sponsorship or activities because it has nothing to hide.

The Committee for a National Trade Policy is a nonprofit corporation incorporated under the laws of the State of New York. It has about 1,000 members, of which approximately 450 of them are corporations, many being the largest and most important in the United States. There are 550 individuals associated with it as members, among them many leaders in the business world. On its advisory board are to be found representatives of major labor and farm groups.

It is important to note that this committee for the first time in history has joined important elements of American business and industry together, not to work for import quotas or subsidies or higher tariffs, but in an effort to assist in the development of a national trade policy.

The forces in the United States advocating higher tariff protection have long been well organized, for which every right exists. These include the American Tariff League, the National Labor-Management Council, and other bodies which support protective tariffs. The same is true of the many national trade associations which for most part have taken positions either against H. R. 1 or are in favor of its substantial amendment.

The recommendations of President Eisenhower and the report of the Randall Commission have been actively supported by the Committee for a National Trade Policy. Now it is supporting strongly H. R. 1.

Many of the most distinguished leaders of business in this country sit upon the board of directors of the committee and take an active part in its proceedings. The position they advocate are in accord with the positions long held and publicly expressed by these men.

One of the principal points of attack in Mr. Burr's statement, graced only by the dignity of being included in the printed transcript of the hearings of the Senate Finance Committee, is largely devoted to attempting to demonstrate that a lawyer named George W. Ball was responsible for the creation of the Committee for a National Trade Policy—that Mr. Ball has dominated the committee—and that Mr. Ball has been motivated by the fact that the law firm of which he is a member has included among its many clients several foreign business interests and has acted as counsel for various agencies for the French Government. Because Mr. Ball and his firm have had foreign clients in the past, Mr. Burr implies that the Senate should vote down H. R. 1.

If America is to have foreign trade and intercourse with other nations, our distinguished attorneys will in the course of their regular practice have clients from foreign lands. But it is a fantastic argument indeed that because an American lawyer has represented foreign clients the Senate should not pass legislation in the national interest of the United States.

Neither should the tag "foreign agent" be applied—else this necessary legal service and practice by members of the bar will take on a connotation of questionable patriotism.

It is far even more fantastic for Mr. Burr to make such an attack when neither Mr. Ball nor his firm have represented any clients in support of H. R. 1—nor have they been associated with the Committee for a National Trade Policy since long before H. R. 1 was introduced. Neither has this attorney nor his firm taken any part in trying to secure the passage of this bill—whether on behalf of the Committee for a National Trade Policy or for any other organization, company, or individual.

I have known Mr. Ball for many years. I know him to be an able and competent attorney, active in many phases of service to America, as an official and as a private citizen. In fairness to him and to the Committee for a National Trade Policy, he should have the right to keep the record straight. I would like to read into the record a statement prepared by Mr. Ball, commenting on the charges that have been made against him.

He is the holder of the Medal for Freedom, given him in recognition of his services during the war. His patriotism, his standing, and his dedication to public service should be unquestioned.

Mr. Ball's statement is as follows:

"Since July 1946, I have been a member of the law firm of Cleary, Gottlieb, Friendly, and Hamilton, which has its principal office in New York City, and also maintains offices under the name of Cleary, Gottlieb, Friendly, and Ball in Washington, D. C., and Paris, France. The firm comprises more than 45 lawyers. It is engaged in the general practice of law.

"While the great bulk of the firm's clients are United States corporations and individuals, it has in the course of its practice also represented certain foreign clients. Whenever such representation has come within the provisions of the Foreign Agents Registration Act, the firm has fully complied with that act.

"In the course of the statement submitted by Mr. Robert Burr to the Senate Committee on Finance, I am described as a founder of the Committee for a National Trade Policy, Inc. Mr. Burr seeks to imply that I was the leading spirit in the creation of that organization and that I was motivated by the fact that my firm represented some foreign clients.

"The facts are quite the contrary.

"On July 14, 1953, I received a telegram from Mr. Harry A. Bullis, chairman of the board of directors of General Mills, Inc., asking me to a dinner in New York to meet with a group of prominent American businessmen to discuss the formation of a proposed Citizens Committee for the Development of International Economic Relations.

"Present at the meeting besides Mr. Bullis were Mr. John J. McCloy, chairman, the Chase National Bank; Mr. Joseph P. Spang, Jr., president the Gillette Co.; Mr. Ralph I. Straus, a director of R. H. Macy & Co., Inc.; and Mr. Stewart F. Louchheim, president, Stewart F. Louchelm Co. of Philadelphia. I had not previously met any of these gentlemen except Mr. McCloy and Mr. Straus. I had been invited to the meeting because of my known interest in trade policy. I was asked to express my views with regard to the form of organization of a committee and the kind of program it should undertake.

"After this meeting I was advised that Mr. John S. Coleman had accepted the invitation of Mr. Bullis to undertake to organize such a committee. Mr. Coleman is president of the Burroughs Corp. and Chairman of the Federal Reserve Bank of Chicago. He was at that time also president of the board of commerce of Detroit.

"In August 1953 my law firm was asked by Mr. Coleman to act as counsel of the organizing group in supervising the legal steps necessary to create the Committee for a National Trade Policy, Inc., as a nonprofit membership corporation under the laws of the State of New York. When the committee was organized, my firm was retained as general counsel and I was elected secretary, with the task of keeping the minutes, and also a director. The articles of incorporation were filed with the secretary of state of the State of New York on September 16, 1953, and the organization meeting of the incorporators was held on September 17, 1953. The first meeting of the board of directors was also held on September 17, 1953. Under the certificate of incorporation, Messrs. Bullis, Coleman, Spang, Taft, and I, along with Mr. Charles H. Percy, president, Bell & Howell Co., and Mr. Morris S. Rosenthal, then president, Stein, Hall & Co., Inc., were to hold office as directors of the committee until its first annual meeting. At the first meeting of the board of directors on September 17, 1953, Messrs. William L. Batt, Edward Littlejohn, Thomas B. McCabe, John J. McCloy, Ralph I. Straus, and Clarence Francis were also elected as directors.

"I mention these facts only because Mr. Burr has sought to draw some malign inference from the appearance of my name on the formal organization papers of the committee and refers to me more than once as being the 'founding secretary' or as having 'founded' the organization.

"The second part of Mr. Burr's attack on me consists of an attempt to show that in my relations with the committee I was really acting on behalf of certain foreign clients. Again, the facts are wholly contrary.

Let me make it emphatically clear that neither my firm nor I, nor, to my knowledge, any member or associate of my firm, has ever contributed one cent to the committee for a national trade policy. Nor has any contribution ever been made by any foreign client which my firm represented; in fact, during the period that I served as a director it was an inflexible policy of the committee never to accept a contribution of any kind from any foreign company or interest. I recall, for example, that shortly after the committee was formed it refused a contribution offered by a Canadian company. Since I am no longer a director or officer of the committee I cannot speak for it today, but I should be amazed if there has been any change in this established committee policy.

"The relations of my law firm with the committee were on a professional basis. Not only did my firm make no financial contribution to the committee, it received from the committee fees amounting to $20,000 for the work it performed as general counsel. The implication in Mr. Burr's pamphlet that the services which my firm or I performed for the committee for a national trade policy were compensated for by the fees which my firm may have received for work performed on behalf of foreign clients—work entirely unrelated to United States trade policy—is both absurd and insulting.

"Mr. Burr attempts to make a great deal out of the fact that in the early months of 1953, my firm had represented the Venezuelan chambers of commerce (composed of private firms doing business in Venezuela). Our representation was in connection with proposed legislation that would restrict the import of oil into the United States. My firm, in turn, retained a number of prominent law firms in various parts of the country to explain the issues involved to American companies in their communities. Included among these firms was that of Headley, Sibbald & Taft, of Cincinnati. Mr. Charles P. Taft, of that firm, had the previous year been the Republican candidate for Governor of Ohio. I knew him to be an expert in the field of commercial policy.

"My firm ceased active work on behalf of the Venezuelan chambers of commerce on August 1, 1953, and withdrew its registration

for that client under the Foreign Agents Registration Act. That was 6 weeks prior to the incorporation of the Committee for a National Trade Policy.

"When the Committee for a National Trade Policy was established, I informed the directors of these facts. I informed them also that my firm was then acting, and had acted for several years, as legal adviser to certain agencies of the French Government.

"Let me make it entirely clear, however, that my firm has at no time undertaken or attempted, directly or indirectly, on behalf of the French Government or any other foreign government, to influence the United States Congress with respect to legislation in connection with international trade, commercial policy, or any other matter. To the extent that our services for the French Government may have involved attention to international trade or commercial policy, those services have been confined to the traditional lawyer's function of interpreting laws or regulations.

"Knowing my interest in the subject of trade policy which had long preceded any professional representation in this field, the directors of the committee were of the opinion that, in view of all the circumstances, no fairminded person would misinterpret my professional activities in such a way as to cause any embarrassment to the committee or its work.

"In October 1954, I submitted my resignation as a director and officer of the committee for a national trade policy, as well as the resignation of my firm as the committee's general counsel. I did this entirely on my own initiative, without any suggestion from any officer, director, or member of the committee. I explained to the directors of the committee that my firm was considering a proposal to represent certain clients in connection with a matter bordering on trade policy (not covered by the provisions of H. R. 1 or any proposed amendments thereto), and that I wished to avoid any possibility of embarrassment to the committee because of innocent or deliberate misinterpretation in connection with this representation. My resignation was accepted by the directors of the committee at their annual meeting on November 2, 1954. This was more than 2 months prior to the introduction of H. R. 1, and neither my firm nor I has represented any clients in support of H. R. 1."

In view of Mr. Ball's statement—and I have confidence in what he says—I think we should return the argument on this important piece of legislation to the merits. I feel we have a serious task confronting us to chart the course of this country in its commercial dealings with the rest of the world. To perform that task properly will take all the sober and informed attention which we can muster. We shall not succeed if we are deflected by unfounded attacks or mean insinuations on character and motives.

Editorial Tribute to Former President Truman

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. HENNINGS. Mr. President, last week, on the 10th anniversary of Harry S. Truman's ascendancy to the Presidency of the United States, a most eloquent and eminently deserved editorial tribute was paid to him by Arthur V. Burrowes, the distinguished editor of the St. Joseph (Mo.) News-Press.

I ask unanimous consent to insert in the appendix of the RECORD this tribute to Harry S. Truman, President, statesman, first citizen of Missouri, and, in the words of the editorial:

A human being, a man who walked and talked with kings, yet never lost the common touch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIMELY OBSERVATIONS

Personal prejudices: Ten years ago this morning he awakened President of the United States. The first citizen of Missouri—he was this State's first Vice President—now by the tread of the dark angel with the beckoning hand, was President of these United States. That man is Harry S. Truman, of Independence, Mo., 1 of our 2 living former Presidents.

Vice Presidents are traditionally doomed to oblivion. When Harry Truman was born one certain William A. Wheeler was Vice President. Who today ever heard of him? Outside history teachers and statistical-minded newspapermen? In Harry Truman's childhood there were Vice Presidents Thomas Hendricks and Levi P. Morton. Who were they? Where did they go? He came of majority when Garrett A. Hobart was Vice President. He was a captain of artillery in France when Tom Marshall was Vice President and he was a hard-working, rigidly, sternly honest county judge down on the Kaw when Charles Dawes was Vice President.

Now overnight, the humble Missourian had become President. He was to suffer the abuse and the canting criticism that has been the fate of every President who ever was aggressive. History discloses how rabid critics of the great Washington printed their spleen. How exulting when the father of his country declined to run for a third term. No President suffered more personal cruelties than did Abraham Lincoln. He was cursed, North and South, all through his dreary years in the White House.

It is this writer's belief that the shadow of Harry S. Truman has lengthened with the years. That is rarely true of former Presidents, especially in their own lifetimes. He who would damn Mr. Truman to the classification of the Pierce, Polk, Hayes, McKinley, and Taft regimes, does not follow history. History, we believe, will deal kindlier with Mr. Truman than have his contemporaries. And we are not ashamed to strike our breast and whisper "Mea Culpa."

On the subject where President Truman was most harshly criticized by the press of America this editor is proud to stand with him. That was over Dean Acheson, Secretary of State. There, too, is a man with whom history will deal more kindly than have his contemporaries. For the Truman Doctrine and for the Marshall plan we have deep respect. They may have kept the world from going more Communist than it has. In the light of all we knew then, and possibly know now, the grave decision of the atomic bomb on those Japanese cities was justified.

Comparisons are odious, and we shall make no hysterical remarks about Mr. Truman being one of our greatest Presidents. We will say this. No President faced a more cataclysmic world. No President assumed office with graver problems of wierd potentialities, not even George Washington taking over an infant Republic after the feeble Articles of Confederation. Not even Abraham Lincoln, inheriting a secession because of a flabby and vacillating James Buchanan. F. D. R.'s bequest was not wholly blessed.

No President revered the Constitution and the American way more than does President Truman. President Lincoln arbitrarily evaded the right of appeal to habeas corpus. President Theodore Roosevelt was grossly high-handed in the manner in which he acquired the site of the Panama Canal. President Franklin D. Roosevelt flouted the Constitution when he gave destroyers to beseiged Britain. True, all three held that the end justified the means. Mr. Truman accomplished his ends within the law and the Constitution.

It seems to us as that distant day approaches when the bearded man will put the life of Harry S. Truman in history's scroll, for this, will he stand out: A human being, a man who walked and talked with kings, yet never lost the common touch. That and his genuine American devotion to that beloved wife and sweet daughter, Miss Margaret. Of all the Presidential biographies of Presidents we have read, we hail the man from Independence as our No. 1 President. Oh, we all love our wives and children. We think we do. Of our Presidents, some were more tender than others. For instance, William McKinley, whose wife was an invalid, or Theodore Roosevelt, whose loving lines to his wife makes the letters to his children sparkle like champagne.

Yet it seems to this editor, that of this man who 10 years this morn awakened a President, the true history cannot be written by him or by his Secretaries of State. They can be written only by someone who has sensed his devotion, yea, almost adoration, for the two women who make up his life. In these two gentle souls, ah, there lies the real story of the life and times of Harry S. Truman. Therein lies the explanation of greatness of the man with the lengthening shadow. In these days of wife-beating husbands, cruel fathers, those twin curses, abuse of liquor and immorality, shattered homes, the life of Citizen Truman of Independence shines. Its rays are like the morning sun on that towering Liberty Memorial across from Union Station, Kansas City, Mo., or that almost rustic sward in front of the tiny Missouri Pacific depot in Independence.

Soviet Reaction to the Programs of the Voice of America

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "Reds' Angry Blasts at Voice Delight Washington," published in the New York World Telegram and Sun of March 19, 1955. This article deals with the Voice of America, and the anger with which Russia is receiving our broadcasts.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS' ANGRY BLASTS AT VOICE DELIGHT WASHINGTON—POWERFUL STATIONS PIERCE IRON AND BAMBOO CURTAINS—PROTESTS SHOW BROADCASTS ARE REACHING BIG AUDIENCE

(By Roger Stuart)

WASHINGTON, March 19.—The roll of dissatisfied listeners is growing at the Voice of America headquaters here—and officials are pleased as can be.

Unlike most radio stations, Uncle Sam's around-the-clock news dispatching organization considers it a high compliment when

its programs are attacked—if the attacks come from Communist officials behind the Iron Curtain. Such blasts, it's felt, provide an indication of the effectiveness of the broadcasts.

Every once in a while nowadays the Soviet powers that be get so burned up at what VOA is telling the Russian people that they order a fresh denunciation of Uncle Sam's news output to appear in one of their official organs or broadcast on the air. That means our programs are getting through.

DOLLAR BROADCASTERS

So, too, when Rumania's Soviet dominated Premier, Gheorghe Georghiu-Dej, recently told his country's Grand National Assembly how little he thought of the Voice of America it was good news indeed to Theodore C. Striebert, Director of the United States Information Agency (of which VOA is a part), and his hard-working associates.

The Rumanian Premier's speech denounced the dollar broadcasters of the Voice of America and described their output as a wave of dirty calumnies and lies. The diatribe was prompted by a series of broadcasts to the Rumanian people, pointing out specific instances when the Communist government had broken its word and made life more difficult for them.

VOA, which moved its studios from New York to Washington a few months back—without skipping a single portion of its 24-hours-a-day broadcast schedule of more than 75 separate programs in 38 languages—now has a potential audience in excess of 400 million throughout the world.

IMPORTANT ADJUNCT

This gigantic network is an important adjunct to Uncle Sam's many-sided effort to carry the truth to every part of the globe. And because radio is the only method of communicating with people behind the Iron and Bamboo Curtains, more than three-quarters of the total program effort is directed to Eastern Europe and Communist China.

In its 9-year history, the Voice has come through some trying times. There was one period when Congressmen and editorial writers alike scoffed at its "silly" programs, complaining that much of their content was ridiculous guff which failed to accomplish more than to make the United States a laughing-stock for the limited number of foreigners who bothered to tune in.

Then, a little later, along came Sen. JOSEPH R. MCCARTHY (R., Wis.) with his charges that the whole United States Information Agency was improperly managed, that its overseas libraries contained pro-Communist publications, that it was a waste of the taxpayers' money.

WHITE HOUSE SUPPORT

Things are different now. For one thing, USIA has been dissociated from the State Department, except that its policy still is dictated there. Otherwise, it's an independent, self-operating agency, headed by an energetic former radio executive, Mr. Striebert, who not only has vigorous White House support but who also is a member of the Operations Coordinating Board, an action unit of the National Security Council.

Approximately 1,600 persons are employed by the Voice—which is the radio (and, to a limited extent, television) arm of the far-flung USIA. The latter altogether has 9,500 employees. More than 850 of VOA's 1,600 work in the new Washington headquarters. The remainder, including 525 foreign nationals, are employed overseas.

Voice officials say the move from New York which was completed last November on orders from Congress, has resulted in improved integration within the agency and closer liaison with other Government Departments, notably the Department of State.

BIG BUILDING JOB

The move necessitated construction of 14 studios, 10 recording rooms with equipment to make 40 discs or tapes simultaneously, 10 tape-editing booths, a recording control center and the master control room, along with editorial offices, music and transcription libraries, and other offices, all located in the Health, Education, and Welfare Department.

More than a half million electrical connections and nearly 100 miles of cable are involved in the highly complex electronic equipment required.

At this moment, preparations are being made for the installation, within another month or so, of a huge control console, which will be capable of selecting program material from any of 100 sources and handling 26 separate programs simultaneously. Until this is completed, VOA will continue to feed its programs to the old board in New York and from there via telephone lines to 30 shortwave transmitters in the United States.

SEVENTY-EIGHT TRANSMITTERS

A network of 78 transmitters, including the 30 shortwave domestic stations operated for the Voice by private broadcasting companies, currently are in use in beaming the programs of news and comment to the worldwide audience.

Government-owned relay stations are located in Salonika, Tangier, Ceylon, Honolulu, Munich, the Philippines, and Okinawa. The last three, each with million-watt transmitters, are the world's most powerful known broadcasting facilities.

Then there's a floating broadcasting station designed to give VOA more mobility and at the same time to combat Soviet jamming. This is located on the U. S. Coast Guard cutter *Courier*, lately stationed off Rhodes.

FACILITIES LEASED

Relay facilities likewise are leased from the British Broadcasting Corp. in England, while still other relays or rebroadcasts are made through arrangement with local broadcasters in France, Italy, Germany, Austria, Switzerland, Trieste, Greece, Belgian Congo, Vietnam, Japan, Korea, the Philippines, Formosa, and Latin America.

But equipment is only equipment, after all. What will make or break the Voice is its talent—the men and women who write and direct the programs, who do the broadcasting, who cut the records and turn the switches. Where do they come from, these individuals of varied gifts who devote their energies to this vast effort to combat Communist lies with the truth?

The answer literally is: Everywhere.

There's pretty Mrs. Libussa Kopfstein-Penk, for example. A former actress, she is an announcer and translator who works on programs beamed to Communist-dominated Czechoslovakia. When she speaks into the microphone, it's as though the Czechs were hearing one of their own countrywomen. For that is exactly what she is—or was before she escaped from Prague with her husband and little boy after the Communist regime took over.

"When I acted in Pirandello's play, Lazarus, on the stage of the National Theater in Prague in the autumn of 1947," she says, "I did not suspect that my next role would be announcing for the Voice of America in the United States."

Her son, Charles, was 3 when Mrs. Kopfstein-Penk and her husband made their first attempt to leave Czechoslovakia. Heading for the western border, they spent 3 days in hiding, only to be returned to Prague as a result of unexpected Communist inspection at the frontier.

"The second time," she says, "we tried to get to the United States Zone of Germany through the Soviet Zone, but for a second time were returned because of the small child. On the third try, we succeeded and, via an airliner, landed in Switzerland."

It was in 1952 that they arrived in the United States, by way of Australia.

"ALL I HOPED FOR"

"It's hard to say who of us enjoys this country most," says Mrs. Kopfstein-Penk. "Possibly it is my son, Charles. For me, America and my work are all that I could have hoped for."

Then there's an enthusiastic, dark-haired young man who produces, directs, and often participates in programs intended for Turkish audiences. His name is Irfan Kipman. A native of Turkey, he landed in the VOA setup in a roundabout way, which had its beginning when he left Istanbul on a motorcycle in August 1949.

At that time, he was a correspondent for the Turkish daily newspaper, Vatan. Riding his motorcycle through Iran, Afghanistan, Pakistan, India, Burma, and Thailand—as he recalls, "over all kinds of roads"—he traveled a distance of 27,000 miles, writing articles about his experiences.

Leaving Thailand by ship for South Africa, he remained there briefly, finally sailing for the United States in the late summer of 1950.

He still possessed his motorcycle when he arrived in New York, but the job as correspondent had come to an end. So he found a job in a steel factory, assigned himself the task of learning English, and after a while became a captain in a Newark restaurant.

Later that year, he began working in the Turkish Service of the VOA, and he has been at it ever since.

So it goes. You'll find writers, announcers, and directors from Indochina, from Bulgaria, from a wide variety of countries. Also you'll find American technicians, like Elizabeth Crandall, who gave up a musical career in World War II to do something for the war effort. That meant learning how to be a studio engineer and recording technician for the OWI and later for the Voice, where she's still happily at work.

MODEST SALARIES

"There's a great similarity between show business and radio," says Miss Crandall. She ought to know. She was under contract to the Shuberts for 6 years and appeared for several seasons with the St. Louis Opera Co. as a mezzo soprano.

The salaries paid these artists and technicians are modest, but their service with the VOA brings them great satisfaction, particularly when word reaches them from listeners in far-off lands—bits of testimony like that volunteered by a Bulgarian escapee, who declared:

"Voice of America broadcasts are the only bright spots for people in my country. The image of a great and strong United States which will win in the end is the only hope."

The Soil Conservation Service

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a telegram which I have received from Mr. Harry Woodward, secretary of the

South Dakota Agriculture Coordination Committee, commending the wisdom of Congress in establishing the Soil Conservation Service 20 years ago yesterday.

In this same connection, I should like also to have printed in the RECORD a news release prepared by Mr. Ross D. Davies, South Dakota State conservationist of the Soil Conservation Service, commenting on the success of the soil-conservation program.

There being no objection, the telegrams and the news release were ordered to be printed in the RECORD, as follows:

HURON, S. DAK., *April 27, 1955.*

HON. KARL MUNDT,
United States Senator,
Washington, D. C.:

Convey to the Congress of the United States the official commendation of 32 agencies participating in this organization for foresight in enacting legislation 20 years ago today enabling soil conservation. The continuous result increases our Nation's agricultural production and stability.

SOUTH DAKOTA AGRICULTURE
COORDINATION COMMITTEE,
HARRY WOODWARD, *Secretary.*

NEWS RELEASE BY ROSS D. DAVIES, STATE CONSERVATIONIST, SOIL CONSERVATION SERVICE

HURON, S. DAK., *April 27, 1955.*

Just 20 years ago today a momentous event took place in the agricultural history of this Nation. The basic Soil Conservation Act passed unanimously by both Houses of Congress was enacted into law. The act created the United States Soil Conservation Service as an agency of the Department of Agriculture to provide principally technical help to agencies of the State which can carry on conservation work.

In the preamble of this act it states: "It is hereby recognized that the wastage of soil and moisture resources on the agricultural, grazing, and forest lands of this Nation is a menace to national welfare, and that it is hereby declared to be the policy of Congress to provide permanently for the control and prevention of soil erosion."

This act was the result of some experimental work on character and extent of soil erosion started in 1928 at 10 experiment stations. This was followed by 175 demonstration projects in major soil areas of the Nation and work of several hundred camps of the Civilian Conservation Corps. Two of these projects were in South Dakota at Huron and Winner. CCC camps under the Soil Conservation Service were located at Alcester, Chamberlain, Presho, Huron, and Fort Meade. In the 5-year program of these projects and camps, many conservation practices were tried out by cooperating farmers. Those that were the most beneficial and practical were used in the expanded program since that time.

Agricultural leaders throughout the Nation recognizing that conservation to be permanent and of maximum benefit would require wholehearted cooperation of landowners and operators who are stewards of the land, and all citizens since it affects most of the source of food, fiber, and clothing needs of all people.

Encouragement was given to States to enact legislation to provide mechanism to carry on soil and water conservation programs to fit local needs, encourage maximum local participation and provide for local administration. The soil-conservation district movement is the outgrowth of this basic philosophy of the Nation on soil conservation.

Today all States, Territories, and insular possessions of this Nation have enacted soil-conservation district laws. There are 2,650 soil-conservation districts organized under State law. All land in farms and ranches in 14 States are within soil-conservation district boundaries. Over three-fourths of all land in this country is within district boundaries and over 2 million farmers are already cooperators wth their districts.

In South Dakota since the State law was enacted in 1937, 65 soil-conservation districts with about 90 percent of all land in farms and ranches within district boundaries have been organized. Nearly 30,000 farmers and ranchers are district cooperators with conservation plans developed in cooperation with technicians of the United States Soil Conservation Service. These plans serve as a guide for applying conservation practices to fit the needs of the land as time, effort, and resources of individuals, farmers, and ranches permit. There are only 7 counties and part of 1 other county in South Dakota not within district boundaries.

This soil-conservation district movement is regarded by historians as one of the most remarkable developments in the history of this Nation or any Nation in the history of the world. A total of 68 Nations have sent representatives to this country to study conservation practices, methods, and the district program.

Secretary of Agriculture Benson has made this statement that the soil conservation district has proved to be an effective mechanism through which local responsibility and leadership in soil and water conservation can be assumed and local needs and desires can be made known. Because districts are local units of State government, organized and controlled by local people, we consider them an effective device through which the Government can serve farmers without dominating them.

During the 20-year period, the program of conservation from a national standpoint has been enlarged upon and responsibilities of agencies concerned clarified and coordinated. Today, there is a five-point program—education, research, technical aid, cost sharing, and credit.

In the educational field, the Extension Service has leadership. Experiment stations conduct research work. Technical aid is primarily from the Soil Conservation Service. Cost sharing with payments on many conservation practices is handled by the Agricultural Conservation and Stabilization Service. Credit facilities are being made available through the Farmers Home Administration and Farm Credit Administration. The last Congress amended the Internal Revenue Act to provide reduction in income taxes for establishing permanent soil conservation practices.

South Dakota can be proud of the fact that the Administrator of the United States Soil Conservation Service, Don Williams, a native of Clark County and graduate of State College, has been entrusted with the responsibility for the activitfes of the Soil Conservation Service in assisting with the conservation program of the Nation. The philosophy being followed by Mr. Williams is to encourage public understanding, local participation, and teamwork among local people, State and Federal agencies assisting soil conservation districts with their programs. The objective being "Use the land within its capabilities and treat each acre in accordance with its needs for protection and improvement."

One notable advance was made in conservation work this past year with passage of the Watershed Protection and Flood Prevention Act, Public Law 566. This act encourages conservation work beyond the individual tract of land, but brings into the picture of conservation, work on small watersheds. Don Williams has stated this is one of the most important strides made in conservation since enactment of the basic law in 1935.

In spite of the accomplishment to date, conservation leaders feel only a start has been made. Muddy waters, dust storms, even in South Dakota, several times this spring, tend to emphasize there is need for much more conservation on farms and ranches in this State. The past 20 years may be called the trial and organization period. Foundations for a practical and permanent conservation program in the future have been laid.

Soil conservation district supervisors throughout the State have expressed themselves that even greater accomplishments in conservation will come in the 20-year period ahead.

Removal of Smog From Pittsburgh

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Smog Cleanup Here Hailed," which refers to the successful program conducted by the city of Pittsburgh, Pa. The article was written by Phyllis Battelle, and was published in the Pittsburgh Sun-Telegram of April 18.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMOG CLEANUP HERE HAILED

(By Phyllis Battelle)

Look alive, you city dwellers who are biting the dust (or absorbing the smog, or inhaling the monoxide), and turn your smarting eyes toward Pittsburgh.

This is the spot that got religion.

Ten years ago, it was a grimy-faced gargoyle of a city. It was dark as a saloon, at midday. Its citizens were susceptible to TB and silicosis and inflamed eyes. The neatest of housewives had tattle-tale curtains. The millionaires had soiled bills by lunchtime.

Suddenly civic pride stepped in, by firm official order. A strong-willed group of residents formed a United Smoke Council of the Allegheny Conference on Community Development and demanded that Pittsburgh's billion-dollar industries, its railroads, even its households, cease and desist burning soft coal.

A few choice squawk words echoed through the surrounding hills, because gas is a comparatively costly fuel and because bituminous coal was one of the region's vital industries. But by October 1, 1947, the deed was done.

THERE, THERE, LOS ANGELES

Today Pittsburgh, unlike some other cities I could mention, is smog free (there, there, Los Angeles, don't be so touchy). And it is the fastest-growing fairyland in the East.

I looked down upon it from one of the high hills across the Monongahela River from the center of the 197-year-old city. It was night, and the lights were sharp in the spanking-clean air over Pittsburgh. They made splotches of corrugated color in the Monongahela and the Allegheny Rivers, as these two swept past the city on either side, then churned together to form the Ohio River in the form of a great watery Y.

The air is almost as pure as it was when George Washington came here in 1758," said Stefan Lorant, the Austrian writer-historian

who has been fetched here by the Allegheny conference to write a book about Pittsburgh and its "Renaissance."

WASHINGTON'S GHOST VISIBLE

"In fact," and he squinted down at the big point of land where the rivers merge, "you can just about see Washington's ghost, if you try."

I tried, but my retinae are not extrasensory it seems, so Lorant described how Washington found this spot, a rolling, tree-covered plot, and how it became the center of French, Indian, and British warfare till the end of the American Revolution.

Then, beginning in the 1790's with a boatbuilding business, it expanded to become the great industrial center. Oil, steel, coal, aluminum, all were discovered, developed, and shipped from Pittsburgh. Great family fortunes were piled up and stowed away. Dollar bills were a dime a dozen here. And everyone was so busy they scarcely noticed.

WITH SUCCESS CAME DARKNESS

With success came darkness. Fog, smoke, and ugliness swept over the wealthy community. One of the city's most powerful industrialists is said to have lost at least one wife because flowers wouldn't grow in her gardens.

For more than a century the filth compounded until citizens scarcely remembered there was such a thing as sunshine. Then, almost overnight, in one cleanup sweep, it was blown away.

Pittsburghers now are almost deliriously civic-minded. They contribute money and ideas to the reconstruction of their town and watch, with delicious amazement, the building of dozens of new structures, the side-scrubbing of soiled ones, the laying out of real, genuine parks in midtown.

I don't know what courage and money and heartache it took for the men who crusaded to make Pittsburgh sunlit once more, but the fact that it was accomplished, with such magic swiftness, is encouraging.

It can, ye unclean communities, be done.

What Price Quemoy and Matsu?

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Price Quemoy and Matsu?" from the April 21 issue of the Iron Age.

Our Nation is fortunate in that we have President Eisenhower, with his military background and his innate desire to keep the world at peace to make the decision as to these islands.

As this editorial points out, it is not merely a question of these two small islands. They are but symbols of other points in this conflict between ideologies.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT PRICE QUEMOY AND MATSU?

(By Tom Campbell)

One man will determine if or when we will help defend Quemoy and Matsu. The Joint Chiefs of Staff, the National Security Council, and others have told President Eisenhower what they think. When the time comes he alone will bear the crushing burden of responsibility—and courage.

There are those who ask loudly why we should defend those tiny islands; as if there is nothing there except real estate. To some people we would be stark crazy to defend such small specks in the Formosan Strait.

But that is not the simple point. We are not interested in the mere physical aspect of Quemoy and Matsu. Something infinitely more important to freedom is involved. No one knows for sure if we will or will not defend these isles against a communistic attack.

It all depends on the Chinese Reds. If they insist on moving toward Formosa, with invasion as their unmistakable goal, they may commit the ghastliest blunder of this century. Yet it would be stupid strategy to tell the Reds what is in our minds—or what we intend to do—about Quemoy and Matsu.

These islands are symbolic in more ways than one. They are the "stop, look, and listen" for the Reds. They contain perhaps the hidden answer to the question, "Is the United States a paper tiger?" They may turn out to be the deterrent to world war III. Or they may be one more setpping stone to the onrush of communism in Asia.

All the hue and cry about these two Nationalist Chinese outposts would lead us to believe that, if we said "No" we won't defend them, or "Yes" we will defend them, everything would be white or black. It isn't that easy. There will always be Quemoys and Matsus of various shades for us.

All the talk in Britain, in India, in Canada, and in the United States will not change this one basic fact; sooner or later we must decide where we are going to stand up against the Reds. If it isn't Quemoy or Matsu it must be Formosa. Even General Eisenhower's severest critics concede that.

The free world did not stop Hitler in time—and so came World War II. Only history can tell us if Quemoy and Matsu will prove to have been the free world's stand—if there is to be any history. Your President needs your support—and your prayers.

Transmission Line From Fort Randall to Grand Island

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

RESOLUTION FOR CONSTRUCTION OF 230,000-VOLT TRANSMISSION LINE FROM FORT RANDALL TO GRAND ISLAND

Whereas the economy of the State of Nebraska is dependent primarily on the production of foods and fiber products from its lands; and

Whereas Nebraska is blessed with the priceless asset of an abundant underground water supply in much of its area; and

Whereas the productivity of much of Nebraska has already been materially increased by means of pump irrigation; and

Whereas the United States Bureau of Reclamation has recently initiated a special rate for electric power used for irrigation pumping, by which large quantities of surplus power available during the summer months from the Missouri River Basin project can be put to beneficial use for irrigation and reclamation purposes; and

Whereas there will also be blocks of low cost firm power available from the hydroelectric developments on the Missouri River; and

Whereas there is and will be definite need for such blocks of firm power as they become available for agricultural, industrial and defense plant purposes in Nebraska; and

Whereas to effect delivery of such low-cost power from the hydroelectric plants on the Missouri River to areas of Nebraska where it can be most effectively used requires the construction of a 230,000 volt transmission line capable of carrying some 150,000 kilowatts of power from the Fort Randall hydroelectric powerplant site to the vicinity of Grand Island, Nebr.; and

Whereas the United States Bureau of Reclamation has built many similar transmission lines in other States in the Missouri Basin; and being interested in all programs which further expand the economy of the State, is vitally interested in the development of additional pump irrigation, rural electrification, and industrial and agricultural development: Now, therefore, be it

Resolved, That the South Platte United Chambers of Commerce endorses and supports the construction of the proposed 230,000 volt Fort Randall-Grand Island transmission line; be it further

Resolved, That we urge the Congress of the United States to give support to this line and appropriate the necessary funds for the construction and completion of this line in 1956 fiscal year; and be it further

Resolved, That copies of this resolution be transmitted to our Members of Congress requesting their support of this important propect.

This resolution adopted at the regular April meeting at Superior, Nebr., on April 14, 1955, by a unanimous vote.

THE SOUTH PLATTE UNITED CHAMBERS OF COMMERCE,
ORAN KING,
President, Superior, Nebr.
CLETUS NELSON,
Secretary-Manager, Holdrege, Nebr.

Ulysses Simpson Grant: The Man

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. SCHWENGEL. Mr. Speaker, on Wednesday it was my pleasure to attend the exercises on the Capitol grounds honoring the 133d anniversary of the birth of Ulysses S. Grant. This significant celebration is an annual event, and I was pleased to see that it was attended by a large number of people. The Marine Band played appropriate music; veteran and patriotic organizations laid wreaths at the monument; introductory remarks were made by Col. Randle Bond Truett, Chief of the National Memorials and Historic Sites Section, and Maj. Gen. U. S. Grant III, grandson of the former President, expressed his appreciation for the observance.

The principal speaker was our amiable, capable, and devoted public servant, the Honorable GEORGE A. DONDERO, of Michigan, who spoke eloquently on the sub-

ject: Ulysses Simpson Grant: The Man. I earnestly solicit the attention of my colleagues to Representative DONDERO's address.

ULYSSES SIMPSON GRANT: THE MAN

(Address of GEORGE A. DONDERO, Member of Congress at the Grant Memorial in Washington, D. C., April 27, 1955)

One hundred thirty-three years ago today, Ulysses S. Grant, one of our greatest Americans, was born.

It is not my purpose to dwell on his brilliant military career nor his political career as President of the United States. The great man in whose memory we have met to do him honor had certain striking elements of character which made him what he was and which enabled him to accomplish what he did. I propose to confine my remarks to his characteristics as a man.

I know of no place more appropriate to discuss his life and character than here in the shadow of the Nation's Capitol Building, and at this imposing memorial erected by a united people to commemorate his name and fame. May we rekindle within us respect and admiration for the knightly character and leader that he was.

General Grant presents one of the strangest anomalies in history: that a man so distinguished in war should be so unwarlike in personal characteristics and free from the ambitions supposed to dominate the soldier.

Among the qualities which enabled him to accomplish what he did were his self-confidence, perseverence, and firm discipline. These qualties were not manifested in an extreme manner, for they were balanced by his temperate character. His self-confidence was combined with humility; his perseverence was attended with adaptability; and his discipline was softened by his innate kindness.

His self-confidence is clearly illustrated in a unique way by a letter which General Grant wrote to his sister Mary from his headquarters at Oxford, Miss., December 15, 1862. The Vicksburg campaign was in progress. The General was expecting his wife and his father to visit him in a few days. Notice what the General said to his sister: "We are now having wet weather. I have a big army in front of me as well as bad roads. I shall probably give a good account of myself however notwithstanding all obstacles." We all know that 5 days after the General wrote the letter to his sister, expressing supreme confidence in his plans, a Confederate force captured Holly Springs where Grant's supplies for his army were stored and where his sister and father were at the time he wrote the letter.

A man of less courage and resourcefulness would have been frustrated and discouraged, but not so with General Grant. He immediately sent all the wagons he had "to collect and bring in all supplies of forage and food from an area 15 miles east and west of the road," to subsist his troops on the people in the region. This lesson, that an army could live off the country, was used in order that he could persevere in his long-range plan to capture Vicksburg.

He was so averse to inflicting pain that as a boy he never enjoyed the sport of killing small animals. He sickened at the sight of blood, yet was forced to witness the greatest outpouring of human blood for freedom in all our history.

He was a lover of horses. During the Wilderness campaign, he came in sight of a teamster brutally beating his horse in the face with the butt of his whip. He directed that the scoundrel be taken in charge and tied to a tree for 6 hours as punishment for his brutality.

During the Vicksburg campaign, or seige of Vicksburg as it is sometimes called, General Grant and staff took possession of a house as headquarters. He informed the family they might retain the upper rooms of the house and the kitchen below. One day the General met a young girl in the hallway carrying a tray of food. He inquired whom it was for. Frightened and trembling with fear, she admitted it was for her brother, a young Confederate officer who was wounded and concealed in the basement of the house. She had visions of a Northern prison for her brother and punishment for herself. "Tell your brother I will have my personal physician attend him and he shall have what food he needs," was the General's directive.

During the late twenties or about 30 years ago, an old lady, on whose head the snows of many years had fallen, entered the office of Ulysses S. Grant III, grandson of President Grant and one of the most respected and highly esteemed citizens of Washington, and told him the story. She said "I am the little girl who carried the tray of food, and I wanted some member of the Grant family to know of the incident before I passed away." Such are the facts as I heard them from the lips of the distinguished grandson of the man we honor today.

General Grant always abstained from profanity and would not tolerate it in others. He hated liars and cowards. The familiar saying that "an honest man is the noblest work of God" could literally be applied to Grant. Characteristic of the man and his meticulous adherence to the truth in an incident which happened in camp. After returning from an inspection, he was heard to say: "I was told so and so about the wounded by Dr. Smith while we were talking this morning inside his tent." A half hour later, he took the trouble to come back and say, as if it were a matter of the greatest importance, "I was mistaken when I told you that my conversation with Dr. Smith occurred inside his tent, that was not correct, it took place while we were standing in front of his tent."

One of Grant's generals, Ingalls, who knew him at West Point while a Cadet said, "He was always frank, generous, and manly." He would not tolerate obscenity or even off-color stories. They were objectionable to him. One evening a citizen who had come to camp said he would tell a story, and began by looking around and saying, "I see there are no ladies present." General Grant interrupted him with the remark, "No, but there are gentlemen present."

He entered the Military Academy because his father desired him to do so and not because he wanted to go. While there, he secretly rejoiced when it was rumored that Congress proposed to abolish the academy. While at West Point, he deliberately planned to be fired from the academy by putting on his full-dress uniform and leaving the grounds without permission. He walked a considerable distance to a favorite meeting place for the cadets. On the way, he passed several officers, who, believing he had authority to leave the grounds, made no report of his escapade, and his whole plan to be fired from the academy failed.

Years after graduating from West Point, he related that on his way to the academy from home he hoped the train would be wrecked and he would be injured just enough to disqualify him from entering. However, his training at West Point left its impress upon the young soldier. He was always refined in his manners at table and never violated the requirements of true politeness.

There was little if anything in Grant's early life to mark him as a man of destiny. Adversity, hardship, and poverty were not unknown to this famous soldier. Shortly before the breaking out of the Civil War, he pawned his watch for $22 in order to provide a few Christmas presents for his children. His weaknesses, if they can be called such, were his devotion to his family and his singular love for children.

When his family visited him at City Point, his headquarters during the last months of the war, his meeting with them afforded him the happiest day he had seen since they parted. The morning after their arrival an officer entered the general's tent and found him in shirt sleeves engaged in a rough-and-tumble wrestling match with his two older boys—age 14 and 12 years respectively. He had become red in the face and seemed nearly out of breath from the exertion. The boys had tripped him up and he was on his knees on the floor grappling with his playful youngsters,and joining in their merry laughter as if he were a boy again himself. Noticing the officer, Horace Porter, with dispatches in his hand, the general rose to his feet, brushed the dust from his clothes and said, "Ah, you know my weaknesses—my children and my horses." The older son, Frederick Dent Grant, was the father of Maj. Gen. U. S. Grant III, my warm personal friend whom we all admire and respect.

This was the man who commanded the Armies of the Union. One army under his immediate command numbered over 100,000 men. He held in his hand the destiny of our Republic. He was intensely human and most considerate of others.

There is an erroneous impression abroad that General Grant was a poor student and left a somewhat indifferent record at West Point and graduated low in his class. His grandson, in an address delivered quite recently, called attention to the fact that this popular fallacy was incorrect. He quoted an officer who made a study of this subject and found that General Grant stood in the middle of his class and relatively higher than Jefferson Davis, General Hooker, Longstreet, Hancock, Custer, Pickett, Hood, and Sheridan.

His innate modesty is well expressed by Alexander H. Stephens, Vice President of the Confederacy, who said, "He is one of the most remarkable men I ever met. He does not seem to be aware of his powers."

Although his education was limited to country schools and the Military Academy, he acquired a general knowledge of literature sufficient to develop a most unusual facility for straightforward and clear expression, which assisted him greatly in later life. No one can read his memoirs without noticing his simple and direct method of expression. During the Civil War, his orders, written by himself, and many of them in the heat and confusion of the battlefield, distinctly conveyed his views, and none of them were ever misunderstood.

It is claimed that General Grant was careless about his personal apeparance. It is true that many photographs of him as an officer during the Civil War show him with his vest unbuttoned or otherwise unconscious of his appearance. However, we have the authority of his grandson that his mother, in her effort to train him in the way he should go, tried to impress on him the scrupulous cleanliness of his grandfather and his meticulous insistence on clean linen. It will be remembered that when Lee surrendered to him at Appomattox, he apologized for his appearance because of his muddy boots and wearing no sword. These were his remarks when asked what his thoughts were at that supreme moment of his military career.

Those who knew him best loved him most; to dislike him was to misunderstand, like the little Southern girl who didn't like the new minister. After the church service, she asked, "Mama, is the new minister a Yankee?" "Why, no, dear, why do you ask?" "Well, I don't like him, anyway; when he prayed he kept saying, 'Grant, O Lord; Grant, O Lord;

Grant, O Lord,' and he never once mentioned General Lee."

Perhaps no better example of his extreme modesty exists than the occasion in 1884 when he wrote an article for the Century magazine on the Vicksburg campaign without mentioning himself. We all know he was the commander at Vicksburg and brought about its fall and the surrender of its garrison of 31,000 men.

Hamilton Fish, who was Secretary of State in the Cabinet of President Grant, when asked what he thought was Grant's dominant quality, said "absolute truthfulness, complete inflexible veracity. I do not think it would have been possible for Grant to have told a lie even if he had composed it and written it down."

It is a common expression among men in uttering the highest faith and confidence in a person to say: "His word is as good as his bond." During the administration of President Johnson, General Lee and other Confederate leaders were threatened with indictment and arrest for treason. Under the terms of surrender given by Grant they were paroled and were not to be molested as long as they obeyed their paroles. That his word be kept as good as his bond, General Grant told the President, "I will resign the command of the Army rather than execute any order directing me to arrest General Lee or any other of his commanders." That put an end to all attempts for vengeance against southern leaders.

Bearing on the character of the great Union commander is the statement of William H. Cook, chief usher at the White House during Grant's administration, who declared, "I have never seen a more devoted family or a happier one," and this during the tempestuous period of speculation and reconstruction of our country. Be it ever said to the everlasting fame and credit of President Grant he entered upon the duties of that high office without political experience or training in the art of diplomacy and statesmanship and made good. The only criticism leveled against him, and the one mistake he made, being as honest a man as God ever made, was that he believed other people in whom he placed trust and confidence were as honest as he.

A fair measure of the esteem and respect in which he was held is included in a tribute paid by a political opponent, a Democrat, assistant attorney general of New York, William A. Poste, who declared, "The century has produced and honored no more rugged and manly man than Ulysses S. Grant—he has gone down to his grave faithful unto death."

The estimate of the Confederate General Longstreet, foe and adversary in battle who fought on the other side and who knew Grant at West Point, speaks in loud praise of the man in whose memory we have gathered here today. He said, "Grant will hold a place with Washington in the hearts of his countrymen. Personally, Grant was a warm-hearted, lovable friend, a magnanimous opponent. His greatness was marked by a modesty so noticeable as to win him the appelation of the 'silent man of destiny.' "

We honor ourselves by honoring Ulysses Simpson Grant on the 133d anniversary of his birth. We bestow upon him today the affectionate appreciation of his countrymen and the loving memory of a grateful people. "A man he was without vices, with an absolute hatred of lies and an unreserved love of truth, of a perfect loyalty to friendship, neither envious of others nor selfish for himself. With a zeal for the public good, unfeigned, he has left to memory only such weaknesses as connects him with humanity, and such virtues as will rank him among heroes."

Assistance to Small Firms From Small Business Administration

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. THYE. Mr. President, during the past few months the Small Business Administration has developed, tested, and placed in operation a program of products assistance. This program is designed to aid small business firms and individual small busines owners to keep up to date in production and marketing techniques, particularly as applied to new product development.

An article appearing in the Wall Street Journal of April 19, 1955, has reported on this program and how it operates. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of April 19, 1955]

SMALL FIRMS NEEDING HELP ON MARKETING CAN NOW GET IT FROM SBA—PRODUCTS ASSISTANCE FUNNELS DATA TO COMPANIES STUMPED BY INDUSTRY PROBLEMS

(By Tait Trussell)

WASHINGTON.—If you're a small-business man with problems in marketing, developing, or, maybe, redesigning one of your wares, the Government's Small Business Administration probably can help you.

At least, you'll get quick attention from officials pushing the agency's newest undertaking called "Products Assistance." Their idea is to funnel already-available information to the people who need it.

A Rutherford, N. J., plant, for instance, had what it thought was a stickler of a problem recently.

"Our company has developed an aluminum carport and is about to launch a marketing program," wrote the New Jersey firm. "However * * * certain statistical information and data is needed."

In less than 24 hours, said an SBA official, the company was given complete data covering all phases of marketing its product, including the total number of United States homes, exclusive of farm homes, the number of houses built since World War II, whether the carport trend is increasing, and the number of homes with garages and with carports.

INFORMATION READILY AVAILABLE

Though the New Jersey company had gone to 10 different private sources without success, the information was readily available, said the SBA, if you knew where to look: The American Association of Home Builders, the American Institute of Architects, the Commerce Department, and Federal Housing Administration.

This was one of 2,000 inquiries that have poured into SBA offices in the past several months. Such puzzlers as what is a new outlet for an ore byproduct, what equipment is needed to make paint pigments, what manufacturer is interested in producing a new aviation toy, all have been handled under the SBA products assistance program.

SBA Administrator Wendell Barnes calls it a unique Government program in that 80 percent of the calls for specific product assistance are processed and solved right in the little firm's locale, in SBA's 12 regional offices scattered throughout the country. These offices are staffed by what the agency calls industrial specialists, in addition to other SBA personnel who handle small-business loans and other agency functions. Problems the field offices can't solve are tackled in the Washington headquarters.

"Over the years a wealth of technical information and data on research and product development of a nonconfidential nature has accumulated," says James Salisbury, products assistance chief. "There's a billion dollars worth lying around if you know where to put your hands on it," adds his assistant, Phil Nelson.

They note about 3,000 research laboratories run by private industry are conducting research and development and 4,500 trade associations are studying problems of their respective industries. Much of what is turned up is available to small business without cost, they say.

NO RESEARCH FACILITIES

Most of the 300,000 small firms in the country don't have research facilities or money to keep abreast of current developments in production and marketing techniques, thus putting the small concern in an unfavorable competitive position. The small-business owner, busy with all the other operations of his firm, meets such problems as: how to make something faster, how to eliminate a costly process, where to find a substitute.

SBA's new program aims at helping the small-business owner find the answer to his particular problem and counseling him on the profitable application of the information.

One of the things about the program which Mr. Barnes says has happily surprised him is the generous cooperation from big business. Scores of king-size companies have given SBA information on techniques or developments they can't use themselves.

Such ideas as these, along with other processes and products and gadgets which lend themselves to production facilities of small business are listed on a circular which SBA puts out to businesses which ask for it, as one phase of the products-assistance program.

The newest SBA circular carries a score of products, inventions or commercial ideas being offered by their owners for development and marketing. The list includes a telephone-holding device which permits free use of both your hands. The inventor wants to license it on a royalty basis to some manufacturer on the west coast.

Seven Years of Israel Independence

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following very interesting record of progress made in Israel since it gained its independence:

SEVEN YEARS OF ISRAEL INDEPENDENCE

POPULATION AND IMMIGRATION

At the time of the proclamation of independence the Jewish population in Israel was 650,000.

The total population of Israel on December 31, 1954, was 1,717,834, of which 1,526,016 (89 percent) were Jews and 191,818 (11 per-

cent) non-Jews. Of the non-Jews, mainly Arabs, 131,500 were Moslems, 42,800 were Christians, and 17,500 were Druzes.

Most of this population increase has been brought about by mass immigration. Between May 15, 1948, and December 31, 1954, 735,394 persons immigrated to Israel.

The natural increase in population amounted in recent years to an average of 30,000 to 35,000 per annum. The birth rate rose from 27 per 1,000 in 1948 to 29 in 1954. The death rate declined from 7.3 per 1,000 in 1952 to 6.7 in 1954, while the infant mortality rate was reduced from 52 per 1,000 live births in 1949 to 39 in 1954.

Absorption and integration of immigrants

Less than 2 percent of the new immigrants who have arrived in the country since 1948 had previously engaged in agriculture, while half of them had no vocational or professional training at all. In 1954, 15 percent of the active Jewish population was engaged in agriculture (12.6 percent in 1947) and 42 percent in industry, mining, construction, and transportation.

Housing

More than 110,000 permanent housing units have been built since the establishment of the State, the majority of which are occupied by new immigrants.

Cultural integration

Some 150,000 adults have studied Hebrew in a comprehensive network of courses for adult education. Of this number, 40,000 attended classes in 1954–55 under Operation Hebrew, a voluntary endeavor designed to impart an elementary knowledge of the Hebrew language and culture to newcomers.

THE DEMOCRATIC PROCESS

When the term of the Second Knesset (Parliament) expires in July 1955, the young democracy, which more than doubled its population and voters through immigration from some 70 countries, will have experienced significant political stability. Israel is a parliamentary democracy of the type which has been evolved in Western Europe. The Knesset consists of a single 120-member chamber elected for a 4-year term on the basis of proportional representation. The Cabinet is responsible to the Knesset and holds office as long as it enjoys the confidence of the Knesset. Since the establishment of the state, there have been three coalition governments comprising almost the same political parties.

While the First Knesset, elected by the general elections of January 1949, dissolved itself because of a Government crisis in the middle of its term, the Second Knesset, and the coalition cabinet of the four parties (Mapai, General Zionists, Progressives, and Hapoel Hamizrahi-Mizrahi) based on it, held office for the whole term prescribed by law, enjoying the continuous support of over two-thirds of the legislature.

Despite the multiplicity of political parties resulting from the proportional system of elections, a prevailing majority of the nation is, through the normal working of the democratic process, united on the main issues of internal and foreign affairs.

ECONOMIC STABILIZATION AND GROWTH

National income

In 1954, national income amounted to IL.1,426 million, as compared with IL.1,100 million in 1953. National income per capita increased from IL.666 in 1953 to IL.843 ($444) in 1954 (compared with $650 in France, $450 in the Netherlands, $420 in Austria, $270 in Italy, $250 in Greece, and $170 in Turkey). Less than half of this increase reflects changes in prices. The rest represents a net increase in the average level of productivity in the Israel economy. Compared with 1950, real national income increased by about 60 percent, and real per capita income by about 20 percent.

National investment

Gross national investment in 1954 amounted to IL.432 million, as against IL.325 million in 1953. Net capital formation increased from IL.220 million in 1953 to IL.292 million in 1954, in both years amounting to one-fifth of the national income.

Prices

The inflationary pressures in the economy, caused by the mass immigration and long-term overhead investments, were considerably checked following the large increases in production and the new economic policy initiated in February 1952. The consumers price index, which rose from 100 in September 1951 to 196 in 1953, increased in 1954 by only 10 percent to 220.

Agriculture

Since 1948–49, the physical volume of agricultural production has increased by almost 125 percent. In 1953–54 alone, the physical volume as well as the added value of agricultural production increased by 22 to 24 percent. The cultivated area increased from 412,500 acres in 1948–49, to 925,000 acres in 1954–55. During the same period the irrigated area almost trebled from 72,500 to 200,000 acres. During the 7 years of independence over 400 new settlements were established, as compared with 277 settlements in the course of the previous 70 years.

A $40 million 60-mile Yarkon-Negev pipeline, diverting the waters from the River Yarkon, north of Tel Aviv, to the parched land of the Negev, is near completion. This pipeline will supply the Negev with 100 million cubic meters of water annually.

Industry

In the 4-year period, 1950–54, the volume of industrial production increased by about 60 percent. In 1954 industrial manpower increased by 10 percent, while production rose by 20 percent. The sale of electrical power for all uses, which may serve as a partial indicator of industrial activity, increased from 329 million kilowatt-hours in 1949, to almost 820 million kilowatt-hours in 1954. In 1954, 48 new factories started production.

The Investment Center was established in 1950 to encourage capital investments in the various industries. Since then, the center has extended facilities and recommendations to more than 1,750 enterprises, which have mobilized over IL.105 million in local capital and over $220 million in foreign capital. By March 31, 1954, 425 enterprises had started production with investments of IL.37 million in local and $57.7 in foreign capital.

Natural resources

Since the establishment of the State, many mineral resources have been discovered, chiefly in the Negev. Today, the mineral wealth of the country consists of the following principal natural resources: Potash, caustic soda, magnesium, bromine, rock phosphates, ceramic clays and glass sand, feldspar, manganese, copper, iron ores, and mica.

Trade

The large increases in production, which were recorded in all branches of the economy, and the economic and commercial policy of the government have made a very important contribution to the improvement of Israel's international accounts. Imports, which reached a peak of $343 million in 1951, declined to $290 million in 1954. Exports in 1954 reached a level of $88 million, a more than 100-percent increase over the 1952 level and a 50-percent increase over the 1953 one. In 1949 exports covered only 11 percent of the imports while in 1954 they financed 30 percent of them. Since 1951, the annual deficit in the balance of trade has been reduced by $100 million.

In 1954, Israel established a market for her exports in 16 new countries, thus bringing the total number of countries buying Israel's products to 80.

Besides earnings from the export of merchandise, Israel earned in 1954, $29 million from invisible exports, partly from the 38,661 tourists who visited the country in the course of the year.

Transportation

Railroads: In 1954, the total length of broad gage lines was 220 miles, as against 62 in 1948. The length of sidings and branch lines was 112 miles, as compared with 80 miles in 1948. In addition, the first stage of a 45-mile Negev railway, connecting Na'an and Beersheba, is now being laid.

Roads: The total number of motor vehicles in Israel reached 44,614 in 1954, as compared with 24,366 in 1949. The length of asphalt roads increased from 890 miles in 1949 to almost 1,250 miles by the beginning of 1954.

Merchant fleet: The merchant marine of Israel expanded from 6,000 tons in 1948 to 21 vessels with a gross tonnage of 55,000 tons in 1950 and 34 vessels with a gross tonnage of 137,000 tons at the beginning of 1955.

Air transportation: El-Al Israel Airlines started operation in July 1949. At the end of 1954, El-Al operated 8 planes, 4 Constellations and 4 of the Curtiss-Commando type, linking 4 continents: Asia, Europe, North America, and Africa. The total number of passengers carried by El-Al, which has a perfect safety record, increased from 15,514 in 1950 to 32,639 in 1954. In addition, the Arkia Corp., a subsidiary of El-Al, operates within Israel, linking Tel Aviv, Haifa, and Eilat.

EDUCATION

Universal, compulsory, and free education for children from 5 to 14 was established by law in September 1949. The philosophy of the educational system is defined by law as follows: "The state educational system aims to base fundamental education in the state on values of the heritage of Israel and the achievements of science, on love for the country and fealty to the state of Israel and the Jewish people, on training in agriculture and manual labor, on pioneering, and on striving toward the creation of a society built on freedom, equality, tolerance, mutual help, and love of mankind."

From 1948 to 1955 school attendance increased from 98,000 to about 350,000.

Higher education: The 1948 war cut off the Hebrew University on Mount Scopus from Jerusalem. The university resumed classes in temporary premises scattered throughout the city. Despite these difficulties, four new schools have been added (medicine, including departments of dentistry and pharmacology, agriculture, law, economics, and social science) and former departments have been expanded. The number of students increased from 870 in 1948 to 3,200 in 1955.

The Hebrew Institute of Technology, "Technion" in Haifa, has experienced a similar expansion. In the course of the last 7 years, 5 new departments have been added (science, industrial chemistry, architecture, aeronautics, and agricultural engineering), and the number of students rose from 660 in 1948 to 1,480 in 1954–55.

SOCIAL AND HEALTH SERVICES

By the end of 1948 Israel had 63 hospitals with a total of 4,626 beds. By the beginning of 1954, the number of hospitals had risen to 87 with 10,609 beds. In spite of the large increase in population, the number of hospital beds per 1,000 of the population rose from 5.33 in 1949 to 6.50 in 1954.

The first stage of the national insurance law was adopted by the Knesset in November 1953. It covers old-age and survivors insur-

ance, maternity, and industrial-accident insurance.

PROGRESS IN THE ARAB COMMUNITY

First experiences in democracy

The Arab community in Israel enjoys full equality of rights and duties. Israel enfranchised Arab women without any qualifications for the first time in history. The First Knesset had three Arab members. Eight Arab members are seated in the Second Knesset. They may, and do, address the legislature in Arabic, and the proceedings in Hebrew are translated simultaneously into Arabic.

The Government has initiated and encouraged local self-government in the Arab communities. For almost all of them this has been their first experience in democracy and self-government. There are now 2 Arab municipalities and 12 Arab local councils, out of a total of 21 municipal corporations and 78 local councils.

Improvements in living standards

The Ministries of Agriculture, Education, Health, Interior, and Religion include special departments for the promotion of the economic and cultural standards of living of the Arab population.

Since three-quarters of the Arab population lives in rural areas, the emphasis has been on the modernization of Arab agriculture through loans, new methods of cultivation, and mechanical equipment. In the last 4 years Arab agricultural production increased considerably, e. g., vegetables from 2,550 to 9,500 tons a year, fruits from 7,910 to 16,300 tons, and olives from 2,400 to 10,100 tons.

With the assistance of the Ministry of Labor and the Histadrut (General Federation of Labor), Arab farmers and workers have established more than 130 producer, consumer, and distribution cooperative societies.

Great strides have been made in wiping out the scourges of malaria and tuberculosis, which were so rampant among the Arab population, and in generally improving their health conditions. Special clinics have been set up in Arab centers and mobile clinics serve outlying areas in the Negev and Galilee, at which medical service as well as hospitalization is free of charge.

Advances in education

The Proclamation of Independence guaranteed to all citizens freedom of language, education, and culture. The Arab community has availed itself of this right and the majority of Arab children attend state government schools with Arabic as the language of instruction. In 1954–55 more than 26,000 students were enrolled in these schools as compared with 7,400 in 1948–49. About 80 percent of the Arab school-age population now attends school, the highest percentage among all the Arab countries. (It was 45 percent during the later period of the mandatory regime in Palestine.)

INTERNATIONAL RELATIONS

Israel has been recognized by 62 countries and is represented in 48 countries.

In 37 of them Israel maintains diplomatic missions, five of which are Embassies (United States, United Kingdom, France, Soviet Union, and Canada). In 17 other states Israel maintains consular offices.

Israel was admitted to the United Nations on May 11, 1949, a year after the proclamation of independence. Two Israel missions are attached to the United Nations, one at the New York headquarters and one at the United Nations European office in Geneva.

Thirty-eight states have representations in Israel; 25 with diplomatic missions, 4 of which are Embassies (United States, United Kingdom, France, Soviet Union), and 13 with consular offices.

Senator George: Quarterback for the State Department

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. UDALL. Mr. Speaker, Senator WALTER GEORGE has been doing a remarkable job in recent weeks as a quarterback on foreign affairs. From crisis to crisis he has been out ahead of the Secretary of State, and the President, and the country is the better for it. Last Saturday night he delivered an address to the American Society of Newspaper Editors in Washington, and again he seems to have influenced a change of policy by the administration. Those who heard this speech called it an "extraordinary address," and it deserves a wide audience. I present herewith a partial text of these impromptu remarks:

Jimmie Pope and ladies and gentlemen of this distinguished audience, now, I suppose you want me to talk to you a little bit about foreign affairs.

From the beginning, of course, we have had relations with other peoples, but prior to World War I, to the great masses of the American people, our foreign relations were hardly known.

These relations and the relations growing out of them occupied the attention of the President, the Secretary of State, and a small group of men in the United States Senate, and intellectuals—men and women throughout the Union.

Even after the outbreak of World War II we said: "Aren't we separated from all that clash and all that confusion by 3,000 miles of ocean and do we not live under other political institutions, and are we not dominated by other social and economical ideas?"

MARKETS DECLINED

Well, we very soon found the answer. The ranchers and cotton growers and manufacturers soon found their markets declining and all but disappearing. And in every accounting and banking house in this Nation, business, temporarily at least, came almost to a standstill. For the first time, Americans in all walks of life began to realize that every important public act committed on the other side of the globe directly affected the welfare and well being of the American people.

At that time and prior to that time and from the beginning, we had the policy of what you and I know as strictly isolationism. We were protected by two great oceans. The British Navy was the unquestioned mistress of the seas, and behind that navy and those two oceans, we enjoyed an immunity seldom found to a young and struggling people, for a long, long time.

World War I came and ended, but we did not reserve the power unity which enabled us to win that war. It fell apart. We were conscious, of course, of how slightly our interests were affected by international affairs, but the unity which enabled us to win that war fell apart.

At the end of the Second World War, the power unity was again dissolved and almost completely dissolved because the American people, true to their traditions, true to their innermost longings, wanted to get back home and wanted to get the boys back home and wanted to settle back into a normal life.

That war, of course, was marked by certain mistakes. All wars are, in point of policy or strategy, and we made some mistakes.

CREATED VACUUMS

I think it may now be said, since the Yalta papers have been published, that we made a great mistake in insisting upon the complete destruction of the great producing nation in Europe—Germany.

Then, after Japan came in and before the end of the war, we again insisted upon the complete, utter destruction of that great producing nation, upon the destruction of the two greatest producers in the world, outside of ourselves, unmindful of the fact that at the moment we were creating economic and political vacuums.

We were right, I think, in insisting upon the utter destruction of Hitler militarism as it had been developed in Germany and as it had lived in Japan.

At any rate we did, and at any rate, these two great powers were destroyed. We made a peace treaty with Japan and Japan is now slowly coming back. We made but recently a treaty with West Germany under which sovereignty is restored to West Germany. But more than that, she is entitled to come into NATO and under which she will come into NATO on May 5, according to present schedules.

Both Germany and Japan are moving back industrially, and commercially, especially West Germany, and you can't understand, I do not believe any of us can understand, what is going on in Europe and what has gone on there for several months, without a realization of what Germany's return to the sisterhood of states in that area of the world means.

SEES SOVIET RETREAT

Many of the actions taken by our Soviet friends undoubtedly are predicated upon the return of Germany, of the entry of Germany into NATO, upon the rearming under restrictions, of West Germany.

The coming back of West Germany, not immediately, but ultimately, will mean the organization of all Western Europe and the retreat of the Soviets back to their ancient boundaries with possibly the exception of one satellite which cannot be defended by Western Europe. Ultimately and at no great distant date, with the return of Japan, there will commence again the age-old struggle for Northern Korea and the rich area of Manchuria, and that struggle will be between what we now call the Chinese People's Republic and Japan.

Moscow is 6,000 miles away from that battlefront, and that battleground, and so two great significant facts have come to pass. They are: The peace treaty with Japan and her entry into world affairs; the peace treaty with Western Germany and her entry again into world affairs.

These are two important facts. I believe Justice Holmes once said that a single page of human history is better than a whole volume of logic. Here are your pages.

Many men and women in this audience tonight will see the day when our Russian friends will go back to their ancient borders and boundaries and when again there will be reestablished a power group in the Far East that will give some stability to that area.

STABILITY IN FAR EAST

Although you may disagree with me, I would be less than frank if I did not say to you that in my considered judgment, whatever it is worth, the great hope for stability in the Far East is somehow, sometime the revival, and I will not say consolidation, but I will say the solidification of the efforts of Japan and India, the most populous countries outside of the Chinese People's Republic, in all of Asia.

I know that you would say that oil and water can't mix, and sometimes we are all a bit worried with Mr. Nehru. Sometimes he is a bit trying and he takes some funny courses and yet he stands very definitely for something in the Far East. And when there is a great commercial power, which again can live and thrive in Japan, reaching out for markets, both for her fabricated goods, and particularly for her new raw materials, there will begin to be order in the Far East.

I am not speaking to you about tomorrow or the day after tomorrow. I am simply saying to you what, in the course of human events must be the pattern which we will see for the development again, both in Western Europe and in the Far East.

We made the supreme mistake, perhaps, at the end of World War II, in assuming that because we had fought side by side with our Russian friends to win that war and because we had come to know them, that they must be, on the whole, people with aims and purposes and aspirations much or very similar to our very own.

AUSTRIAN TREATY RUSHED

Perhaps we were not justified in reaching that easy conclusion, but we did reach it. We acted upon it, and that is past history. There is no need to discuss it here.

We, of course, know that Russia is still actuated with the old Russian imperialism, plus the communistic ideologies of the 1917 revolution. Capitalism or the capitalistic system could, of course, not be tolerated inside the Russian state or empire, and capitalism and the capitalistic system, could not be tolerated outside because it is the way of Communist expansion.

Now, what is the state of the world tonight? Some most interesting things have been going on.

In Austria, a treaty has now been hurried to a conclusion and the four powers are invited to witness this ratification, and its signing.

A study of Russian tactics ought to show us that it can mean but one thing and that is that Russia is tremendously concerned with the rearming of West Germany and wth Germany taking her place in the NATO group.

A little while ago we were very much disturbed because the Colombo group had called a conference down in Indonesia. Now the nervousness in Washington and in some high places in Washington stemmed from the belief that we would have no friends in that conference and that resolutions would come out of that conference solidifying the yellow and black races against the white man everywhere. So there was nervousness here.

STATEMENT BY CHOU

Then we began to speak in more optimistic language about that conference and only last Saturday, I was rash enough, perhaps unwisely, to say that I thought the heads of state should have something to say about that conference, that at least we should have an understanding of what that conference meant and what its real objective was and that I believed there would be some friends of the Western Powers there.

You have heard the speeches that were made within the past week. You have noted the utterances they have made, and while perhaps those speeches do not represent the rank and file of the Asiatic states represented there, they nevertheless do represent the thinking of some of the leaders of those Asiatic states. And then; just last night and this morning you read that Chou En-lai had said he had no purpose to go to war with the people of the United States; that he was not planning sucif a war, and indicated that he was willing to sit down and talk with us.

Now I have been thinking, for many weeks and even many months, that after a period of great wars, and particularly of great revolutions, fairly shaking the foundations of the old civilizations, a people into whose hands leadership has been thrust, or to which leadership had come, must be able to make some adjustments to meet the changing conditions of the world.

WOULD CONFER WITH FRIENDS

You may recall that not too long ago I said that I believed the time was rapidly approaching when the heads of government of the four great powers could sit down and talk about the problems of Europe and the tensions in Europe; the tensions, indeed, which shadow all civilization.

Day-by-day the conviction that grows—at least to my way of thinking—is that we should have a conference first with our friends, with those nations who have been uniformly friendly to us, and with those nations in the southeast of Asia who are our friends.

Why? Because I think it important that we know precisely their thinking on the important problems that have arisen in the Far East and precisely what readjustments, if any, we should be willing to make to meet changing times and changing conditions.

That is not appeasement. It never has been and never will be appeasement for any strong power to say to another power that it is willing to sit down and talk about the problems that concern you and concern the world.

I do not know and I doubt if anyone can know what degree of sincerity is in the mind and heart of Chou En-lai, but I do think the things that he saw and witnessed down in Indonesia since the last Sabbath have opened his mind and when he says that he is willing to talk, then I will unhesitatingly say that this Nation should be big enough and great enough, through its highest officials, to talk to him.

It is time that we were relieving the tensions of this world, if we can. We should know what our friends think and say, what position they have, in what conclusions they concur in about the trouble spot in the Far East. We should not be unmindful of the concurring judgment and opinion of our friends. Indeed, I do not think that any nation can be unmindful of the opinion and judgment of its friends.

I am not talking about what the President should do or should not do with reference to his position now or hereafter, in the Formosa area.

From the beginning I have said and taken one position, and I believe it is right. I still believe it is right, and that position is that this decision is with the President himself.

In that conviction I have not wavered and will not waver; but I have also expressed the belief, and I believe it profoundly, that when and if a fateful decision must be made by the President as to whether or not he will defend any island or islands in the area of Formosa, that he will get all the information that he can from his joint chiefs, from his military leaders, from every agency of information that is available to him, and if I do not mistake the man, he will then go into his closet and face-to-face with his Maker, he will make his own decision.

I say now that out of a world conference, there can come good, that a conference with our friends will be helpful to us, and that we ought to be willing to talk with the Chinese Peoples' Republic or their leaders. We owe this to our own country, to our friends, and to all mankind everywhere. Out of that conference might come, not a final solution, but a first step which could lead to a second and third step toward the solution of some of the problems of our present time.

WOULDN'T DENY AID

I know very well that there are many good friends of the United States who believe that the time has come when we should give more attention to our home affairs and when such aid and assistance as we might give to other countries should be very definitely marked in behalf of the essential American interests which we are seeking to serve.

With that general thought, no American can quarrel, but I say to you tonight, and I hope that you editors and managing editors will bear it in mind, that this is no time to do either of two things, or both. This is no time to say that there will be no further aid or assistance given to those people of the world that are struggling to make themselves strong.

I change my mind as I go along, frequently. I am glad I do because it is probably the only proof that I have that I am in existence. I have changed my mind about economic aid because undoubtedly tonight in many wide areas of this earth, especially in the Asiatic and African countries, economic aid, point 4 if you please, technical assistance if you wish to be more technical in describing it, is a far greater military aid to people who love peace and who don't want a war. This is no time to turn away from our international obligations; whatever those obligations are. It is no time for us, in the present state of the world, to grow soft in our own ability to carry out and execute those programs that we regard as vital.

STRENGTH IN BEING

No foreign policy will receive any respect unless the people who put it forth have the strength and the will to carry it to execution. In an atomic age, that means strength in being, because the nuclear weapons of this modern age threaten to destroy the productive capacity of the people on which great reliance could have been placed. You must have something ready and presently at hand.

So this is not the time for us to turn back in our efforts to continue militarily strong, nor is it the time for us to lose interest in the economic soundness and strength of the whole free world.

How can the free world be strong, militarily and economically unless through the cooperative efforts of all free peoples, ourselves included?

How can we turn the clock to another day and say that the trade and commerce of the world, especially the free world, again should be circumvented and departmentalized to the point almost of the stagnation of that commerce? How can we do this and yet hope all free nations will become economically strong and prosperous?

DIDN'T SEEK LEADERSHIP

Upon their prosperity and strength will depend their ability to maintain their own military equipment, their own military strength.

We didn't seek world leadership. You don't get it by seeking it. World leadership comes to a nation if it comes at all, because of the superb and supreme heroism of its people; because of their devotion to duty, private, and public, because of their tireless exertions to bring it about.

Above everything else, it comes to a nation when it is great enough and big enough and strong enough, when mighty impulses are running through the world, to rise to the challenge of stirring times.

So it came to us. Would we pass it up? Can we pass it up? Future generations would hold us responsible and rightly responsible for failure to grasp the high responsibilities resting upon us.

The road which we are traveling may be long and hard and thorny. Indeed, it is hard and long and thorny, but it is worthwhile, my friends, to travel along that highway that can lead us, and will lead us, if we keep our courage and our faith, to a world in which the normal things of mankind and of human life again may be enjoyed and appreciated.

A Music and Fine Arts Center in the Nation's Capital

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement by Patrick Hayes, chairman, cultural development committee, Washington Board of Trade, before a House District Subcommittee on Legislation for the establishment of a music and fine arts center in the Nation's Capital:

THE THOMPSON BILL, AND RELATED BILLS, FOR THE ESTABLISHMENT OF A COMMISSION TO STUDY AND RECOMMEND LEGISLATION FOR A MUSIC AND FINE ARTS CENTER IN THE NATION'S CAPITAL

(Statement by Patrick Hayes, chairman, cultural development committee, Washington Board of Trade; former president National Association of Concert Managers; former president Greater Washington Music Council; former manager, National Symphony Orchestra, before a House District subcommittee, February 15, 1955)

Gentlemen, Burl Ives, the folksinger, has a song that goes: "There's a great day comin' and it's not far off, been long, long, long, on the way." The spirit of those lyrics fits the subject of this hearing, a dream harbored by countless thousands of citizens of the Greater Washington area, and throughout the Nation, that 1 day in our lifetime we shall see established here in the Nation's Capital a home for the living arts of music, grand opera, ballet. That it is fitting, few deny. That it is needed, more and more people are becoming aware.

This hearing is a milestone in the progress toward this important objective. A short 10 years ago, and for decades before that, there was little apparent interest in the Congress in fine arts legislation. During the postwar years there has been an upsurge of interest, and many distinguished gentlemen in both Houses of Congress, and on both sides of the aisle, have introduced bills aimed at recognition of the fine arts in American life, and in varying degree pointing the way to strengthen them and extend their influence in the daily lives of our people.

As Congressman KLEIN, of New York said here last week, "Man does not live by bread alone." Neither does a nation become great in terms of history solely by industrial might, inventive genius, advanced techniques of agriculture, etc., and no nation's capital city has endured in history in terms of true greatness without also being a great center of art and culture. Athens and Rome are examples in ancient history. Berlin, Vienna, London, Paris are examples in modern history, which we must observe in planning for the future of the great city of Washington. National significance is deeply involved in what is proposed. In recent years we have observed that Germany and Austria gave top priority to the reconstruction of their buildings for art in the postwar years. By 1950, 10 opera houses had been built or rebuilt in Germany. This year, 1955, the great Vienna State Opera House is being completed.

Ours is a Nation that has become so great and so big, that it staggers the imagination of newscomers to the country. We are out of our covered wagons, our industrial plant is highly developed, we have fought our wars, and survived what we hope is our one big depression, and now find ourselves well along in the second half of the 20th century. A major challenge before us in this era is the conquest and development of the broad area of the fine arts in life, with all their rich dividends for the Nation and its people, and with their opportunities for the gratifying use of leisure time which is increasing, and for combatting juvenile delinquency by channeling more young people into musical and artistic pursuits. This is no idle point in passing. Ten years ago the late Olga Samaroff Stokowski did some research at Sing Sing prison in New York State, and came up with the astonishing fact that over 95 percent of the inmates had had no exposure to music in their lifetime; and conversely, relatively few people in the world of music have gotten themselves into trouble to the point that they become inmates of our jails.

This hearing today could be the moment, as recorded later by historians, when the United States Government began a long term movement in behalf of the fine arts, by approving legislation to appoint a national commission to study and prepare actual later legislation to establish in the Federal city a great center for music and the living arts. The atmosphere is lively and favorable for what is proposed. We have become a great musical Nation. Our universities and colleges, and our musical conservatories, turn out graduates in increasing numbers each year who have had major exposures to the musical arts during their 4 years. Public school music grows by leaps and bounds each year. There are tens of thousands of school and college bands in the country. There are over 700 symphony orchestras in America, ranging in size from Columbus, Ind., population 6,000, and orchestra budget $600 to Boston and Philadelphia and New York, with their great professional orchestras of 100 men and budgets approaching $1 million a year. Radio, recordings, and currently TV pour music across the land, taking it where it never had been before, and never would have been. Every corner of this vast country has readily available the world's finest music for all ears to hear and enjoy.

As a citizen of greater Washington, I am proud to report to this committee of the Congress that by all standards of comparison, qualitative and quantitative, Washington, D. C., is one of the most musical cities in the world. From September through April each season nearly 1,000 programs worthy of the attention of music-lovers are performed here, in concert halls, at our universities, in our churches, in our art galleries, and at the Library of Congress. The Budapest String Quartet resides here, tours the world from here, and gives two extensive cycles at the Library of Congress in the Coolidge Auditorium. The National Symphony Orchestra, Dr. Howard Mitchell, conductor, has reached a level of excellence that is acknowledged by all in the field—next season is its 25th anniversary, founded in 1931 by the late Hans Kindler. It performs nearly 30 major concerts in Constitution Hall, open to the public at prices within the reach of all, and performs nearly 30 concerts for young children, many of which are underwritten by public spirited people and business houses and are free of charge to the youngsters. The National Gallery of Art, whose distinguished Director, David E. Finley, testified before you last week, presents to the public over 40 Sunday evenings of music each season, including 10 orchestral concerts, and including a month long festival of American music, founded by Richard Bales, director of music at the gallery, and conductor of the gallery orchestra. Nearly 50 concerts are presented in the Phillips Gallery on Sunday afternoons and Monday evenings, free to the public. Constitution Hall is the scene of recitals and choral concerts.

You would have to search hard to find the name of a great or established artist in the world of music who does not appear here annually, either alone in recital or as soloist with the national symphony, or the visiting orchestras of Philadelphia and Boston, which play series of 8 and 4 respectively. The foreign orchestras from abroad visit here and play in Constitution Hall. This year we are host to the Amsterdam Concertgebouw and the Berlin Philharmonic orchestra. This is the niagara of music that marks Washington life as rich indeed, together with the church and university programs, not to mention the quality performances of our service bands and orchestras.

Our great lack, and your concern here this morning, is in the fields of opera and ballet, and also in the sybolism inherent in special buildings for music to dignify this art as the National Gallery of Art dignifies the art of painting. Music needs its own home in the Nation's Capital.

In passing, I should mention the tremendous debt of gratitude we all owe the Daughters of the American Revolution for making Constitution Hall available for orchestra, recital, and choral concerts and lectures. Without it, Washington would have a serious problem indeed. That the hall is not suited for opera and ballet is not the fault of its owners. It was built for convention purposes, as the home of the DAR, and not intended for public use at all. When the old Poli's theater was torn down about 25 years ago, with its perfect stage and attractive auditorium, there went our opera house, gentlemen, and stage for ballet, to make way for the Federal Triangle. And the irony is that the actual ground where Poli's theater stood has on it today only a temporary building of the kind that Congressman BROYHILL and many of us would like to see eliminated.

Grateful for our blessings, including Constitution Hall, and our devoted people who have gone on and forward year by year in spite of the handicap of not having a great hall of music, we are now grateful and hopeful for what you are about to do. The Washington Board of Trade is on record by vote of its directors and by resolution of the cultural development committee as favoring the proposed legislation and its ultimate objectives. While many of our carefully studied points are the purview of the proposed commission once established, I would like to mention the following specific points at this opportunity:

A theater for drama is one thing; a concert hall is quite another thing; an opera house of grand proportions is another; and a large hall for the inauguration of Presidents is still another. Modern achitectural techniques of functional design can do wonders, but I urge caution and care in determining what is needed to meet current and future needs. As for theater, or a theater, we have here now the National and Shubert houses—perfect theaters—and the problem with them is in keeping them open with plays and musical shows. The problem today lies within the field of drama itself, starting with a shortage of playwrights and producers. A concert hall in the manner of the Royal Festival Hall in London is clearly very much needed. So is an opera house, like the new edifice just completed in Vienna. An inaugural hall for Presidents is essential. Thus, we need 3 separate buildings or 1 massive edifice containing the various units, like the Municipal Auditorium in Kansas City. I would like to point out that these buildings will serve for decades and perhaps for a century or more and initial decisions must be wise ones. Errors of initial judgment could be fatal or at least costly. There should be included in plans to be drawn by the commission facilities for a great national conservatory of music, including opera and ballet instruction. Such are the feeding grounds for the companies of the future that will enrich our national life. An area with the greatest possibility for miscalculation is the stage of proposed buildings. The stage and storage areas should equal in size the square and cubic footage of the rest

of the building—it is a commentary on our entire country in this regard that only three stages in America are big enough to accommodate comfortably the repertoire of the Sadler Wells Ballet and the Old Vic production of Midsummer Night's Dream which played in the United States last fall. They are the Met in New York, the Chicago Civic Opera House, and the War Memorial in San Francisco.

When the eventual legislation might be readied and passed, I would like to see a great triple play for the fine arts. First would come the acts of legislation. Next would come a major address on the subject of the fine arts by our President, leading to the eventual establishment of a department or division of fine arts in our National Government. And finally, the President would invite wealthy American citizens, companies, and foundations to come forward and participate, to build and endow the buildings, or share the cost with the Federal Government, and enlarge our fine-arts programs, as Andrew Mellon did so nobly and effectively in establishing the gallery which some of us still prefer to call the Mellon Gallery, although he insisted it become the National Gallery of Art. All that would transpire here would be sent out to the Nation by radio and television, bringing art and culture to all our citizens, as well as having these arts available in live form when citizens visit their capital city. And speaking of visitors, we estimate that nearly 300,000 young American citizens, school children, visit their Nation's capital each year in organized school parties. They see the monuments to Washington, Lincoln, Jefferson; the tomb of the Unknown Soldier, the Iwo Jima statue, the Capitol buildings, the National Gallery of Art. They see no great monument to music and theater, opera, and ballet. These arts have become important in their daily lives, in school and at home, and in their communities. They would find inspiration here in such buildings and grounds as we envision, and they must now think it strange that we do not have such buildings already.

Lack of facilities for all forms of musical art to be presented at their best in our Nation's capital exposes us in the eyes of our international friends of the Diplomatic Corps; and of our enemies behind the Iron Curtain. I feel that I speak today not only for the board of trade, but for hundreds of thousands of citizens across the land, represented by the National Association of Concert Managers, the American Symphony Orchestra League, and certainly in this area where I have the privilege of being a spokesman on this general subject in regular Sunday broadcasts over the good music station, WGMS. I express to you, gentlemen, of the committee our gratitude for the attention you now give this subject, and I convey to you our urgent hopes and prayers that this step will be taken, with dispatch, so that the living arts may come into their full flower in our Nation's Capital soon.

Understanding Airpower

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by David S. Smith, Assistant Secretary of the Air Force, for the junior chamber of commerce, Lowell, Mass., on April 27, 1955:

UNDERSTANDING AIRPOWER

I consider it a great privilege to appear before the junior chamber of commerce of such an important city as Lowell, Mass. I am grateful to Mrs. ROGERS, your distinguished representative in Congress, through whom the invitation was extended. I am grateful to the members of the junior chamber of commerce, who indicated their interest in hearing an Air Force speaker.

I accepted the invitation so cordially extended because of the opportunity it gave me to thank you, and through you Jaycees everywhere, for what they are doing for the Air Force. I accepted it also because it is a personal pleasure for me to get away from the Pentagon, and have a good heart-to-heart talk with people like you. You are the present and future leaders of your community. Many of you, probably most of you, are veterans of military service. All of you are citizens deeply concerned with national security. My job at the Pentagon lies in helping to make sure that our plans are right, and that our security will be maintained. I am happy to have the opportunity to make a report to you on some of the things we are doing.

First, however, a further word about the junior chamber of commerce and the Air Force. Last January, as you well know, the national organization of the junior chamber of commerce launched its Air Force recruiting assistance campaign. It is a little early to identify the current success of recruiting efforts with any one type of assistance. In fact, it is not even desirable to identify different contributions to the recruiting effort, because we are all working as a team—a national team—and our pride must be in the success of the team, not the performance of individual players. I am sure, however, from the news that reaches my office, that your efforts are combining with various other steps being taken, and are bringing results. More and more young men are signing up for the Air Force, and reenlisting in order to make a career of service in the Air Force, and we are very pleased with the results.

Three months ago, only a little more than 20 percent of the airmen scheduled for separation in February 1955 indicated an intent to reenlist. The Air Force now estimates that this figure has increased to 30 percent for airmen who did reenlist in February or who plan to do so within 90 days from their separation. From 20 to 30 percent is a 50 percent increase. Things are really looking up.

We also believe that as a result of this increased interest in the Air Force, the bonds between the man in uniform and his civilian supporters are being greatly strengthened. The stronger those bonds, the stronger our national security. A few weeks ago the Gallup poll reported that 71 percent of the American people are convinced that if another world war comes, the Air Force would play a much more important part in it than either the Army or the Navy. Analyzed by age groups or by education levels, the percentage is the same. The great popular appeal of the Air Force affects all walks of life. The American sense of reliance on air power is strong.

I am not sure, however, that American understanding of airpower is commensurate with American appreciation of the traditions and the performance of the Air Force.

We are, we say, an airminded Nation. So rapid have been the developments in this half-century which we call the air age, and so conclusive are the lessons of history, that airpower is now generally accepted as the predominant military force. But we are tired of war. Recurrently through the last 15 years homes throughout the Nation have been saddened by the loss of loved ones. We are reluctant to face the fact that preparedness must be for a lifetime, and not merely for a foreseeable, limited period. We have not, as a nation, given evidence that we accept the security of our Nation as everybody's business, and not the exclusive responsibility of the man in uniform. We gripe—to use the GI term—because, 10 years after V–E and V–J Days, we still face the sacrifices necessary to maintain a huge Military Establishment.

This griping may well be a habit of democracy, but not all habits are good habits. The thought that preparedness can be seasonal is certainly a mistaken idea. William Jennings Bryan expressed a national attitude when he said that in times of national peril, a million men would spring to arms. And millions of men did spring to arms to defend the Nation in two world wars. However, millions of men have been reluctant to remain in arms, when the victory was won, to make sure that the peace was well guarded.

I am sure that all of you can recall the frantic effort to demobilize, after World War II. The sad truth is, that when the peace was won, no nation's people were ever quicker to lose interest in their armed forces than the people of the United States.

For this reason, the history of our armed services in America has been one of high peaks of military strength, followed by almost bottomless valleys of weakness. And the wonder is that we were able to rise from the valleys to reach the peaks.

We might ask what course history would have taken, if we had never permitted ourselves to descend into the valleys. If we had been strong in 1916, would Germany have sunk the *Lusitania*? If we had been strong in 1941, would the Japanese have dared to attack Pearl Harbor? If we had been strong in 1950, would the Communists have struck in Korea?

It may be academic to ask the questions, because there can be no definite answers. But it is necessary for us to realize that while our Nation has sprung to arms in the interest of national defense many, many times in the past, it is no longer possible to wait for war to begin, in order to start building national defense. Modern warfare begins too suddenly and strikes with too much devastation—witness Pearl Harbor—to permit delayed mobilization. We must be ready when war starts—if it should start again.

Quite aside from the fact that this is so because our survival as a nation depends upon it, we should be willing to admit that it is so because it is enormously expensive and wasteful—wasteful of human lives, money, material resources, and opportunities for the development of mankind—not to maintain preparedness. It is amazing that in the past we have seemed willing to pay so high a price for the privilege of ignoring danger until it was upon us.

What we now need to understand above everything else is that the price is higher, beyond estimate. Nuclear weapons, combined with the capabilities of long-range airpower, have revolutionized warfare. And we hold no monopoly on such weapons.

We hold no monopoly—neither the practical monopoly in long-range bombers nor the absolute monopoly we once possessed in nuclear weapons—because there can be no monopoly in science. Our pilots who first encountered the Soviet-built MIG–15, in November 1950, were surprised to discover what a formidable weapon the Communists had. Before the war was over we learned a great deal about the general excellence of Soviet technology. We have developed a healthy respect for Soviet industrial capacity.

We know now that the Soviet Union has made remarkable progress in the building of nuclear weapons and modern long-range bombers. It is this progress that has put us in what President Eisenhower has forthrightly called an age of peril. Communist exploitation of the potentiality of their weapons makes it an age of tension as well.

In addition to the world's largest air force, containing some 20,000 aircraft in combat units, the Soviet Union has a huge ground force, a powerful submarine force, guided missiles, and a large industrial capacity, most of which is devoted to the production of war goods. As early as 1949 her industry was able to produce an atomic explosion, and in 1953 she announced to the world that she possessed the hydrogen bomb. Thus on the one hand, our national security program must be designed to meet the most serious of all threats to the survival of western civilization—the combination of Soviet long-range airpower and atomic weapons. On the other hand, it must also be designed to cope with the constant possibility of local warfare such engagements as the free world has experienced in Korea, in Indochina, and is now experiencing in the Formosa Strait.

The leaders of communism have repeatedly made it clear that their goal is communism worldwide. The United States is a principal obstacle which confronts them in their path to this goal, and the support you give your Air Force enables it to remain that obstacle. I said remain, not maintain. I do not mean maintain for a limited period, but maintain indefinitely. The United States is and must remain a roadblock to international communism. The understanding our air-minded Nation has not yet fully acquired is that if there is a new kind of war, there is also a new kind of peace. This is a peace that can be kept only through strength.

It is not enough for our Nation to be air-minded. It must possess air superiority. It must control the airways, and be prepared to defend them against all who would use them to violate our freedom and our democracy.

To give the Nation the strength necessary to maintain peace as the most precious gift of our times, and to resist and conquer aggression if it comes, the United States has established its Air Force, and assigned it certain definite missions. The development of nuclear weapons and of guided missiles carrying atomic warheads, which has come in the 8 years since the Air Force was established, has not altered these missions. What such development has done is to place greater responsibility on the Air Force for the successful carrying out of its missions. These missions are the conduct of strategic air warfare, the defeat of enemy air forces, combat support of the Army, support of the Navy in keeping the sea lanes open and the air defense of the United States directly related to Air Force offensive capabilities.

To perform its missions in this age of crisis, the Air Force is continuing today, and will continue for the next several years, the build up of air strength which was programed in 1950, after the Korean war caught us in a period of lessened guard and depleted military resources. When the Korean war began the Air Force consisted of about 42 effective wings and about 400,000 men in uniform. Today we have 121 wings, ready and effective, and about 960,000 men in uniform. By the end of June 1957, we expect to have reached our 137-wing goal, and 975,000 men in uniform. All Air Force wings are now equipped with modern aircraft, and all fighters are jet propelled.

Constant progress is being made in modernization of aircraft. New types are replacing outmoded types.

Technological advances in propulsion and electronics are making substantial contributions to the development of guided missiles. The Air Force has made significant progress in the development of strategic, tactical, and air defense missiles, all of which are being pushed vigorously.

Construction of the base facilities needed to support the 137-wing program is a most serious problem. Our offensive forces must be able to hit any potential enemy on short notice under all conditions. Our long range aircraft can operate from the United States in the event of war, and advanced refueling techniques have greatly lengthened ranges of smaller combat aircraft. However, the existence of bases overseas, equipped to handle all types of aircraft, greatly increases the flexibility, economy of operation, and hence the effectiveness of our offensive air forces. Overseas bases also increase the capability of tactical air forces to operate in overseas theaters.

Our air defense forces require bases located so that our interceptors can reach attacking enemy aircraft before they reach the line where they would drop their bombs on American cities. Radar facilities are needed to detect the approach of enemy aircraft, and communications and navigation facilities are needed to direct the defenders to intercept them. It is not sufficient to have such facilities within the United States. We must have them in Canada, Alaska, and the Arctic.

Bases within the United States are needed for training our tactical forces, for providing logistic services, and to maintain a strategic reserve which can be sent to any theater of operation in need. I have just returned from an inspection of several bases. I can tell you that I was proud of what I saw.

Maintenance facilities must be increased to keep up with the increased complexity of modern aircraft and equipment. With the greater consumption of fuel by jet aircraft, increased fuel storage facilities are required.

In the past 4 years the Air Force has gone a long way toward building the base structure needed to support its modernized and expanded forces. Continued modernization of base facilities is required to provide base support for the programed increase to 137 wings.

All this costs money, lots of money. Whether or not we understand fully the continuing need for maintaining strength in order to guarantee peace, the American people have certainly been generous in supporting the build-up of the Air Force under the present program. In 1954 and 1955, the Air Force budget, requested by the President and approved by Congress, was for about $11.5 billion. For fiscal year 1956, beginning next June, the President has requested $14.53 billion, excluding appropriations for base construction. Our President, and his administration, have recognized the real nature of the continuing threat to national security, and the most effective way of countering it.

A great deal of the money appropriated for the Air Force will go in pay to personnel—and toward increasing the attractiveness of a service career in order to attract and retain qualified personnel. I said at the beginning of my remarks that we have been concerned about our reenlistment rate, and that it is improving. Now I want to backtrack on one score. Whereas the reenlistment rate in general has been about 20 percent, among the men we need the most—the trained, skilled, and experienced technicians—the rate has been even lower, below 15 percent. We are also losing veteran pilots and experienced staff officers. We are losing trained mechanics, radar men and technicians. So the shortage of trained, experienced personnel is the No. 1 problem within the Air Force.

The Secretary of the Air Force, Mr. Harold Talbott, has taken the keenest personal interest in accomplishing those things which will increase the attractiveness of a service career, and encourage men to reenlist, and remain in service. We are all grateful for the fact that Congress recently approved a substantial pay raise, earnestly advocated by Mr. Talbott, and is now considering other legislation designed to improve service attractiveness. One such measure is adequate family housing of proper standards and within the proper rental brackets for men in the Air Force. Considering what it costs to train a man, approximately $14,000 for an airman, and more than $200,000 for a triple-rated pilot of an atom bomber, his pay could be increased by many, many dollars before it would equal the cost of losing him. We could increase service attractiveness in many ways, and still not make the rewards of a military career comparable financially with those offered by civilian industry to these trained men.

Earlier, I also spoke of the bonds between the men in uniform and the citizens at home, that are being strengthened. These bonds are numerous and of many kinds, and I shall not attempt to identify them all or to define them. They are bonds of interest, affection, and sympathy, of gratitude and honor. But the most important bond of all is that which I have stressed, the bond of understanding. If the people of Lowell and of each community in this Nation develop a real understanding of our Air Force, of its responsibilities and its needs, your community will send more men into the ranks of the Air Force. It will also stand ready to support the Air Force in every necessary way in its supreme mission of preventing war, and securing peace under acceptable conditions.

When this understanding of airpower and of the role of our Air Force in maintaining it is widely and thoroughly understood, the youth of our land will turn naturally to the air, as the youth of England in the days of her greatest glory turned naturally to the sea, as the proper sphere for their noblest careers. When that happens, we will indeed have become an air-minded Nation.

I think that understanding is coming, and coming very rapidly. People like you, throughout the land, are helping to bring it about, and the evidences are unmistakable. I feel confident, therefore, that our Air Force will be able to carry out the missions for which it was created. I feel confident that our national security will not be violated, and that we will be able to enjoy those rights we consider inalienable—those rights which were won for us, and must constantly be rewon by sacrifice.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. VAN ZANDT. Mr. Speaker, one of the major legislative issues to be considered during the present session of Congress concerns the proposal to increase the minimum wage from 75 cents to $1.25 per hour.

In view of the interest in the subject, I am inserting in the CONGRESSIONAL RECORD the enclosed letter received from Mr. Bernard Navasky, president, Charles Navasky & Co., Inc., Philipsburg, Pa.:

CHARLES NAVASKY & CO., INC.,
Philipsburg, Pa., April 23, 1955.

Hon. JAMES VAN ZANDT,
New Office Building,
House of Representatives,
Washington, D. C.

DEAR MR. VAN ZANDT: The proposed revision of the Fair Labor Standard Act of 1938, by changing the minimum wage from 75 cents per hour to $1.25 per hour, should merit your support, because it would benefit the citizens of our State and country.

An increase in the minimum wage would in my opinion increase the Nation's purchasing power and would, naturally, stimulate and strengthen our entire economy.

Therefore, I urge your support of this revision.

Sincerely yours,

BERNARD NAVASKY,
President, Charles Navasky & Co., Inc.

The Passing of the Little Giant

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. REES of Kansas. Mr. Speaker, last Monday the life of a great and good man came to a close on earth. Dr. Clinton N. Howard, wide and favorably known to many Members of the House, journeyed to that "undiscovered country from whose bourne no traveler returns."

In the passing of Dr. Howard our country has suffered the loss of a great American. He possessed all those qualities that go to make up a truly Christian gentleman. Dr. Dale Crowley, a close friend of Dr. Howard, described Dr. Howard most eloquently in a radio message delivered this morning over radio station WPIK on his Start the Day program. I am honored to include herewith the tribute of Dr. Crowley to the life of Dr. Howard:

THE PASSING OF THE LITTLE GIANT

At sunset on Monday, April 25, the colorful life of a great hero of faith came to the end of its earthly sphere, when Clinton N. Howard, at the age of 87, sheathed his sword, and answered the call of God to "Come up hither."

Affectionately known as the Little Giant, this mighty warrior influenced three generations of Americans in his uncompromising crusade against the forces of intemperance and unrighteousness.

As superintendent of the International Reform Federation and editor of Progress magazine, he spent his last 20 years in our Nation's Capital. During this period he represented the cause of temperance and good government before hundreds of congressional hearings. His forceful logic, eloquent discourse, and whole-souled earnestness, flavored by perennial wit and humor, won for himself the respect and confidence of great men. At his funeral were many of the Nation's outstanding citizens—ministers, political leaders, editors, businessmen, Congressmen, and members of the Supreme Court.

Mr. Howard began his crusade against King Alcohol at 12 years of age when he made his first public lecture against the evils of rum. After 75 years in "battle against the bottle" he was unflagging in zeal, in devotion, and in optimism. This was his diamond jubilee year, and how fitting that it should be the year of his coronation.

His peerless oratory has been heard in every State in the Union. No man deserved so much credit for the enactment of the 18th amendment as the Little Giant. He inspired Billy Sunday, and gave him the material for his first two temperance sermons. He spurred William Jennings Bryan in his great temperance crusade. He challenged such stalwarts in the United States Senate as Senators Sheppard, Capper, and Borah, and many others.

His Progress magazine was a two-edged sword, piercing, pungent, penetrating. Times without number his fearless exposures of wickedness in high places, and in low places, has served to halt the evil designs of those men who would further corrupt the morals of our community, State, and Nation. The publication of his classic discourses, Pearls of Paradise, Jesus, Human and Divine, and others have been printed into the millions. Everything he wrote may be considered both timeless and priceless, and will continue to bless many lives.

Clinton Howard's annual fellowship breakfasts at the Capitol (which always lasted for 3 hours) have been milestones of blessings along the way, and have served to fire the flagging zeal of many leaders in the temperance cause.

The influence of the Little Giant, both upon the young and the old, and upon all classes of people in our Nation has been immeasurable in its impact during the three-quarters of a century of his vigorous, fruitful life, and shall live on, and on, in the lives of all who have ben so fortunate as to know him. "Though being dead, he yet speaketh."

We have parted with a truly great citizen, a cherished friend and neighbor, a wise and helpful counselor, and a Christian leader who was completely devoted to God and to his fellow men.

Few men have ever poured more of love, and of devotion, and the spirit of courage and hope into the stream of human life; and certainly no man ever planted more indelibly his footprints on the sands of time.

Goodby, Little Giant, we shall see you on the morning of the Resurrection.

H. R. 5120 and H. R. 5211

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statements on H. R. 5210 and H. R. 5211:

H. R. 5210 is a bill to amend the Internal Revenue Code of 1954 so as to promote diversified ownership of domestic corporations by encouraging small investors to buy stock and reinvest their dividends.

It is hoped that the passage of this bill will result in direct ownership of American industry by Americans. When the people of the Nation own the corporations, it will be impossible to socialize the country.

Through this bill millions of capitalists will be created. For example, the employees of American Telephone & Telegraph Co. or other corporations would not only buy shares of their companies out of current income but would increase their ownership through the reinvestment of their dividends and yet would have the privilege of deferring taxes on those dividends for at least 10 years or until the shares disposed of, such as the provision which now prevails in the series E savings bonds.

The masses are customers of many of the American corporations. They should also be the owners. They can do this by purchasing shares directly or through an investment company. The investment companies and the New York Stock Exchange have automatic purchase plans whereby individuals can, out of current income, buy into American industry, and many corporations have the same provision for the purchase of their own shares by employees.

In connection with the use of common stocks in a long-term investment program, a research firm prepared a computation which will easily convince the most confirmed skeptic. These figures cover a 30-year period and assume that the investor will start with a salary of $3,500 and gradually increase until at the end of the 30-year period he was receiving $7,500, with the indicated changes over the period:

Years:	*Salary*
1–5	$3,500
6–10	4,500
11–15	5,500
16–20	6,500
21–30	7,500

The figures assume that the investor put 10 percent of his yearly salary aside and these amounts were invested quarterly in common stocks in over seven different 30-year periods and the dividends were reinvested. The averages of industrial common stocks were used in making these computations so that no assumption of better than average is involved.

Period:	*Value at end of period*
1858–88	$97,545
1868–98	61,070
1878–1908	65,515
1888–1918	70,400
1898–1928	107,585
1908–38	50,010
1918–48	52,860
Average	72,140

These remarkable results were achieved with a total investment of only $17,500. In the worst period, 1908–38, the fund at the end was worth a little less than $3 for every dollar put in and on the average it was worth about $4 for every dollar put in.

These results would certainly indicate that passage of the bill H. R. 5210 is a step in the direction of individual security for the individual to supplement his social security and pension plan. It is hoped that through this bill the 63 million working people of the Nation will own the business corporations and reverse the present trend—with 6 million to 10 million who now own these corporations.

H. R. 5211 is a bill to exempt from Federal income-tax dividends paid by regulated investment companies whose income is derived entirely from tax-exempt Government obligations.

Because of the Federal tax program of the last decade the number of wealthy individuals who normally would absorb a large amount of tax-exempt obligations has been greatly reduced. Therefore, to finance the $7 billion school program it will be necessary to get the masses to purchase such bonds. The investment companies have proved that their method of operation is the best yet discovered for reaching the masses—hence the provisions of this bill.

To sell $7 billion in school bonds, in addition to the normal amount of Government obligations, plus the expanded financing of toll roads will not be easy unless we reach the masses.

It is hoped that the various State regulatory authorities will declare as legal investments the shares of investment companies whose assets are invested in tax-exempt Government obligations and that the Congress will amend the proper bills to permit national banks to deal in the shares of the tax-exempt investment companies to the same extent that they deal in tax-free Government obligations.

From the standpoint of the small investor this is an ideal way to build an estate. For example, an individual could systematically invest a specified amount—say, for example, $100 a month—in the shares of one of these investment companies and compound his earnings. When millions of Americans, through ownership of shares in a tax-exempt

investment company own the obligations of the school districts and other Government agencies it is only natural to expect that they will take a greater interest in the operations of these agencies and will be more concerned as to the efficiency of those operations.

This bill (H. R. 5211) might very well go a long way toward revolutionizing the financing of municipalities because instead of having a few hundred dealers specializing in municipal bonds there would be more than 10,000 salesmen discussing these obligations with investors.

Israel Made the Desert Bloom

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. REUSS. Mr. Speaker, as we commemorate next week the seventh anniversary of the founding of Israel, our hearts go out to the millions of Jewish people who have made the desert bloom and established a sturdy democracy in the Middle East.

We recall the agony of the Jewish people as they suffered under the lash of the Nazi storm troopers throughout Europe. We recall a brave people huddled in the streets of the Warsaw ghetto as political gangsters sought to decimate the Jews.

Today the disease of anti-Semitism is carried by a new totalitarian power—world communism. Throughout Eastern Europe, in Russia itself, and now in China, the claims of the cynical Communists to be the benefactors of mankind have been unmasked as the deceitful Reds employ wholesale bigotry to whip disgruntled people in line.

History tells us that a healthy government can profit from the talent and devotion to morality of the Jewish people. A sick and decayed government—Nazi or Communist—traditionally turns on the Jews to cover up the failures and shortcomings of their boastful ambitions.

The American people can be proud of their contribution to the growth of Israel and for our part in relieving the pressures of world anti-Semitism as Israel welcomed Jewish refugees to its shores.

The best way I know of paying tribute to Israel's seventh birthday is to dedicate ourselves to working vigorously against all forms of racial and religious discrimination in this country. We must be on guard to see that anti-Semitism, which has destroyed and weakened other nations, does not gnaw at our foundations.

While we devote ourselves to keeping our own house in order, we must not overlook the perilous political and economic condition Israel finds itself in today.

The tension between Israel and the Arab States continues. In shipping arms to Israel's neighbors to build a bastion of military strength against communism, we have contributed to the tension and hostility lurking along Israel's frontier. We must return to our earlier policy of making peace between Israel and the Arab States our foremost aim in the Middle East.

Israel has passed through its infancy. It can walk now, and we must see that Israel is able to grow up with healthy muscles.

Cuban Trade Benefits United States Industry

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues a letter written to me by a constituent, Frederick W. Green, of Cedar Hills, Weston, Conn. This letter points up the advantages to United States industry realizing from fair marketing quotas for Cuban sugar.

Although Mr. Green confines his remarks to the effect of Cuban trade on Connecticut industry, it is a fact that throughout the Nation many industries are dependent on the Cuban market for a substantial share of their export volume.

Maintaining Cuban sugar quotas at a just level means maintaining Cuba's economy, and a strong Cuban economy is essential in many ways to the welfare of the United States.

The letter follows:

CEDAR HILLS,
Weston, Conn., April 22, 1955.

Hon. ALBERT P. MORANO,
House Office Building,
Washington, D. C.

Senate bill S. 1635 and companion House bill.

DEAR SIR: This letter is being written to voice an opinion concerning the need for increasing marketing quotas for Cuba and the other nations in the Caribbean whose marketing quotas may be curtailed if the above bill is enacted.

Recently, while traveling through Cuba and Puerto Rico it was easy to see how closely the economy of the country is tied to the sugar industry. At the same time, it is also easy to see how Connecticut industry benefits as a major supplier of equipment to all the sugar producers. The cane mills are almost entirely produced by Farrel-Birmingham, Ansonia, Conn.; clarifiers and filters by Dorr-Oliver Co., Stamford, Conn.; the vacuum pumps, in many instances, by the Nash Engineering Co., Norwalk, Conn.; the cane knives or machetes by Collins Co., Collinsville, Conn. In addition there are many other items such as instruments produced by firms like Bristol. I would venture to say that perhaps in no other industry is there such a large portion of the total equipment required, furnished from one State such as ours.

In view of this I feel that we in Connecticut are definitely obligated to throw our weight behind the sugar industry, if not for a magnanimous reason at least for our own personal interests.

Sincerely,

F. W. GREEN.

American Surplus Wheat to the Soviet Union

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. FEIGHAN. Mr. Speaker, the recent proposal to offer the Soviet Union a gift of American surplus wheat was so ill-founded in fact that it is almost difficult to believe the naivete which in part inspired it. Fortunately, due to the opposition to an unconditional gift, raised by many organizations and individuals, myself included, the President has announced that at this time no such offer is being contemplated. However, in one of his press conference statements, the President did leave open the possibility of such a plan in the future.

This time qualification in the President's statement has impelled one of the most vigorous opponents to the unconditional gift to write to the Presiednt a detailed letter containing all the necessary factors that would have to be weighed before any intelligent action on the matter could be undertaken. In this letter Dr. Lev E. Dobriansky, professor of economics at Georgetown University, in his capacity as president of the Ukrainian Congress Committee of America, puts forth essential points and questions that in their consideration by any fair-minded American can logically lead to only one conclusion, namely, no unconditional gifts of surplus wheat or any other commodity to the U. S. S. R. even in the foreseeable future.

The contents of this letter deserve the careful attention of every Member of Congress. Under leave to extend my remarks in the RECORD, I insert a copy of the letter written to President Eisenhower on March 8, 1955, by Dr. Dobriansky, on the subject of no unconditional gifts to U. S. S. R.:

MARCH 8, 1955.

The Honorable DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: The possible shipment of surplus wheat or any other commodity to the Soviet Union in the form of a gift has for some time been of profound interest and concern to this committee. This has been shown in testimony on H. R. 1 before the House Ways and Means Committee, in newspaper editorials (for example, Why Consider Giving Reds Wheat? Cleveland Plain Dealer, February 23) and through other essential informational media.

We now take note of your statement, made at the press conference on March 2, that "There is no purpose and no plan being studied at this time for sending any grain of any kind to Russia." It is regrettable that this statement perpetuates the untruth of identifying Russia with the Soviet Union, but aside from this basic error, the time qualification in the statement leads us to believe that this issue might be reopened in the foreseeable future. Since we are dealing with political elements that will certainly remain unaltered within this time context, we wish to explain our position further in the hope that some of the points

advanced below will receive adequate consideration when and if the issue is revived.

It is our considered opinion that on grounds of Christian humanitarianism and opportuneness of political occasion a limited supply of surplus food commodity should be offered in the form of a gift but, in full view of imposing political realities, not without strict recipient observance of certain necessary conditions of offer. A gift without strings attached may, like peaceful coexistence or else, possess superficial slogan appeal, but on sober analysis its patent divorce from reality reflects only a perilous naivete concerning the Soviet Union and our relations with it.

As you well know, with regard to many other issues pertaining to Soviet-American relations we have consistently endeavored in behalf of the security interests of our country to utilize effectively the assembled knowledge and experiences of escapees and exiles from Ukraine and the other non-Russian nations in the U. S. S. R. On the basis of this wealth of knowledge we would like to emphasize the following major observations which determine our opinion:

1. The pressing food problem in the Soviet Union is not nearly the result of natural acts as it is the consummate end of a brutal collectivization program coupled with the active and passive resistance of patriotic Ukrainian, Uzbek, Caucasian, and other non-Russian farmers whose rich agricultural lands are being exploited by imperialist Moscow;

2. The genocidal policy of Moscow in currently forcing hundreds of thousands of Ukrainian youth for agrarian occupations in Central Asia, as an essential step in the build-up of an inner fortress for war, has with its disruption of agricultural activity in Ukraine accentuated this problem;

3. The outstanding Ukrainian experience with Moscow's manmade famine in 1930–32, when millions starved to death while Moscow was exporting requisitioned grains for capital equipment, stands as a grim reminder of the extraneous uses to which Moscow might put a gift if tendered without conditions; and

4. The reality of economic imperialism in the Soviet Union, as consistently evidenced by the relative plenitude of goods in the Moscow center as against the drained non-Russian peripheries, in itself, reveals the bald fallacy of the monolithic term "Soviet people" to whom the gift was to be extended.

It appears to us that each of these major factual observations raises pertinent questions that must be answered before a decision could be arrived at on this crucially important matter. Concerning (1), in the face of untold human sacrifice since 1930, are we to be grossly unwitting in sponsoring a scheme that would seriously counteract the heroic effects of peasant resistance to Moscow's economic and political tyranny? (2) By a substantial, unconditional gift what degree of moral, not to say political, satisfaction could we realize in the knowledge that this in some measure would serve to implement Moscow's genocidal policy, clearly calculated in preparation for war? (3) Even in the circumstance of famine, for which there is no evidence in the Soviet Union today, are we to be recklessly heedless of the propaganda and political uses to which Moscow can advantageously put the gift? Finally (4), are we so indifferent to the crying needs of the non-Russian captives in the U. S. S. R. that a possible canalized distribution of the gift among the elite centered in Muscovy is of no concern to us?

The answers to these basic questions are self-evident if one pays due respect to facts rather than to misleading catchwords. Also, they obviously point to the logical necessity of conditions surrounding an offer if equity, genuine charity, and political prudence are to be served. In the reasoned judgment of this committee, for the foreseeable future, as also of now, the political complex of our relations with the Soviet Union necessitates the following conditions of offer: (1) A verbal stipulation of our desire to witness an equitable distribution of the gift among all the affected nations in the U. S. S. R., (2) in the effectuation of this desire, the admission of carefully selected neutral distribution teams, and (3) the offer of a limited supply measured according to terms not offsetting the basic effects of resistance in the U. S. S. R., and not overlooking the needs of many impoverished areas in the free world itself.

In our view, a propitiously timed gift with these necessary conditions is a gift with charitable responsibility toward the nations involved. To merely dump surplus food into the laps of Moscow for its indiscriminate and politically determined use would be an incredible repetition of our naive UNRRA experience. As indicated in our testimony before the Ways and Means Committee, we fear, too, that a gift with no strings attached would be the first conditioning step toward the virtual dumping of our stored agricultural wealth into the entire Russian Communist empire and subsequent American-Red empire trade which we, along with countless other Americans, strongly oppose.

In addressing ourselves to you in this detailed manner we feel confident that the merits of the arguments presented herein will doubtlessly be observed by your sense of fairness and Christian charity, and we earnestly believe that your leadership will enable us to avoid the pitfalls of hastily concocted ideas which bear little relationship to actualities in the Soviet Union.

With God's many blessings upon your leadership in these eventful moments, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

Negro's Land of Opportunity

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the April 18, 1955, issue of the Clarion-Ledger-Jackson Daily News:

NEGRO'S LAND OF OPPORTUNITY

No one group is more concerned with the United States Supreme Court's school desegregation order than the fine Negro teachers of the South. None is more aware that where there is no segregation in public schools there is little oportunity for Negro teachers.

In our segregated Southern schools there are about 20 times more qualified colored teachers employed than in all other States combined, according to the U. S. News & World Report. Likewise, the proportion of Negro college students to the colored population is greater than the proportion of college students to total population in any other country in the world; and most of the Negro college students are in the South.

We hope that all Clarion-Ledger readers saw the letter from J. W. Jones, of New Albany, prominent Negro educator and publisher, in our editions of April 15. Taking a strong stand for segregation, he pointed out the 17 Southern and border States employ 7 times as many Negro teachers as all 31 so-called nonsegregated States combined.

In these entire nonsegregated 31 States, Jones reminds us, there are only 10,248 Negro teachers compared with 722,487 white teachers. This is a ratio of 1 colored teacher to each 72 white teachers. Thus, despite professed equality and specious arguments against discrimination, non-Southern States cannot match Dixie's superb record of fair dealing with the Negro educator.

Actually, the South is the only real land of opportunity for Negroes on the entire face of the earth. In addition to more Negro teachers, the South has more Negro college presidents, college professors, doctors, lawyers, and prosperous independent businessmen than all other States combined.

Thinking Negroes are aware of these facts which is why failure will greet efforts of present-day carpetbaggers, political hacks, and agitators who seek to turn the Negro against his only time-tested friend—the Southern white man.

The Andrada Statue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. MULTER. Mr. Speaker, on April 22, 1955, a new statue was dedicated in Bryant Park on the Avenue of Americas in New York City. The statute of José Bonifacio de Andrada e Silva, patriarch of the independence of Brazil, took its place with two other great South American liberators as a visible symbol of good will toward our South American neighbors.

Presiding at the dedication was the Honorable Robert Moses, commissioner of parks for the city of New York. The invocation was given by His Eminence, Francis Cardinal Spellman, archbishop of New York. The presentation and unveiling of the statute were made by His Excellency, Joao Carlos Muniz, Ambassador of the United States of Brazil to the United States of America. The acceptance of the statute was made by the Honorable Robert F. Wagner, mayor of the city of New York. Also at the dedication were the Honorable Hulan E. Jack, borough president of Manhattan; the Honorable Edward J. Sparks, Deputy Assistant Secretary of State for Inter-American Affairs of the United States of America; and Consul General Hugo Gouthier, of the Brazilian consular office in New York City.

I am pleased to direct the following words regarding this dedication to the attention of our colleagues:

THE ANDRADA STATUE

The dedication today of the statue of José Bonifacio de Andrada e Silva, patriarch of the independence of Brazil, marks a third significant addition to the Avenue of the Americas since its renaming 15 years ago as a symbol of hemisphere solidarity. The Andrada statue, located in Bryant Park at 42d Street, joins with Bolivar and San Martin, great South American liberators whose statues were dedicated in 1951 at the north end of the avenue in Central Park.

Andrada was as much dedicated to the freedom of the individual and the abolition of slavery as he was to the independence of

Brazil as a state. It is fitting that a memorial to Andrada, a professor and scientist, a scholar and statesman, should be located near New York's great central public library.

The statue is by Brazilian sculptor José Otavio Correia Lima, the winning design in a competition. The idea was conceived by former Consul General de Berenguer-César, authorized by Foreign Minister João Neves da Fontoura and followed through to reality by Brazil's present Consul General Hugo Gouthier. The $60,000 contribution for the plaza and base was made by the Government of Brazil to the Avenue of the Americas Association and transferred to the department of parks.

The 9-foot 2-ton bronze statue is located at the northwest corner of Bryant Park in an open plaza facing the avenue. The 2,000-square-foot plaza rising three steps above the surrounding sidewalk, is paved in bluestone flagging and granite block in a fish-scale pattern. The statue stands on a 9-foot-high granite base. Steps at the east of the plaza give direct access to Bryant Park.

The people of the city of New York are indebted to the United States of Brazil for this magnificent gift and it is their hope that it will serve as inspiration for continued cooperation between North America and South America. The park department will consider it a privilege to protect and maintain this distinguished memorial.

The Right To Know

EXTENSION OF REMARKS
OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from Collier's of April 29, 1955:

THE RIGHT TO KNOW

Mr. Harry A. Levinson, of Beverly Hills, Calif., has lately been involved in a row with the United States Government. Because it is not Mr. Levinson's fight alone—because 165 million other Americans are deeply involved along with him—the matter at issue bears examination.

Mr. Levinson protested the Postmaster General's seizure of a volume of Aristophanes' Lysistrata which had been mailed to Mr. Levinson, a dealer in rare books, by the Hammersmith Bookshop in England. The Postmaster General told Mr. Levinson that the volume "contains numerous passages which are plainly obscene, lewd, and lascivious in character and which are well calculated to deprave the morals of persons * * * and almost equally certain to arouse libidinous thoughts in the minds of the average, normal reader." After Mr. Levinson went to court to challenge the validity of the law under which the book had been seized, the Post Office Department finally gave it back. But it did so only after receiving "assurance * * * that the book in question is not for general distribution and is intended for delivery to a collector of rare books." In other words, a seasoned rare-book collector might be trusted with it—but not the average normal reader.

Lysistrata is certainly a frank-spoken play; whether its passages are well calculated to deprave morals depends upon what was in Aristophanes' mind when he wrote it; whether it is certain to arouse libidinous thoughts in the minds of the average, normal reader depends upon one's assessment of the character of the average, normal reader. Considering that Lysistrata had its premiere 2,366 years ago, has since found its way onto the shelves of countless public and private libraries, and has been through a couple of recent Broadway revivals, all without stirring more than a casual raised eyebrow, the Postmaster General would seem to be overstating the case. Indeed, it seems possible that whatever libido-stirring tendencies the play might possess would have escaped public notice indefinitely if the Postmaster General hadn't made, as they say, a Federal case of it.

But there is much more involved here than the merits or demerits of the Greek classic.

This is a time when censorship, in general, is enjoying a vigorous revival in this free land. More and more people are telling more and more other people that their tender little minds aren't able to weather the shock of exposure to this or that idea. The solicitude is not confined to the area of ordinary morality. This is a time when, in spite of the fragile quality of world peace, the American people were for 1 year denied the vital knowledge that a hydrogen bomb had been exploded which was able to wipe out a whole State. This is a time when, in the face of the most cunning and complicated ideological threat ever raised against freedom, a teacher takes his professional life in his hands if he tries to acquaint his students with the nature of the Communist threat. This is a time when, in the face of an unprecedented need for this democratic people to be informed, the public was banned last year from 41 percent of congressional committee sessions where public business of the most critical importance was being transacted. It is a time when a copy of Marx's Das Kapital under a scholar's arm raises fearful suspicions of his loyalty; when the Soviet newspapers Pravda and Izvestia are banned from the mails; when a Midwestern lady can command a scattering of respectful applause by denouncing Robin Hood as a communistic tract.

Censorship is not new. What is new, and alarming, is its increasingly casual acceptance by a people with a venerable tradition of liberty.

For many centuries men lived and died beholden to self-appointed groups or individuals who did the thinking and the governing for all.

Freedom came to the Western World, and to America, because some men dared to assume that ordinary people had in them the innate stuff to be noble in their own right—the ability to discern, to exercise that restraint and judgment which had until then been considered the exclusive endowments of their "betters."

One of these men, John Milton, declared 300 years ago that "our faith and knowledge thrives by exercise." He wrote that if all judgments were left to the censors, "to be a common, steadfast dunce would be the only pleasant life."

This is no time for America to be breeding a community of common, steadfast dunces. The very format of a free nation, spreading the responsibility for stewardship among all the people, demands the steady, purposeful development of uncommon men with the grasp and the character to make sound decisions in the heat of crisis.

That is the kind of people we have bred in our 180 years of freedom. We have remained free and grown great because we have thrown upon each individual the responsibilities of adult behavior—for making appraisals on the basis of all the facts, and acting upon those appraisals.

How shall we deal with the present crisis?

Not by making a virtue of ignorance. Five hundred million Chinese followed 200 million Russians into the Communist trap because they didn't know it was loaded. They went for bait labeled "security" and "land reform" and "progress" because they lacked the experience and perception to recognize the phoniness of the promises.

This is a time for caution, certainly—for denying the enemy knowledge he could use to attack us, for defending against both spies and cynics bent upon subversion.

But it is no less a time for a democracy to keep firmly in operation those processes which fit free men to exercise their power.

The character, the competence, the ruggedness demanded of our kind of uncommon man are not grown in a hothouse; the facts of life and politics aren't learned in a Child's Garden of Verses. They are developed only by practice in appraising—in sorting right from wrong.

There is far less peril in books—whether plain-spoken classics or claptrap comics—than in the American family's failure to ingrain youth with the sense to discriminate between quality and trash. There is less reason for concern over young people's exposure to Das Kapital than over the chance that they will grow up innocent of the fraud it preaches. There is less ground for worry about any American's contamination by Lysistrata than about his degration by a clique of censors who believe themselves to be made of some special kind of clay. This is a poor time to tolerate tinkering with the people's right to know, when knowledge is a condition of survival.

Mayor David L. Lawrence and Pittsburgh City Solicitor J. Frank McKenna, Jr., Wage Battle for Consumer in Fight Against Legislation To Exempt Natural-Gas Producers From Federal Power Commission Price Regulation

EXTENSION OF REMARKS
OF

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mrs. BUCHANAN. Mr. Speaker, some of the most effective work on behalf of the consumers of natural gas in this country is now being done by a committee of mayors formed by Mayors David L. Lawrence, of Pittsburgh, Joseph S. Clark, Jr., of Philadelphia, and Robert F. Wagner, of New York. More than 50 mayors of major cities have joined their committee.

Mayor Lawrence and the Pittsburgh city administration which he heads has been in the battle over natural-gas rates and effective Federal regulation for many years. They have always been leaders in the fight. Former City Solicitor Anne X. Alpern, now a judge of our common pleas court, was for years one of the foremost legal experts in this field, and carried the day for the consumer, time after time, both in the regulatory agencies and in the courts. She was, in addition, a tremendously effective witness before congressional committees considering legislation in this field.

Mayor Lawrence's present city solicitor is also waging a determined battle in this same field. City Solicitor J. Frank McKenna, Jr., appearing before the House Committee on Interstate and

Foreign Commerce on the Harris bill and other bills to exempt the so-called field price of natural gas from Federal Power Commission regulation, presented a very fine statement of the issues involved in this legislation, particularly from the consumers' standpoint.

He said it would be shocking to exempt from regulation the sales of gas to the pipelines; that the pressure for legislation of this kind appears to be based on a feeling that the fair return guaranteed to producers by law is somehow considered not enough of a return.

Mr. McKenna says that the opponents of this proposed legislation "have already won at least 3 times on the merits. The Rizley bill was defeated, the Kerr bill was defeated, and the opponents won again on the merits in the Supreme Court in the Phillips case."

Mr. Speaker, I think the entire membership of the Congress will be interested in reading the full text of Mr. McKenna's statement on behalf of Mayor Lawrence and the natural gas consumers of the Pittsburgh area, and I include it as follows:

STATEMENT OF J. FRANK MCKENNA, JR., CITY SOLICITOR OF PITTSBURGH, PA., BEFORE THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE IN OPPOSITION TO THE HARRIS BILL

I am J. Frank McKenna, Jr., city solicitor of Pittsburgh, Pa. I was admitted to the Supreme Court of Pennsylvania in 1932, and have been practicing law in Allegheny County since that time. I entered the office of the city solicitor in 1947 and became city solicitor in January of 1954.

Mayor David L. Lawrence, of Pittsburgh, is a member of the mayors' committee opposing the bill.

The city council also adopted a resolution expressing its opposition to the bill and directing me to seek an appearance before your committee to testify in opposition to the proposed legislation.

To me it is shocking that sales of gas by producers at the wellhead for transportation in interstate commerce should be free of regulation on a national level. The desire to be free of such regulation can only arise from selfish motives. Anyone subject to the jurisdiction of the Federal Power Commission is still entitled to a fair return on his money invested, and adequate compensation for expenses. Why, then, is there such great force put into the drive for passage of the bill? It can only be because the producers will not be satisfied with a fair return. The fact that gas is a natural resource situated chiefly in a relatively small portion of the country, and the fact that the consumers are nationwide and are really at the mercy of the producers, indicate that regulation is necessary.

I think that the Harris bill proposes two things—both bad. It proposes to reverse the only favorable break consumers have had for some time, which resulted from the Phillips decision by the Supreme Court of the United States (348 U. S. 672), that the Federal Power Commission does have jurisdiction over the price of gas sold at the wellhead. The other objective of the bill is to write into statutory law one of the most serious reverses the consumer has suffered, namely, the Panhandle decision by the Federal Power Commission, of April 15, 1954 (3 PUR 3d 396), that a pipeline company is entitled to treat as an expense the fair field price of gas it produces instead of the cost of the product, based on the historic "rate base" approach.

The National Institute of Municipal Law Officers (NIMLO) has carried on the fight against the bill for some time. I am a member of the institute and join with it in voicing objections to the bill. This was the position of the city of Pittsburgh as early as last summer when the issue was discussed at the convention of NIMLO in San Francisco.

It has often been said that the opponents of the bill represent the little people. I cannot concur in this. In the Pittsburgh district the gas consumers are all of the people—big and little. It is a very serious problem with them. Gas prices have risen very sharply from a point where they were rather insignificant to a position today where they constitute a substantial portion of the budget of every consumer. We receive many phone calls and letters from our residents who are feeling the pinch and who are relying on the city government to resist rate increases.

The city of Pittsburgh is supplied by three gas companies, Equitable Gas Co., Peoples Natural Gas Co., and Manufacturers' Light & Heat Co. The city has been dependent upon natural gas for many years for cooking, water heating, heating homes, and for fueling its great heavy industries. For a good many years the city was supplied by gas produced in western Pennsylvania and nearby West Virginia. Shortly after World War II, however, local suppliers were no longer able to keep up with increasing demands of our growing population and our expanding industries. Today the greater part of gas consumed in the Pittsburgh area comes from the Gulf Coast gas fields. The gas purchased by the three distributing companies in the Pittsburgh area from the pipelines has been increasing in cost at a startling rate in recent years. The distributing companies are now faced with the prospect of being priced out of their markets. If they lose a large part of the industrial load to competing fuels because of the ever-rising price of natural gas, the small consumers will be hurt even more because they will be saddled with all the overhead that formerly had been carried by the large consumers. So the rise in gas prices is more dangerous to the ultimate consumers than just the rise in the cost of gas purchased by the distributing companies.

I know that the producers claim that the increase in the price of gas at the wellhead affects the consumer very little. The answer is threefold. In the first place Mr. J. French Robinson, president of Consolidated Natural Gas Co., which serves a portion of the Pittsburgh area has already testified that the field price represents 25.1 percent of the average rate which the company receives for all gas sold. Secondly, as Commissioner Draper said in his dissent in the Panhandle case (3 Pur. 3d 476):

"The majority should be aware that the test of a proposed increase or decrease in rates is not the impact on the individual consumer. The test is, of course, whether the proposed rates are reasonable when measured against the company's cost of service, including a fair return which the company should have the opportunity to recover in its rates."

Thirdly, in the Phillips case, Mr. Justice Minton, speaking for the majority, stated flatly that, if the price of gas at the wellhead is not regulated, this will mean a substantial increase in the price of gas to the ultimate consumer.

It seems to me that the opponents of this bill have already won at least three times on the merits. The Rizley bill was defeated, the Kerr bill was defeated, and the opponents won again on the merits in the Supreme Court in the Phillips case. I know that the ruling in the Phillips case is that Congress intended that there shall be the disputed regulation, but the opinion indicates that the Court believed regulation to be necessary for the protection of the consumer.

Now the Harris bill proposes to remove this protection. If this is done, investors in pipeline and distributing companies are no longer going to have the security which came from the stability of the cost principle. They are going to demand a greater return on their investment since they may find their business going to competitive fuels as a result of their prices being forced upward through the application of the ephemeral concepts of fair field price.

We have heard it stated that competition will regulate field prices, but you can be sure that if competition is all that regulates field prices they will be regulated ever upward. The reason is simple because there is no competition among producers. The competition is among buyers and when buyers compete for something the price goes up. We have seen this time and time again as pipelines have had to expand to meet growing demands of their markets. The spiral has been accelerated even further through "favored nations" clauses on which the Federal Power Commission has at last begun to look with disfavor.

A hypothetical example is all that is needed to show what I mean. A pipeline connects up a gas field and starts transporting the gas from the fields to the markets. Pipelines cost a lot of money. The big ones run around $75,000 to $100,000 per mile; some even higher. When a pipeline is once in the ground it can't go shopping all up and down the Gulf Coast for additional gas. It has to buy gas that is accessible, and it finds itself then in a seller's market, or perhaps I should say, a gouger's market. It has to pay more for this gas than it has been paying the other producers. So it does and then it finds that, under the "favored nations" clauses in its old contracts, it has to pay the original producers the new high price even though they have been enjoying a market for their gas since the line was first built. This is the "favored nations" clause in its least offensive form. Some forms of favored nations clauses bring about an increase of price because some other pipeline comes into the area for a supply. Do you call this competition? Perhaps it is, but it is competition among buyers, not among sellers.

All of the public utility industries in the United States which have grown and prospered and served the ever expanding demands of our economy so well—power, telephone, water supply, and gas—have accomplished this under the cost principle which has been the basis of public utility regulation for years. The investors have put their money into utility plant primarily because of the stability which has resulted from the cost principle. Industries have invested huge sums in gas burning equipment because of the stability which they thought was inherent in a public utility supply of fuel. The small consumer with his gas stove, his water heater, and perhaps a gas furnace, has invested a large proportion of his capital in gas burning equipment with the expectation that prices would be fair and stable because they were based upon the cost principle. To scrap this principle at this time is to break faith with the large consuming interests in our national economy. This is a scandalous thing to do and will have reverberations that will do no one good, including many of those who have made fortunes in the gas producing business.

I can see no good for anyone in the Harris bill. If it becomes a law, it will do irreparable harm before it can be repealed. We cannot take this chance.

Any increase which the producer secures is bound to result in an automatic increase in rates charged the consumer. The pipeline companies will increase their rates as will the distributing companies in the Pittsburgh district. It is difficult to advance any argument that the pipeline companies and the distributing companies should not be per-

mitted to pass on to their customers the increase in the cost of purchased gas.

In conclusion, I again want to state that I heartily endorse the arguments made by the other opponents of the bill, particularly those made by the National Institute of Municipal Law Officers and the statement of Hon. ALEXANDER WILEY, of Wisconsin, made in the Senate of the United States on Friday, March 18, 1955. The arguments in favor of the bill arise from a human desire to increase profits. Since gas is a natural resource and a product distributed by monopolies, namely public utilities, it is eminently unfair to permit the producers to reap profits from the consumers without regulation. If producers are free from regulation this will destroy effective regulation of the industry. It is difficult to see why the producer should fear the Federal Power Commission. The producers, the pipeline companies, and the distributors are all entitled to a fair return on the value of their properties. What more can they ask?

I wish to thank the committee for affording me the opportunity of presenting the view of the city of Pittsburgh.

APRIL 26, 1955.

Foster True Patriotism

EXTENSION OF REMARKS
OF

HON. SAMUEL J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able and eloquent address entitled "Foster True Patriotism," which was delivered by a brilliant and charming daughter of North Carolina, Miss Gertrude S. Carraway, president general of the National Society of the Daughters of the American Revolution, on April 18, 1955, before the 64th Continental Congress of that great organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOSTER TRUE PATRIOTISM

(Address of Miss Gertrude S. Carraway, president-general National Society Daughters of the American Revolution, 64th Continental Congress, April 18, 1955)

Now of all times, in these crucial days of national problems and international tensions, Americans, especially Daughters of the American Revolution, should endeavor in every way possible to foster true patriotism.

Taken verbatim from our second major objective, this clause has been our special theme for the year. Actually, it incorporates our three primary aims—historical appreciation, patriotic service, and educational training. These are the main ways in which for 64 years we have tried to foster true patriotism: by understanding of the past, good citizenship in the present, and preparation for a better future.

Citizenship in the United States of America is the freest and finest devised by mankind. Here we have more rights, higher standards of living, and greater opportunities for advancement than anywhere else in the world.

But these advantages entail responsibilities. To preserve our priceless heritage in this representative republic, we must assume its obligations. Each of us should apply personally the closing paragraph in The American's Creed, by the late William Tyler Page, which we say so often together:

"It is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its Flag, and to defend it against all enemies."

True patriotism observes these five duties of good citizenship.

By literal definition, patriotism is love of one's country. This is a noble emotion. The Apostle Paul, in thongs, boasted of his Roman birth and citizenship. On the gallows Nathan Hale expressed regret that he had only one life to lose for his country. At Valley Forge, George Washington ordered: "Let only true Americans be on guard."

At long last patriotism is becoming more prevalent and popular. For sometime recently it was erroneously considered narrow-minded and old-fashioned. Now we are returning to the conviction that as our Nation is the only one to which we pledge allegiance, the only one protecting, training and benefiting us, we, in turn, should give it our support and devotion. How proudly we should answer the question asked at customs offices: "I am an American."

W. P. Merrill wrote: "Those are quite right who tell us that it is just as immoral to say, 'I love every country as well as my own,' as to say, 'I love every other woman as well as my wife.' God has set us in families and in nations, and we realize our best possibilities in loyal allegiance to those relationships."

We must cherish our Federal Constitution. Its basic principles should be more fully comprehended and carefully followed. We must be familiar with its content and intent, if we are to keep its foundations from being undermined, its flanks from being attacked, its spirit from being violated.

It should be safeguarded from those who misuse its fifth amendment without being willing to abide by it in its entirety. If they are accorded the privilege of enjoying its liberties, they ought to undertake its obligations. Investigations along these and other security lines should be continued by the FBI and by congressional committees.

Abraham Lincoln declared: "As the patriots of '76 did to the support of the Declaration of Independence, so to the support of the Constitution and laws let every American pledge his life, his property, and his sacred honor."

Why should any real American object to pledging loyalty to our country? Often we recite our religious creeds. From time to time are repeated scientific beliefs and theories. Frequently we express our love for friends. Why not for our native land?

Our laws are not strictly enough obeyed. Unless leading citizens keep them, how can we expect others to do so? So long as adults violate ordinances, there will be juvenile delinquency. We cannot presume to reform the rest of the globe until we check the crime and corruption at home. The young as well as old would be more law-abiding, if greater emphasis were placed on the responsibilities of citizenship.

Too few pay proper respect to the Stars and Stripes, the symbol of our Nation. DAR activities have long included presenting flags, distributing flag codes, teaching the correct salute to the Star-Spangled Banner as it passes in a parade or when the national anthem is played or sung.

It is not sufficient to be law-conscious, flag-honoring citizens. Our duty is also to help defend our Nation against enemies. When half the world understands most clearly the language of force, it is essential to be adequately prepared militarily for any emergency.

A strong citizenry, however, is just as necessary to save our land as are an invincible Army, Navy, and Air Force. For, in this age of subversion, dangers come from within as well as from without. Therefore, we must be vigilant on the home front, being good citizens ourselves and promoting better citizenship among others.

The best defense against the deadly foe of communism is to build up resistance to its subtle inroads by becoming imbued with Americanism. Constructive programs should be sponsored for American history, the Constitution, and Declaration of Independence. So many of our young people fail to study our representative government. How can they be for it, if they do not know it and its preeminence?

Communism and Americanism are as contrasting as falsehood and truth, darkness and light, slavery and freedom, barbarity and humanity. Many who espouse Red propaganda, have a pinkish tinge or sympathetic ear for its high-sounding phrases, do not recognize its underlying implications.

What does communism offer in the place of our freedom of worship? No religion; no God. Instead of our freedom of conscience? Atheistic materialism; mass indoctrination. Our preferred peaceful negotiations? Brute force. Our freedom of movement? Police guards for circumscribed limits. In place of our freedom of speech? Gag rule; censorship.

For our freedom of press? Controlled newspapers. Our right to own property? No private property. Instead of trials by jury? A mockery of justice. Fair treatment? Brainwashing, water cures, so-called truth serums, unwarranted imprisonment. Our initiative? Stifling of free enterprise. Rather than integrity? Misrepresentation, deception, failure to keep promises. Instead of trust and charity? Suspicion and hatred. For benevolence, human welfare, and mercy? Terror, cruelty, purges.

The Communist approach is to make government the master, with all subjects subservient. It tends to eliminate individualism.

Right kinds of competition and good sportsmanship must be maintained in scholarship and recreation at our schools to train better for later competition in our businesses. This means voluntary cooperation, a desire to do one's best, to use skills to the utmost, and to be worthy of success in attaining goals.

Lord Wellington remarked: "The Battle of Waterloo was won on the playing field of Eton." A later illustrious warrior, Gen. Douglas MacArthur, wrote the inscription on the gymnasium at West Point: "Upon the fields of friendly strife are sown the seeds which in other years, on other fields, will bear the fruits of victory."

Our philosophy incorporates diversity of endeavor, even differences of opinion, changes when sanctioned by majority votes. It is our acknowledged privilege to find fault constructively. That is how we bring improvements. But we must not allow our disagreements to become weaknesses or liabilities. That is what our enemies want. In the big things, on fundamentals, we should stand firmly united, with the "Faith of our Fathers."

It is our mission to preserve the bequest of individual liberty, free enterprise and national sovereignty for which our ancestors risked their lives and fortunes. That is why our society has taken firm stands against any form of world government. We prefer our constitutional government, which has served us well for so long. We must not barter it away by becoming a vassal province in any kind of world or regional superstate.

World government is not safe or practical. So much of the globe's population is under the iron heel of an implacable foe, including aggressors and gangsters, whose ideas are diametrically opposed to our own. Incredible as it may seem, some would thus throw overboard our Declaration of Independence, which for 179 years has been for us such a trustworthy prop, domestically and internationally.

Our Constitution should have an amendment to prevent treaties or executive agreements with unconstitutional provisions from becoming the supreme law. Why lock the front door and watch it with expensive munitions and precious lives only to lose the

structure by allowing the enemy or unrealistic visionary to slip in through the back door? Such an amendment would safeguard the constitutional rights of Americans and our duly elected representatives to pass our own internal legislation.

Benjamin Franklin warned: "Those that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

Daughters of the American Revolution can and should foster patriotism by aiding our fine committees. Each has a patriotic purpose. The more we assist them, the more truly patriotic we will be and the more true patriotism we will engender in others. Activity along any of these lines will be of value. Samuel Johnson said: "He who waits to do a great deal of good at once will never do anything."

Our historical projects promote patriotism. The more we know of the past, the more apt we are to want to prove worthy of our heritage and emulate the outstanding examples of earlier periods. Abraham Lincoln advised: "Return to the fountain whose waters spring close by the blood of the revolution."

All our efforts for our country are in behalf of true patriotism, for what we believe to be for the preservation and enrichment of the American way of life, especially our committees on national defense, Americanism, and the many other ways in which we stress better citizenship.

The numerous goals through we undertake educational training for the future also help foster true patriotism. In our own two DAR schools we add to the three academic R's of reading, 'riting, and 'rithmetic two other R's—responsibility and religion.

That this is advisable is shown by the fact that our Kate Duncan Smith DAR School has raised substantially the standards of its surrounding area and the fact that during the 35 years of our Tamassee DAR School not one of its graduates has ever been involved in crime, all making good American citizens, most of them leaders in their communities.

Through our large student loan and scholarship funds, including our scholarships for American Indians and young Negro women, we help build for the future. By such committees as our DAR Good Citizens, Children of the American Revolution, Junior American Citizens Clubs for all grades, races and creeds, we are teaching younger generations to take responsible roles in our republic, to appreciate the ideals on which it was founded and which have made it so strong and so great. Patriotism is not born in infants; it must be instilled in our youth, carefully nurtured and constantly cultivated through the years.

Our National Society thus has excellent programs for fostering true patriotism. If they were more zealously adopted by our members and their principles cherished by all Americans, there would be no reason to fear the Communist menance or un-American infiltration. Our country's future would be assured.

History proves that tyrannical governments, through temporarily successful, have finally failed, because there is an inherent desire in all men to be free agents. In time they rise up to oppose despotism, and as individuals they can be far more effective than slaves, mouthpieces or automatons carrying out the commands of dictators. In past annals those who have had ambitions to conquer or control the world have met death, defeat or downfall. The same fate in the long run may await those who currently seek to dominate the globe, if we patiently persevere to spread the will for freedom.

It is not isolationism to love our country best, to put its welfare foremost. Some might mistakenly call it that. It is realistic and practical, enlightened self-interest, treading the paths which have proved satisfactory, cooperating with other nations and helping those which are worthy to help themselves but not becoming too involved or submerged for our own economic stability or political security.

Theodore Roosevelt asserted: "There is one quality which we must bring to the solution of every problem—that is an intense and fervid Americanism. We shall never be successful over the dangers that confront us; we shall never achieve true greatness, nor reach the lofty ideals which the founders and preservers of our mighty Federal Republic have set before us, unless we are Americans in heart and soul, in spirit and purpose, keenly alive to the responsibility implied in the very name of American, and proud beyond measure of the glorious privilege of bearing it."

This doctrine should be stressed today. The dynamic, crusading spirit of Americanism forms our most powerful weapon, of offense as well as defense. It can bring peace and victory in the cold war of ideologies.

The American way of life excels all others. It is our duty to maintain it, with confidence in ourselves, faith in its high principles, and trust in Divine guidance.

True patriotism should be fostered, strongly and surely. For, the strength of America and Americanism is humanity's best hope.

Your Job: Where Does It Come From?

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent that a very interesting article entitled "Your Job: Where Does It Come From?" which was published in the Reader's Digest, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR JOB: WHERE DOES IT COME FROM?

(Condensed from the Freeman)

(By A. J. Gallager)

If we know what it takes to make one job, we will know what it takes to maintain the many we have today and to create the necessary new jobs for tomorrow.

That sprawling thing we call the national economy is nothing but a lot of individual jobs. This confusing subject "economics" can be quite simple: A job is the security of the home. A business is simply a group of jobholders at work. A community is just a group of different businesses. The Nation is the sum of its communities, or 60 million jobs.

If you have a job, you're a valuable person. To your family, your pay is what buys the groceries, clothes the kids and provides the other things that make a comfortable home.

SALES NECESSARY FOR EACH JOB

But to your employer, your pay means something much different. To meet your wages and other costs and keep you on the job for a year, the company must sell about $14,000 worth of goods. That's the average for a great many businesses, with some requiring as much as $40,000 in sales. Let us look at one job in a big steel company (United States Steel) whose products are used for anything from a kitchen paring knife to a giant steel-framed skyscraper.

United States Steel's sales of $12,850 for each one of the people on the payroll are close to the average for all types of business. In 1953 the $12,850 was divided for each of the 301,560 jobs as follows:

Wages and benefits, $5,200; products and services bought, $4,700; taxes, $1,370; other expenses, $843; put back in the business, $393; paid out as dividends, $344.

Of the $737 per job that remained after all costs and expenses, $393—more than half—was reinvested in the business to improve methods and buy better equipment, which results in lower costs, better products, more customers and more jobs. The $344 left was paid out as dividends to the 286,240 people who had their savings at work in the business.

INVESTMENT NECESSARY FOR EACH JOB

As important as they are, the sales it takes to keep a job going are only one side of the picture. Before there can be any sales, someone has to save the money to provide all the necessary things to make a job possible, such as land, buildings, machines, and materials.

In United States Steel, about $14,000 was at work in plants and equipment alone for each of its 301,560 employees. Thus, a small fortune is at work for every individual on a payroll.

ONLY CUSTOMERS MAKE JOBS

In any business, however, you, the customer, are all important. You are a jobmaker for countless people you have never seen. And these people, as customers for what you help make or sell, keep you on your job.

For example, here is what the customers of the country must do each year to keep one average jobholder at work making these typical products; and so on for thousands of other products.

These are not unusual examples. The sales required to maintain one job in any business are large and steadily growing.

In terms of jobs, all businesses look much alike. A great food manufacturer and the corner grocery store, a dairy and a department store. Measured by jobs, the big total figures become small, understandable figures. For instance, the vast steel company, whose profits in 1953 were $222 million, made about the same amount of money per job as a roadside diner whose profit was $7,300.

To keep our present living standards, we need about 3 jobs for every 2 families. You can imagine the vast task of maintaining more than 60 million jobs.

The largest business concern in the country maintains something over half a million jobs. All manufacturing combined supplies little more than a fourth of the total.

The big share of creating jobs is done by the more than 2 million small businesses and farms, started by people willing to risk time and money in the struggle to progress.

In every community, farmers, merchants, manufacturers, and service people might well hang out the sign, "jobmaker."

The security of your job depends upon the sincere cooperation of business, labor, and government—backed by general understanding of what it takes to maintain a job; who the jobmakers are; what helps and what hinders them.

Air Transportation for All Our Citizens

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Air Transportation for

All Our Citizens," delivered on April 26, 1955, by Col. Joseph P. Adams, Vice Chairman of the Civil Aeronautics Board, and a member of the National Advisory Committee for Aeronautics, at the second annual airport management conference, sponsored by the Washington State Aeronautics Commission, in cooperation with the Association of Washington Cities and Washington State Aviation Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AIR TRANSPORTATION FOR ALL OUR CITIZENS

(Address by Col. Joseph P. Adams, Vice Chairman, Civil Aeronautics Board, and member, National Advisory Committee for Aeronautics, delivered at the second annual airport management conference sponsored by Washington State Aeronautics Commission in cooperation with Association of Washington Cities and Washington State Aviation Association, April 26, 1955)

Mr. Chairman, colleagues, and guests, I am very happy to have this opportunity to make a report to you on the very substantial and laudable progress that has been made in bringing air transportation to all our citizens—the low-income people of our country, as well as those in the higher-income brackets; the people living in small communities, as well as those in our largest cities. As air transportation has been brought to an ever-expanding portion of our total population, regardless of income and place of residence, all of the public have been directly benefited—the stockholders, the taxpayers and, of course, the air travelers themselves. Air transportation is rapidly losing its luxury label as more and more people find they can afford to fly, and at the same time air transportation is gaining wider and more stable support as it serves more and more of our people and more of our smaller communities.

My own record makes it clear that I have consistently favored both low-fare mass air transportation and the further development of our local-service air carriers. I have taken this consistent position ever since I have been a member of the Civil Aeronautics Board, in majority and dissenting opinions, in speeches which were made here in the West and elsewhere, and in testimony before Congress.

I propose to report to you today on the progress achieved in the field of low-fare mass air transport and that of local air-carrier development not only because of my own position and attitude, but because the progress thus far made is eloquent testimony of what can be accomplished when the efforts of the Civil Aeronautics Board, the air carriers themselves, and the people like you here assembled representing the States and cities served, are all directed toward a common goal. It is a record in which all of us can take great pride. I can go further and assure you that under our New Civil Aeronautics Board Chairman, Ross Rizley, even further and greater progress in bringing air transportation to all our citizens will be assured if such cooperative efforts continue.

LOW-FARE MASS AIR TRAVEL

My personal interest in furthering the development of mass air travel through low air fares has long been a matter of record. In a dissenting opinion written in November 1951, I stressed the need for the immediate expansion of low-fare air service not only in order to recognize the pioneering efforts of our nonscheduled or irregular air carriers, but also because I was convinced that a hitherto untapped market was available to all our carriers, both scheduled and nonscheduled.

I reiterated this position in two speeches which I delivered in April 1953 in Oakland, Calif., before the chamber of commerce there, and in Eugene, Oreg., on the occasion of the first Northwest airport management conference. In the first of these talks I expressed this conviction of mine as follows:

"Air transportation must leave the luxury class and become a necessity. It must forget and actively campaign against its reputation for being in business to serve only the few. It must develop and encourage a reputation for being available to the mass of travelers in this country."

I also called for a reversal of the relationship which existed as late as 1952 between low-fare air passenger traffic and first-class or luxury-class air passenger volume. This ratio in that year was 20 percent low-fair air coach to 80 percent first class, and I urged that all of those concerned—the Board, the air carriers, and such aviation-minded people as you here, representing cities and States throughout this country—do our utmost to convert this 20 to 80 ratio to the reverse ratio, or 80 percent for low-fair air coach and 20 percent for first class.

It gives me great pleasure to be able to report to you today that while we haven't yet reached that 80 to 20 goal, we are well on the road to it. In the calendar year 1954, low-fair air coach services carried approximately 33 percent of the total passenger volume transported by our trunklines, so that the ratio is now 33 to 67 rather than 20 to 80. Two of our trunklines, incidentally, are now generating a greater volume of low-fair air coach passenger miles than they are first-class passenger miles; so in these two instances the ratio is 52 to 48, and 55 to 45, in favor of low-fair air coach.

Total air travel, including coach, has increased by leaps and bounds since 1952, and with such increasing revenues, unit expenses have gone down. The average operating expense per revenue ton-mile reported to our domestic trunk carriers approximated 47½ cents for the calendar year 1954—about 1½ cents less than for the year ended 6 months before, June 30, 1954, and more than 5 cents less than for the fiscal year 1950. It should be noted, furthermore, that such declining expenses have enabled our carriers with the encouragement of the Board to maintain a fare level which has been stable for the last 5 years.

I can therefore report that we are now well into the era of low-far mass air transportation in the United States. The day of air transportation for all our citizens therefore—including those of low income—is almost here. I am also happy to be able to tell you that Seattle, my own hometown, has shared in the general increase in low-fare air service. Four and a half years ago in September 1950, Seattle enjoyed only 1 round trip daily coach flight to and from the California area and only 2 daily round trips to and from the East. A year later in September 1951, 1 more daily round trip coach flight had been added to the Seattle coach service, so that at that time Seattle had only 4 daily round trip coach services—2 operating to and from the South and 2 operating across the country to and from the East.

This total of 4 daily round trip flights for Seattle had been increased by last September to 11—5 up and down the west coast and 6 operating east and west across the country to and from Seattle. Here again, then, with reference to this area and our own State, there has been substantial progress made in bringing more and more low-fare air coach service to our citizens.

As I have already indicated, there is still much to be done before the low-fare mass air travel market will have been fully exploited. This is shown by the 33–67 ratio, which must continue to change to 45–55, 60–40, and so on. With the continued cooperative effort of the air carriers themselves and of such aviation-minded people as you here before me today representing the public, continued progress in increasing the "air coach to first class" ratio is assured. As such further development and progress takes place in mass air travel, the recent significant profits earned by all our trunklines enable us to predict even further and greater profits for them. Both the air carrier and the public served by them can be confident that the Civil Aeronautics Board under the leadership of its new Chairman will spare no effort to continue and improve upon the progress already made in bringing more air transportation to our low-income citizens.

LOCAL AIR SERVICE

Just as I have consistently favored air transportation for the person with the small income, so I have championed air transportation for the small community ever since I have been a member of the Board. All parties responsible for the local air service development seen in the last 3 years are to be congratulated. The air carriers themselves, the CAB and its staff, and most important, aviation-minded civic leaders like you here assembled, have reason to be proud of the job that has been done. It is obvious, of course, that there are many problems in the local air service field which are not yet settled and there are some which as yet have not even been clearly defined. Nevertheless, the progress made thus far, during th period of initial experimentation and development, leaves no doubt in my mind that the problems will be defined and will be solved.

Overall passenger volumes carried by our local air services have increased considerably in 1954 over 1951 or 1952, while in the first few months of this year all previous records are being broken every month. One local air carrier reports gains in terms of passengers in the first quarter of 1955 of 27 percent over the same quarter of 1954. Another reports a first quarter traffic increase of 35 percent, while a third carrier shows, for the month of March 1955, an increase of 163 percent over the same month last year.

As more and more people have been carried every year by our local air services, it is most significant that those services are no longer requiring great increases in Federal mail pay subsidy support. We estimate, for example, that the current year, fiscal 1955, will see an increase of less than half a million dollars of subsidy over 1954, and that in 1956, there will be only some $100,000 more subsidy needed than for 1955. This leveling off of dependence on subsidy by our local air carriers is taking place in the face of the substantial increases in traffic generated, which I have already mentioned. This means, in other words, that as the local airlines carry more and more of the smaller community people, it is costing the taxpayers relatively little; and, of course, it is costing them less and less on a per passenger or per passenger mile basis.

It is, of course, a fact that as yet there have been but few similarly demonstrable benefits accruing to the stockholders of the local airlines. A 10-year period, however (which covers the entire existence of these carriers) is not a long time. In fairness to the local carriers it should be noted that even our trunklines received subsidy mail pay and did relatively little for their stockholders as long as the DC–3 airplane was their chief type of operating equipment, and for a period much longer than 10 years.

I repeat, therefore, that the record achieved by our local service air carriers has been a good one. I am particularly gratified at that record, since 2 years ago at Eugene, Oreg., and again at Edgewater Park, Miss., I was the one who advanced to my friends the "use it or lose it" slogan as to local air service. I stated that either the public would have to patronize these carriers or we at the Board could not continue the service. My position was premised upon my confidence in

the ability of the carriers and the State and city organizations to work together toward a goal which I believed in, and which I was sure was attainable by them. It is always a good thing to find that one's faith has been justified. It is even better to have the opportunity, as I have now, of describing the fine record that has been achieved by those in whom that faith was placed.

Congress, itself, has recognized already the national importance of the local service air carrier role. Both Houses of Congress passed permanent certification bills last week, and this week will probably agree on a single bill. In this connection I am pleased that I urged such permanent certification of the local service airline routes before the Aviation Subcommittee of the Senate Interstate and Foreign Commerce Committee in February. As I stated before that body:

"I am in favor of permanent certification for our local air carriers, particularly if the Civil Aeronautics Board retains some flexibility of control in the grant of the new certificates as to future adjustments of loss points or route segments.

"* * * my position on the basic issue of premanency for these carriers is simply that it is time for us to recognize that these carriers are here to stay just as the smaller communities which they serve are here to stay."

The forthcoming permanent certification of our local carriers by Congress can be regarded by both the airlines and their supporters—such as you people here—as a real tribute to all your efforts—expended on their behalf for the past 10 years.

Together with this general overall local air carrier trend, your own local carrier, West Coast Airlines, serving Washington, Oregon, and Idaho, while not one of the largest of our local air services, has done well and its record is worthy of note here. West Coast has always been one of the most economical of all our local carriers. For the year ended September 30, 1954, for example, its direct flight costs per total hour flown were the lowest in the entire local air industry. It's passenger fare policy has also been most favorable to the traveling public in the area it serves and it should be noted that its average passenger fare for a recent year was next to the lowest reported by any local carrier.

Therefore, both in this Northwestern area and throughout our entire country, this local service carrier "progress report" is highly favorable. More and more air transportation is coming to the smaller communities of the United States, resulting in present and real benefits to the traveler and taxpayer and in ultimate benefits to the stockholding public as well.

I cannot leave the local air service portion of my report to you today without pointing up the Civil Aeronautics Board's own responsibility for the future progress of our local air carrier program. We at the Board cannot expect your cooperation unless we pledge our own. As your Washington State Aeronautics Commission Act of 1947 specifically provides, your State commission, "shall cooperate with and assist the Federal Government, the municipalities of this State, and other persons in the development of aeronautics, and shall seek to coordinate the aeronautical activities of these bodies and persons."

Progress made thus far indicates that State commissions such as yours and the Civil Aeronautics Board have cooperated with one another thus far. We at the Civil Aeronautics Board have made real efforts thus far to promote and develop the local air service program which we began some 10 years ago.

A pertinent inquiry at this point in its development, however, is, Where do the local service carriers go from here and what is the Civil Aeronautics Board prepared to do, to see that they get there? I cannot, of course, speak for the entire Board as to future policy, but in light of the positions I have taken in the past as to this program, I can certainly state my own position based on past developments and facts known to me at this time.

Our local air carriers, if they are to play their proper role in our air transport system, must be granted increased operational flexibility on the one hand, and must be permitted to serve more lucrative air travel markets on the other hand. If these carriers are expected to live on limited subsidy, or if they are to operate on declining Federal subsidy support, then their load factors must be increased and their costs on a unit basis must decrease. Only when these changes in their operating results take place can we reasonably expect the subsidy burden on the taxpayer to go down and dividends or other benefits to the stockholders to materialize.

I, as one Board member, expect to do all in my power to bring this about. The carriers themselves, and all you aviation-minded State and city civic officials must continue to work with these carriers to increase revenues and reduce costs; but unless the Civil Aeronautics Board supplements these efforts by improving the route systems of the local carriers—in terms of both revenue potential and operational flexibility—the subsidy bill will not go down. By the same token, the taxpayers' total burden will never be substantially reduced, and the stockholders' interests will never be adequately protected. In light of the fine record achieved by our local air-carrier experiment thus far, I propose that we all dedicate ourselves to removing or, at least, reducing the amount of Federal subsidy support and the onus which attaches to such subsidy support of our local air carriers and the cities they serve. Only when this is done can any of us seriously defend and espouse the future economic soundness of our local airline industry. I assure you that I shall continue to do what I can to help these carriers attain an economically sound status—since only that status will enable them to best serve all the interests of the public. With the continued support of the carriers and the public, I have no doubt that the outcome will, ultimately, be successful.

In conclusion then, my overall report is a favorable and optimistic one, I believe. Air transportation is rapidly coming to all our citizens—the low-income people as well as the high-income people, the small-community people as well as the big-city people. This kind of progress must and can continue with the continued efforts of the air carriers, the public served by them—represented by you here—and the Civil Aeronautics Board.

"God Meant Us To Find the Atom"—Thomas E. Murray

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by the Honorable Thomas E. Murray, Commissioner of the Atomic Energy Commission, which appeared in the April 1955 issue of Better Homes and Gardens.

The story, God Meant Us To Find the Atom, is a moving statement of principle, which I urge every Member of Congress to read. The article follows:

GOD MEANT US TO FIND THE ATOM

(By Thomas E. Murray, as told to Henry Lee)

Once I stood within 9 miles of one of our sizable nuclear explosions. I stood riveted, dumbfounded, awe-stricken. I had a feeling I might be looking into eternity.

Space is annihilated, time measured in millionths of seconds. Temperatures approaching those at the center of the sun are produced. Out of the blackness and stillness of the night, a great ball of light plunges into vision. Opaque glasses, so dense that ordinary light does not penetrate, seem to melt before one's eyes. You count 1, 2, and 3, and then remove the glasses.

Now the fireball surpasses summer's midday sun. It represents energies greater than ever before released by man. There is an empty feeling in the pit of your stomach as you watch the familiar mushroom which might remind you of those highly colored medical pictures of the human brain. Then, a rush of heat like the opening of a furnace door—a crash that seems to break the eardrums and does knock you off your feet if you haven't braced yourself. And all this at 9 miles away.

Finally, the awesome mass rises rapidly skyward with its cargo of radioactive dust, some of it, perhaps, to sail endlessly around the world and make its presence known wherever it goes. For some of its particles will give off radioactive rays for thousands of years.

Again, in the far Pacific at Eniwetok, where little pieces of God's earth used to be and now are no more, I participated in Mike, the test of our first thermonuclear explosion, the forerunner of our present hydrogen bomb.

Before Mike, scientists had speculated on the possibility of world destruction through nuclear reactions. After Mike, they knew that the possibility could be triggered into actuality.

Bluntly, here are the facts. Man now can make weapons capable of reducing the world to the primitive conditions of the time of Cain and Abel. He even has, within the range of his grasp, means to completely exterminate the human race.

And since Mike was developed 3 years ago, other versions and improvements have also been successfully tested. Today, scientists can make a good educated guess as to the number of Mikes needed for total world catastrophe—to scatter to the four winds, in a matter of seconds, the civilization it has taken man so many centuries to put together.

This magic number is less than the scientists had calculated in 1952—and only God knows how much smaller it will become in the years ahead. No wonder some ask, "Are we not playing with things that belong to God?"

It is a haunting question in this season of the resurrection and the promise—the 10th Eastertide since, in the presumption and witchery of our science, we first reconstituted a piece of the sun over the sands of Alamogordo in New Mexico.

And it deserves a respectful, straightforward answer that does not beg or neglect the spiritual implications. The course of history is irreversible. We cannot undo the atom. Nor should we even try to cork the genie back into the bottle, for one simple reason: The concerted, atheistic threat against all we hold dear has increased and grown bolder in the ratio that the hydrogen bomb has surpassed the rifle. We, in turn, must remain armed to the teeth to contain that threat.

With this, I agree. But, fundamentally, because I believe in Providence, I believe that God meant us to find the atom. And, let us not forget, it was He who made the atom. Since it is of God's creation, it is good. The

fault lies not in the Giver or the gift but in the perverse will of man, the recipient. Those who let themselves lapse into despair and disbelief already are suffering in their souls the atomization they fear for their bodies.

If you agree with me that the atom is heaven-sent and not an awful thing that slipped out of hell's door, we can pick our way more accurately, more serenely, through the frightful complications of the atomic era. Admittedly, we are wrestling with the greatest alteration in man's relation with nature since the upheaval at the time of the Garden of Eden. But his fundamental relation with God has not changed one whit.

The same trial that tested the first man in Eden, and every man since, challenges us in the atomic problem. It is the exercise of choice, the dangerous freedom to use God-given power for good or ill. Out of a piece of steel, man can fashion the scalpel—or the stiletto.

I believe—to believe otherwise would be idolatry of self—that free man, as a creature of God, exults in genuine liberty only when he is subject to Him. Eternal principles govern man's life, his purpose, his destiny—whether he achieves his perfection by them or nihilates himself without them.

After 5 years of almost ceaseless contemplation of the atom, in all its wonder and horror, I still believe intensely in the three simple ultimates I learned as a child. They are faith, hope, and charity. More than ever in recorded history, man needs to believe and accept them today. We need faith that we may be brought neare to nature's God and not be led astray by a false man-made god called science. Hope that with God's help we can avert the worst fate with which war, powered by the atom, can menace us. Charity that we may truly learn—learn or die—the old, old words—love one another as I have loved you.

I do not mean for a moment that science is wrong, but only man's worship of it. Surely, a part of our duty, the effect of the primal urge implanted by our Creator, is to discover more and more of the world we live in. It is a part of the instinctive search for God, in the heart of every man created of God. The unity, the harmony, the order of the universe, revealed little by little to us, reflect the unity, the order, and the harmony which are God's perfections, "See how the skies proclaim God's glory."

But science can give man mastery only over matter. It never reaches ultimates. It becomes a process of smashing atoms and then of endlessly smashing the parts into which atoms are broken. It "explains" matter by simply dividing it into ever smaller subatomic particles—electrons and protons yesterday, neutrinos and mesons tomorrow. While it explains much, there is a sense in which, we can say, it is forever deferring explanation. It is always postponing the ultimate reason.

Can we get any nearer the good life by thus constantly raising atomic dust, and giving that dust Greek-derivative names to mask our ignorances?

While progressing without end in the knowledge of broken things, can science ever properly answer such fundamental questions as what is man? What is his destiny? Who is God?

In our morality and ethics, the relation of man to man, what does science offer? It is a matter of closed systems in which action equals reaction, input must equal output. Mathematical equations, in which one member always precisely equals the other, best define its laws.

But sacrifice and generosity are precisely what they are, because input does not equal output. If we are generous or charitable, reaction is greater than the action. Life and love cannot be compressed into tidy equations, and we know the sum of goodness more than equals its parts.

Therefore, I continue to put my faith for our salvation on religion and philosophy. Here are open systems unlimited by any physics, chemistry, or by astronomy. The atom's diameter and the vast areas, measured in billions of light years, between the fringes of the expanding universe are crossed with equal ease and speed by lightning flashes from the best minds of man. Mind penetrates all boundaries, bringing us in one direction to God and in the other beyond tomorrow's tiniest division of submicroscopic particles. Spirit is open to all reality; it is not limited to matter and physical energy as are our experimental sciences.

I greatly fear one thing. If men will not clothe the bare framework of science with the warm garments of true humanism, they will end up by making machines their god and mathematics their only dogma. The rising paganism of the western world will make our civilization cold as interstellar spaces, ruthless as the atoms which smash each other.

Yet, do you believe, can you believe, that this is a random world tossed by chance upon the gaming table of space? For all their reality, the great, glittering galaxies and the dizzying circuits within the atom are not what a man can really live for or be willing to die for.

Against our fears, I oppose a great hope. The physical discoverics, which have shaken the spiritual faith of some men, are also shaking the philosophic foundations of materialism. I have noticed a new, extremely encouraging disposition on the part of some leading nonreligious scientists. They are beginning to acknowledge that the concept of divine creation should no longer be dogmatically excluded from rational speculation about the origin of the universe.

What a far cry from the mechanistic hopes and religious skepticism of the 19th century. What a challenge to godly men of science, trained in their philosophy and their faith, to reconcile scientific and religious thinking because genuine science and religion are never in conflict.

To my mind, there are today startling possibilities for a religious break through into the secular mind. The time is ripening for a marriage of religion and science.

GOD IS WAITING

Pope Pius XII has said, "According to the measure of its progress * * * true science discovers God in an ever-increasing degree * * * as though God were waiting behind every door opened by science." There you have it. God waiting behind every door opened by science.

I emphasize the spiritual aspect of the atom because it transcends all the other problems, military, political, and economic, that seem so overridingly important. The fact is, atomic bombs are dangerous only because some atomic men cannot be trusted. Our crisis today comes from man's greed and will to power, his refusal to submit to reason.

Like ourselves, every person in the Soviet Union is a human being, compounded of mortal body and immortal soul. Each is dear to God, his creator, as we men and women of the Western World are dear to Him. The resurrection is the credential of liberty and faith for them as well as for us. Outlawry on the part of others cannot justify outlawry on our part.

As Christians, we must hope that in the Kremlin's dictatorial mind there can eventually be sown some small measure of skepticism as to the value of the barren earth which any atomic war would bring. We must pray for that, with our lips and with the example of holy lives.

I have been especially surprised to see that the unbelievers among scientists sometimes seem more concerned for the peace than those of us who believe the peacemakers are blessed. It is not their excess of good will, but rather their sharp knowledge of what nuclear war would do to this planet. Therefore, if one does hope to be blessed as a peacemaker this critical year of 1955, he must grasp the facts of atomic life.

You, I, the American public cannot "leave it to the experts." In this cosmic drama, the bald truth is that there are no experts. It is not enough to be merely a technician. For unless the technician in some small way is enamored of the idea of becoming a saint, he will fall short of success. He will only exemplify the definition given by one learned educator who called the mere technician "a man who understands everything about his job except its ultimate purpose and its ultimate place in the order of the universe."

THE MAIN INGREDIENT

No, the essential ingredient to atomic survival is a broad base of informed and interested civilians. It is the only way in which we can cope with the immoral fatalism that considers war "inevitable"—with the folly that professes unconcern over man's darkest threat. Surely, these ostrich attitudes are like the frivolity of those who deny the reality of hell by refusing to think about it.

Perhaps the secrecy with which we have guarded certain especially sensitive areas of atomic information contributes to this apathy. But the extent of this secrecy is greatly exaggerated; it is more an alibi for than an explanation of our abandonment of the normal functioning of public opinion. The fact is, the greatest atomic decisions must come from the heart and the soul, not the skilled brain that comprehends a cyclotron.

Let me give an example. In this country, the demand for power is doubling every 10 years, and there are many other regions of the world where the power shortage is already acute. We talk vaguely of using the atom "for peace," but we are comfortably supplied with the standard fuels, even if many other countries are not; we can wait leisurely for the development of large nuclear reactors (the atomic-power engines), even if they cannot.

Therefore, I say, we face a problem that calls for a heart-and-soul solution. Here we have a technology and industrial capability that are unsurpassed, a pool of brillians scientists who could acccelerate the development of atomic power. Overseas are "have-not" nations which desperately need that power now, but which may never enjoy it if they must first acquire the technical skills and supporting industries to produce their own reactors.

Shall we fail them? Shall we say, "We could have atomic electric power if we wanted it. But, unlike you people, we don't really need it today, and so its development can wait for economic and financial forces to move it ahead." Actually, though we are investigating many different reactor types, there is only one operating reactor in the United States today. I very much fear that if we fail to push a broad, vigorous program in this field, we will be accused of following a dog in the manger policy.

I fear even more to consider the consequences if the U. S. S. R. should win the industrial-power race. Certainly, the price tag for nuclear-power reactors would be very high, with the purchasers surrendering their birthrights and civil liberties as the down-payment. What a tragedy if world leadership in reactors fell into Soviet hands by our spiritual default.

It seems clear to me that, "realistically" and humanely, we should use the atom to help eliminate want where it already exists and to forestall want where it threatens. By developing nuclear power, we can simultaneously enrich ourselves and the world, materially and spiritually.

But I would add one word of caution. The spreading of atomic material benefits, however generously we may decide to do it,

is not the final answer to the 20th-century dilemma. A material solution alone can never be more than a tentative answer, for only in the realm of the spirit is man complete. If all the world were made up of have-nots or we lived in some kind of atomic Eden, we would still have to remember the words, "Not by bread alone does man live."

WE MUST CRUSADE

It was faith in man alone that robbed us of our peace, and only a universal return to faith in God will restore it. We must crusade, not only with good works, but also with prayer that this supernatural faith may lay hold of the hearts of all mankind. In my belief, we must trust the faith that can move mountains, the prayer that may find divine favor in living realities as real as the atom and indescribably more powerful.

I do not mean to speak in tones of careless reassurance as one sometimes does to a child. For all you and I know, it may be the incomprehensible and inscrutable will of God to make the 20th century closing time for the human race. But we do know from the law He implanted in us that we have a personal obligation to use the normal means to stay alive as long as possible. Our Nation and the human race have an inescapable duty to the Almighty to avoid an ending of this civilization until God's good time.

How can we ignore the manmade threats? How can we leave it to the experts? How can we pretend—and that's all it is, pretense—that God's laws have been mashed to nothing in the cyclotron and only amoral power survives? How can we ignore the fear, not panic but a holy fear, that our lives are failing Him and us in the time of His sternest test?

If each of us does his part, the rest is divinely simple: Thy will be done. Once, you may remember, a wise and simple man named Francis was hoeing in his garden. Someone asked, "If an angel appeared to tell you, Francis, that tonight you are to die, what would you do?" And St. Francis very calmly said, "Keep on hoeing in the garden."

With all its tremendous complications, with the very future of the human race at stake, our atomic agony comes down to this. We keep on hoeing and await God's will. In faith, we celebrate the resurrection and look beyond Eniwetok to Galilee.

Statesman From the New South

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, Mr. A. Boyd Campbell has been a leader in Mississippi for many years, and his accomplishments and contributions to society are well known to the people of my State. His recent election as president of the United States Chamber of Commerce has brought national recognition to our State, and we are understandably proud of him and his achievements.

In order that others throughout the country may have some knowledge of Mr. Campbell's background and abilities, I am including, under leave to extend my remarks, a feature article entitled "Statesman From the New South," which appears in the current Nation's Business magazine. This article is written by Mr. Tris Coffin, who recently spent some time in the State of Mississippi making a survey of conditions in our State. Not only did Mr. Coffin express amazement over Mississippi's tremendous progress in recent years in articles which he wrote following his visit, but he had the opportunity, also, to meet Mr. Boyd Campbell, the new president of the United States Chamber of Commerce, and to learn first hand of the esteem which Mr. Campbell enjoys at the hands of his fellow Mississippians.

It is with a great deal of personal satisfaction that I include the following article about my friend and neighbor as part of my remarks:

STATESMAN FROM THE NEW SOUTH

(By Tris Coffin)

A tall man walked down the main street of a thriving southern town. Every few feet, he was stopped by a friendly word or a handshake. For each well wisher, bank president or gas station attendant, he had the same warm smile—the smile of one who loves people.

This was a typical moment in the busy life of A. Boyd Campbell, the president-elect of the Chamber of Commerce of the United States. He is one of those rare souls, a natural leader, intelligent and broadminded, with a genius for conciliation. He gently closes the door on bombast and intrigue and tries to win other men's minds by reason and friendship.

He is chairman of the Mississippi School Supply Co. He calls himself "just a pencil peddler." After his election by the chamber of commerce board of directors, Mr. Campbell received a note from a Pittsburgh banker, a former member of the chamber's board.

"If anything is needed to demonstrate that the presidency of the chamber of commerce is awarded on a basis of merit and personality, rather than the influence of so-called big business, you are a perfect example."

Actually, Boyd Campbell is a statesman of the new South, a South busy with progress and growth. He and his friends—utility and railroad operators, publishers, bankers, planters, lumbermen, and industrialists—have changed the tide of Mississippi. Just three decades ago, this State was the poor relation haunted by illiteracy, a sagging cotton economy, and a spirit of lethargy. Today, thanks to these business leaders, dairy herds, beef cattle, and rice flourish on thousands of diversified green acres; factories are producing goods for an expanding southern market; hammers and rivet guns are building new schools. Boyd Campbell's foresight and persistence helped build these schools. He says again and again, "I believe with all my heart that public education is an economic good, a moral obligation, and a spiritual trust."

The new South of Boyd Campbell no longer waves the bloody shirt. The term "carpetbagger," which once described the hateful despoiler from the North is now an affectionate phrase for the hundreds of northern businessmen and technicians who have come to Mississippi to take part in its progress. This economic transfusion of capital and know-how is bringing to the South the grandsons of Federal troops which fought and burned their way to victory. A prime mover in Mississippi's startling growth is Michigan-born Rex I. Brown, chairman of the Mississippi Power & Light Co. In Mr. Campbell's hometown, Kosciusko, Attala County, a bus company with headquarters in Lima, Ohio, is manufacturing an export order of 500 buses to carry the Mohammedan faithful of Saudi Arabia to Mecca.

Across the State, trim new houses line the good roads where new model cars whiz by. The magnificent contrast that is Mississippi is on every hand.

In Jackson, the State capital, is the gracious 114-year-old Governor's mansion, presently tenanted by two-term Gov. Hugh White, founder of Mississippi's balance agriculture with industry program and spearhead of the State's industrial development. On entering the majestic old building with white pillars, stately arabesques and hand-hewn four-poster beds where Jefferson Davis slept, the visitor meets a soft-voiced colored maid who asks, "Kin ah rest youah hat, suh?"

Down the street, carpenters, metalworkers, and plasterers are busy on a building that will soon house the modern offices of the Mississippi School Supply Co., Jackson unit of the office equipment and printing division which Mr. Campbell says is the tail of his company which wags the dog.

In this new South, the New Orleans Symphony plays to sellout crowds in Cleveland, a town of 5,000; the Little Theater flourishes everywhere; the church plays an intimate part in the life and thoughts of the people. The divorce rate is relatively low. Juvenile delinquency is little known. A psychiatrist or ulcer specialist could starve.

This serenity and progress has been achieved by what Boyd Campbell calls a sense of mission.

It certainly is the chisel that molded his life. Mr. Campbell believes, as deeply as he believes in his God, that a solid society must have these elements: Equal opportunity, a high educational level, an expanding economy, deep moral and spiritual roots, and a sense of civic responsibility. His is a "benevolent and productive nature," in the words of Mississippi's famous editor-author, Hodding Carter.

This is proven by his own well filled life. He has worked not only in the chamber of commerce, locally, in the State and Nation, but in the Rotary Club, the Boy Scouts (he holds the second highest award that can be made to an adult, the Silver Antelope, for his years of devotion to scouting), educational groups, as treasurer of the board of trustees of his alma mater and has represented his country at the International Labor Organization Conference last year at Geneva.

Mr. Carter, writing in the Delta Democrat-Times, reveals another side of this extraordinary man:

"Quietly, but with personal enthusiasm, he has worked to help the people of our State. He has been particularly interested in cultural improvements, and in helping the underprivileged. Several years ago he helped to sponsor a concert tour in Mississippi for Laurel's then unknown Negro soprano, Leontyne Price. More recently, he completely supplied with art materials a Negro youth in Greenville whose unusual talent in primitive type painting had been discovered by local artists. We know there have been many such examples, rarely given any publicity and most frequently unknown even to his friends and family."

Long before the Supreme Court was ruling on the educational opportunities for Negroes, Boyd Campbell was fighting with reasoning, charm, and compromise for better Negro schools.

The same sentiment was sounded by Maj. Frederick Sullens, veteran editor of the Jackson Daily News: "Boyd Campbell has never shirked a civic duty or failed a public responsibility. Always he has been alert to all opportunities to serve unselfishly the community to which he is so ardently devoted."

Boyd Campbell's life is the story of the new South. His grandfathers Boyd and Campbell were officers in the Civil War. (It seems that only northern orators speaking in the South refer to it delicately as "the War Between the States.") He can recall both of them, one who fought at Shiloh, the other at Vicksburg, as courtly white-

haired, bearded gentlemen who never discussed the war.

When the grandfathers were mustered out, Jackson had been burned to the ground. It was wryly called Chimneyville. The devastated land, looted of its treasures, run by alien conquerors, fell into a sleep where the glory of the past lived again. In 1897 when Boyd Campbell was 8 years old Jackson was a drab town of 5,000. The streets were unpaved and dusty. There was no sewage system.

The boy lived on a small farm belonging to the impoverished gentility, a class, it seemed, with no future. Even then he could see the economic erosion of the South. Adventurous boys ran away to "make a good livin'" in Oklahoma and Texas. Wagons, headed west, creaked past his door. Today, the grandsons and great-grandsons of many who deserted Mississippi are returning to find what their grandparents found in the West—better economic opportunity.

The Campbell farm was in the sloping hill country about 80 miles northeast of Jackson. Old timers there remembered his father as a gentle philosopher; his mother as an indomitable spirit who wanted good schools and community activities. Their son, the eldest of 5 children, combines the qualities of both.

Today, many relics of his childhood still stand by the side of quiet, dirt roads. The barn he built in his teens is sagging slowly to one side. Not far from the old post road, the Natchez Trace, is the one-room school where he learned his ABC's. It is a sturdy, unpainted structure made of cypress logs pegged together and hammered through with square-headed nails.

Another link with the past, the 83-year-old Bethel Methodist Church, still plays an important role in Boyd Campbell's life. His parents and grandparents rest in its small cemetery where cedars and oaks protect the simple, hand cut stones from the sun's glare.

This little church, whose door is never locked, is a haven for Boyd Campbell. He often returns alone to seek solace there. He has told friends, "When the way grows dark, I always come back to this churchyard. It is a place of peace where perspective is gained. Somehow, the tangled weave straightens out and becomes simple again."

Even in this simple rural community progress is evident. A short time ago, Mr. Campbell and a visitor from the North stopped at a filling station on the outskirts of Kosciusko. He cheerfully asked the attendant, "How's business?"

"It's sure good," the other replied. "They've just hired a lot more people at the bus company. They've got an order there to make several hundred buses to take the Ay-rabs to their holy place in Mecca."

Mr. Campbell turned to his companion with a delighted smile.

"There now is real grassroots economic education. This is something folks can understand a whole lot better than an academic discussion of reciprocal trade. The immense possibilities of world trade are a known fact to the people of Attala County."

Kosciusko also figures in an enlightening and educational experience of Boyd Campbell. A year ago at the ILO he met a Polish woman delegate. She woodenly parroted Communist propaganda and maintained a cold, even hostile, attitude toward him. This puzzled and ruffled him because one of his traits is an amazing capacity to win friends in an enemy camp. One day, at a committee meeting, he told her, "I want you to know that my hometown in America was named for a great Polish patriot, Kosciusko, who helped the United States gain its freedom."

Her eyes lost their coldness as she replied, "I knew you were sympathetic when I first saw you." As she turned away, he saw her eyes fill with tears.

When the conference ended, she shyly presented him with all she had to offer, a handsomely bound Polish propaganda book.

As a youth, Boyd Campbell attended Millsaps College at Jackson. It is a small Methodist school with a reputation for scholarship. He worked at a sawmill and in wheatfields to put himself through college. His father wanted him to be a lawyer but that required money which he did not have. There were brothers and sisters who needed his help in going to college.

His field of economic opportunity was limited, so he was led to teaching. He rose to school superintendent in the north Mississippi town of Grenada. There he met Miss Sara Louise Horton, who became his wife. (The light of their life is a red-haired daughter, Mrs. Sara Jane Harris, a junior leaguer, who married her classmate, Richard Harris. In New York where Richard was working for an investment house while completing advanced studies in finance at NYU at night, Sara Jane found an outlet for her social conscience as a volunteer worker with the sick and young in tenement slums.)

In the spring of 1919, Boyd Campbell came to a hard decision. He was disturbed by the slow progress of education in the State, and frustrated by his inability to shove it ahead. Teachers, he felt, were not accorded the status in the community which the importance of the profession warranted.

They were bypassed in civic affairs and community development. He feels that the same is largely true today. This passive role did not fit Boyd Campbell. He decided to leave the schools and go into some business close to education. He had been surprised, as a school superintendent, to find that all his supplies had to be bought outside the State. With $250 borrowed on his insurance policy and $9,750 from friends, he launched the Mississippi School Supply Co. in one small room. Today, it is the sturdy parent of office equipment, printing, school supply firms and retail stores in five Mississippi communities. His companies include the School Book Supply Co., the Mississippi Corp., a financing firm, and the Magnolia State Foundation, into which charitable contributions of the Campbell organization are channeled.

Boyd Campbell—"just a pencil peddler"—is actually much more. He is a member of the executive committee of the board of directors of the First National Bank of Jackson, active in its affairs, and proud of its new office building, Mississippi's largest.

Membership on the board of directors of the Mississippi Power & Light Co., the State's largest taxpayer, has been rewarding to him because of his association with a group of kindred spirits who work in season and out for industrial development and community building in the 44 counties served by the big utility.

He is a long-time member of the board of the Gulf, Mobile & Ohio Railroad, a 3,000-mile carrier serving the Middle West and the gulf shore, and promoted the setting up of the G., M. & O.-Tigrett Foundation through which charitable and educational gifts of the railroad are channeled.

A northern business analysis firm studied organization of the Mississippi School Supply Co. and its affiliates and praised it as a model of efficiency and progress. The stores and shops, even the warehouse, are clean, neat, and attractive. They have a cheerful aura. Employees, from office boy to manager, greet the customer with smiles. An old lady from the country buying a 10-cent birthday card gets as much polite attention as a purchasing agent shopping for machines.

This is no accident. Boyd Campbell's business associates, from the least to the most important, are selected with great care; they are carefuly trained and shepherded over the rough spots.

When a promising young salesman hits the bottom the first time and is ready to go back to farming, Mr. Campbell works carefully behind the scenes to perk him up. He may even plant a sale. He says philosophically, "That big grin of self-confidence is worth money to the business."

This is not merely good business. Boyd Campbell has a genuine affection for young people, and tries to pick and mold them to be leaders of the new South. He told a friend, "The South has the greatest promise of any place in the world. But it is going to need stout helpers, leaders with brains, tolerance and understanding. The best work I can do is to provide a few of them."

Every one of his aids knows he is expected to take an active role in civic, religious, and business organizations, and to accept community responsibility. As a result, his staff is abundant with officers of local chambers of commerce, service clubs, Boy Scouts, school board, and churches.

A typical Campbell protege is a young man with a million-dollar personality. Tall, handsome, likable, he took honors in college and has a smart and beautiful wife. Soon after the boy came to work, Mr. Campbell found occasion for a serious talk with them.

He said kindly, "You've had it pretty easy, son, and that makes you careless sometimes. You are going to find that selling pencils will be a lot harder at times than making touchdowns or being class president. I think it would be better in the long haul if you would knuckle down, try hard to do everything the best you can and not rely on the sales that drift to you because you're a nice fellow or have a beautiful wife."

The girl said anxiously, "I'm so glad you said that. I feel exactly the same way."

He took Mr. Campbell's advice and did so well he has just been promoted to store manager. His wife whispered to Mr. Campbell the other day that they were expecting a child. His face lit up, and he said softly, "Now, that's the best word I've heard in a long time."

He meant it, too. This assured the community of a new generation of good leadership and moral responsibility.

How the Campbell employees feel about the boss was summed up by Jim Wilson, the Negro warehouseman who joined the company in 1920 fresh from the country. Jim says, "Mr. Campbell has been like a father to me. He stood by me in my time of trial. No better man ever lived. I'd like to stay with him until I die."

Weekly staff meetings, times for serious decision, are characterized by good-natured bantering. Jim Campbell, Boyd Campbell's younger brother and company president, takes the lead. Gus Ford, treasurer, is the most frequent target as is often the case with figgering men. Mr. Campbell affectionately refers to Randolph Peets, college mate and a few weeks his senior, as the company's "patriarch." The others came straight from Mississippi colleges to the company and grew up with it. This partly explains the spirit of camaraderie and intense loyalty that characterizes the Campbell team.

Boyd Campbell's main interest is education. He always says, however, "I'm not interested in education per se. My interest is in business—more and better business—and I know where to find it. It is always where there is the most education."

Education, to him, is the long-time answer to all the South's problems, from the racial dilemma to economics. He says, "In today's kind of world, unless we educate all the people, and educate them well, we have little chance to survive."

Since 1950 he has been chairman of the education committee of the Chamber of Commerce of the United States and has

spoken repeatedly on the bond between business and education. He opposes Federal aid to education, although many of his best customers are ardent partisans for it. His solution is to reduce the Federal tax load so States and communities have more taxable income and to repeal local laws that restrict taxation for education.

On the difficult and delicate issue of segregation in the schools, he spoke words that commanded the respect of the Nation. He said:

"I believe that all thinking southern leaders realize that the Supreme Court's decision on segregation will not be reversed. Once this fact is accepted, the South can move more rapidly to the solution of vast problems which flow out of that constitutional decision. * * * In solving the multitude of problems now upon the South, the major goal is an improved public-school system for all children. Some have said that the Court's decision is the cocklebur under our saddles to keep us galloping toward the goal of better schools.

"As the South moves toward this goal, it will find that construction of more school facilities, improved teacher salaries, and reorganization and consolidation of outmoded school systems will become as important a force for social and economic betterment as the continuing southern industrial and agricultural revolution.

"No one has the final answer to integration, not even the Supreme Court, and all of us must grope for even the most tentative answers. These tentative answers will evolve from the wisdom and good will of thousands of southern leaders of both races working primarily at the community level.

"This prospect of years of complexities makes it mandatory that we freely discuss the problems and be willing to work toward the only goal upon which all should agree—maximum educational opportunities for all children."

Mr. Campbell has pioneered in bringing educators and businessmen together at business-education days, which he describes like this, "A day when business moves out of the counting house and education leaves the ivory tower and the two meet in an area of mutual interest and agreement; a day when students stay at home and teachers go to school to learn how good a job they are doing in training manpower for industry. They go to learn more about the economic system which picks up the bill for education. In due course, this day will be followed by education-business day when businessmen will go back to school to understand educational problems and to help reinforce the role of education in preserving a free society."

Mr. Campbell explained the feeling that moves the new team of southern leaders of business and industry thus:

"Community development does not come about by chance. It is the result of the price that the most enlightened spirits pay in long hours of thought, study, research, and work for what is best. What is best may not be a factory or a new payroll. It may be better health, better housing, and better education. Whatever it is, someone must take the lead. No one can lead better or further than the businessman. And when he does, he is not only being a good businessman and a good steward; he is exalting the great American tradition."

It is this kind of philosophy that Boyd Campbell brings to the presidency of the chamber of commerce of the United States. When the chamber directors notified him of his election, he said this reminded him of the words of a devout Negro who, when offered a new job, said prayerfully, "Lord, don't give me no job that is too big for You and me." Mr. Campbell added, "This job is too big for me, but not too big for all of us. The failures will be mine, the successes will be yours—and His."

That is the kind of a man Boyd Campbell is.

A Laboring Man Looks at Labor

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent that a very illuminating article entitled "A Laboring Man Looks at Labor," which was published in the Tablet, a Catholic newspaper, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LABORING MAN LOOKS AT LABOR

(By Joseph A. Byrd)

Perhaps this is heresy for me, a man with 25 years' experience in the field of labor, to want to speak for myself.

Yet the more I read of the pronouncements of high union officials and the more I read the pronouncements of so-called labor priests who stem from the social action department of NCWC the more I realize that unless someone from the actual ranks of labor does rise up and speak his mind, we will soon be completely submerged in the sea of "depersonalization."

For all practical purposes, the pronouncements of the union official and that of the labor priest are identical, though the latter insists that we accept a profile of papal thought instead of the full-faced view one gets from studying papal teaching in its entirety.

However, my purpose here is to present the convictions I have had forced upon me over the years and not primarily to refute certain individuals.

LAUDS WORK OF PRIESTS

Nor do I want people to assume that the vast majority of the labor priests are not doing a good and much needed job. However, it is not this vast majority that is heard from today.

I know from experience how many times these really good priests have had to step in and settle a bad situation that could have been avoided in the first place if the labor movement were truly Christian, truly trying to promote the good of the working man.

Nor do I pretend to be right in all of the opinions that I have formed.

I have formed these opinions the hard way, and to me at least they are worth more than those that have been formed on the basis of theory alone.

By this I do not mean to belittle theory, for theory first opened the way to experimentation and then to practice.

But the errors of theory are made clear by experience, and it seems to be the voice of actual experience that has been silenced in the discussion so vitally involving labor today.

In Rerum Novarum (p. 30 of the Paulist Press issue) we read this quotation from Scripture: "It is better that two should be together than one; for they have the advantage of their society. If one fall he shall be supported by the other. Woe to him that is alone, for when he falleth he hath none to lift him up."

Then Pope Leo XIII continues with "It is this natural impulse which unites men in civil society; and it is this also which makes them band themselves together in associations of citizen with citizen; associations which, it is true, cannot be called societies in the complete sense of the word, but which are societies nevertheless."

MAN IS FIRST OF ALL A MAN

This explains why men feel the need of banding together into a union, not because Pope Leo XIII said so or because the Scripture said so, but because it is a natural impulse to do so.

In my experience I have known very few men who would not rather belong to a union if that union met the minimum requirements of decency and honesty in its efforts to serve its membership.

At the same time I know very few men who would not rather maintain their union membership on a voluntary basis.

Before a man is a workman or a union member he is a man and as a man he has a right to liberty of conscience. I think that is what our American bishops had reference to in their statement issued November 22, 1953.

The bishops said: "Liberty in political life may be described as the condition in which the individual finds himself unhampered in the discharge of his duties and in the exercise of his rights.

"Liberty, however, is something more than a political phenomenon as some disciples of free enterprise maintain.

"It is something more mature than that dream of rights without responsibilities which historic liberalism envisioned; it is certainly different from that terrorism of responsibilities without rights which communism imposes.

"It is something wiser than free thought, and something freer than dictated thought. For freedom has its roots in man's spiritual nature. It does not arise out of any social organization, or any constitution, or any party, but out of the soul of man.

"Hence to the whole tradition of the Western World liberty does not come essentially from improved conditions of living, either political or economic, but is rather the spring out of which better conditions must flow.

"A free spirit creates free institutions; a slave spirit permits the creation of the tyrannical ones."

DESIRES LIBERTY OF CHOICE

So we are confronted here not only with a natural impulse to join ourselves into a union but we also have the natural desire springing from the very soul of man to have liberty of choice in the matter.

Having made this the basis of my labor relations with my fellow man, I have been amazed to the point of astonishment at some of the statements made in some Catholic publications and by Catholic priests.

On Friday, January 14, 1955, the St. Louis Register published excerpts from what must have been a long letter from Rev. Albert F. Danter, in which he said this: "The right-to-work laws make it impossible for unions to force laborers to join unions or to compel industry to hire only union workers."

In that one sentence Father Danter has expressed part of the present program of big labor: "Laborers must be forced to join labor unions no matter what their kind or complexion and industry must be compelled to use only union workers." This is not compatible with Catholic teaching.

Paragraph 93 of Quadragesimo Anno, by Pope Pius XI says, "Just as the citizens of the same municipality are wont to form associations with diverse aims, which individuals are free to join or not, similarly, those who are engaged in the same trade or profession will form free associations among themselves, for purposes connected with their occupations."

Not only does this clear papal thought impeach the reasoning of Father Danter as

he stated it, but it also makes it clear that these associations should have for their purposes aims which are connected with their occupations .

Besides, the social teaching of the Catholic Church is designed to save souls, to help and guide us when certain evils confront us, and to bring justice to the workingman. It is not designed as propaganda fodder for a union membership drive.

GOOD UNIONS NEEDED

Speaking either as a worker or as a union member my opinion is the same: So far as unions are concerned, at least, bigness is not a virtue, nor is so-called union strength a virtue.

Too many times have we seen this union strength misdirected to actually oppress the union worker.

There have been far too many Evan R. Dales and Callinans, too many Harry Bridges and Nathan Witts, too many Lee Pressmans and John Abts, too many James Matles and Julius Emspaks and far, far too many small fry who are willing to carry water for them in union circles. We need good unions, not strong or big unions.

Again we turn to Rerum Novarum (p. 32) and read the words of Pope Leo XIII: "Associations of every kind, and especially those of workingmen, are now far more common than formerly.

"In regard to many of these there is no need at present to inquire whence they spring, what are their objects, or what means they use.

"But there is a good deal of evidence which goes to prove that many of these societies are in the hands of invisible leaders, and are managed on principles far from compatible with Christianity and the public well-being; and that they do their best to get into their hands the whole field of labor and to force workmen either to join them or to starve.

"Under these circumstances the Christian workman must do 1 of 2 things: either join associations in which their religion will not be exposed to peril or form associations among themselves."

Msgr. George Higgins of the NCWC social action department, writing in my diocesan paper (January 30), tells us that this quotation is taken out of context; that it does not apply in the current right-to-work discussion. He said that this passage pertained to certain unnamed, anti-Christian organizations in the past.

I do not think Monsignor Higgins is wholly correct. In my experience I have found it much more frequent that the church will condemn an evil practice rather than an organization; that wherever such evil practice occurs it falls under the ban of Catholic principle.

Let us see if this passage is actually applicable in whole or in part to this situation.

Do we have a movement afoot to get "the whole field of labor" into the hands of a few and to force workmen to join their organization or to starve? Are these unions managed "on principles far from compatible with Christianity?"

ASKS MORE THAN LIP SERVICE

The time is fast approaching—to the point of being upon us—when we must consider honestly whether the policy of big union officials to pay lip service to papal labor teaching is sufficient to protect the spiritual welfare of Catholic workers.

Is not the promoting of the class struggle out of keeping with Catholic principles? Every papal encyclical on labor has condemned it emphatically.

Pope Pius XII said: "If the signs of the times are not misleading, the second phase of the social dispute, on which it appears we have already entered, confronts us with problems and tasks of a different nature. Two of these we shall now mention:

"The overcoming of the class struggle by an organic coordination of employer and employee, for class struggle can never be a goal of Catholic social ethics, since the church feels itself equally beholden to all classes and strata of the people.

"In the second place stands the protection of the individual and the family against their absorption by the state, a process of excessive socialization at the end of which looms the threatening nightmare of Leviathan.

"Against this menace the church will fight uncompromisingly because the highest goods human dignity and the salvation of the soul are jeopardized" (address of Pope Pius XII to Austrian Katholikentag in Vienna, September 14, 1952).

Let us turn to the present program enunciated by the leaders of our two gigantic unions. Under date line from Miami Beach, February 5 (AP), we read that Walter Reuther, David McDonald, and James B. Carey, of CIO, are holding a committee meeting with George Meany, William Schnitzler, and Harry C. Bates, of A. F. of L. to discuss union unity. The purpose of this union unity is stated in that article as follows:

"The union leaders say that by combining forces under a single banner they can build greater political power for organized labor, tougher economic strength against employers, and more efficient drives to sell unionism to unorganized workers."

I have before me my January 1955 issue of the Midwest edition of Steel Labor, the "voice of the United Steelworkers of America—CIO." On page 2 of this issue we read the comments of President McDonald, of the Steelworkers, on labor unity, which he considered a must for 1955.

QUOTES UNION LEADER

Giving a reason for the necessity of unity between these two gigantic labor organizations, Mr. McDonald said: "If we have a united labor movement, we can have united political action and we can go out in a more unified way to support those who will devote themselves in the halls of the legislatures for the good of labor and all the people."

I have read a lot of such stuff in the past 25 years and I see in this the hopes of our union leaders of forming a super labor party or at least to forge a club with which to bludgeon recalcitrant legislators. Again we see the underlying aim to be described by the words "force" and "compel."

Here we see in the making the very leviathan against which we were warned by Pope Pius XII and against which the church must fight uncompromisingly.

Political power is not a thing that will aid the individual worker, but on the contrary is a power which may be used to enslave him.

Nor does it seem to be anything but a contribution to the class struggle to enable the unions to enjoy a tougher economic strength for union officials against employers.

To the average worker it means that industry has already done its share. Wages are higher now than they have ever been in the history of the world. But at the same time taxes are correspondingly higher, thus draining off the savings or the potential savings of the individual worker.

We are now in the position that the average worker himself has to pay himself in higher prices and higher tax percentages for every raise that is being conceded by industry through tough labor policies.

We have also read a great deal across the country recently in Catholic press circles, which derive their information from the NCWC social action department, which in turn expounds the philosophies or the pseudo philosophies of the Catholic Association for International Peace, concerning this right-to-work legislation.

These writers have been given full swing in a number of Catholic papers, and in the St. Louis Register they have gone so far as to create the impression that such legislation was now pending in the State of Missouri.

This legislation was alleged to be immoral according to these reporters and columnists. Yet a check with the State Capital at Jefferson City, Mo., brought us this information which we quote:

"I am unable to send you a copy of the so-called right-to-work legislation, inasmuch as it has not been introduced in either house of the legislature."

SEES MISINFORMATION

Considering this fact, it is difficult to understand the waste of printed space in the St. Louis paper to fight an issue that does not exist. It was apparently a "trial balloon," perhaps an effort to head off such legislation.

If so, it was not pictured in that manner. It was pictured as an organized effort of the National Association of Manufacturers and the chamber of commerce to fool the unsuspecting workingman and destroy the unions.

It is difficult to see how such an effort can be justified.

Apparently it was necessary to create a synthetic atmosphere in which arguments designed to aid the unions in their third stated objective—"for more efficient drives to sell unionism to the unorganized workers"—may be presented.

But if that is the case, the presentation degenerates to propaganda and seems entirely out of place in the Catholic press.

It misinforms Catholics not only as to an alleged present issue, but tries to indoctrinate the idea that Catholic social teaching aims at building up union membership.

This seems to bear out Pope Pius XII who, in his address to the Italian Catholic Association of Owners-Managers on January 31, 1952, said: "The great misery of the social order is that it is neither deeply Christian nor truly human, but only technical and economic.

"It is not at all built on what should be its basis and the solid foundation of its unity—viz., the character common to men of being men by reason of their nature, and also sons of God by reason of the grace of divine adoption." Here it seems to us that Pope Pius XII and Pope Leo XIII must have come to the same conclusions concerning social relations.

QUOTES POPE PIUS XI

But we might also consult Pope Pius XI. Let us read paragraph 130 of his "Quadragesimo Anno":

"Goods are produced more efficiently by a suitable distribution of labor than by the scattered efforts of individuals. Hence the Socialists argue that economic production, of which they see only the material side, must necessarily be carried on collectively, and that because of this necessity men must surrender and submit themselves wholly to society with a view to the production of wealth.

"Indeed, the possession of the greatest possible amount of temporal goods is esteemed so highly that man's higher goods, not excepting liberty, must, they claim, be subordinated and even sacrified to the exigencies of efficient production.

"They affirm that the loss of human dignity, which results from these socialized methods of production, will be easily compensated for by the abundance of goods produced in common and accruing to the individual who can turn them at his will to the comforts and culture of life.

"Society, therefore, as the Socialist conceives it, is, on the one hand, impossible and unthinkable without the use of compulsion of the most excessive kinds; on the other,

it fosters a false liberty, since in such a scheme no place is found for true social authority, which is not based on temporal and material advantages, but descends from God alone, the Creator and last end of all things."

However, we may hear the complaint that Socialists are not involved in this. This can only be claimed in a most restricted sense. George Bernard Shaw, the father of the Fabians, advocated that the name Socialism be dropped since it had fallen into ill repute. Our adversaries will claim that the Americans for Democratic Action are not Socialists—but in the restricted sense I have mentioned. "A rose by any other name is just as fair."

In the opinion of many Catholic workers, the advice given by St. Pius X, in his encyclical, "Singulari Quadan," given September 24, 1912, to German labor organizations ought to be brought into practice here.

It boils down to the recommendation that each Bishop in each diocese should pass on whether unions made up of both Catholics and non-Catholics in his jurisdiction are worthy of Catholic patronage.

GIVES PIUS XII'S STAND

It further recommends that Catholic unions should be formed and that all Catholic workers should belong to them as well as to the mixed unions that are granted ecclesiastical approval. Such a movement would certainly curtail the Evan R. Dales, the Nathan Witts and the Emspaks.

We earnestly urge all Catholics interested in the problem of labor to read this encyclical on labor by St. Pius X (Singulari Quadam, page 190 of "All Things in Christ," selected encyclicals and documents of St. Pius X by Rev. Vincent A. Yzermans, published by the Newman Press, Westminster, Maryland, 1954).

Now we might bring our discussion up to date and see if our present Holy Father has had anything pertinent to say on the same subject. The following passages are taken in their entirety, lest I might otherwise be charged with taking them out of context; they are from the Christmas Message of Pope Pius XII given December 24, 1952 (pp. 54–56 of Six Social Documents of Pope Pius XII, Our Sunday Visitor Press, Huntington, Ind.).

Under the subheading, "Oppression and Persecution," we read the following:

"Consciences are today also afflicted by other oppressions. Thus, for example, against the will and conviction of parents, teachers are prescribed for their children.

"Again, access to employment or to places of labor is made to depend upon registration in certain parties or in certain organizations which trace their origin to the labor market.

"Such discriminations are indicative of a wrong concept of the proper function of labor unions and of their essential purpose, which is the protection of the interests of the wage earner within modern society, which has become more and more anonymous and collectivist.

"In fact, is not the essential purpose of unions the affirmation in practic that man is the subject, and not the object of social relations?

"Is it not their purpose to protect the individual against the collective irresponsibility of anonymous owners?

"Is it not to represent the person of the worker against those who are inclined to consider him merely as a productive agent with a determined price value?

"How therefore, can they consider it normal that the protection of the personal rights of the worker be more and more in the hands of an anonymous group, working through the agency of immense organizations which are of their very nature monopolies?

"The worker, thus wronged in the exercise of his personal rights, will surely find especially painful the oppression of his liberty and of his conscience, caught as he is in the wheels of a gigantic social machine.

"Whoever would think that this solicitude of ours for true liberty is without foundation when we speak, as we do, to that part of the world which is generally called the free world, should consider that, even there, first of all real war and then the cold war have forcibly driven social relations in a direction which ultimately curtails the exercise of liberty itself, while, in another part of the world, this tendency has reached the ultimate consequences of its development."

Certainly no one can say that these passages have been taken out of context, nor can they say that these passages apply to some nebulous group in some far distant age. They apply to us here and now and if we do not heed them now we will surely experience "the ultimate consequences of its evil development."

URGES REVIEW OF STAND

It is difficult to say what has caused some in Catholic press circles to take the stand that they have on right-to-work legislation. Certainly a review of their stand seems to be in order.

For them we would like to repeat the advice of Pope Pius XII given to those interested in Catholic principles that concern our social problems. In his radio address to the Austrian Katholikentag in Vienna, September 14, 1952, he said:

"We feel it incumbent upon us to exhort you and all Catholics anew, from the very outset of the new developments in the social dispute, to hew close to the clearly defined line of Catholic social teaching without deviating either to the right or the left.

"A slight deviation may at first seem inconsequential. However, in the long run, it would lead dangerously away from the right path, and entail disastrous consequences.

"Sober thinking, self-control, steadfastness in the face of temptations from extreme positions, accordingly shall be the watchword of the hour."

National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present to you a brilliant report made by the Honorable JOHN L. MCCLELLAN, United States Senator from Arkansas, national director and outgoing president of the National Rivers and Harbors Congress. I commend this report to the reading of all of the Members of Congress and to the people generally who receive copies of the CONGRESSIONAL RECORD throughout the United States:

REPORT OF THE PRESIDENT, SENATOR JOHN L. MCCLELLAN, OF ARKANSAS, NATIONAL RIVERS AND HARBORS CONGRESS, MAY 26, 1954

Officers and directors of the National Rivers and Harbors Congress, delegates to its 41st national convention, and honored guests, I am happy that the National Rivers and Harbors Congress can now resume its annual convention sessions which were halted 4 years ago by a defense emergency, and I am especially pleased that so many delegates from all sections of the country are in attendance here today as I give to you this report of activities of the Congress since last we met.

You will recall that the fighting started in Korea 3 months to the day after our 40th session in May 1950 and thereafter all public-works construction except that of a defense nature was banned. In the light of this situation, our directors suspended the annual conventions until the emergency should be past.

In the spring of 1951, however, our officers and directors met together here in Washington, and invited a few leaders in our field to join us in discussions of policy and formulation of a plan of action to take while the Korean fighting went on. It was decided to continue the suspension of Congress meetings, and the project hearings, until such time as they might be expected to have more direct and profitable result.

Meanwhile, the national officers, not desiring to lose, during a sustained period of inactivity, the impetus gained from 40 years of progress, conceived the idea of holding regional meetings where rivers and harbors, flood control, and other water-resource projects pertaining to the particular area might be reexamined and, if so decided, kept in an active status.

Three such meetings were convened, and each was well attended and achieved some beneficial results. The New England States held an area meeting at Taunton, Mass., in May 1952; the Florida Waterways Congress was host to a regional meeting at Orlando in December 1952; and a statewide conference for the State of Illinois was held at Springfield in September 1953.

Out of these meetings came sound advice at the State and local level as to which projects might be laid aside, and which others might be retained and advocated at a later time.

Now we are met here in the 41st national convention of this body to consider many important matters concerned with the general subject of water resources, and to formulate our policies thereon. Much of the agenda was outlined in the call for this meeting sent out in March of this year. The subject set forth included: The urgent need for enactment of an omnibus flood-control and rivers-harbors authorization bill; the long-neglected maintenance of important rivers and harbors channels; the rapidly deteriorating merchant marine; the advisability of a sound program of public works to help absorb any slack in employment by reason of economic readjustments; and, despite the truce in Korea, recognition of the continued need for major expenditures in expanding and maintaining a strong national defense.

You have heard brilliant expositions of these topics yesterday by an impressive panel of speakers. Others are to follow, after which our projects committee will report its findings and recommendations as to the vast number of specific projects which were submitted and argued before it. Matters of general policy decisions will be laid before you in the resolutions committee's report.

Leading the list of officials who appeared before this Congress was the President of the United States. It is difficult to find exact words to express our appreciation for the interest that Mr. Eisenhower has shown in this program of conservation and development of the Nation's water resources.

This interest was first made manifest officially in the message to Congress on the state of the Union February 2, 1953, shortly after Eisenhower's inauguration, in which he called for a strong Federal program in the field of resource development. "Its major projects should be timed," he declared, "wherever possible to assist in leveling off peaks and valleys in our economic life. Soundly planned projects already initiated should be carried out. New ones will be planned for the future."

He urged that this program should not rest entirely on the shoulders of Federal bureaucracy, but rather should bring into partnership the States and local communities and private citizens, all working together. "This combined effort," he said, "will advance the development of the great river valleys of our Nation and the power that they can generate."

Reiterating the theme of partnership and joint responsibility in his state of the Union message in January this year, Mr. Eisenhower declared that the next fiscal year will see work started on 23 new projects which have met the Federal Government's requirements of economic soundness. Stating these would be built "with local sharing of cost wherever appropriate and feasible," he added: "The Federal Government will continue to construct and operate economically sound flood-control, power, irrigation, and water-supply projects wherever these projects are beyond the capacity of local initiative, public or private, and consistent with the needs of the whole Nation."

This message also recommended enactment of legislation to strengthen agricultural conservation and upstream flood-prevention work, and to achieve a better balance with major flood-control structures in the downstream areas. It promised recommendations for the adoption of "a uniform and consistent water-resources policy."

In transmitting his economic report to Congress in January, President Eisenhower wrote that "our approach to a position of military preparedness now makes it possible for the United States to turn more of its attention to a sustained improvement of national living standards."

Pointing out that the backlog of desirable Federal, State, and local public works is counted in tens of billions of dollars, he emphasized that such programs should be so designed and executed as to contribute to economic stability, by being accelerated in slack times and restrained in boom times.

The report promised that effort will be devoted during the present year to "the large task of evolving truly integrated long-term programs of major Federal works in the fields of water and soil conservation."

With regard to the advance planning of public works, our own national vice president, Congressman OVERTON BROOKS, of Louisiana, has introduced a bill in Congress which would require the Bureau of Reclamation, the Corps of Engineers, and the Bureau of Public Roads to report to Congress comparative figures on public works money for the year 1935 to 1941, and from 1945 to 1953.

The bill states that a massive public works program conceived to make war on a future depression would require years of planning to prevent loss of millions of dollars through the necessity for urgency and emergency action, in many cases authorizing public works which cannot be economically justified.

Great further encouragement in our aims is provided by the President's message submitted to Congress with the budget for fiscal year 1955. Here he speaks of budget provisions for helping to prevent the ravages of floods and soil erosion as one of the "constructive domestic purposes designed to strengthen the foundations of a stable and prosperous economy." Further, under the subject of tax proposals, it is recommended that deductions up to 25 percent of the farmer's gross income be allowed for soil conservation expenses on farms.

Under new legislative proposals, it is recommended that the sum of $3 million be authorized for cooperation with State and local agencies on watershed protection; and $10 million for aid for non-Federal development of water resources, with an added $400,000 for Federal projects.

The sum of $580 million is recommended to be obligated for civil functions of the Defense Department; in other words, for construction work of the Corps of Engineers. Net budget expenditures of slightly over $1 billion are estimated for 1955 in the category of "natural resources."

Here again it is pointed out that "a strong program of resource conservation and development is necessary to support the progressively expanding demands of our increasing population and to contribute to the economic growth and security of the Nation."

Budget recommendations provide for the continuation of river basin work now underway. Less urgent features of the projects, not required for operation of going or completed units, will be deferred. Budget expenditures of the Bueau of Reclamation and the Corps of Engineers include an estimated $443 million in fiscal 1955 to carry on construction of about 160 river basin development projects. A substantial amount of these expenditures is for multipurpose development for irrigation, flood control, navigation, and hydroelectric power. During the year, 20 projects will be completed or substantially completed, including 9 flood control projects, 5 irrigation projects, and 6 multipurpose projects with power facilities.

The budget further recommends starting work on 6 irrigation and water supply projects, 8 local flood prevention projects, and 8 navigation projects. In addition, it provides for resumption of work on 2 flood control reservoirs and 2 river and harbor improvements. This work is estimated to cost a total of $184 million, with expenditures of $20 million scheduled for the fiscal year 1955. Together with the St. Lawrence Seaway, this totals 23 new projects and 4 resumptions in the budget.

I think you will agree with me this by no means is all that is to be desired. We need to make faster progress—but as long as our Projects Committee continues to hear as many applications as they had before them on Monday, however, there is no danger of a shortage of proposals to be considered by the Federal Government in the way of land and water resources development.

Additional work should be undertaken, the President's message said, with a view to strengthening our vital upstream conservation activities. Farmers increasingly realize that it is in their own interest to do more of this work. Because the Nation, as well as farmers and local communities receive benefits, this work should be a joint responsibility. Existing law, however, does not provide an adequate basis for cooperative upstread development.

The 1955 budget, therefore, includes $3 million under proposed legislation to permit the Department of Agriculture to cooperate with local and State agencies in the planning and installation on small watersheds of the necessary protective facilities, and to provide for better conservation, development, utilization and disposal of water. This will supplement the $11 million to be spent under existing law for watershed protection and flood-prevention projects, but still this amount should be larger.

We approve and applaud the administration's policy toward public works construction, their permanent value to the national economy, their present value as defense spending tapers off to act as a deterrent to unemployment and recession, and the view that, wherever feasible, they should develop as a partnership of all responsible interests or those which may enjoy the benefits.

Improvements of internal waterways for navigation and for flood control not only have a beneficial economic effect to make our nation stronger, but they also effect beneficially the strengthening of our defenses. Particularly wise, we believe, is the resumption of flood-control works that are not completed, in order to avoid both the tragic waste from floods, and the loss of money already invested. Maintenance of navigation projects we consider foresighted action to provide water transportation to relieve congested railroads and highways, thus to prevent any future transportation delays which might adversely affect national defense efforts.

The National Rivers and Harbors Congress is pleased to find the administration in accord with its long-established policy favoring additional production of hydro-electric power, but opposing unnecessary Government competition with the private power industry in constructing such facilities. The budget report recognizes the "willingness of State and local groups to participate" in providing the power facilities, but states that where the necessary transmission facilities are not also being provided on reasonable terms, the Department of Interior will construct and operate them.

It is a source of great satisfaction to the National Rivers and Harbors Congress to find itself continuing to work in the company of the Corps of Engineers of the United States Army. There seemed serious danger a while ago that civil functions might be removed from their roster of duties, and we would lose them as leaders, staunch allies and coworkers in this field. Fortunately, reason prevailed, and the Engineer Corps continues its supervision of navigation and flood-control projects, a job which it has done superbly for more than a century, a peacetime job much less spectacular but in the large sense as vital, as the great achievements of the corps in the works of national defense or helping to win a war.

We are greatly indebted to the distinguished Chief of Engineers, Maj. Gen. Samuel D. Sturgis, Jr., for the interesting and valuable contribution he made to yesterday's program when he discussed the rivers-harbors and flood-control program.

Another Goverment agency with which we have learned to work together over many years is the Bureau of Reclamation of the Department of Interior, whose Secretary, Hon. Douglas McKay, honored us by attendance at this convention, and by his helpful presentation of his department's program of reclamation.

The great experience, expert techniques, alertness to improve their standards and methods in developing and utilizing our natural resources, of the Bureau of Reclamation, have certainly gained for them a reputation for competence which will reassure the United States Congress to believe that any moneys supplied to that Bureau will be completely justified and well expended. The same assurance should apply to any appropriations asked for the Corps of Engineers.

Another Cabinet officer who generously gave his time to appear before our Congress was the Secretary of Agriculture, Ezra Taft Benson, who discussed intelligently the soil-conservation program of his Department. This Congress has consistently supported the Agriculture Department's authoritative work on soil conservation, reforestation, and upstream watershed control. We support the future program in this field and oppose any change in it, unless perhaps it should come by way of expansion.

Foreign trade is much in the minds of nations throughout the world today, perhaps only secondary to the questions of war and peace. A vital factor in all considerations of expanding the trade of any nation is its merchant marine. A strong, effecient, modern American merchant marine is indispensable to development of our trade with world countries, to the preservation of our domestic economy at high peak in peacetime, but also it has been, and shall continue to be, an invaluable aid to national security in a national emergency, a vital factor to success in time of war.

We should like to urge upon the United States Congress that there appears united

sentiment throughout the country to support the development and mainetnance of our water-transportation facilities, as essential to our prosperity, with particular reference to the water carriers in the foreign trade, the domestic coastwise and inland waterways, the shipbuilding and repair facilities, and the maintenance of adequate harbors on our expansive coastline to service fully the commerce of our Nation.

The brilliant pages of history written by the American merchant marine during World Wars I and II were substantially augmented by further performance during the Korean emergency when American-flag vessels were available to serve the United Nations interests.

The United States, with its present world leadership in industry, finance, agriculture, and other fields, must continue to be a leading maritime nation. It must never have to depend upon foreign-flag shipping for bottoms to carry its exports, nor to aid its national defense.

Now, for a few moments before closing, I should like to talk about our organization and its future. After having served for 10 years as your president, I have not stood for reelection this time. This afternoon you will hear the names of your new directors. All 21 offices were vacant because we have not been able to hold elections for some time. With a wholly new board of directors in office, you shall be off to a flying start toward a richer and broader future. These directors shall meet and select a new president, and to him I wish to extend in advance my greatest good wishes, and a cordial pledge of cooperation, and the hope to be of further service to him and to the Congress whenever either shall call upon me.

The National Rivers and Harbors Congress is a body which moves quietly, avoids criticism, and performs wonders. It should have the unqualified and continuous financial support of all interests and individuals who realize the long-range vitality of America is measured by our evaluation of the land and water resources so generously given us by Providence.

Transportation depends in part upon our inland waterways, our barge lines; the harm of devastating floods can be halted by measures of control; soil erosion and the dust bowls can ruin agriculture or, by proper measures, can be brought under control; foreign trade depends upon navigable harbors and inland waters, as well as the open seas; irrigation can bring desert lands into production of food; impounding of flowing waters and building of dams and hydroelectric plants brings light and power for manifold uses to the city, and the farm dwellers.

All these, and many more, conservation activities are the zealous concern of the National Rivers and Harbors Congress. Their work is fortunately at present in general accord with expressed policy of the Federal Government. This is a time for forward progress on all fronts. I wish you all every possible success in your part of this tremendous program, for America's sake.

Chemicals in Food

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. MILLER of Nebraska. Mr. Speaker, I have today introduced a bill dealing with the use of chemicals in foods.

This bill represents an effort to modernize our Federal Food, Drug, and Cosmetic Act on a practical basis. The principal accomplishment of the bill is to close the loophole in the present law. This is done in two ways: First, by requiring the pretesting of food additives and food-packaging materials before they can reach the public; and second, by requiring the industry to submit a report of its pretesting to the Secretary of Health, Education, and Welfare before marketing the new food additive or new packaging material. Although responsible companies follow the practice of pretesting, the present law is deficient in that it is legally possible for untested materials to reach the consumer.

The primary purpose of the bill is to protect the public health. I believe this has been done, and reasonable safeguards have been established. Other factors which vitally affect the national welfare have been given careful consideration. For example, although the bill provides for a reasonable degree of practical control over new products of the food, packaging, and chemical industries, it also sets up balances which will prevent the stifing of research and competition in these important industries.

This bill provides a different approach than the Insecticide Act which I introduced in the 83d Congress. The reason for this is quite obvious. Many insecticides must be highly toxic in order to be effective. Food additives, however, do not present the same toxicity danger, and the possibility of a seriously hazardous food additive reaching the consumer is somewhat remote. Industry, as a whole, has performed an excellent and conscientious service by observing high standards of scientific testing before placing new additives in commercial channels.

The procedures established in this bill adequately serve to protect the public health, without requiring the Secretary of Health, Education, and Welfare to write and issue licensing regulations covering the use of new food additives or new packaging materials. The bill provides practical control mechanisms for the Secretary, without permitting strangulation of industrial research by capriciousness in the Department.

Outstanding representatives of science, industry, and Government have devoted many hours of thought and study to the legislative problems posed by the tremendous progress being made in this field. The bill attempts to incorporate the commendable features of legislation that has been proposed during this session of the Congress. It also attempts to meet many of the more serious objections to these bills.

The bill applies to all new food additives. By definition, however, substances generally recognized among experts as being without hazard to the public health in their present uses are excluded from its operation. Pesticide chemicals are specifically excluded, and new packaging materials are treated separately.

Under procedures established in the bill, before marketing a new food additive, the industry or person must file a report of investigations to show safety with the Secretary. The report contains, generally, all pretesting data and all pertinent information bearing upon the new food additive. The Secretary must render an opinion on the basis of the data before him within 120 days after the report is filed. If the Secretary renders a favorable opinion or fails to act within the allotted time, the applicant may proceed to market the additive.

If the opinion of the Secretary is unfavorable there are several courses which may be followed:

(A) The applicant may request a public hearing in the Department. After the hearing the Secretary shall enter a final order based upon the evidence adduced. Appeal from this order lies with the circuit court of appeals.

(B) Either the Secretary or the applicant may request an advisory committee, to be selected from representatives of science, industry, and Government under procedures outlined in the bill. This committee is so composed as to combine scientific knowledge with the approach of commerce and government.

(C) The applicant may elect to market the additive at the risk of having an injunction proceeding brought against him by the Secretary.

Several courses remain open in the event an advisory committee is requested by the Secretary or by the applicant. If the report of the committee is favorable to the applicant and is affirmed in an order by the Secretary, the applicant may proceed to market the product. If the report of the committee is favorable but the Secretary does not acquiesce, the applicant may either request a public hearing, appeal the order to the circuit court of appeals, or place the product on the market at the risk of an injunction by the Secretary.

If the report of the committee is adverse, the applicant may use the public hearing and appeal remedy; or the applicant may, in the alternative, proceed to market at the risk of injunction, but here the bill gives to the Secretary the benefit of a presumption that the new food additive would present a reasonable likelihood of hazard to the public health, and the burden falls upon the applicant to prove otherwise.

It should be pointed out at this stage that the applicant may withdraw the report at any time, and the Secretary may likewise modify or withdraw any opinion for cause.

New packaging materials have been treated separately in the bill because the potential hazard from packaging materials is very much less in degree, in that only trace contaminations generally may be involved. The bill does provide, however, that a report of investigations to show safety must be filed and, if the Secretary is of the opinion that the material presents a reasonable likelihood of hazard to the public health, the main sanctions of the bill shall be applied.

This bill attempts to reconcile the many divergent and conflicting points of view relative to regulation of the use of chemicals in foods. It is my belief that this legislation will meet the needs of dynamic, growing industries, and will provide a system of adequate controls, with the public health paramount. It is in this interest that the bill is submitted.

Apple Blossom Festival

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. QUIGLEY. Mr. Speaker, the Adams County Fruit Growers Association, in Biglerville, Pa., is having its annual festival, Apple Blossom Time, this coming weekend. Members who wish to take a pleasant and enjoyable drive on Saturday or Sunday are cordially invited to come to Adams County, follow the special signs, and drink in great beauty by touring along the Apple Blossom Trail.

Within 8 miles of Gettysburg are located heavy concentrations of orchards. To reach the trail follow United States Highway No. 240 to Frederick, Md., and then follow U. S. 15 to Gettysburg. From Gettysburg follow any of several routes to the Apple Blossom Trail, all of which will be adequately marked.

Once you have reached Pennsylvania, however, the spring beauty will be well worth the trip, whether you find the formally marked trail or just tour the countryside.

As a part of my remarks, I include a brief history of the development of the apply industry in Adams County:

ADAMS, THE APPLE COUNTY

Adams County, with its 2 million bushel apple crop, is a vital part of the Nation's apple industry. Nestled against South Mountain, in the Appalachian Mountain range, the country's fruit belt is concentrated in a crescent-shaped area of approximately 80 square miles across the northern section and south through the western part of the county.

The first commercial orchards were planted near Arendtsville in the late 1880's, the largest of which was approximately 10 acres. Fifteen years later these orchards came into bearing and Adams County was on its way to becoming a fruit producing area. Pioneer growers were plagued with disease and blight, and in many cases entire orchards were wiped out by disasters which agricultural science had no way of combating.

But Adams County's orchardmen discovered one important factor that changed their farm operations completely—soil and climatic conditions were conducive to fruit production. The rolling slopes of the Blue Ridge Mountains provided natural protection from damaging frosts at blossomtime, and the fertile soils possessed natural drainage formations on which fruit trees thrive.

Early commercial orchards were planted with an eye on the rich European markets—a trade that continued to flourish until the early thirties when export tariffs made overseas shipment impractical for American producers. However, almost simultaneous with the maturity of county orchards came the establishment of commercial apple processing plants in Adams County to encourage orchardmen to increase plantings and to seek scientific assistance in the protection and development of healthy, highly productive trees.

MANY FORTUNES LOST

Many fortunes were lost in the fruit industry between 1920 and 1935 because of world conditions, but with the industry's concentrated program toward consumer-consciousness, markets became stabilized in proportion to orchard production.

Today, some 300 Adams County growers own about 15,000 acres of apple orchards, many of them planted in third generation trees. In the course of progress many so-called sport varieties of apples have been planted for greater consumer acceptance. Orchards are set according to public demands, and orchardmen frequently plan their building programs on a percentage basis which includes early varieties, eating varieties and processing varieties. Because of the very nature of the different varieties, harvests are constant from late August until late November when winter freezes make their appearance.

One of the many important facts growers have learned in the past 50 years is that trees must be set with pollination in mind, which explains why—at harvesttime in particular—an orchard may bear fruit of contrasting colors. Yet, while some varieties are self-pollinating, thousands of bee colonies are imported during the blossom season to insure successful pollination of blossoms.

FIVE POPULAR VARIETIES

Most popular varieties of apples produced in Adams County are York Imperial, Stayman, Golden Delicious, Rome Beauty, and Red Delicious. These are acceptable in either fresh or processing markets because of their versatility. The Red Delicious continues to be the Nation's favorate eating apple, while the Stayman is popular in both eating and cooking circles. Golden Delicious has a flavor that appeals to the most sensitive taste, yet, along with Rome Beauty, is also a fine cooking apple. York Imperial, used primarily for processing, provides whole firm slices for baking and cooking. Inasmuch as the popularity of certain varieties is more prevalent in some consumer areas than others, buyers temper their stocks to local eating habits.

An estimated third of Adams County's apple harvest is packed for fresh consumption; the other two-thirds is delivered to processors. As recently as 10 years ago, growers with substantial crops maintained their own packinghouses, where fruit was packed in barrels or baskets. The individual packinghouse, however, was crowded out of the local picture during the war because of labor shortages, and today only a few of the largest growers operate packing facilities. Several commercial packers serve growers for fresh market outlets, and commercial sales agencies market supplies in excess of private sales.

CHOICE FRUIT STORED

Thousands of bushels of choice apples are placed in the various cold storages in the county for distribution as late as April and May. Many of these are repacked by merchants and distributors in pliofilm, mesh, or custom-made paper bags to answer still another demand of the consumer—the demand for smaller, more convenient household packages.

INVESTMENTS HEAVY

As the agriculture industry goes, fruit growers have extremely heavy investments in their operations. Trees do not reach maturity in less than 15 years, but the grower devotes thousands of dollars to the development of these plantings, for they must be pruned, fertilized, fed and protected from disease and pest damage. Equipment necessary in the operation of an orchard is intricate and expensive, and growers estimate a minimum investment of $15,000 in machinery and equipment. Depending upon the size of the operation, this investment could easily triple. Rising costs have forced growers to greater efficiency of operation and management. In Adams County irrigation systems have made their entry as still another means of meeting consumer and industry challenges. Growers who have installed such systems have invested another $10,000–$15,000 in pumps, pipes and ponds to combat droughts.

So far, science has been unable to develop harvest equipment to replace the thousands of men and women fruit pickers. Many of these people are almost professional pickers, careful to protect fruit from bruises and handling damage. Extreme care is necessary in the orchard to protect fruit from sunburn. Harvested fruit is run over graders to provide uniformity of size before it is ready for market.

TWO-THIRDS PROCESSED

Adams County's 3 apple processing firms, with 5 plants located within a radius of 15 miles, process about two-thirds of the normal crop into slices, sauce, vinegar, butter, cider and prepared pie fillings. Different varieties are required for different commodities, thus consuming a part of each variety's harvest starting September 1. Each of these companies maintains cold storage facilities so that the processing season normally extends well into late winter, and all have national distribution of processed apple products.

Adams County is famed also for its cherries and peaches. About 5,000 acres are planted in these fruits. About half of the country's red sour cherry crop is packed in local processing plants for shipping throughout local and foreign markets. The Montmorency variety of cherry has been developed as the most acceptable sour cherry for this purpose. The county produces thousands of bushels of peaches, the large percentage of which are placed in fresh markets. A highly perishable crop, peaches demand more of the growers' attention at harvest than either of the other two fruits. Within recent years, processors have packed local peaches on a large scale.

While apple blossoms dominate the blooming season in the county, cherry and peach blossoms are a definite contribution to nature's unusual sight every spring, complementing the delicate coloring of apple blossoms with pure white and deep pink blooms.

Voting and Attendance Record

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 2d session of the 81st Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

Voting and attendance record, Representative GERALD R. FORD, JR., 5th District, Michigan; 81st Cong., 2d sess.

Roll call No.	Date	Measure, question, and result	Vote
	1950		
1	Jan. 3	Quorum call	Present.
2	Jan. 9	do	Present.
3	Jan. 18	do	Present.
4	Jan. 19	do	Present.
		H. R. 5330, authorizing economic aid for the Republic of Korea:	
5	do	On recommittal to Committee on Foreign Affairs for further study and hearings. (Defeated, 190 to 194.)	Yea.
6	do	On passage. (Defeated, 191 to 193.)	Nay.
7	Jan. 20	Quorum call	Present.
8	do	Motion to adjourn. (Defeated, 161 to 255.)	Yea.
9	do	H. Res. 133, amending rules of House by repealing 21-day discharge rule which permits chairmen of legislative committees to bypass the Committee on Rules. (Defeated, 183 to 236.)	Nay.
10	Jan. 23	Quorum call	Present.
11	do	do	Present.
12	do	do	Present.
13	do	do	Present.
14	do	do	Present.
15	do	Motion ordering the previous question, thus ending debate on H. Res. 217, providing for the consideration of H. R. 331, a bill to provide statehood for Alaska. (Passed, 373 to 25.)	Yea.
16	Jan. 25	Quorum call	Present.
17	do	do	Present.
18	do	do	Present.
19	do	do	Present.
20	Jan. 27	do	Present.
21	do	do	Present.
22	do	do	Present.
23	do	do	Present.
24	do	do	Present.
25	Jan. 30	do	Present.
		H. J. Res. 398, increasing the cotton and peanut acreage allotments and marketing quotas under the Agricultural Adjustment Act of 1938, as amended:	
26	Jan. 31	On motion to recommit. (Defeated, 136 to 239)	Not voting.
27	Feb. 1	Quorum call	Present.
28	do	Motion that Calendar Wednesday be dispensed with. (Defeated, 104 to 271).	Nay.
29	do	Quorum call	Present.
30	do	do	Present.

239	...do....	On motion to recommit. (Defeated, 111 to 261.)	Yea.
240	...do....	On passage. (Passed, 264 to 108.)	Nay.
		Conference report on H. R. 6000, extending and revising the Federal old-age and survivors insurance system and amending the public assistance and child welfare provisions of the Social Security Act:	
241	...do....	On motion to order previous question on motion to recommit. (188 to 186.)	Yea.
242	...do....	On adoption of conference report. (Adopted, 374 to 1.)	Yea.
243	...do....	H. Res. 716, providing for the consideration of H. R. 6277, giving military discharges to the members of the Russian Railway Service Corps. (Defeated, 91 to 242.)	Nay.
		H. R. 7570, providing for the appointment of 1 additional district judge for the northern district of Ohio:	
244	Aug. 17	On motion to recommit to committee until such time as any vacancies existing in the northern district of Ohio have been filled. (Defeated, 142 to 146.)	Yea.
245	...do....	On passage. (Defeated, 133 to 148.)	Nay.
246	Aug. 22	Quorum call	Present.
247	...do....	....do....	Present.
248	Aug. 23	....do....	Present.
	...do....	H. R. 8850, creating 2 additional Assistant Secretaries of Agriculture and an Administrative Assistant Secretary of Agriculture:	
249	...do....	On motion to recommit. (Defeated, 123 to 222.)	Yea.
250	Aug. 24	H. R. 3775, providing for an additional district judge for the 3d division of the District Court for the District of Alaska. On passage. (Passed, 196 to 147.)	Nay.
251	...do....	H. R. 9477, providing allowances for dependents of enlisted members of the uniformed services and suspending certain provisions of the Career Compensation Act of 1949. On passage. (Passed, 361 to 0.)	Yea.
		H. R. 8677, providing for the maintenance and operation of the Panama Canal and to reconstitute the agency charged with the civil government of the Canal Zone:	
252	...do....	On motion to recommit to committee with instructions to amend bill to provide that no tolls shall be levied upon vessels engaged in coastwise trade of the United States. (Defeated, 20 to 330.)	Nay.
		S. 456, authorizing the construction, protection, operation, and maintenance of an additional public airport in or in the vicinity of the District of Columbia:	
253	Aug. 25	On motion to recommit to Committee on Interstate and Foreign Commerce for further study and investigation. (Defeated, 124 to 226.)	Nay.
254	...do....	Quorum call	Present.
		Conference report on H. R. 7786, making appropriation for the support of the Government for the fiscal year ending June 30, 1951.	
255	Aug. 26	On passage. (Passed, 311 to 1.)	Yea.
		S. 868, providing for dissemination of technological, scientific, and engineering information to American business and industry.	
256	Aug. 28	Quorum call	Present.
		S. 3357 to prohibit transportation of gambling devices in interstate and foreign commerce.	
257	Aug. 29	Quorum call	Present.
258	...do....	H. Res. 826, making in order consideration of H. R. 9490, protecting the United States against certain un-American and subversive activities by requiring registration of Communist organizations. (Adopted, 357 to 1.)	Yea.
259	...do....	H. R. 9490, protecting the United States against certain un-American and subversive activities by requiring registration of Communist organizations, barring Communists from Government jobs, requiring labeling and identification of Communist propaganda, denying passports to members of the Communist Party and prohibiting contributions by Government officials to Communist front organizations. On passage. (Passed, 354 to 20.)	Yea.
260	Aug. 30	Quorum call	Present.
261	...do....	S. 4029, providing for authorizations, through which the Armed Forces can meet the demands for additional personnel in the medical, dental, and allied categories to support the expanding forces without requiring the large scale call to active duty without their consent of Reserve officers who have had substantial periods of service in World War II. On passage. (Passed, 363 to 1.)	Yea.
262	...do....	H. Res. 834, citing Edward A. Rumely for contempt of Congress for failure to furnish certain information to the Committee To Investigate Lobbying Activities. (Adopted, 183 to 175.)	Nay.
263	...do....	H. Res. 835, citing William L. Patterson for contempt of Congress for failure to furnish certain information to the Committee To Investigate Lobbying Activities. (Adopted, 238 to 106.)	Yea.

303	...do	Quorum call	Present.
		S. 3295 to amend Railway Labor Act. On motion to recommit with instructions.	
304	...do	On adoption. (Defeated, 61 to 284.)	Nay.
305	...do	On passage. (Passed, 292 to 52.)	Yea.
306	Jan. 2	Quorum call	Present.
	...do	H. R. 5244, for the relief of Charles J. Trees. (Conference report.)	
307	...do	On adoption. (Adopted, 219 to 127.)	Nay.

Reclamation Faces a Crucial Battle

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. ROGERS of Colorado. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an excellent editorial that appeared in the Denver Post, Denver, Colo., on Monday, April 25, 1955. This editorial indicates many difficult problems that are not adequately explained and offers excellent recommendations for further development of reclamation. The editorial is as follows:

RECLAMATION FACES A CRUCIAL BATTLE

Attacks on the upper Colorado River storage project—by southern Californians, by eastern advocates of government retrenchment, by various other groups—have reached a dinning crescendo in the last few days.

The motive of the southern Californians is easily understandable. They have grown rich because Government dams have enabled them to use vast quantities of water from the Colorado. If they can prevent the building of upstream dams, the use of water in the upper basin always will be small and more water will be left in the river for California's benefit.

Southern California's selfish attitude is not likely to win many votes in Congress. It is regretted even by some of the Congressmen from northern California.

More damaging, perhaps, are new attacks launched against reclamation in general which are being used in an effort to defeat the upper basin storage project in particular.

These emphasize a number of themes which Raymond Moley, the one-man gang of Newsweek magazine, has been harping upon: reclamation is a boondoggle; it takes money from eastern taxpayers for the benefit of favored localities in the West; it increases farm production when we already have surpluses; it is uneconomical and a fraud on the Nation.

It probably is no accident that just at this time the Reader's Digest has published an article, Dollars Into Dust, by Leslie A. Miller, former Governor of Wyoming, and Holman Harvey which takes the Moley thesis and goes on to reach the conclusion that reclamation, except the reclamation of southern brushlands and swamplands, should be ended now, once and for all.

Mr. Miller, who developed a myoptic view of reclamation while doing task force work for the first Hoover Commission, authored another article a few years ago in which he attacked the Colorado-Big Thompson project. One of his complaints—which the new article repeats—was that the Big Tom was supposed to cost $31 million and turned out to cost $159 million.

He may be able to impress eastern readers with arguments of that kind but Coloradans know there are good reasons for the increase in cost. They know, for example, that the $31 million figure did not include many features of the Big Tom project which it was found desirable to add to original plans. They know that a World war, with tremendous inflationary results, intervened between the planning of the project and its completion.

They also know that the Big Tom proved its worth, not only to Colorado but to the nation, in period of last year's big drought when it saved crops on hundreds of thousands of acres.

In Dollars Into Dust, Mr. Miller and his associate put their emphasis on irrigation phases of the proposed upper basin storage project. An uninformed reader might get the impression that irrigation is virtually the only purpose of the project.

The authors argue that water devoted to industrial purposes yields a monetary return 50 times greater than the return from water devoted to irrigation but they fail to mention that the storage dams are necessary regardless of whether the water behind them is used for industry or for farms.

They fail to say anything about the industries which are certain to spring up to use the power generated at the upper basin dams. They give no hint of the fact that the storage dams will provide more domestic water for the growth of cities.

Actually, Colorado is as much interested in developing water reserves for industrial purposes—such as the processing of oil shale—as it is in storing water for irrigation but one would never guess it from The Reader's Digest article.

Messers Miller and Harvey quote figures worked up by the Tax Foundation to the effect that if the upper basin storage project is built, New York taxpayers would have to pay $271 million "to subsidize food surpluses their population does not need," Illinois and Pennsylvania taxpayers would have to pay about $152 million each, etc., etc.

This, of course, is an attack on the entire idea of reclamation. It rests on the narrow view that ony the man who takes water from a reservoir benefits from the investment in the dam.

Theodore Roosevelt and other founders of reclamation policy, had a broader view and for that the Nation may be thankful. They saw that we had water resources that were being wasted into the sea and that we had land which was of little value to individuals or to the country as a whole unless it was irrigated.

"The reclamation and settlement of arid lands," Mr. Roosevelt said, "will enrich every portion of our country, just as the settlement of the Ohio and Mississippi Valleys brought prosperity to the Atlantic States."

In approximately 50 years, about $2.4 billion has been spent by the Federal Government on reclamation in 17 States. It is a modest, though profitable, investment. We spend that much on national defense in a month.

The reclamation investment has created 7 million acres of new farmland. Most of the crops grown on reclamation projects are not among the surplus crops of which Mr. Miller and associate complain.

Reclamation lands have grown $10 billion worth of crops in 50 years. They have produced $225 million in electric-power revenues. The immediate areas which have been made to thrive because of reclamation have paid $3 billion in Federal taxes since 1916.

Retail sales in reclamation States exceed $40 billion a year. In 1951 reclamation States bought more than 1½ million railroad carloads of goods from the East. Since then purchases have increased. There is not a corner or hamlet of the Nation which has not benefited from western development and without reclamation many productive parts of the West would still be desert.

We who have seen the benefits—local, regional, and national—that reclamation has brought have not done an effective job of telling the story to the rest of the country. We have assumed, mistakenly, that everyone knew it. We must speak up, and fast, if the storage-project bill is to be saved in this session of Congress from assaults such as Mr. Miller and his associates have made.

Report on American Press and Radio Executives' Tour of Europe

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

BARSTOW PRINTER-REVIEW,
Barstow, Calif., April 1, 1955.

Hon. HARRY R. SHEPPARD,
Member of Congress, House Office Building, Washington, D. C.

DEAR HARRY: We have returned from the American press and radio executives' tour of Europe, including parts of Asia Minor and Africa. We felt greatly honored when you gave of your busy time to receive us in Washington. We felt more than flattered when you asked for a report, including our opinion of reciprocity from the many European nations.

In general we talked only to the top echelon in the countries visited. We did not go out and interview the peasant in the field. However, we believe we obtained a fairly accurate and representative viewpoint. Ordinarily we were briefed by our American Ambassador and his staff of experts the first day, and by the host country's top officials the second day.

Germany is 100 percent for the United States, and will reciprocate in every way possible. They like the American occupation forces. They regard us not as dictators of a conquered country, but rather as liberators and preservers of the peace. They feel that should the occupation forces be withdrawn today, Russia will take over tomorrow. Chancellor Adenauer is opposed to neutralization even though it would mean reunification. The Russians would move in at once. This is no idle threat. Remember the American airlift, when Russia tried to take over Berlin?

Austria is also 100 percent for reciprocity with the United States. They are rebuilding their economy and hope to be self-sufficient.

Yugoslavia is an unknown quantity. We are assured by their Government officials that Yugo is very much appreciative of the aid that the United States has given. They have signed pacts within the Western Powers. However, Stalin believed that Yugoslavia was with him, but in 1949 Marshal Tito arbitrarily severed relations. This country is very important, both strategically and politically to the Western Powers. It is expected, hoped, and believed that Yugoslavia will side with us and the Western Powers, but it all depends on one man—Marshal Tito.

Turkey is 100 percent for us.

Egypt intends to stay neutral, regardless of whether she is attacked by Russia or other outside powers. Right now she is greatly annoyed about the Israel incident, and the part that the United States played or did not play in this. She realizes and frankly states that without United States aid she would have never pulled through.

Greece is 100 percent for us. She frankly admits that without United States aid she would have fallen to the Soviets. She also is annoyed, not seriously, because the United States has not taken a more positive stand on the Cyprus question.

Italy will do everything they can to reciprocate with the United States. After the war, the elections turned up a 40-percent Communist vote. Italy would have gone to Russian dominance were it not for United States aid, and she realizes and appreciates this.

France wants to be independent, but is appreciative of our aid. Their Governments are changing so fast and so often that it is hard to get a definite commitment.

England is 100 percent in accord with the United States. They faced three major crises since the war's end, and in each case they state they pulled through only because of the help they received from the United States.

We can vote you or any other elected official out of office at the next election. We are free to write what we choose and to express our views in our newspaper. In the United States we have had the four freedoms since 1776. Our American heritage is something that we take for granted. We have a democracy. We had never realized how the divine right of rule by kings was taken for granted in Europe. With a few exceptions democracy is unknown in Europe.

Yugoslavia is a dictatorship, where the voter may vote yes or no on one candidate. Austria and Germany will soon become republics in fact, but today their government is subject to the occupation forces. Turkey became a republic in 1923, but the first free election was not held until 1946. Egypt was ruled by King Farouk. Then on July 26, 1952, came the revolution and the military took over. There are no free elections in Egypt today and the press is under censorship. Greece is better off but is still under a constitutional monarchy. Italy had no free elections until 1949. The common people in these countries just do not and cannot understand the right of the people to rule. They have been accustomed for endless centuries to be ruled by the classes. We are taking movies of the trip. We feel a picturesque scene is that of a beautiful palace in the background with a poorly dressed and overloaded peasant in the foreground. Through the centuries there has been untold wealth among the classes and extreme poverty among the masses. The summer palace of the Austrian emperors is beautiful to behold. With its expensive tapestries, the marvelous paintings, its own chapel, the immense ballrooms, and the handcarved and gold plated furniture, it must represent a cost of some $100 million. But these palaces were built at the expense of millions of peasants living in sub-sub-standard living conditions. These peasants lived, and many of them live that way today, in straw huts with dirt floors. They are fortunate if they have an oil lamp. They earn anywhere from $120 to $300 a year. It takes them at least 5 months to buy a new outfit, including suit, shoes, shirt and underclothing. Consequently, they cannot buy clothes. Their money must go for food. Their clothes are patched and repatched from generation to generation. Suffering from malnutrition, with a background of centuries of divine right of rule, they have no ambition to rise above their existing level. Our slaves were far better off. When a southern plantation owner paid $500 for a male Negro, he had an investment to protect. He saw to it that his Negroes were adequately fed and housed and received adequate medical care. Such is not the case in Europe. In Egypt today, 1 out of 4 babies die before it reaches the age of 5, and those that survive may have eye and other diseases that stay with them for life. "But," one person asked us, "Why don't these persons rise above their surroundings? Abraham Lincoln did." Lincoln had a mother that could read and write. He had access to books. In Egypt 80 percent of the people

are illiterate. Their parents cannot teach them, and they may be hundreds of miles from any literature. In Turkey there are no railroads today and few roads. We were told that in Egypt there were only three schools. In Berlin the United States built and gave to the city the first public library in the country of Germany. There is an optimistic side. Egypt under its new 5-year program plans on 4,000 schools or 1 for every village. They plan on a high school in every town and also 6 colleges and 3 universities. King Farouk who cooperated with the British lived an immensely wealthy life. We asked to see his palace. "Which one?" they asked. "He had six of them." He also had 2 dozen Cadillacs, a marvelous Nile River steamer and a beautiful oceangoing yacht. The military took over July 26, 1952, and has been ruling the country since.

Turkey also gives promise of developing. They are planning on numerous schools, developing roads and railroads, making themselves self-sufficient and raising the standard of living.

How about American aid? One of our party was much incensed that the United States had spent $1¼ million for a library in Berlin. Others did not like the $4 billion figure spent on the point 4 program in Egypt or the $12 billion spent in Italy. There were, of course, additional billions spent in France, England, and Germany. A lot of American taxpayers' money has been spent. Has it been worth it? We have to go back to President Roosevelt's remark, "Our frontier is now on the Rhine." Then we should reread Wilkie's One World. We crossed the Atlantic Ocean in a civilian plane in 7 hours. Today, as you have realized long before this dawned on us, there are no boundaries. We are all one world. Having seen the extreme desolation and utter destruction in Berlin, we thank God that such a thing has not happened in the United States, but it could. Jet bombers with nuclear fission bombs could devastate our country easily. To be frank, Greece would have admittedly fallen to communism if it had not been for United States aid. With Greece in the Soviet fold, Yugoslavia would never haved dared to break with Russia. Italy was ripe for a change. It voted 40 percent Communist in 1949. The five satellite countries plus these three would have given Russia a tremendous hold on Europe. It is entirely conceivable that without United States help, the major portion of Europe would be under Russian influence. Austria and Germany certainly would have been under the Russian banner.

We think the United States money that has been poured into Europe has been repaid several times over, and the United States is leading the way to seeing that another world war will never occur, if it can possibly be prevented.

Europe has been a constant battleground for centuries, ever since it existed. In Germany, we saw many statues of Prussian generals extolling them for conquering France. In France, we saw many statues of French generals extolling them for conquering Germany. This is true of all Europe. It seems to have been the ambition of every country's leaders to conquer another country. So there was warfare back and forth. One country would conquer another. Then a generation later the other country would conquer the first. This was done at the expense of the masses, who were in a state worse than slavery. These monuments to us are sickening. We hope and pray that we never have them in this country.

We saw the pyramids. They are beautiful. We saw all the effects from King Tut's tomb. Not 1 gold casket, but 3, and not 1 beautiful box but 3 to hold these triple caskets. The furnishings were elaborate. Those rulers, even 4,000 years ago, lived in splendor and luxury while the masses starved. Thank God it cannot and will not happen in these United States.

Russia is going to be interesting to watch. Stalin was secretary-general of the party, which is the absolute ruler of the country. In addition, he was Premier. He had the secret police spying on the army, and the army spying on the secret police; he had a civilian, a good party member, at the head of the army. Stalin was unbreakable.

Malenkov took over and under some delusion that the premiership was all powerful, relinquished his control as secretary-general of the party. He also abolished the secret police but still kept the NKVD. The party was and is all powerful and Malenkov was deposed. Marshal Bulganin was appointed Premier, but Nikita Khrushchev as secretary-general of the party is still all powerful. However, something new has been added. The army is now headed by army officials. Stalin would never, never have permitted this. It is conceivable, and in Russia anything is conceivable, even though improbable that the army might take over, and the Russian army believes in peace.

There is no chance that the satellite countries will overthrow their Soviet domination. The Russians have increased their military strength from 40 to 80 divisions. They have intermingled Russian troops with satellite troops. They have an excellent spy system and are fully prepared to put down any insurrection before it occurs.

We feel you know all of this. It is like telling a professor that the English alphabet is composed of A, B, and C but there are our opinions.

We were impressed with everyone we met. However, there are a few that we believe stood above the rest and particularly impressed us:

Adenauer, Chancellor of Germany. He is some 79 years of age and the question is who will replace him. There is no one. He has been solely responsible for the success of the German republic. Almost single-handedly he put over the Paris peace pacts. He is responsible for the German Republic of today.

Nasser, President and Premier of Egypt. He is only 37 today. He engineered at the age of 34 the military revolution that deposed King Farouk. He is sponsoring the 5-year program for Egypt that will make Egypt self-sustaining. His tenure in office depends on the military.

Byroade, United States Ambassador to Egypt. He is young and deals with and has the confidence of the young men ruling Egypt today. He has a military background and can speak the same language that the military rulers of Egypt do. He made a special trip down the Nile and in spite of a previous dinner engagement took time out to receive us at 6 p. m. Sunday. The State Department is to be congratulated on his appointment.

Anthony Eden, now Minister of Foreign Affairs of Great Britain and slated to be the next Prime Minister. His informal attitude and his off-the-record talk made all of us feel that we had known him for ages.

We have some marvelous men in our State Department. We were vastly impressed with all of our ambassadors and their staffs. We met them at the briefings, but got far better acquainted with them at the inevitable receptions that followed.

In this world of today, what is happening? What is being done to secure world peace? Are the American dollars being spent in a worthwhile manner? We read about U. N., NATO, SHAPE, and other alphabetical symbols; what do they mean? Tie them all together, and we believe they mean a sincere effort toward world peace and possibly realization. First is U. N., or United Nations, which ties in all the leading nations of the world. Separate from this, but organized under the provisions of chapter 51 of U. N., is NATO, or North Atlantic Treaty Organization, consisting of 14 countries. Germany will be the 15th. NATO, with 100 divisions, 4,000 jet planes, and hundreds of airports, is organized to strike back immediately in case of aggression. They can hold for 30 days, during which time the nations affected will have time to mobilize. Now, all these pacts are for defense only, not aggression. Cooperating with NATO is the Western European Union. We were briefed on all these, and could write much more than this brief outline. Now the Honorable John Dulles is organizing Asia into a mutual-defense pact. Of interest is the Iron Curtain. The Russian sectors and zones of Austria and Germany are not behind the Curtain, and travel from the allied zones to the Soviet zones is unrestricted. The Iron Curtain is bordered by the five satellite countries and Russia itself. We did fly over it, and 18 members of our party continued on to Russia. The border is a cleared strip with all trees, brush, and obstacles removed. It is plowed in most cases every night and the strip watched for footprints. Many sections have electrically charged barbed wire. It is also planted with land mines and has holes like bear traps dug. There are towers along the Iron Curtain, and bloodhounds patrol the border. A neat trick of the Russians is to have a false border some 2 miles inland in certain parts of the area. The escapee crosses this false border and then rushes to the nearest uniformed guard to ask where the refugee station is. The guard, who is a Russian officer, turns him in.

The trip has been a great experience for us. We are trying to give you an idea of the tour and our opinions through this account, and we thank Heaven that we were born in the United States where we have freedom of speech, the right to vote, and have a standard of living that is unbelievable to the masses of Europe. There is a great deal more that we could tell you, but we have very briefly tried to cover the highlights.

Cordially,

CARYL KROUSER, *Publisher.*

Albert L. Hammer

EXTENSION OF REMARKS
OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. FORD. Mr. Speaker, in Grand Rapids, Mich., today they are celebrating Albert L. Hammer Day. Mr. Hammer has served as secretary of the Rotary Club there for 40 consecutive years. He was selected for that position in 1915 at the age of 32 and has held the office ever since. He has given unselfish devotion to this public service.

Mr. Hammer is actively employed as a certified life underwriter, and with his wife, Dora, has reared four children. He has been a member of a number of church choirs, and has conducted the choir of East Congregational Church. He is an ardent sportsman enjoying golf, fishing, and bowling. Mr. Hammer has been, and is, a good, solid American. He is the kind of citizen of which any community may be proud.

Mr. Speaker, under leave to extend my remarks, I include a copy of the proclamation issued by the mayor of Grand Rapids designating April 23 as Albert L. Hammer Day:

A PROCLAMATION

Whereas this month, April 1955, one Albert L. Hammer, a resident of Grand Rapids, Mich., is observing his 40th consecutive year as secretary of the Grand Rapids Rotary Club; and

Whereas Rotary International consists at the present time of more than 9,000 clubs situated in 89 countries and political subdivisions, with a membership exceeding 400,000 members of different races, creeds, and nationalities over the face of the globe; and

Whereas no other individual has ever served so continuously and for such a great length of time, thereby investing Albert L. Hammer with the distinction of being the oldest living secretary in point of service of the entire Rotary world, or any other service club; and

Whereas the Grand Rapids Rotary Club, organized in 1913, with charter No. 77, by taking cognizance of this unique fact by honoring their secretary at their regular meeting on Thursday noon, April 28, 1955, a recognition he so richly deserves:

Therefore I, George Veldman, mayor of Grand Rapids, do proclaim and set aside this day in said city of Grand Rapids, as Albert L. Hammer Day, and so do set my hand and seal.

GEORGE VELDMAN,
Mayor of Grand Rapids.

APRIL 28, 1955.

Boone County Pays Debts

EXTENSION OF REMARKS
OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1955

Mrs. HARDEN. Mr. Speaker, on Tuesday of this week it was my privilege, along with many of my Hoosier colleagues, to attend a breakfast here sponsored by the REMC's of Indiana. A special feature of the breakfast, in addition to the appearance of Vice President NIXON, was the presentation to the Rural Electrification Administration of a check in final payment of United States Government loans to Boone County (Ind.) REMC.

The presentation, made to Mr. Ancher Nelsen, Administrator of REA, represented the final payment by the Boone County REMC of Federal loans totaling $772,926 over a period of 20 years.

This was, in my mind, somewhat of an historic occasion. Next month, we will observe the 20th year of operation of the Rural Electrification Administration. The question automatically presents itself: Has REA been worthwhile?

The Boone County experience convinces me that the answer must be a definite "Yes."

The Boone County REMC obtained its original loan from REA on November 4, 1935, in the amount of $567,926. Subsequently, additional loans were approved, totaling an additional $160,000. These loans have now been repaid in full. Interest charges totaling $182,937.14 also have been paid, so the Federal investment has been a profitable one. Meanwhile, the Boone County REMC has provided electrical service for a total of 3,528 individuals and firms, mainly rural. Source of the supply of power has been, I might point out, private rather than public and the REMC has found it both possible and profitable to maintain this relationship with private suppliers.

The Boone County experience, it seems to me, provides solid evidence of the soundness of the rural electrification program in this Nation. And certainly it proves, too, that the management of the Boone County REMC has been both provident and successful in its operation.

It is my privilege and pleasure at this time to call the attention of the Members of this House to two brief speeches by officials of the Boone County REMC, Mr. Paul Morton, board president, and Mr. H. E. Antle, manager. The speeches follow:

ADDRESS BY PAUL MORTON

The Boone County REMC directors and manager are here today for a somewhat unique reason. It is unique in the fact that we came to Washington not to ask for some definite consideration. I think you, as Members of the Congress, will agree that the lack of such is within itself at least a little unusual. We are here, though, to voluntarily give something to one of the departments of the Government—a check. This check is a payment that we are making without the least reluctance on our part, which is also somewhat unique. It is the final payment on the loan granted for our electric distribution system.

It is certainly not my purpose to bore you with a long list of events, dealing with the history of our cooperative, but would like to give a few highlights of the development. The original allotment was made July 22, 1935, in the amount of $567,926. This was to build 567 miles of line and serve 2,200 consumers. Since that time there were 5 other loans of $25,000, $54,000, $25,000, $32,000, and $24,000, respectively. That brought the total advance from REA to $727,926. Besides the advance from REA the members have invested from margins $508,292 back into the system. That makes a total of $1,236,218 that has been used in building the plant. At the present time there is a total of 770.74 miles of primary line serving 3,528 consumers. The first line was energized on May 22, 1936.

We are extremely pleased with the financial condition of the cooperative. Besides making the final payment of the loan, we have other investments as follows:

Invested in Government bonds to match the meter deposits made by the members	$34,621.00
Invested in Government bonds and Treasury certificates or almost one-fifth of the depreciation reserve	104,060.00
In bank deposits which is sufficient for normal operation of system	35,507.52

We have an ample and attractive home office and all of our mobile and other equipment is in excellent condition. There is a definite reason why this has all been possible. The average service bill in February 1955 was $12.32 for 508.9 kilowatt-hours, compared with $2.68 for 43.5 kilowatt-hours in January 1938. That is an increase of almost 1,200 percent.

Admittedly Boone County, Ind., has had some advantages which to some degree have helped in the marked accomplishment. It is a rich agricultural county. Density and power utilization are high. The major part of the construction was completed before the war while costs were lower. Climatic conditions are favorable for high consumption of electricity. Also, the rural people of Indiana are cooperatively minded. But I feel I would be lax if I didn't mention at least one thing that this cooperative has proved. First: Any appropriation you as Members of Congress see fit to make for rural electrification and any loan that REA chooses to make to rural people, under proper management, and capable supervision, should stand a good chance to be repaid. The Boone County REMC is definitely rural and almost strictly agricultural. The December billing included:

Farms	3,105
Nonfarms	207
Churches and schools (all rural)	33
Power users	2
Small commercial users (mostly agricultural)	70

About 90 percent of the $38,209 collected that month came from rural agricultural sources.

The second rather pertinent remark I would like to make—this loan has been repaid altogether on private power. In Indiana we do have reasonably favorable wholesale sources of electric power from private companies. I know, this has been considered impossible by some within our own ranks, but it seems that we have proved convincingly that rural electric cooperative does not have to have certain advantages offered by public power.

Not all problems are solved when a cooperative is out of debt. There come certain demands from the membership, such as: When are you going to reduce rates? And what recognition do I have of the portion of my service bill that has been used to retire debt or build the capital structure of the organization? As I said before, Indiana is not without some cooperative experience and we have some striking examples of how a good cooperative should be built and operated. We would like to build a sound businesslike utility—owned and operated by the farmers of Boone County, Ind. To do this we feel that there are a few principles we should follow:

1. Maintain plant in same top condition that it is now in and continue to offer best possible service.
2. Do all financing of future expansion with local (preferably members capital).
3. Maintain sufficient reserves in form of cash or bonds to meet unanticipated emergency.
4. Be very cautious about, and probably avoid, any drastic rate lowering policy.
5. Recognize capital that members have invested, probably to the extent of paying interest on the same.

Again, being somewhat unique, we would like to first thank you as Members of Congress for making an appropriation establishing REA, which has in turn made it possible for us to own and operate a rural electric distribution system. We have always enjoyed our association with REA, and only because we farmers have been taught that it is thrifty and sound business to pay off the mortgage, that we are happy to be able to sever legal relationships.

ADDRESS BY H. E. ANTLE

In reality this occasion has more significance than the mere assembly by a group of people representing our Government and the Indiana Rural Electric Systems. It is quite fitting and proper that we meet today. On May 11, 1935, the Rural Electrification Administration became a reality and by Executive order was permitted to make loans up to 20 years to responsible agencies for the purpose of constructing rural electric systems for rural American farm folks. At that time less than 1 of every 10 of America's farmers had electric service. A few days from now REA will celebrate its 20th birthday. The presentation of Boone County's final payment here today is a fitting tribute to the foresight of the folks con-

nected with our Government and to our farm folks who shouldered the responsibility of seeing that this agreement was carried out, that the farm folks received electric service and that the loan was paid during its agreed time. Frequently we believe it desirable for all of us to take stock, to examine the promises that we have made to one another, to the farm folks, to the Congress who made the money available for the construction of the system, and to the administrative personnel who have administered the program. A short review shows today that the Boone system has met all of its obligations; that is, every farm family in Boone County who wished electric service has it today, and those same farm folks have contributed a sufficient amount by the use of electricity and their payment of reasonable electric service bills to enable the system to complete its obligation to the Rural Electrification Administration and to pay the final loan in its entirity.

It is our sincere thought that today is just the start of a series of systems on which the Rural Electrification Administration and the Congress have entrusted money on a loan basis to become self-liquidating and to begin repaying their obligations in full to our Government.

If I could be permitted to make two or three comments with respect to the Hoover Commission and its report on the Rural Electrification Administration, and more particularly to page 64 of this report. The report says, "The additional demand for capital by the REA cooperatives have been met wholly from additional REA loans." This is not a true statement. The total investments in the Boone system as of December 31, 1954 amounted to $1,236,218.49. The total demands for all time as loans by the REA amounted to $726,967. The mere subtraction of these two figures shows that our system consumers have invested $509,251.49. It certainly is evident that the additional demands for capital have not been met wholly from additional REA loans. Farther down on this same page we note a statement, "It is obvious that loans are not in fact, self-liquidating, when substantial subsidies remain in effect permanently." The check that has been presented today, together with the figures shown above of the amount invested by our own consumers certainly is evidence that this statement bears a further checking. We have no quarrel to pick with any Government commissions or agencies, in fact we have total respect for all. However we do believe that today, evidence has been shown that the report as submitted to our Congress should be reviewed very carefully before acceptance by the folks who will have to examine and accept or reject this recommendation.

Elizabeth Jane Hench

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. QUIGLEY. Mr. Speaker, on Monday, May 2, Mrs. Elizabeth Jane Hench, of New Cumberland, Pa., will observe her 100th birthday anniversary.

This event will be marked by a celebration on Sunday May 1 when the Medical Society of Pennsylvania will present this splendid lady with a plaque, which reads:

The Medical Society of the State of Pennsylvania extends greetings and felicitations to Mrs. Elizabeth Jane Hench, born May 2, 1855, in recognition of one whose life span exemplifies healthful living.

The presentation will be made at the home of Mrs. J. Cover Sterline, daughter of Mrs. Hench, in New Cumberland, by Dr. Edward S. Kronenberg, Jr., president of the Cumberland County Medical Society. Later there will be a birthday party, at which there will be five generations of Mrs. Hench's family.

Doctors advise me that Mrs. Hench is in excellent physical condition and retains full use of all her faculties.

I am sure I express the sentiments of my colleagues in wishing this great lady a most happy birthday.

The Effects of Atomic Explosions on the Frequency of Tornadoes in the United States

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. VAN ZANDT. Mr. Speaker, in view of the oft-repeated statement that atomic explosions are believed to have a marked effect on weather conditions, the following manuscript written by Mr. D. Lee Harris, United States Weather Bureau, Washington, D. C., and published in the December 1954 issue of the Monthly Weather Review is timely and of informative value since it discusses the subject in detailed fashion:

EFFECTS OF ATOMIC EXPLOSIONS ON THE FREQUENCY OF TORNADOES IN THE UNITED STATES [1]

(By D. Lee Harris, U. S. Weather Bureau, Washington, D. C.)

ABSTRACT

The upward trend in reported tornades during the past few years has led many people to suspect that atomic explosions are responsible for the increase. Because there is no known physical reason for believing that atomic explosions should affect the tornado frequency, the records of tornadoes and atomic explosions are examined in considerable detail to find evidence which will support or contradict this popular hypothesis.

It is found that tornado reports have always been incomplete and that much of the recent upward trend in tornado frequency can be accounted for by improvements in the tornado reporting system. A comparison of the distribution of tornadoes and of debris from an atomic explosion in time and space does not support the hypothesis that atomic explosions tend to increase the tornado frequency.

INTRODUCTION

The 532 tornadoes reported in the United States in 1953 exceeded the next highest yearly total of record by more than 200. Of the 532 tornadoes, 294 were reported between March 17 and June 15, the period when atomic weapons were being tested in Nevada. The coincidence of this increase in the number of reported tornadoes with the increase in the frequency of atomic explosions in 1953 led many people to believe that atomic explosions caused an increase in tornadoes.

Because of its importance to the success of atomic tests and to the transport of the radioactive debris, the weather during periods of atomic tests has been studied in considerable detail (Cumberledge (1), Holzman (2), and List (3)). Any obvious effects of the explosions on weather should have been revealed by these studies, but no evidence of any effect away from the test site was found.

Machta and Harris (4) have investigated the possibility that the debris from atomic explosions might provide ice nuclei in regions having a natural deficiency, and thereby affect the rainfall regime for a short time after each atomic explosion; that the debris might interfere with the amount of solar radiation reaching the earth, and thereby change the temperature at the ground; or that the radioactivity of the debris might change the electrical properties of the atmosphere, and that this in turn might lead to some changes in the more observable weather. They found that none of these possibilities was likely to occur to any significant extent. They were unable to find any theory which is consistent with the known facts that would indicate that atomic explosions could alter the natural occurrence of tornadoes.

Since the true cause of tornadoes has not been firmly established, the failure of any of these theories to relate tornado occurrence to atomic explosions, is not in itself conclusive. However, an examination of the available observational data should show whether there is any reliable evidence of a relation between atomic explosions and tornado occurrence.

TORNADO RECORDS

The number of tornadoes reported to the Weather Bureau during the period 1916 through 1953 is shown by the bars in figure 1. The solid line shows the linear trend of these reports based on data for the years 1921–50. The dashed line shows the rate of population growth as determined from the last four census reports. The correlation between these two lines suggests that the linear trend prior to 1950 may be due to factors which are closely related to population, but some other factor must be found to explain the increase since 1950. In order to find this, we must examine the method of collecting tornado statistics.

Tornadoes are occasionally observed by Weather Bureau observers. More often, the first report of any tornado or suspected tornado comes from the public. Sometimes the first report is found in a newspaper account of the storm. Each reported tornado is investigated by a meteorologist, in person if possible, but it is often necessary to rely on detailed reports by laymen who live in the vicinity of the reported storm. These investigations sometimes disclose sufficient information to permit definite identification of the storm as a tornado, or to show that the initial report was in error in calling the storm a tornado. More often the data are inconclusive, and it is unlikely that all meteorologists engaging in the study of tornadoes would agree on the classification of every storm. However, no storm can be investigated much less classified, unless a report of it reaches the Weather Bureau and thus the first requirement that any storm must satisfy before it can be classified as a tornado and appear in the statistics, is that it be reported to the Weather Bureau. It is unlikely that all tornadoes are reported, and it appears probable that the percentage of tornadoes reported is greater in regions of high population density, and that it increases with the population and with the effort spent to obtain complete reports.

[1] Paper presented at 133d national meeting of the American Meteorological Society, Miami, Fla., November 17–19, 1954.

EFFECTS OF POPULATION DENSITY

The hypothesis that the percentage of tornadoes reported is a function of population density is difficult to check because the meteorological conditions which favor the formation of tornadoes are not equally common over any large region. However, if we select a small area of high population, say a county, and surround this with a group of counties with low population density, the meteorological conditions should be about the same in both regions, so that any observed difference in reported tornado frequency will be due to chance occurrences or to the population differences. The population and tornado statistics[2] have been examined in this way for six States in the Tornado Belt, Nebraska, Kansas, Oklahoma, Iowa, Missouri, and Arkansas. In figure 2, the 28 counties or groups of counties of these 6 States having a population of 50 persons or more per square mile in 1940 are shaded. The outlined unshaded areas denote the surrounding counties with lower population densities. The average tornado density for the period 1921–50 is higher in the high-population areas in 22 of the 28 regions. A summary of these data is given in table 1.

TABLE 1.—*Average tornado density per 1,000 square miles per year as a function of population density*

	1921–50	1951	1952	1953
Counties with more than 50 persons per square mile	0.304	0.234	0.466	0.633
Counties with less than 50 persons per square mile	.220	.169	.267	.645

The mean difference in the tornado densities in these two types of area for the period 1921–50 is 0.084, and the standard deviation of this mean is 0.041. The probability of obtaining a difference of this amount, when no true difference exists, is only about 0.04. Since there is no theoretical reason for expecting a correlation between tornado occurrences and population density, the true cause of the difference is probably the completeness or incompleteness with which tornadoes are recorded in the two types of area. Since the population is not evenly distributed throughout the high-population counties, it is also probable that even here tornadoes have occurred which were not reported.

The data for 1951 and 1952 are also biased in the direction of greater tornado density in the high-population regions. In the data for 1953, this bias disappears, suggesting that the reporting of tornadoes in rural areas may have caught up with that in urban areas. However, the tornado density was higher in the low-population areas in 9 of the 30 base years, and the results for a single year cannot be regarded as significant.

EFFECTS OF INCREASED EFFORT TO OBTAIN REPORTS

During World War II, at the request of defense officials, the Weather Bureau organized a large number of severe local storm warning networks around military bases and ordnance plants. Most of these were discontinued shortly after the end of the war. However a few, in the most storm conscious areas of the country remained active from the time they were first established.

In 1949, the weather bureau began to reactivate some of these networks and to establish others around weather-bureau offices, especially those east of the Rockies. State and county law-enforcement officers, and many other organizations such as the Red Cross and public-utility companies, as well as many private citizens were asked to report certain information concerning any severe local storms that came to their attention. The number of these networks was increased from 11 in January 1949 to over 100 in January 1953, and 170 in January 1954.

In 1953 and 1954, the weather bureau cooperated with Federal civil-defense officials and civic organizations in establishing community reporting and warning networks for protection from fast-moving storms such as tornadoes. Several hundred such networks have been established, and all tornadoes detected by them are reported to the weather bureau.

Developments in tornado research since 1950 have led to a need for an even greater improvement in the completeness of tornado reports. In 1951, contracts were negotiated with private press-clipping services to increase the completeness of tornado reports received by the weather bureau. This policy has been continued and extended since 1951. Tepper [5] has described the workings of the clipping service in 1951, and only a summary will be given here.

The clipping service was in effect from late April through August 1951 for the States of Kansas and Oklahoma in the region of maximum tornado frequency. The efficiency of this service is indicated by table 2 (from [5]). It is seen that in Kansas and Oklahoma the number of storms officially designated tornadoes during the 4-month period, May–August, was 126 compared to a 35-year average of 18. The number for the remainder of the country was 94 compared to a 35-year average of 61. This amounts to an increase of 600 percent in the area covered by the clipping service as compared to an increase of only 54 percent in the rest of the country, for the period the clipping service was in full operation. No other State having as many as 10 tornadoes during the year showed an increase comparable to that of Kansas and Oklahoma.

TABLE 2.—*1951 monthly and annual frequency of tornado reports for the entire United States and for the Kansas-Oklahoma area, after Tepper [5]*

	United States			Kansas-Oklahoma			United States less Kansas-Oklahoma		
	Reported in newspapers	Official record	35-year mean	Reported in newspapers	Official record	35-year mean	Reported in newspapers	Official record	35-year mean
January	3	3	4	0	0	<1	3	3	4
February	19	10	5	6	6	<1	13	4	5
March	12	9	17	4	4	2	8	7	15
April	39	27	24	27	19	5	12	22	19
May	86	76	33	64	55	9	22	21	24
June	125	90	26	77	51	6	48	39	20
July	32	25	12	9	6	2	23	19	10
August	35	29	8	20	14	1	15	15	7
September	9	9	7	2	2	1	7	7	6
October	3	3	4	1	1	1	2	2	3
November	12	12	5	0	0	<1	11	12	5
December	11	11	3	0	0	<1	11	11	3
Annual	386	300	149	210	158	28	176	142	120
4-month total	278	220	79	170	126	18	108	94	61

In 1952, the clipping service covered the same area for the period March through August. This time the number of tornadoes reported in Kansas and Oklahoma was 54, or an increase of 116 percent over the 35-year average. The number reported in the remainder of the country was 160 or an increase of 78 percent over the long-term average.

In 1953, the clipping service was extenedd to the 11 States within the heavy outline in figures 11 and 12 and was effective from February through August. Of the tornadoes in the United States in 1953, 86 percent occurred during this period so a satisfactory comparison can be made by considering only the annual totals. There were 292 tornadoes reported in the area covered by the clipping service compared to the 35-year average of 54. This amounts to an increase of 440 percent. There were 240 reported in the 37 States not covered by the clipping service. The 35-year average is 91, so that this increase is only 160 percent.

In 1954, the clipping service was extended to all of the United States east of the Rocky Mountains and a comparison between the rate of increase in the States covered and in the rest of the United States becomes meaningless.

The effect of the newspaper clipping service in increasing the total number of tornadoes reported to the Weather Bureau is obvious. However, this may not explain all of the increase. The advances made in tornadoes forecasting, in tornado research, and the publication of a great many popular articles concerning tornadoes since 1950, as well as the severe local storm warning networks mentioned above, have led to a greater interest in tornadoes among many segments of the public and this has led to an increase, difficult to evaluate, in the number of tonadoes that are reported directly to the Weather Bureau or to newspapers. One significant change in the character of tornado reports in recent years is in the number of reports of tornado funnels not reaching the ground. This is shown in figure 3. The rate of increase of tornadoes reports of this class (fig. 4) is much greater than the rate of increase of tornadoes doing heavy damage, and is believed to be an indication of the increased interest in tornado reporting, for it requires a greater interest in the subject to report a tornado of this class, than to report a damaging tornado.

The possibility of an actual increase in the number of tornadoes cannot be neglected. The synoptic weather patterns during the tornado season in 1953 were similar to 1933, the year with the maximum number of tornadoes before 1951, and it appears likely that 1953 would have been an unusual tornado year by any system of counting. Although more tornadoes were reported in 1954 than in 1953, there appears to be little reason for believing that 1954 was an exceptionally favorable year for tornadoes.

It is clearly established that tornado statistics were incomplete, at least before 1954, and that improvements in the methods of collecting tornado reports have been responsible for much of the increase in the totals reported since 1950. This improvement has been so great that it cannot be determined from an inspection of the tornado records whether or not there has been any increase in the actual occurrence of tornadoes.

CORRELATION BETWEEN DATES OF ATOMIC EXPLOSIONS AND TORNADO OCCURRENCES

To study the possible correlation between atomic explosions and tornadoes it is necessary to consider the distribution of both tornadoes and atomic debris in time and space. It will be recalled from figure 1 that in 1945, the year in which the first atomic bombs were exploded, the number of tornadoes reported in the United States was well below normal. The second group of atomic explosions, this time in the Pacific, was conducted in 1946, and this year also was below normal in reported tornadoes. Both the intense program of atomic weapons testing in the United States and the rapid increase of tornado reports began in 1951. Therefore, only the last 4 years have been studied in detail.

Although the total number of tornadoes reported has increased in recent years, due to increased emphasis on obtaining complete reports, this does not preclude the possibility that the atomic bombs may have had some influence on the development of tornadoes. In order to investigate this possibility, it is necessary to form a hypothesis concerning the manner in which this influence might be exerted. Since no evidence

has been found of any large-scale effect of atomic explosions on weather, it will be assumed that the influence, if any, must be confined to the time of the explosion, or to the location of the radioactive cloud. The amount of radioactivity from an atomic explosion decreases rapidly with time, and much of the debris is brought to the earth within a few days after the explosion, therefore, any effect due to the debris must decrease rapidly with time.

If atomic explosions have encouraged the formation of tornadoes, it is to be expected that the seasonal distribution will have been altered in the direction of relatively more tornadoes during and for a while after the period of the atomic tests than at other times. The trend toward more complete tornado reporting was more or less continuous between 1920–1950 and there is little reason for believing that the reporting system was improved more in one month than in another. Thus it is reasonable to assume that the relative seasonal distribution of tornadoes is better known than the total number that occur in any particular year. The data for 1921–1950 have been used to determine a 30-year average (normal seasonal distribution) of tornadoes.

Figures 5–8 show plots of the daily accumulated tornado reports for the years 1951–54. In order to make the reports for these later years comparable with the earlier years when the reporting system was less efficient, the scale on the right shows percent of the annual total; the actual number of tornadoes is given by the left-hand scale. The "normal" distribution is given by the dashed line. The actual numbers for the "normal" distribution are given on the left-hand margin in parentheses. The dates of all atomic explosions in the United States, and of all announced atomic explosions elsewhere are indicated on these graphs. In 1951 (fig. 5), the test periods in the United States were in January, February, October, and November, outside of the usual tornado season, and there is no indication that any of these explosions were associated with tornadoes. The Pacific tests were in April and May and the fraction of the annual total occurring during this period was below normal.

In 1952 (fig. 6), the first period of intensified tornadic activity occurred before the first atomic explosion, and, in general, an outbreak of tornadoes preceded rather than followed an atomic explosion. This certainly does not indicate a possible cause and effect relation. Again in 1953 (fig. 7), the first two groups of tornadoes occurred bofore the first atomic explosion, and the tendency toward a record year was established before the atomic test program was begun. There is some evidence of an increase in the tornado frequency a few days after some of the atomic tests in 1953. However, in view of the large number of tornado groups and the large number of atomic explosions in the spring of 1952 and 1953, this coincidence does not appear to be more than one might expect by chance. Once again in 1954 (fig. 8), the first group of tornadoes occurred before the first atomic explosion. None of the steep regions on this curve correspond to a pronounced increase in the amount of fission products in the areas in which the tornadoes occurred. The data for 1954 are provisional and some corrections are to be expected in the official records.

The above data are summarized in figure 9 which shows a comparison of the seasonal distribution of tornadoes in 1951–54 by months with the average value for the period 1921–50. The light line represents the average number of tornadoes for each month expressed as a percentage of the average annual total for the base years 1921–50. The heavy line gives the distribution for each month since 1950, expressed as a percentage of the annual total. The 1954 tornado data were brought into this scheme by assuming that the ratio of the number of tornadoes in the first 8 months of 1954 to the total for the year, would be the same as the average number in the first 8 months to the average annual total in the base years 1921–50. The vertical bars indicate the periods during which atomic tests were conducted. These are summarized in table 3. Each month is regarded as a bomb month if any bombs were exploded during the month or during the last 3 weeks of the previous month.

TABLE 3.—*Departure from the normal seasonal distribution of tornadoes in months with nuclear explosions*

	Nevada bombs	All bombs 1951–53	All bombs 1951–August 1954
Number of months above normal tornado frequency	4	6	7
Number of months below normal tornado frequency	6	9	11
Accumulated percent above normal	12	18	22
Accumulated percent below normal	22	36	46

Actually, the amount of data involved in this table is too small to permit the formation of any reliable conclusions or to justify any test of significance. However, the evidence presented indicates that atomic explosions may have a tendency to inhibit the formation of tornadoes, and that the effect is greatest when the bombs are farthest away. The data certainly do not support the theory that atomic explosions cause tornadoes.

GEOGRAPHICAL DISTRIBUTION OF TORNADOES AND ATOMIC BOMB DEBRIS

If one could assume that the improvement in the reporting system has been about the same all over the country, a similar study could be based on the geographical distribution of tornadoes. However, the effort to improve the completeness of the reporting system between 1950–53 was concentrated in those regions in which tornadoes are most common, and this coincides reasonably well with the regions most frequently crossed by the atomic clouds from Nevada. Thus, one should expect an increase in the relative number of tornadoes reported from these regions irrespective of any effects from the atomic bomb. Although the sparseness of the data and the known lack of uniformity in the records form different States prevent an objective investigation of this effect, some information can be obtained by considering figures 10–12. Figure 10 shows the location and track of all tornadoes reported in May from 1916 to 1950. Figures 11 and 12 give the location of all tornadoes reported in the first and last halves of May 1953. The isolines give the relative cumulative amount of radioactive fallout in arbitrary units recorded by the Weather Bureau network during the period of the maps. In spite of the increased coverage of tornado occurrences due to the press clipping service, no tendency for a relative increase in tornado frequency in those areas most affected by the bomb debris can be found in these figures.

Daily maps of tornado locations have been compared with maps showing the movement of atomic debris for all atomic explosions of the past 3 years. These maps do not indicate any correlation between the location of tornadoes and the distribution of atomic debris.

SUMMARY

There has been a great increase in the reported frequency of tornadoes in the United States during the past few years. A study of the distribution of reported tornadoes indicates that the reports have been incomplete prior to 1950 and may still be incomplete. However, considerable effort has been spent in the past few years to improve the completeness of these reports, and much of the trend toward an increase in the number of reported tornadoes is due to this effort.

A study of the distribution of tornadoes and atomic explosions in time does not indicate any tendency for a relative increase in tornadoes during periods of atomic explosions. Furthermore, a study of the geographical distribution of tornadoes and the radioactive debris from at atomic explosion does not indicate any tendency for a relative increase in tornado frequency in the regions most affected by the atomic debris

Those "Quickie" Hearings

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1955

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Times News at Twin Falls, Idaho, April 6, 1955. This editorial most appropriately calls attention to the recent hearings which were held in the Northwest in connection with Hells Canyon Dam legislation:

THOSE "QUICKIE" HEARINGS

The "quickie" hearings at Boise, Lewiston, Pasco, and Portland to get grassroots sentiment on the new Hells Canyon bills recently introduced in Congress are turning out just about as would be expected.

When the Senate Interior Reclamation Subcommittee—stacked as it is with Democrats favoring Government construction of a high dam in Hells Canyon—opened its first hearing at Boise, it was obvious from the start how that committee's thinking is slanted.

The chairman as much as said the committee hoped these hearings would convince one and all that the Government, and no one else, should take over Hells Canyon.

However, when Gov. Robert E. Smylie, as first witness to testify, let it be known that Idaho wants no part in a Government deal for Hells Canyon, the committee got its eyes opened. The Governor not only suggested that Congress would do better by having the Federal Power Commission decide on the feasibility of a Hells Canyon Dam, but also expressed grave doubt that the proposal before the committee was seriously tendered.

No open-minded person in attendance at the Boise hearing can deny that the weight of testimony, although the number of witnesses was equally divided, leaned heavily toward opposition against a Government-built high dam.

Lined up against any such a proposal was the Governor, the president of the Idaho Reclamation Association, the master of the Idaho State Grange, a spokesman for the Idaho Farm Bureau Federation, and the Idaho director of the National Reclamation Association.

The best the proponents could offer did not measure up by comparison. Their spokesmen included Secretary of State Ira Masters, several labor leaders, and a few farmers who took issue with the stand of the State's leading farm organizations. Secretary Mas-

ters, as usual dealt in such generalities as "smudge pots" and the "people's future."

But none of the proponents could minimize successfully the biggest stumbling block in all their arguments—that once the Government gets control of Hells Canyon any future Congress could place upper Snake River water users at a disadvantage to carry out all the functions of the Government-owned and operated downstream project.

At Lewiston, one of the most glaring of all the absurdities offered by those favoring a high dam, came from a National Rural Electric Cooperative Association vice president, who said:

"Most of Idaho's key people in the Government are opposed to public power because they are more or less controlled by pressure groups."

These key people, instead of being opposed to public power because they are controlled by pressure groups, are fighting Government intervention because that follows the majority thinking in Idaho—the majority that elected these key people in Government to the offices they hold.

These same Hells Canyonists have contended all along, and so testified before the congressional committee, that the farmers in Idaho are afraid of the power monopoly and that the newspapers, with few exceptions, are controlled by the same interests.

That is an outright misrepresentation that insults the intelligence of any sensible person and appeals only to those gullible enough to swallow such tripe. What newspaper, or what farmer if you please, is afraid of the Idaho Power Co.? The suggestion is ridiculous.

In Oregon and Washington, although the Governors of both States stand with the opposition, it's reasonable to assume that certain interests are rubbing their hands in eager anticipation of getting power generated by Idaho's Snake River waters. They'd be stupid to turn down any such a handout if we're saps enough to give it to them, as other States already have learned under similar circumstances.

Why wouldn't there be a world of support in Washington and Oregon for a Government-controlled Hells Canyon? Once the Government gets control of the lower Snake River, their preponderance of strength in Congress will have little difficulty in surmounting any weak protest our handful of Senators and Representatives might raise.

It's all so strange in Idaho. Even though the key people in State government, the key representatives of our major farm organizations, and nearly all of the State's newspapers are opposed to Hells Canyon, the combined opposition, if you are to believe the Hells Canyon enthusiasts, doesn't mean anything.

We're just afraid of some big, bad bugaboo, that's all. Or, as Secretary Masters tried to explain it, we probably don't know what's good for us because "we haven't been enlightened."

Mayor Wagner Submits Board of Estimate Resolution on Natural Gas Regulation to House Committee on Interstate and Foreign Commerce

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. KLEIN. Mr. Speaker, in the course of his excellent discussion today of natural gas issues while a witness before the House Committee on Interstate and Foreign Commerce, Mayor Robert F. Wagner submitted to us copies of the resolution on this subject adopted by the board of estimate of the city of New York on April 21.

This resolution pointed out the effects upon New York City consumers of natural gas of the proposal to exempt producers of natural gas from Federal price regulation. The Supreme Court, as we know, settled a long-standing argument on this question last year by declaring that the Federal Power Commission has the power, and has always had the power under the Natural Gas Act, to regulate the price of gas moving in interstate commerce.

The oil and gas industry which controls so much of the natural gas now moving through the interstate pipelines is determined to overturn this decision. They are hoping to lull the consumer into sitting quietly by while this exemption legislation is pushed to enactment, and are using every means available to them, which are indeed tremendous, to accomplish that purpose.

The citizens of New York, however, are becoming aroused over this effort to undercut effective Federal regulation of natural-gas rates, and we all owe much to our mayor for spearheading the fight and helping to form a national committee of mayors opposing this legislation.

Following is the resolution adopted by the board of estimate on April 21, as presented this morning to the members of the House Committee on Interstate and Foreign Commerce:

RESOLUTION ON EXEMPTION OF INDEPENDENT PRODUCERS OF NATURAL GAS FROM REGULATION BY FEDERAL POWER COMMISSION

Whereas the millions of consumers of gas in New York City are dependent upon a supply of natural gas for cooking, and many of them for other domestic uses, such as water heating, refrigeration, and space heating; and

Whereas the Transcontinental Pipe Line Corp. is the sole supplier of natural gas to the six local gas companies in the city of New York, and the Transcontinental Pipe Line Corp. is dependent in great measure upon a supply of gas purchased from so-called independent natural gas producers who have heretofore been free to sell their gas at prices affected by competition between natural gas pipeline companies seeking a supply of natural gas to satisfy their respective customer demands; and

Whereas the Supreme Court of the United States has recently determined in the case of *Phillips Petroleum Company* v. *Wisconsin*, that independent producers are natural gas companies within the purview of the Natural Gas Act and are subject to regulation by the Federal Power Commission to prevent unjust, unreasonable, and discriminatory prices for natural gas produced and sold in interstate commerce; and

Whereas the oil and gas interests in the United States have initiated a nationwide campaign through the press and other media for enactment of legislation by the Congress of the United States to exempt producers of natural gas from regulation by the Federal Power Commission so that they may exact from those who supply gas for ultimate consumption in the homes of New York and elsewhere the highest price obtainable by the incidence of competition among the pipelines for their sources of supply; and

Whereas such competition and competitive prices will rapidly increase the cost of gas for domestic uses in New York and elsewhere and will inevtiably increase such cost as to restrict the nomal use of gas necessary for the health and comfort of residents of New York: Therefore be it

Resolved, That the House of Representatives and the Senate of the United States be fully informed of the consequences of such legislation and that the corporation counsel be, and he is hereby, directed to use all proper means, and to make such representations to the Congress of the United States, to prevent the enactment of legislation exempting producers of natural gas from regulation by the Federal Power Commission.

The Value of a Hobby

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. DONOHUE. Mr. Speaker, I desire to include a very valuable description of the evolution of a hobby, written by Homer P. Little, dean emeritus of Clark University, as a guest editorial for the Worcester (Mass.) Telegram, edition of March 20, 1955.

The article follows:

THOUGHTS ON COLLECTING

(By Homer P. Little, dean emeritus of Clark University)

Many are those who collect. Among the items that attract are stamps, old glass, buttons, matchboxes, brass, antique furniture, coins, picture postcards, and works of art. College students sometimes gather such bulky objects as street signs and related objects, both public and private. The expense involved in collecting ranges from the sublime to the ridiculous—from hundreds of thousands of dollars to nothing. Fortunately, the fun involved has no relation to the expense.

Why do people collect? In part, at least, because of the acquisitive instinct. Certainly the competitive and artistic impulses enter the picture. And the need of relaxation surely plays its part.

Did not a Clark student indicate in a master's thesis that no stamp collector, so far as he could determine, had been confined in a mental institution?

The writer has indulged in a number of these hobbies. While they have not been important in keeping him out of an institution, they certainly have rested him when weary, and helped keep him on his chosen path when discouraged.

The most helpful hobby in this latter respect has been one begun a good many years ago—that of jotting down what seemed particularly worthwhile sermon texts or thoughts and developing them in accordance with the listener's (my) own thinking.

The beginning of the hobby apparently goes back to about 1915 when the Rev. Everett Herrick, now president emeritus of Andover Newton Theological School, spoke to the students of Colby College. Among the stories that he told very simply was one about a visitor to Boston. Wishing to see some of the city's famous winding, narrow streets, he picked his way without incident among the great vans unloading ferverishly at the sturdy platforms. Suddenly, near the end of his jaunt, the visitor stubbed his toe on a half

inch projection of the concrete pavement and sprawled flat.

Our readers may make up their own sermons from the incident. Probably they would include the thought that most of us are aware of the conspicuous things of life, but sometimes miss the little courtesies. They might even think of Michelangelo, who said, in effect, that it is trifles that make perfection, but that perfection is no trifle.

Most of the notes for the hobby have been made during the writer's 32 years of residence in Worcester. The first local addition was from a sermon that the Rev. Robert McLaughlin preached at old Piedmont Church, on whose site now stands a gas station. From the pulpit he read Oswald's supposed letter to Annabelle. "Dearest Annabelle," he wrote, "I would swim the mighty ocean for one glance from your dear eyes. I would walk through a wall of flame for one touch of your little hands; I would leap the widest stream in the world for a word from your lovely lips. As ever, Oswald. P. S. I'll be over Saturday night if it doesn't rain."

Subsequently, in another city church, young Robert Balfe, born and raised in Worcester, preached from the text, "And there was given me a reed like unto a rod; and the angel stood, saying 'Rise and Measure'." Obviously, one's thoughts are quickly led in other directions than measuring buildings. How about measuring people? And how about measuring yourself fist of all? What floods of gossip might thereby be stopped. Perhaps, even, racial and religious prejudice might be decreased. Rise and measure.

The Reverend Stuart Haskins, who recently left Worcester, was a frequent contributor to the hobby, as when he preached from the text "While Thy servant was busy about many things, he (the prisoner) was gone." Since the King had stated that, if the prisoner escaped, the guard would be executed, this matter of being busy here and there was of considerable consequence to him. Of almost equal consequence is to be busy here and there when opportunity knocks.

The problem, though, is not that simple. What would happen to volunteer services to the community in such activities as the Church, Community Chest, cancer and polio, heart, and arthritis drives, YMCA, and Boys' Club, if many citizens were not willing to be busy here and there? Truly, this is a complex world to live in wisely.

A partial answer to this last problem is to be found in the sermon in 1939, given in Worcester, by the chaplian of the Massachusetts senate. "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run and not be weary; and they shall walk and not be faint." Did you get the sequence—Mount up with wings; run; walk? Climax or anticlimax? The latter, it is generally admitted. The consistent plodder, constantly doing his best, tops the list. For the great majority of us this is a good place to stop.

Not bad for a hobby that never cost a cent.

Housing Credit

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, yesterday's newspapers carried the story that the Veterans' Administration is about to take steps to tighten credit on housing mortgages. In my opinion this action is unwarranted, unnecessary, and undesirable. The prime issues which are raised in this whole matter are stated most briefly in an editorial in the Washington Post and Times Herald of March 30, 1955. The text of the editorial is as follows:

TOO MUCH HOUSING CREDIT?

A group of leading life insurance executives has called on the administration to tighten up on both Veterans' Administration and Federal Housing Administration mortgage loans. This is not the first warning that 30-year, no-down-payment mortgages may result in damage to the economy. William McChesney Martin, Chairman of the Federal Reserve Board, raised his voice some weeks ago against poor quality credit arrangements in this field. The life insurance executives, obviously concerned because of the heavy real estate investments which their companies have, said the long-term loans with no down payment or almost none are "an open invitation to a boom-bust situation in home building." They also are costly to borrowers.

Because it is difficult for most of us to realize that what is good for the economy one month may not be good the next, there has been a natural reluctance to do anything to check the housing boom. After all, housing has been one of the major sustaining forces of the postwar prosperity. Moreover, the need for housing, especially low-cost housing, still is substantial. But an all-time record in housing construction was set last year, and in January and February this year housing starts were up 25 percent.

Now that the economy is operating at a very high level a slight tug on the reins ought not to have an adverse effect on construction activity. But it might put the industry in a stronger position over the long pull. The insurance executives did not suggest a specific governmental program, but it was indicated that some of them thought the addition of a 5-percent downpayment on both veteran and FHA mortgages would have a stabilizing effect. Such a mild check ought to be seriously considered in the interest of stability in the construction industry.

Though the Republican Party most of all fears a depression in 1956, for whatever political repercussions it might bring, they seemed prepared nevertheless to yield to the bankers' pressure to reduce housing construction below present levels. The way the Washington Post and Times Herald editorial put it, there should be a slight tug on the reins of mortgage credit.

Those who do not have solely the bankers' interest at heart sharply disagree.

Mr. Speaker, under leave to extend my remarks, I insert statements taking issue with this whole pressure campaign against the American people:

First is a letter to the editor of the Washington Post and Times Herald written by Leo Goodman, and dated April 5, 1955. It answers the editorial which I have previously mentioned. The letter is as follows:

HOUSING CREDIT

Deeply disappointed in the editorial position taken March 30 under the title "Too Much Housing Credit?" This question of credit goes to the heart of the availability of housing for the American people. Millions of families need more adequate housing. Only those who oppose the development of an adequate supply to meet the demand are advocating curtailment of housing construction. The Washington Post and Times Herald suggests "a slight tug on the reins," and then suggests that such "a mild check ought to be seriously considered in the interest of stability in the construction industry."

After careful study Senator Taft in 1945 advocated immediate expansion of the housing construction industry to 1,250,000 a year for a minimum of 10 years. Later, during the debate in the Senate on the Taft-Ellender-Wagner bill and the subsequently enacted Housing Act of 1949, he raised his estimate to 1,500,000.

Competent students of housing have recently revised their figure upward and suggested the need of 2 million units a year for at least 10 years. Witnesses before the Congress, ranging from Walter Reuther to Prof. William L. C. Wheaton of the University of Pennsylvania, have urged 2 million units a year. Recently Public Housing Commissioner Slusser has pointed to the 8 million substandard homes in existence in the United States today.

The National Association of Home Builders in their monthly magazine Correlator, for February 1954, advocated, old and new, 2 million homes a year for the next decade.

All these competent sources reject, as now the building industry itself finally does, the thesis that family formation is the sole basis for calculating new housing construction. Economist Miles Colean, one who formerly used family formation primarily for first predictions, has now shifted. In last September's Architectural Forum he said: "Other influences are offsetting this bearish (decline in the rate of family formation) factor." He listed:

1. Increased security in old age.
2. The increasing propensity to spend.
3. The upward shift in average income.
4. Continued growth in personal income.
5. The continued high birth rate.

Millions now condemned to living in the slums would disagree that we need a mild check on building. Only when 10-year average of construction for a sufficient period exceeds the 10-year average of family formation do we need to consider credit restriction.

LEO GOODMAN.

WASHINGTON.

Next is a press release issued by the National Association of Real Estate Boards, dated April 14, 1955. It is as follows:

UNITED STATES SHOULD SUSTAIN RATE OF HOME PRODUCTION, CONSIDER INCREASING IT, NAREB TELLS SENATE

The United States should sustain the current rate of home production and of purchase and consider increasing it—not cutting it down—Henry G. Waltemade, New York, president of the National Association of Real Estate Boards, yesterday informed the Senate Subcommittee on Housing.

This rate rests upon the healthy expansion taking place in the economy as a whole, he wrote to Senator JOHN J. SPARKMAN, Democrat, of Alabama, chairman of the subcommittee, who had invited his views on the question of "whether there is excessive credit and overbuilding in the industry."

Mr. Waltemade warned that if the market for homes "should be curtailed through restrictive action, its decline would reverberate throughout our sensitively balanced economy.

"Last year's sustained healthy home market is credited by economists with turning general trends from decline in the early part of the year to a productive upward movement in the second half of the year. A similar cause-and-effect relationship in the other direction can follow any deliberately planned restriction on home production and home buying.

"The home market has none of the characteristics of an erratic or inflationary surge,

or of a building boom running out of gear with general economic movements," Mr. Waltemade added, listing the following points to demonstrate its stability:

"1. Today's home-mortage debt is sound and manageable.

"2. Current production is emphasizing home ownership in response to demand.

"3. Current home production is concentrating its output in the low and moderate price ranges.

"4. Goal of the private home production industry is to keep new production high and thus permit removal of unfit housing."

"Indications are," Mr. Waltemade said, "that we should expect to stabilize at the present rate of production while, in addition, increasing our supply of low-cost and low-rent adequate housing by stepping up the volume of rehabilitation and modernization of that part of our housing inventory that is susceptible to such treatment."

"This latter method of adding to our supply of good housing can be soundly stimulated by the new section 220 mortgage insurance provided in the Housing Act of 1954," he added.

Describing the soundness of today's mortgage debt, Mr. Waltemade said, "There is no parallel with the situation that prevailed 25 years ago. In 1954 mortgage debt represented only 37 percent of national income," he explained, "whereas it had equalled 62 percent of national income in 1930.

"Mortgage debt in the late twenties was expanded in financing hotels, apartment buildings, and office buildings. Today it is accounted for principally by purchase by families of homes of their own."

Mr. Waltemade contrasted the short-term loans accompanied by high interest rates and frequent second and third mortgages in the late twenties with the modern long-term amortized first mortgage geared to a monthly payment which the home buyer is qualified to meet.

"Whether home production may soundly be increased is a question worthy of study," he said. "Our population is increasing at the rate of 3 million per year. A larger proportion of our adult population is now in a married status compared to 1950. Last year there was a record total of more than 4 million births. Owing to a trend in marriages and births that began in the 1940's, a new high in housing demand is generally anticipated in the early 1960's. Our generally rising standards in housing and the ability to pay for them, largely account for today's housing demand."

Next there follows a press release issued by the Congress of Industrial Organizations, dated April 24, 1955, which contains quotations from a letter by CIO President Walter P. Reuther to Senator JOHN J. SPARKMAN:

CIO PRESIDENT REUTHER TAKES SHARP ISSUE WITH CRITICS OF RESIDENTIAL HOUSING BOOM—CALLS FOR A CONTINUED HIGH CONSTRUCTION RATE

CIO President Walter P. Reuther today took sharp issue with critics of the present residential housing construction boom and called for a continued high construction rate.

In a letter to Senator JOHN J. SPARKMAN, Democrat, of Alabama, responding to the Senator's inquiry as to whether CIO viewed present housing construction as excessive, Mr. Reuther said:

"It is our view that the well-organized and widely disseminated propaganda which depicts our present rate of residential construction as excessive because it exceeds the current rate of new-family formation either is based on ignorance or reflects a deliberate effort to deceive the American people."

The CIO president said that while present residential construction was at an all-time high "it still falls far short of meeting the housing needs of the American people."

He cited authoritative studies indicating the country needs an annual new home construction of 2 million units for the next 10 years. The reasons, he said, were to provide housing for new families, to meet normal replacement requirements, to rebuild units lost because of slum clearance and other public improvements, to accommodate families still overcrowded and to make it possible to vacate substandard dwellings which are not suitable for rehabilitation.

Mr. Reuther said the "rate of new-family formation could be conceived of as a major determinant of the need for new-home construction only if there were no need to replace existing substandard structures, no public or industrial programs, or acts of God, which destroy thousands of existing structures each year that must be replaced, and no preexisting shortages or overcrowding."

"If those who charge that the present building rate is excessive were forthright, they would admit that they are not concerned with housing needs at all but rather with housing prices. Actually, they fear that the value of existing properties will fall if the present rate of new-home construction is maintained. Their views are based on the false assumption that the Nation's economic well-being is preserved by scarcity, not by abundance," he continued.

Mr. Reuther said that "the American people fear a decline in economic activity, not an expansion of it. Only a handful of short-sighted individuals who cannot be persuaded that a constantly expanding and prospering America is possible fear rising production and look upon a decline in various segments of our economy as healthy."

The CIO president observed that America's concern "should be with a continuing program to aid and encourage home construction for sale and for rent and with the overall economic growth which these programs can so substantially stimulate. Submission to the fears of the prophets of scarcity will not avoid economic disaster; it will assure it."

The final insertion is a release from the New York State division of housing, by Housing Commissioner Joseph P. McMurray, who was formerly chief of the staff of the Senate Banking and Currency Committee. It is as follows:

NEW YORK, March 17.—Recent predictions of a lessening of the housing need were attacked last night by State Housing Commissioner Joseph P. McMurray as poor and short-sighted statistical forecasting.

Examination of all the factors involved point instead to a tremendous increase in need, he declared, in an address before the Real Estate and Mortgage Forum of the Savings Bank Women of New York, held at the Park Sheraton Hotel.

Commissioner McMurray cited as factors contributing to the need the huge increase to be expected in the early 1960's in the number of new families to be formed by the post-World War II babies, the great backlog of unfulfilled need which increases each year, the increased incomes of families which will continue, the formation of larger sized families, earlier marriages among our population, undoubling, the additional units required as a result of slum clearance and housing demolition for roads and other purposes, and the formation of households other than families.

Commissioner McMurray pointed out that the Federal Reserve Board's annual report published last week on consumers' buying plans shows more people, 9.6 percent, expect to buy homes this year than in any year since 1948. In 1950 it was 8.4 percent, in 1954 it was 6.6 percent. If the volume of construction in 1955 conforms to the volume of these previous years as compared to people's plans, 1955 construction would be at an all-time high of over 1,500,000 dwellings.

In New York State, Commissioner McMurray reported, the rate of construction is lagging behind that of the Nation. In 1950, when there was a national construction level of almost 1,400,000, the rate of construction in New York State was 124,000 units, or 8.85 percent of the national total. The year just completed, 1954, saw a rate of 1,220,000 nationally, while there were only 94,000 starts in New York State, or 7.70 percent of the national total.

In terms of the need in New York State, housing starts certainly should be in the same proportion, or greater than that of 1950. Certainly, as a goal, we should not count on less.

Aside from the FHA insured rental and cooperative-type housing and a relatively few projects financed by some of the large financial institutions, there has been practically no other rental-type housing built in New York State in the past 20 years.

Between 1950 and 1953, in New York City, the amount of money loaned by savings banks for mortgages of $50,000 and over (in which class new apartment house mortgages are found) declined by 29 percent on the average. By way of contrast, during the same general period, from 1949 to 1954, the mortgage portfolio of New York City savings banks increased by 87.5 percent from $4 billion to $7.6 billion.

The fact that New York City has so many urban renewal problems offers even greater opportunities for sound investment, he indicated to the savings bank women.

Commissioner McMurray described his philosophy of Government action to improve the welfare of the people as based on a reliance upon reason, knowledge, and truth. He indicated the many approaches he is making toward evolving a program of cooperation and coordination with the building industry, financial institutions, Federal and municipal agencies so that the State division of housing can better meet the needs of all the people.

Much of his attention, he said, is being devoted toward helping develop measures to stimulate the production of a large supply of good housing for the average wage earner and salaried person, the large group who are, for the most part, still in the no-man's-land of housing, ineligible for subsidized public housing because of incomes a little too high, yet earning too little to buy their own homes or rent available FHA housing at current high costs. He predicted the development of a number of such aids within a short time.

Commissioner McMurray also pointed out various ways in which deteriorating areas of the city could be redeveloped through a combined use of Federal urban renewal aids and those available under the State's slum clearance program. He indicted the role savings banks could play in this process and urged their assumption of their full share of responsibility in rebuilding the city.

Mr. Speaker, in view of the evidence which points to a growing need for home construction, we must all realize the attempt to cut back the volume of construction is obviously inspired by those who profit most on scarcity and who fear a housing program to meet the real needs of the American people.

I am sure that the members of the House Armed Services Committee will will want to study carefully the long-range implications of the announced intention of the Veterans' Administration to bar GI home mortgages which require no down payment or closing fees from the veteran-purchaser. If this is done, many veterans will be denied the opportunity to buy homes which they urgently need for their growing families.

Mayor Wagner Says Increase of Only a Penny Per MCF in Field Price of Natural Gas Will Increase New York Consumers' Costs by a Million Dollars a Year

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. KLEIN. Mr. Speaker, it was a distinct pleasure to me today as a member of the House Commitee on Interstate and Foreign Commerce to hear the Honorable Robert F. Wagner, mayor of our great city of New York, testify in a most able and illuminating fashion on the involved and somewhat technical issues surrounding proposed natural gas legislation now before our committee.

The mayor, who has been one of the leaders among city officials of the country in the formation of a mayor's committee to oppose legislation which would inevitably increase gas rates to the consumers, impressed the committee with the fairness and moderation of his testimony.

Nevertheless, it was hard-hitting testimony, showing that an increase of as little as one penny per 1,000 cubic feet in the field price of natural gas—the price paid by the pipelines to the producer in the field—would result in a $1,000,000-a-year increase to New York consumers in their monthly gas bills, under present circumstances.

Mayor Wagner urged our committee to reject bills now before us to remove these producers in the field from Federal price regulation. Otherwise, he said, "unanticipated, unbearable, and unwarranted" price increases were sure to follow.

Detailing the history of successive price increases to the utility companies servicing gas customers in New York largely as a result of increases in the prices paid in the field, the mayor said these price raises will shortly have increased the annual charge to these consumers by about $11,000,000 above the cost assumed at the time that the decision to introduce natural gas into the city of New York was made.

Mr. Speaker, following is the full text of Mayor Wagner's excellent statement today before the House Committee on Interstate and Foreign Commerce in opposition to the proposal to exempt the producers from price regulation:

TESTIMONY OF ROBERT F. WAGNER, MAYOR OF THE CITY OF NEW YORK, BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE OF THE HOUSE OF REPRESENTATIVES, IN OPPOSITION TO H. R. 4560 AND SIMILAR BILLS TERMINATING FEDERAL JURISDICTION OVER THE FIELD PRICE OF NATURAL GAS SOLD FOR RESALE IN INTERSTATE COMMERCE

Mr. Chairman and Members of the Committee:

My name is Robert F. Wagner. As mayor of the city of New York, I have joined with Mayors Clark and Lawrence of Philadelphia and Pittsburgh in organizing a conference, comprised of 50 mayors representing cities with a population of over 30 million, to present the position of the consumers in opposition to the legislation now under consideration by your committee.

Our position has been outlined generally by Mayor Clark and others who have already appeared before your committee. I propose to avoid, as far as possible, repetition of the arguments previously presented.

At the outset, may I present a resolution adopted on April 21, 1955 by the Board of Estimate of the City of New York, consisting of the seven principal officers of the city selected by direct popular election. The resolution expresses their unanimous viewpoint. I respectfully request that it be incorporated in the record. It reads, in part, as follows:

"Whereas the millions of consumers of gas in New York City are dependent upon a supply of natural gas for cooking, and many of them for other domestic uses, such as water heating refrigeration and space heating; and

* * * * *

"Whereas the oil and gas interests in the United States have initiated a nationwide campaign through the press and other media for enactment of legislation by the Congress of the United States to exempt producers of natural gas from regulation by the Federal Power Commission."

The resolution concludes with the directive that all proper means be used to prevent the enactment of legislation exempting producers of natural gas from regulation by the Federal Power Commission.

The action of the board of estimate, of which I am a member, is prompted by consideration of the impact of any further increases in the cost of natural gas upon the consumers of the city of New York. Conversion of existing facilities for use of natural gas has been completed for approximately 2 million consumers and a continuing program is in progress for ultimate accommodation of all potential users. It is anticipated that within a year or two conversion will have been completed for at least 2,500,000 users.

There have already been several substantial and unanticipated increases in the cost of natural gas since its use in New York City was first contemplated.

The utility companies that service the city agreed on a price of 25 cents per 1,000 cubic feet in their first negotiations with Transcontinental Gas Pipe Line, the then sole supplier. This price was increased to 28 cents per 1,000 cubic feet by the time the pipeline approvals were granted by the Federal Power Commission. Between 1951, when service was initiated, and 1954, the price increased to 32 cents per 1,000 cubic feet. I am informed that increased costs, reasonably certain to become effective in the near future, will culminate in a cost of 36 cents per 1,000 cubic feet.

Thus, in the relatively short period since the use of natural gas was first taken under consideration for the city of New York, in the belief that its use would provide a more economical source of fuel, the cost has risen 44 percent. In the same period, the field price increased from less than 7 cents per 1,000 cubic feet to almost 11 cents, and field prices as high as 15 cents were reported in 1954.

I fully recognize that any increase in field price represents only a small fraction of the ultimate cost to the consumer. Nevertheless, we cannot lose sight of the fact that an increase of 1 cent per 1,000 cubic feet in the field will cost consumers in the city of New York approximately $1 million a year at the present time. In brief, an increase measured in pennies rapidly mounts to huge sums drawn from the pockets of the consumers.

The increase in the use of natural gas in New York City and the immediately adjoining Long Island area has been spectacular. According to current estimates, this area now uses natural gas to the extent of 100 billion cubic feet annually. The successive price rises to which I have referred will shortly have increased the annual charge to these consumers by about $11 million above the cost assumed at the time that the decision to introduce natural gas into the city of New York was made.

Increases which are certain to follow the removal of existing regulation of natural gas producers will therefore impose an additional unanticipated and unwarranted burden upon the consumer public which has turned to natural gas in recent years in the expectation of a reasonable saving in cost. If that expectation should be frustrated, the consumer may be compelled to revert to other fuels. The large number of consumers who have converted to natural gas in the city of New York, have done so at considerable direct or indirect cost to themselves and should not be subjected to the investment loss, additional expense and inconvenience entailed in reconversion to the use of other fuels.

In requesting that the jurisdiction of the Federal Power Commission over gas producers be retained, the consumer in the city of New York does not wish to deprive the producer of a fair and reasonable return. However, he does need and does ask for protection from uncontrolled runaway prices. It is our firm belief that a price allowing a fair return to the producer of gas and at the same time protecting the interests of the consumer can best be achieved through appropriate and reasonable regulation of the producer by the Federal Power Commission. We urge that no action be taken to jeopardize the gains made for the protection of consumers of public utility service after many years of struggle.

Removal of the producers of natural gas from the jurisdiction of the Federal Power Commission, particularly after their regulation has been upheld by the Supreme Court and during a period of mounting natural gas prices, seems unwarranted and unreasonable. Certainly, such action is basically inconsistent with the continuation of regulation and control over transmission and distribution of this natural resource. While technical and artificial distinctions may be drawn, the fact remains that absence of regulation at any stage of the process—production, transmission or distribution—will lead to higher prices to the consumer. Effective regulation cannot be realized on a piecemeal basis. The necessity for regulation in some form is recognized, I am informed, by the Harris-Hinshaw bill. However, counsel advises me that the provisions of this proposed legislation will not accomplish their stated objective of ensuring just and reasonable natural gas prices.

In the absence of a more convincing showing than has been brought to our attention that the proposed legislation is required in the best public interest, I am convinced that it would be a serious mistake to amend the present law so as to exempt the producers from regulatory control.

Let me say, in conclusion, that I do not appear here as an expert on the problems of the natural gas industry. You have undoubtedly already heard a number of specialists in this field and will hear from others. I should like it understood that my opposition to the proposed legislation and that of my colleagues on the Board of Estimate, is in line with a long standing policy of our community to strengthen public utility regulation. It is based on the broad grounds that adoption of this legislation would result in unbearable increases in prices to the consumer public and that retention of regulatory jurisdiction by the

Federal Power Commission is required for the protection of consumers.

Finally, I wish to express my appreciation for this opportunity to appear before your committee. I am confident that your decision will be made in the exercise of your best judgment as to what is best for the people.

The Virtues of Old-Time Farming

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. DONOHUE. Mr. Speaker, I desire to include at this time a most interesting article describing the basic virtues of old-time farming, written by Richard C. Potter, director of the Worcester Natural History Museum, as a guest editorial for the Worcester (Mass.) Telegram, edition of March 21, 1955.

The article follows:

OLD-TIME FARMING

(By Richard C. Potter, director; Worcester Natural History Museum)

The old-time family farm is disappearing. Looking back over the last few decades the decline can be followed step by step. Perhaps this may be for the better but it is always best not to lose the virtues of the past in order to gain some of the uncertainties of the future.

It is certain that the traditional customs of the family farm or family life are no longer understood or practiced. This is largely because the problems of food production and distribution have changed.

Fifty years ago the farmer, after a week of hard work, came to his day of rest, a large portion of which after chores was spent in his churchly duties. Usually his afternoons were free. This time was spent by him walking through his fields with a heavy, swinging gait, in many cases acquired by much walking behind his plow and his other tillage instruments. This gait indicated in a measure, his train of thought. It expressed a deep penetration into the processes of nature, for only by his understanding of these processes was he able to improve the quality of his crops, as well as their quantity over a period of his active farming life.

The creative work that he had accomplished during the week, was thought completely over, in terms almost to be compared with the lessons that he learned from his religion and his Bible. Back 50 years ago, the farmer was accompanied by his sons and these he initiated into the mysteries of nature. He described to his offspring in very simple words the manner of tilling the earth, the art of sowing, the ways of fertilizing. The lessons that he taught had been handed down by his forefathers from time immemorial.

From his observation and his knowledge of tradition, the farmer was able to use the course of nature like an almanac with its signs and symbols. The budding of this or that bush, indicated for him the time for the preparation of the seed beds. The development of wild growing plants became his guide for the right moment to do one thing or another. There was a sort of instinctive certainty, in the way in which the farmer of 50 years ago took the necessary measures at the right moment by observing the rules of nature's course.

Now this instinct has been engulfed by modernism. But what has been lost is the certainty of instinct. Uncertainty has arisen. Too often now the successful neighbor is frequently the only guide for the farmer's work, even though his neighbor may be a farmer of large-scale dimension, or a farmer who is more used to putting stimulating things into his soil than to following the course of nature; or it may be some learned institution that serves wholly as a guide.

In older times it was the custom to rotate crops with intervals between, during which the land was allowed to lie fallow for the sake of rejuvenating the soil. In looking forward to certain events of the family over which this farmer presided, he would sometimes say, "When this field lies fallow for the third time, we shall be ready for the dowry for our daughter," or "When this cow calves for the last time, then the son will be ready to leave school."

Diligence and orderliness insured a safe future. Fortunes, modest ones at that, were accumulated over the lifetime of the farmer, gleaned from the fields over which he presided and from the work which he tended carefully. There was in that type of land use, a certain feeling of comfort and satisfaction which spread over the entire field of farming activity.

It was an atmosphere created by abundant living interpolated with hard work, hard thinking and righteous and honest living. It was a diligence and an atmosphere created by a true naturalist who knew that the tools by which he made his living, or the tools by which he raised his family were those which were placed into his hands by nature and God, Himself.

This unity of farm life, this so-called one-family farm, is fast disappearing in favor of farms of greater extent, farms that are machine manipulated, farms that have lost the objective of following the laws of nature, and have sought the profit motive. Perhaps this must of necessity be, since the call for greater food production in the growth of our industrial nations is a must, but the farmer of 50 years ago had a fine feeling for nature and for the meteorological conditions surrounding his situation.

He even felt in his bones without the aches of rheumatism or arthritis, every change of weather, and was able to arrange his work accordingly. All these semiconscious treasures of knowledge of past times, and all these inheritances can still be found today, among the so-called oldtimers who tilled the farms 50 years ago.

Loyalty Day, May 1, 1955, Has Been Officially Designated by Congress and Proclaimed by President Eisenhower as an Occasion for Rededicating Our Love and Devotion to the American Way of Life

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. VAN ZANDT. Mr. Speaker, it is gratifying to note that the President on April 27 approved House Joint Resolution 184 to designate May 1, 1955, as Loyalty Day and has issued a proclamation accordingly.

I had the privilege of introducing House Joint Resolution 184 in the House of Representatives and my good friend, Senator PRICE DANIEL of Texas, sponsored the measure in the Senate. This is the successful culmination of several years of effort to designate a special day when the American people will be given special opportunities to reaffirm and rededicate their loyalties to the ideals and institutions of our American way of life. We know and recognize that every day is and should be Loyalty Day, but in designating May 1, 1955, as the Loyalty Day, we are attempting to publicize and highlight at least one day on which the American people may give special emphasis and loyalty to our Government and its institutions.

The idea of designating May 1 as Loyalty Day originated among veterans on the Atlantic seaboard, who were disturbed by the traditional May Day rallies and parades of the Communists. These veterans decided that the best way to discourage and draw attention away from the Communist rallies and parades, was to organize a demonstration and parade emphasizing loyalty and support of the United States and the American way of life. The Veterans of Foreign Wars of the United States, an organization of which I am proud to be a member and past commander in chief, has acted as sparkplug in organizing Loyalty Day rallies and parades over the years, until Loyalty Day observances around the first of each May have become the outstanding events in many cities in the United States. It was at the request of the VFW that Senator PRICE DANIEL and I sponsored legislation to designate May 1 as Loyalty Day.

I want to express appreciation to the Judiciary Committees of the Senate and the House; to the Senate and House leadership and to the membership of both bodies for their splendid cooperation in making it possible for the Loyalty Day bill to become law. I am grateful to all those who have assisted in the course of this legislation through the Congress.

On April 25, 1955, following approval of the Loyalty Day bill by the Senate and prior to the Presidential approval, the Hearst press, in an editorial printed in all of their papers, commented on Loyalty Day in the following manner:

The designation of Loyalty Day as a special observance, to be held annually on the 1s day of May, reflects the awareness of Congress of the great value of commemorative occasions expressing the patriotic enthusiasm of the American people.

There was a time between the two great wars when many of the American people were inclined to be somewhat timid about showing enthusiasm for their country.

When the enemies of America scoffed at all display of patriotism as flag-waving, the timid people let themselves be persuaded to look the other way when the beautiful flag of the United States went by, and to be silent when the stirring national anthem was sung, and to make a great show of tolerance when American traditions and history were disparaged and besmirched.

Loyalty and love for America were derided by our enemies as forms of narrow nationalism, and while very few Americans believed this, too many of them let themselves be intimidated and looked around to see if anybody was looking before they displayed their

emotions about the country, its flag, or the inspiration of its institutions.

But then the second of the two great wars came along, and millions of young Americans offered their lives in the fullest expression of loyalty and love, and thousands of them made the supreme sacrifice of life itself.

Since then there has been no timidity about patriotic enthusiasm in America, and our people are proud to express the sentiments that fill their hearts.

Loyalty Day is in keeping with the glad hearts of our people that sing and shout loyalty and love and pride, and it is good to have a special day dedicated to the patriotic ideals which dignify every day of our lives.

In addition to the Hearst editorial praising Loyalty Day, some of the great radio and TV networks are also extending an accolade to the purpose and intention of Loyalty Day. For example, on Monday evening, May 2, from 8 to 9:30 o'clock, the NBC–TV network will have a showing of the spectacular Darkness at Noon in color as well as in black and white. This special program, which deals with the issue of loyalty versus subversion, is an NBC contribution to the Loyalty Day theme. Commenting on the NBC–TV show Darkness at Noon, VFW Commander in Chief Merton B. Tice had this to say:

As commander in chief of the Veterans of Foreign Wars, it is tremendously gratifying to me to learn that the National Broadcasting Co. is planning to stage the great dramatic Broadway hit, Darkness at Noon, before the television cameras. This is one of the great plays to be done on the subject of anti-communism. When it was premiered on Broadway in 1951, the critics labeled it a "dramatic thunderbolt," and today we of the Veterans of Foreign Wars sincerely believe that the presentation of Darkness at Noon on television will be a potent force in the field of Americanism. We also feel that it will be a dramatic climax to the hundreds of VFW Loyalty Day celebrations that will take place April 30 and May 1.

Marine News Magazine Says Philadelphia Area's Fight for Delaware River Dredging Is "A National Issue, a Fight in Behalf of All Waterway Interests To Sustain the Historic Policy of Federal Responsibility for the Development and Improvement of Our Nation's Navigable Waterways"

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. GRANAHAN. Mr. Speaker, the House Appropriations Subcommittee on Civil Functions will shortly be holding hearings on the proposal in my bill and in others introduced by Philadelphia area Members of Congress to appropriate $25 million for a start on the dredging of the Delaware River Channel from Philadelphia to Trenton.

In pushing for this appropriation—without the strings which the Budget Bureau and the White House have attempted to tie to any funds for the work—we are only seeking to have carried out what has already been established as the will of Congress on this important project.

Congress said the full cost of this improvement should be a Federal obligation, in line with historic principles and policies dealing with navigable rivers. The Budget Bureau, in the authorization bill last year, attempted to require that local interests, in this case, the United States Steel Corp., be required to shoulder $18 million of the cost of the project.

BUDGET BUREAU PROPOSAL WAS REPUDIATED BY CONGRESS

Members of Congress from the Philadelphia area, including many of our colleagues from New Jersey, were instrumental last year in defeating that proposal. We succeeded in having enacted an authorization law which provided that the entire project was to be a Federal responsibility.

But in his budget this year, President Eisenhower has again insisted on the United States Steel contribution. He has said no funds should be appropriated for the project unless the $18 million contribution from United States Steel is put forward. This would not only negate the will of Congress but would for all practical purposes stymie the project.

We do not intend to permit this to happen. We intend to fight for the appropriation this year of an initial $25 million to begin work on the project, as called for in my bill, H. R. 3594, and in similar bills by other Members from the Philadelphia area.

In this connection, Mr. Speaker, I want to call the attention of the Members to an editorial which appeared in the April 1955 issue of Marine News, As the Delaware Goes.

This editorial points out that our efforts to have the Delaware River channel work prosecuted as a Federal project exclusively is "a fight in behalf of all waterway interests to sustain the historic policy of Federal responsibility for the development and improvement of our Nation's navigable waterways."

President Eisenhower Says Republican Defense Pamphlet Is a Blunder

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a news story which appeared in today's Washington Post and Times Herald entitled "Ike Flays GOP Book Blunder."

The article follows:

IKE FLAYS GOP BOOK BLUNDER

President Eisenhower said yesterday he thinks the publication of a pamphlet by the Republican policy committee giving data on American guided missiles and other weapons was a blunder.

Democrats have contended the document violated security—a charge the Pentagon denied Tuesday in praising it as presenting positive defense accomplishments.

But the President told his news conference the pamphlet "gave out information that I wouldn't have given out."

The GOP booklet was issued to Republican speakers to help them reply to critics of the administration's military manpower cuts.

Asked about the document, the President said he first heard about it shortly before the news conference. Aids "gave me some idea that made me think that there had been a blunder that occurred," he said, adding that "at least" he wouldn't have given out the information.

Ever since he took office, the President went on, "I have been plagued by inexplicable, undiscovered leaks in this Government." But "we mustn't be too astonished," he said, because "great numbers of people" in Washington necessarily know details of projects.

"I just don't believe that it is justifiable for any Government official to release anything that applies to the secret war plans, war policies, war purposes and war equipment of this Government," Mr. Eisenhower said. "That is the kind of thing that foreign intelligence systems spend thousands and thousands of dollars to get, unless we give it to them for nothing."

Defense Secretary Charles E. Wilson has objected to similar compilations of weapons data, declaring that even if individual bits of information in it were unclassified, putting it together was harmful.

But he made public a letter to Congress stating that while the GOP document contained "three minor technical items" that had not been cleared for release, it was not a breach of security. Democrats accused Wilson of doubletalk and political expediency.

Asked about the brownout of military news under Wilson's new restrictions on release of information, Mr. Eisenhower said he objected only to giving out "technical military secrets." He said such data should not be released at the Pentagon "merely because of the desire of one section of the Department or another to be the first to make such an announcement."

A trained intelligence system can get a "terrific source of information out of the combined documents that can be procured on the newsstands and the libraries of the United States," the President said.

"This is as it should be," he went on, because "to inform ourselves we have to be ready to inform others." But the President insisted that this did not make it necessary to release information about "an airplane able to fly straight up." He apparently referred to the Navy's vertical takeoff plane.

The 160-Acre Limitation on Reclamation Projects

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington Post of April 19, 1955, which highlights efforts by the present administration to do away with the 160-acre limitation on reclamation projects that

has existed since the time of Theodore Roosevelt.

A very effective effort to retain the 160-acre limitation was made by Secretary of Interior Oscar L. Chapman and by Michael W. Straus, who served as Commissioner of Reclamation, but Secretary McKay is not supporting this basic policy which has endured for half a century.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAND OF THE PEOPLE

In Italy during the past few years a painful land reform process has been underway; great feudal estates which created a vast landless peasantry are being broken up to provide small family farms. In an illuminating letter from Rome which appeared on this page the other day, the Right Reverend Monsignor John O'Grady told of the economic, social, and spiritual revitalization which has accompanied this land reform. America has been spared the kind of stratified society that grows inevitably out of concentrated land ownership in part by a consistent encouragement of small-scale land-owning—beginning with Thomas Jefferson's Virginia law abolishing entailed estates, progressing with Abraham Lincoln's Homestead Act of 1862, and moving forward toward conservation and development of the water resources of the West with the National Reclamation Act signed by Theodore Roosevelt in 1902.

But there are now signs of a serious reversal of the traditional land policy of the United States. They come in connection with the potentially rich Central Valley of California, where individual and corporate land speculators have amassed great holdings along the Kern and Kings Rivers and have for some time been bringing great pressure to have the acreage limitation provisions of the reclamation law relaxed or ignored. Land holdings in the area run as large as 12,000 and 15,000 acres each. In order to assure equitable use of resources developed through federally financed dam construction and to prevent monopoly, the reclamation law provides that no one may obtain more than enough water to irrigate 160 acres, or 320 acres for a married couple.

In the Central Valley, 320 acres is a generous allocation. With irrigation, it makes possible a prosperous family farm. It may be argued, perhaps, that in sparser and more arid regions, such as Montana, larger allocations would be in order. But this has no relevance to California. When Congress authorized construction of the Pine Flat Dam on the Kings River, completed last spring, and the Isabella Dam on the Kern River, now nearing completion, emphatic assurance was given that the reclamation law would be applied; the authorizations would not have been passed without such assurance. But now the speculators who have piled up immense holdings want the 160-acre provision set aside so that they can realize millions in profits on their holdings. And Secretary of the Interior McKay seems bent upon obliging them by interpreting a clause of the law authorizing construction of the Pine Flat and Isabella Dams to the effect that prepayment of the construction charges on the dams relieves excess lands of the reclamation law requirements.

The issue here is a momentous one for the Nation. Theodore Roosevelt argued for his reclamation law in terms that are applicable today:

"I wish to save the very wealthy men of this country and their advocates and upholders from the ruin that they would bring upon themselves if they were permitted to have their way. It is because I am against revolution; it is because I am against the doctrines of the extremists, of the Socialists; it is because I wish to see this country of ours continued as a genuine democracy; it is because I distrust violence and disbelieve in it; it is because I wish to secure this country against ever seeing a time when the "have nots" shall rise against the "haves"; it is because I wish to secure for our children and our grandchildren and for their children's children the same freedom of opportunity, the same peace and order and justice that we have had in the past."

Retail Food Prices and Modern Aids To Food Preparation

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mrs. Ted R. Banta, of Geyser, Mont., and published in the Great Falls Tribune of April 23, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONTANA WOMAN SAYS BENSON MISTAKEN—DIDN'T DEMAND KITCHEN EASE BUT LIKES IT

(By Mrs. Ted R. Banta, Geyser, Mont.)

"Benson Says That Housewives Keep Food Prices High" was a caption in the Great Falls Tribune April 18.

It's hard for me to believe that the Secretary would venture such a remark, but if he did, he is badly mistaken. I feel certain that hundreds of housewives will agree with me.

The news item read in part: "Agriculture Secretary Ezra Taft Benson said retail food prices have not declined at rapidly as farm prices, partly because of the housewife's demand for 'built-in maid services'." There's a heap of built-in maid service in a lot of food products but the housewife did not demand it. She was faced with it and has been forced to purchase many items at an increase in price because she has no other choice.

Did the housewife demand that bread be sliced or that shrimp be breaded before it was packaged? Did she demand paper cartons for milk or that eggs be graded and packaged? Absolutely not, but she does demand good bread, clean shrimp, healthful milk and fresh eggs.

I recall when the first loaves of sliced bread first hit the grocery shelves, women, including myself, remarked, "What next?" We really didn't mind slicing our own bread—always had a good sharp knife in the kitchen drawer in those days. Selling sliced bread was a competitive idea which quickly spread to all bakers. Naturally the housewife liked the idea and found it convenient, but she did not demand it.

As for the breaded shrimp, she didn't ask for that either. Most housewives save stale bread for just such purposes. But one day, to her surprise, there it was—shrimp already breaded in the package.

Any homemaker took pride in making her milk bottles shine with cleanliness before returning them. She had no idea of paper cartons for milk until they suddenly appeared. Everyone will agree, however, that it was an excellent idea and a lot less bother for the housewife, but she did not demand it.

As for eggs, if the housewife could get good, fresh eggs from a big box in the store, she wouldn't mind taking them home in a paper bag. Most people are particular about eggs, I'll admit. No one wants a spoiled egg for breakfast and every housewife needs fresh eggs for good baking; yet she didn't demand grading, candling, packaging and refrigeration for eggs. But if that's the only way in which she can buy good eggs, then naturally she goes for it in a big way, although few understand the meaning of the stickers placed on egg cartons.

Take cereals for instance. It's amazing all the things that one finds inside a cereal box. Once I bought a box of cereal with a real good phonograph record attached. Now, I certainly would have bought that box of cereal without the record.

I have cited only a few of the numerous built-in maid service ideas which have added to the cost of food and please don't blame the housewife or the farmer for the spread between farmer and consumer prices.

Now, since the housewife has enjoyed all of the added helps, brought to the market, she wouldn't want to go back to the simpler ways—but she did not demand them.

Secretary of Defense Wilson Blunders in Bailing Out a Blunder

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "Bailing Out a Blunder," which appeared in this morning's—April 28, 1955—issue of the Washington Post and Times Herald:

BAILING OUT A BLUNDER

Consistency obviously is no virtue to Secretary Wilson, but he and his friends must be having a hard time keeping a straight face. What they have said, in effect, is that a compilation of military information published by the Republican Policy Committee does not constitute a violation of security even though it includes some items not previously released; but if anyone else should disclose such data, off to the dungeons with him. President Eisenhower demonstrated both a more acute sense of smell and a nicer sense of propriety yesterday by labeling the release a blunder.

How serious were the affronts to security, if any, we do not know. The brochure, entitled "National Defense Under the Republican Administration," contained descriptions of Air Force and Navy guided missiles—descriptions of the sort that the services themselves have been forbidden to give out. Possibly, however, the disclosure was not very important in itself. What is significant is that Mr. Wilson apparently has developed a double standard. It is not hard to imagine the screams that would have emanated from Mr. Wilson's office if a Democratic committee had undertaken a similar disclosure for political purposes.

All of this illustrates again the ineptness with which Mr. Wilson is approaching the information problem. The danger is that the present blunder will serve as an excuse for clamping down even more on information in which the people have a legitimate interest and which they need to judge public affairs. No one can object when responsible defense officials decide, on grounds of military security, that certain information about weapons and plans ought to remain

classified. Some of the breaches of security in the past have resulted from the vying for publicity among the services. It is wholly proper that this kind of information should be controlled as an administrative matter. But there is a vast difference between the sort of control based on security considerations and Mr. Wilson's effort to bottle up information that does not make a "constructive contribution to the primary mission of the Defense Department." This may be an appropriate formula to apply in General Motors, but it is an indefensible standard for the conduct of public business.

Fears on this score will not be relieved by the appointment of R. Karl Honaman, lately head of the misnamed Office of Stratgic Information in the Department of Commerce, as Deputy Assistant Secretary of Defense for Public Affairs. Mr. Honaman is an able man who no doubt was a very good director of publication for the Bell Telephone Laboratories. Here again, however, there is a great difference between a private company's interest in putting out information to its advantage and what ought to be the responsibility of the Defense Department in making available all information that does not bear on security. The burden of proof ought to be on those who would withhold information. Instead, it seems to have been transferred to those who would release it.

By the way, what ever happened to the Defense Department's promise to make public General MacArthur's World War II messages to the Joint Chiefs of Staff?

GOP Kicks Farmers Out

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. HUMPHREY. Mr. President, even the Republican editors out in Minnesota are deeply concerned about the way the Republican Party is treating America's farmers these days.

In the friendly spirit of bipartisanship, I pass along for my Republican colleagues the view of one of our good Republican editors, Donald J. Olson, publisher of the Marshall Daily Messenger.

I ask unanimous consent to have printed in the RECORD an editorial from Mr. Olson's newspaper entitled "Was This Republican Editor Right?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAS THIS REPUBLICAN EDITOR RIGHT?

Shortly after the last off-year election, when Senator HUBERT HUMPHREY defeated Val Bjornson, a prominent Minnesota Republican editor remarked that he had called the turn because he noted a dramatic unawareness of the facts of life among the old-line Republicans.

The Republican editor shocked this writer a bit when he stated: "We have kicked the farmer out of the Republican Party."

This is not completely true. Never before has the farmer been more closely associated with business and industry. The farmer, first, last, and always, is a businessman. But this Republican editor's statement is not completely false either.

While the Republican Party has not kicked the farmer out the door the party has, in a sense, treated him like a second-rate party member—sort of poor relation—a problem. Why do we say this?

Many Republicans will cheerfully admit—at least in private—that a guaranteed annual wage may be in the offing for organized labor. The hard-hitting, brilliant Walter Reuther, chief of the United Auto Workers, is respected as well as feared in Republican circles. Reuther has made no bones about it; he wants a guaranteed annual wage.

The same Republican leaders who grant all of this for organized labor talk in a different tone about a farm support program. While they willingly or unwillingly consider Reuther's ambitious plans, they scorn the leaders of the farm groups for doing the same things and talking the same way in behalf of their constituents, the farmers.

This all gives the impression that the farmer is considered to be poor relation. No one apologizes for the aims, the goals of organized labor. No one has heard a Democrat say that Walter Reuther is a parasite on the American economy. But when talking about a farm support program it is different.

Even the farmer's friends apologize for him. They ask his fair share with a sort of guilty expression—as if for some peculiar reason he is entitled to something less than the laborers of the big unions.

We don't believe the Republican Party has kicked the farmer out the door. But we believe that he hasn't received the treatment or consideration he should have been accorded. It is not too late to make amends.

Neither is it too late for the farmer to take a more active interest in the Republican Party and see to it that his voice is heard.

Dr. Frank Bay, of Albia, Iowa, Typical Iowa Family Doctor

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. MARTIN of Iowa. Mr. President, recently the Des Moines Register and Tribune published a pictorial review of the busy life of a typical Iowa family doctor. They selected as their subject the life and character of Dr. Frank Bay, of Albia, in Monroe County. They could not have selected a more deserving subject.

I have had the honor of knowing Dr. Bay intimately for many years. He and I attended the same Iowa high school. Although Frank was just ahead of me in high school, we played on the same football team. I have long admired him, both as an athlete and as a scholar.

During the years which have passed since our graduation from Albia, Dr. Bay has translated his high school leadership to his professional and community life. Certainly he stands for the ideals that we should recognize as worthy and important. I am more than proud to count him among my closest friends.

Mr. President, I ask unanimous consent to have printed in the RECORD the article concerning the wonderful civic life of Dr. Frank Bay.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Of Iowa's approximately 2,400 physicians, some 800 practice in towns of 5,000 or less, and about 700 of those 800 are general practitioners, or family doctors. They don't have any trouble in keeping busy. The busiest man in all Monroe County, for example, is Dr. Frank Bay, and it is probably safe to add that he is also the most beloved.

He has been treating Albia's aches and pains since 1922 except for 17 months he spent in the Navy during World War II, and in that third of a century he has had just 10 days vacation.

The 62-year-old physician averages from 4 to 6 hours sleep a night, and that has been his average ever since he opened his office. His wife, who regards Dr. Bay as the most unselfish man she has ever known, once plugged the telephone so it wouldn't ring on a night when she felt he desperately needed a good sleep. When he learned what she has done, he told her "Don't ever do that again."

Once the busy doctor had two hobbies—gardening and wood-working—but there is no time left for that now. He is president of the Albia School Board, president of the Monroe County Medical Society, chief of staff of the Monroe County Hospital, a member of the medical staff of the Ottumwa Hospital and of St. Joseph's Hospital in Ottumwa, a steward of the First Methodist Church in Albia, and except for 3 years he has been county coroner since 1929.

It is no surpise that, as he says, "Time sure flies in this business. They used to bring a calendar around one a year, but now it seems like they are bringing them around every month."

You can't live as full a life as Dr. Bay has enjoyed without experiencing a certain amount of excitement and adventure, and he has had his share. Twenty years ago he was overcome by gas when he went down into a mine after an explosion. Not long ago he had to squirm on his stomach to push a stretcher along in another mine accident. In 1933 he was a member of a posse following a Bussey bank holdup, and the following year his car was struck by a bullet after a holdup in Hiteman. Dr. Bay was driving the sheriff on that occasion. About 7 years ago, the doctor dived into the river to hook a chain to a car that was under water so it could be hauled up. A flash flood had washed out a bridge and drowned four persons trapped in the car.

NO MORE HORSES

The energetic physician formerly kept a horse in his garage during bad weather so he could make his country calls, but now he uses a jeep. He has made calls by horse, car, jeep, railroad handcar, steam engine, boat, tractor, bobsled, and on foot.

"I just keep plugging along," he philosophizes. "That way I stay out of trouble. My father used to say, 'Mom, keep the boys busy,' and she would reply, 'But the woodbin is full,' and he'd say, 'Well, tell them to empty it, then.'"

HOUSE CALLS $2

Once Mrs. Bay wondered why a certain patient always called the doctor late at night. He never told her, but she found out later the patient had cataracts and called him when she was lonely, whereupon he would go read her a chapter from her Bible. Dr. Bay never turns down a house call, and his fee is an old-fashioned $2 "if they have it." "No sense in charging high fees," he comments. "The people haven't got the money, and the Government would take it, anyway."

In all other ways, the friendly physician is up to the minute. He even has installed a television set in his office waiting room. "I had to," he explains. "The kids were wrecking the place."

Albia always has been home to Dr. Bay. He was born there September 24, 1892, and

was graduated from Albia High School in 1910. He then went to Penn College to study engineering, but left there after a year to work for the Maple Block Coal Co. near Albia. After a spell there he made the decision that changed his life and proved to be one of the most fortunate things that ever happened to his hometown. He quit engineering and took up premedical training at the State University of Iowa. After 7 months in the Army during World War I, he completed his medical studies at Iowa and at St. Louis University, and served an internship at Wheeling, W. Va. It was in Wheeling he met his wife.

"I'VE BEEN LUCKY"

"I've been lucky," he confides, speaking of Mrs. Bay. "My wife was a nurse and knew what the life would be like. She taught and brought up the girls and did a wonderful job. Three of them were straight 'A' students."

The Bays have four daughters: Mrs. Charles Coon, 31, of Lovilia; Mrs. Donald Daniels, 29, of Morton Grove, Ill.; Ciella, 24, and Calia, 20.

The President's Road Program

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Engineering News-Record of March 31, 1955, page 128.

It will be noticed that those who criticized the report of the Clay committee and the pending legislation for carrying out the President's plan for building better roads in the United States now offer no constructive substitute. The necessity for building better roads in this country is not a debatable question. It is conceded by all people who know the facts. The method of building such roads or financing them is the only question involved.

The views expressed by the Engineering News-Record are worthy of consideration whether you are for or against the building of better roads. I commend it to the Members of Congress for reading:

NO BETTER ROAD PLAN YET

Opponents of the President's road plan so far are woefully short on counter proposals that meet the road problem squarely, or offer even a fair chance for success. From the hearings before the Senate Subcommittee on Roads have come numerous criticisms of different parts of the President's plan as embodied in the administration bill, but almost nothing that can be called constructive.

In this connection the testimony of Senator BYRD was particularly disappointing because he, too, chose criticism as his contribution, without suggesting any alternative that would provide the Nation with the roads it so desperately needs. He expressed fear that Federal financing of the interstate system would mean Federal control. He called bond financing outside of the Federal budget "financial legerdemain." And he thought it was wrong to pledge the Federal gas tax to a "single specified purpose." What is the alternative? Continued road inadequacy. Unfortunately, Senator BYRD did not say.

To date, therefore, it must be concluded that no one has a better road plan to offer than the one the Clay committee developed for the President. Unless Congress can come up with something better, it should pass the administration bill with whatever constructive changes it deems desirable.

Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent that two columns by May Craig, Washington correspondent for the Guy Gannett newspapers in Maine, written from Moscow during her recent trip to Russia, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald, April 23, 1955]

BEHIND THE IRON CURTAIN—FIRST MERRY REDS SEEN AT THE CIRCUS

(By May Craig)

MOSCOW.—Most fun I had in Moscow was at the circus. This is a small intimate one-ring circus, in the middle of town, in a building, not a tent. The front row of seats is so close to the ring that the horses kick sand right into your lap. I was in the second row, and glad of it, when the horses were going fast, with bareback riders, men and women, recklessly jumping on their backs, standing three high on shoulders, riding tandem.

This circus lasted 3 hours and had a great variety of acts. Clowns came in between acts; there was slapstick comedy; animal acts; music; acrobats, aerial performers. The master of ceremonies was dressed in white tie and tails and was most dignified, with a resonant voice, and announced each act. The ring was surrounded by a low wooden railing, about 2 feet wide, covered with red velvet, and some of the animals raced on this. For some acts they put down carpets on the sand of the ring, and young stagehands brushed this off with fagot brooms between acts, and rolled it up and took it away for animal acts.

The act that really brought down the house was a moose reined to a small donkey. They raced around the ring and over hurdles; never did I expect to see anything funnier than this moose, with his face flapping, clambering over hurdles with his clumsy legs. The little donkey kept him in the ring, but I expected every moment he would flop over and come ambling up the low seats into my lap. It was pretty frightening when the horses were really racing around, because the front aisle was only 2 feet wide, then the front row, and then me.

The animal acts were the funniest—squirrels, foxes, a rabbit riding a small donkey, dogs and cats, even an eagle. There were some excellent Chinese jugglers; this was a shock to me, because I had seen them at the Intourist (Russian travel agency) Hotel National where I am staying, had been impressed by their dignity, and imagined they were some high Red Chinese delegation here plotting the violent overthrow of the free world with the U. S. S. R.

Incidentally, the written words here are very confusing. They do not use our alphabet, and the letters look strange to us. If you see CCCP engraved on a building or monument, it means U. S. S. R.—Union of Socialist Soviet Republics.

First time I had seen anybody behind the Iron Curtain merry was at this circus. We were really among the Russian people there. There were whole families together. The children applauded wildly when a "family" of acrobats came on, including three boys, the youngest not a day over 5 years. During the intermissions, everybody went out into the lobby, jammed the aisles, talked and visited. I have not seen one Russian woman dressed stylishly. Hardly any have lipstick or visible powder. One of our guides had lipstick; quite a few have curled hair; on the lobby floor of the hotel, in a cubbyhole plainly visible from the lobby, I saw a lady getting her hair set in what looked like a permanent.

Some of the aerial acts at the circus were hair raising. And the slapstick comedy was good enough so we knew perfectly well what was going on.

Russians are strong for theater; they always have been. There is a square of theaters dominated by the great State Bolshoi Opera, but this was completed in 1824, so the Reds cannot take credit. There are many children's theaters. People wait months to get tickets to some popular production. We told our guide we were fortunate to get tickets for a ballet at Bolshoi the following evening and she said that this was "a privilege we show our guests." There are many movie houses, with wide screens too, but there are no American movies as we saw in all but Iron Curtain countries.

One thing the United States must soon decide, is whether to participate in international contests, sports, music, chess, and so forth. The Communists are determined to show they are better than the capitalist world, in everything, as part of their propaganda. Sports especially, since that typifies force. They take children and train them rigorously, whether it be music, sports, chess, ballet; train them all their lives—train them to be better than any capitalist competitor. This is a policy, a design; they must win, they are subsidized while they do it. Free countries do not do that. Can we develop winners, without this planned and ruthlessly enforced lifetime training? And if we do not win, if we do not even participate, the Reds make capital of it, either way. One pressing question is, Do we participate in the next Olympic games? All the satellite countries are coming into this design of the Communists to excel non-Communists. We face an important policy decision on this. Shall we come in when we know we have little chance to win against the subsidized competitors?

[From the Portland (Maine) Press Herald of April 25, 1955]

BEHIND THE IRON CURTAIN—OLD MOSCOW HAS DISAPPEARED

(By May Craig)

MOSCOW.—Moscow is an ancient city, founded 800 years ago. The Communists, while saving the ancient monumental churches, palaces, walls, have ruthlessly demolished "old Moscow," the firetrap old wooden houses. There have been many fires which have destroyed these, too. Some are left, and on a guided tour we saw some.

A guided tour in Moscow, as in the satellite countries—is exactly that. The tour is planned and, come hell or high water, the guide is going to follow the pattern. Being Americans, we tried several times to get

off the track, do something else on the spur of the moment—but no luck. It is part of the frustration of traveling behind the Iron Curtain—they are set in a rigidity that come partly from the organized, bureaucratic system, and partly because they have orders not to deviate from whatever their schedule is.

There is a guard in uniform outside our hotel—maybe he is just a doorman—and when we asked the guide if we could take his picture, she said she would ask him. She said something and he said "No."

In the square, opposite our hotel, called the Big Square, though its name is Manesh Square, nearby Red Square, is the old Moscow University with students from 64 countries. Our guide told us there are 57 million persons studying in Russia, of all grades including postgraduate. The Communists are making a great effort to educate their people as an asset against the capitalist world, and to aggrandize the Communist world. Education is necessary to win hot or cold war, they believe, and with dictatorial power they can educate, and they are doing it.

Just as ruthlessly they have widened streets—Leningrad Avenue is about 380 feet wide, with trees and planting down the middle. To widen and straighten streets, they have torn down houses, moved others which are historic or beautiful. They construct new cellars and move the whole building in one piece. Monuments are moved in one piece. Everything is subordinate to the plan.

Before 1917, the date of the revolution, 70 percent of Moscow was wooden; now the city is spotted with tall, modern skyscrapers, rising in pinnacled tower style typical of new Russian architecture. There are rows of apartment houses. Rent is determined by salary of the head of the family.

Much of the new construction is now good, however, perhaps too hastily built, and for effect, to show the world that the Communists could outdo the capitalist world, catch up in a few years, for the centuries they are behind. It is a fascinating city, in the ancient buildings.

The editors were taken to see the new Soviet Hotel. It is monumental. The editors were appalled by the "waste space" in the wide marble lobbies, pillars and royal staircases of marble, with red carpet. I was appalled to see the hardwood parquetry floors, only 2 years old, already chipped and splintered and the individual inlay sprung apart as though they were green when laid. The joints of the parquetry did not fit, showing poor workmanship.

We saw the prize suites, $50 a day, and though I allowed for the odd furnishings, unlike ours, I could not help seeing that the plumbing in the bathrooms was poorer than in the cheapest housing at home; and the same poor workmanship on the wooden floors. Much of the construction was of the same caliber, though it looked magnificent from a distance—I must say for the Russians—they do have magnificent concepts, big and bold.

I saw the same poor construction in Poland and Czechoslovakia. The workers housing was often of reclaimed brick, for which I do not blame them, because they didn't have new—but there was scanty mortar between the bricks, which means they will loosen and fall out. The stucco is already peeling from some of the new housing. The wooden inlaid floors in this hotel, which is 50 years old, is in much better shap than in the new Soviet Hotel.

Spelling really gets you down. At the airport, the sign said "Mockba", which is the way they spell Moscow. In Yugoslavia some of us stayed at the Moskva Hotel. Russian is hard to learn, for westerners, because of the pronunciation. Some of the Americans here have learned it enough to get around, and order a meal. There are only five Americans in all Moscow except the American Embassy staff and us. These five are the correspondents of the New York Times, the Associated Press, the United Press, the International News Service, and the wife of the latter—and us.

There is pretty nearly every other nationality in the world—except the Western World, who are about as restricted as the United States, though all the official Communists blame us for shutting out visitors and complain of restrictions on Russians in the United States and the U. N. With due care against spies and saboteurs, I think we should let more Communist visitors come to us.

Boris Sirpo's All-Girl Orchestra

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1955

Mr. NEUBERGER. Mr. President, Oregon's Little Chamber Orchestra of 14 outstanding young girl instrumentalists will tour Europe as ambassadors of musical good will.

The Portland Little Chamber Orchestra, with the youngest member only 15 and the eldest only 28, was founded by and is under the able direction of Boris Sirpo. Sirpo is well known to Oregon music lovers as professor of music at Lewis and Clark College, and director of the Portland Chamber Orchestra and the Hood River Music Festival Association.

Sirpo came to the United States in 1940, fleeing the Russians as they invaded his native Finland and destroyed the fine conservatory of music he had founded at Viipuri in 1918. The highlight of the European tour will be the dedication of the newly completed Boris Sirpo Hall at Viipuri Music College, in Finland.

Mr. President, it is with a great deal of pleasure that I offer this well-deserved tribute to Boris Sirpo and to the talented 14 young Oregon girls who are members of Portland's Little Chamber Orchestra.

I ask unanimous consent to place in the Appendix of the RECORD an article about the Sirpo tour by Ann Sullivan from the Oregonian of Sunday, April 17, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BORIS SIRPO'S ALL-GIRL ORCHESTRA
(By Ann Sullivan)

Mid-May will mark departure time for 14 feminine ambassadors of musical good will—14 young Oregon girls Europe-bound.

They are Portland's Little Chamber Orchestra, 14 charming, vivacious, pretty instrumentalists—quite capable of showing Finland, Norway, Sweden, Denmark, France, England and perhaps Italy that American teen-agers are not entirely coke-drinking, jive-talking hot-rodders.

The youthful group—youngest only 15, eldest only 28—is a dream brain child of an adopted Portlander, grandfatherly, portly Boris Sirpo, "Mr. Music" of the Hood River Music Festival Association, the Portland Chamber Orchestra and now the Little Chamber Orchestra.

Professor of music at Lewis and Clark College for 10 years, 10 years director of the Chamber Orchestra and a stern but kindly taskmaster to hundreds of young musicians in this area, Sirpo thought up the idea of this trip about 5 years ago and formed the orchestra about 2 years ago.

Sirpo came to America in February 1940, when the Russians overran his native Finland and destroyed the fine conservatory of music he had founded at Viipuri in 1918, when he was quite a young man. He was for 15 years conductor of the Viipuri Symphony Orchestra, and that was gone, too.

After a short while in New York and a year at Paramount studios in Hollywood, he finally elected to live in the Northwest. He taught at Marylhurst 4 years, during that time helping develop the Hood River symphony and the Hood River music festival.

He organized the Portland Chamber orchestra, a good-sized orchestra of musicians from a variety of walks of life who like to play together, and finally the Little Chamber, composed of some of the fine young girl musicians who have come under his tutelage.

The Little Chamber orchestra is an affiliate of the Portland Chamber orchestra and Lewis and Clark College.

There has been some turnover in the Little Chamber during the 2 years of its existence but, roughly, it comprises 14 young girls who are among this area's top musicians.

They were chosen first for their music, second for their culture, third for their friendliness, and possibly for their looks, too—because they are all beautiful.

Already a rigorous concert schedule is set up for their 2-month trip, which will include Sirpo's native land for the Jan Sibelius festival in June.

Sirpo intends also to take his girls to play for the 89-year-old music master in his home.

The first concert is set for May 18. At the moment there are 11 others already scheduled in Norway, Sweden, and Denmark alone. The girls will appear on a half-hour television program in Paris, France, and also go to London and several smaller cities in England. At the last moment it looks as if they will include Italy, too.

They will play all their concerts from memory.

Whenever possible the girls will stay at homes rather than hotels in the cities where they will play. They want to learn how Europe lives and acts, just as much as Sirpo wants to show off the grace and charm of his pretty charges.

The trip, expected to cost about $25,000, is already half subscribed and pledged by friends and supporters, according to Sirpo. Some money will be realized by the concerts, but the group does not intend to "make money" on the trip. Anything over expenses will go to Rotary clubs of various countries to help young Europeans study in America.

To Sirpo the trip is vision soon to come true, his first trip home, where a concert hall in his honor has been named for and dedicated to him.

The 14 young instrumentalists will be accompanied also by Mrs. Sirpo, a couple of mothers, and the husband of one of the girls of the group who is married.

These are the young musical ambassadors: Claire Hodgkins, 25, daughter of Mr. and Mrs. James L. Hodgkins, 4746 Northeast Flanders Street, is a violinist and concertmaster of the chamber orchestra. She has soloed with the Hood River symphony, the Portland symphony, the chamber orchestra, and the Lewis and Clark symphony, and has been playing since she was 4 years old. She is a young artists auditions winner.

Jean Nesbit, 17, violinist, senior at Cleveland High School, daughter of Mr. and Mrs. W. Wallace Nesbit, 3675 Southeast Crystal Springs Boulevard, has been playing 5 years with the Portland junior symphony, chamber orchestra, and Lewis and Clark symphony.

Ann Kafoury Tremaine (Mrs. Norman Tremaine), 25, 316 Northeast 60th Avenue, violinist, concertmaster of the University of Oregon orchestra for 3 years and daughter of Mr. and Mrs. Allen Kafoury, teaches the violin to a few students. She has played with the Portland chamber orchestra, the Lewis and Clark symphony, and junior symphony.

Susan Lathrop, 16, daughter of Dr. and Mrs. T. G. Lathrop, Oregon City, violinist, a junior at Oregon City High School, has been playing 8 or 9 years. Her physician-father plays the clarinet, her mother the organ and piano, one brother the bass, another the clarinet, and a sister the piano.

Joyce Annala, 20, part-time student at Lewis and Clark College, is a cellist, daughter of Mr. and Mrs. Arvin O. Annala, Hood River, and third cousin to Claire Hodgkins (both are of Finnish descent). She has been playing 9 years, including concerts with Hood River symphony, chamber orchestra, Lewis and Clark symphony.

Jo Ann Kaden, 15, violinist, Jefferson High School sophomore, daughter of Mr. and Mrs. Albert Boardman, 634 North Winchell Street, is the youngest of the orchestra. She has played with the junior symphony, chamber orchestra, and Lewis and Clark symphony, and she was concertmaster of her school orchestra.

Gloria Wawrinofsky, 22, violinist, daughter of Mr. and Mrs. Carl Wawrinofsky, 1337 NE. 52d Avenue, attended Portland State last year. Now working as an operator for the Pacific Telephone & Telegraph Co., she has been playing since she was 7, with the Grant High School orchestra, junior symphony, chamber orchestra.

Tana Bawden, 20, pianist, daughter of Mrs. Monte Bawden, 3080 SW. Spring Garden Street, is now attending Portland School of Music after 2 years at Lewis and Clark. She wants to be a concert artist. She won a junior symphony contest at 10 and has been "picking out notes" since she was 3½.

Hope Jaquith, 25, violinist, daughter of Mr. and Mrs. Douglas Jaquith, Salem, is from another musical family. Two brothers play the piano, and her father, who owns the music center, plays most musical instruments. He once toured Europe with a musical group. She has soloed with both chamber orchestra and Lewis and Clark symphony, has played concerts in several northwest cities.

Muriel Fitts, 26, violinist, former University of Southern California student and graduate of Lewis and Clark College, lives at Brooks, near Salem. She teaches violin and viola, has played with the Lewis and Clark symphony and chamber orchestra. Although she recently underwent a hip operation, she plans the European trip anyway.

Eunice Watson, 23, cellist, head resident of the gatehouse at Lewis and Clark College, where she graduated last year, is the daughter of Mrs. Theo Watson, Denver, and Roy Watson, Boise. She has been playing 10 years and performs with the Lewis and Clark symphony, and Portland chamber orchestra. A philosophy major, she will probably teach.

Ann Thompson, 24, string bass, 3400 S. W. Veterans Hospital road, is a music teacher at Lane elementary school. A University of Oregon gradute in music in 1952, she has played the instrument 12 years, including 4 years with the University of Oregon symphony. She plays now for the Portland Chamber Orchestra. She is the daughter of Mr. and Mrs. Matthew R. Thompson, of Monmouth.

Patricia Steen Olsen (Mrs. Ralph), 28, now making her home in Seattle, is the daughter of Mr. and Mrs. Norman Steen, 10126 S. E. Stanley avenue. A graduate of Lewis and Clark College, she is now working for a master's degree in music education at the University of Washington.

She plays both the violin and the viola, was concertmistress of the Lewis and Clark symphony and is charter member of the Portland Chamber Orchestra.

Kathyrn (Kay) Hardwick, 18, a senior at St. Mary's Academy and daughter of Dr. and Mrs. Clifford Hardwick, 2645 Southwest Davenport Court, plays both the violin and the piano. She started the former when she was 5½. She plays in the St. Mary's Orchestra, the Lewis and Clark Symphony, and the Portland Chamber Orchestra.

A Resolution To Designate April 30 of Each Year as Presidents' Day

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1955

Mr. FASCELL. Mr. Speaker, I have introduced a House joint resolution today which I commend to the attention and consideration of all our colleagues.

My resolution would designate April 30 of each year, the anniversary of the inauguration day of George Washington as first president of the United States, to be known as Presidents' Day. This resolution stems from a suggestion made to me by Mr. David McDonough, of Miami, Fla. He has long been active in community affairs and has a great sense of civic responsibility. This idea of his for the commemoration of our past Presidents is but one of the many fine civic endeavors on which he has worked.

I am hopeful that this Congress, during this session, will adopt this resolution in order that proper plans may be made throughout our country to officially honor our past Presidents by April 30 of next year.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Address by Hon. John W. McCormack, of Massachusetts, at the Jefferson-Jackson Day Dinner, Moundsville, W. Va., April 30, 1955

EXTENSION OF REMARKS
OF

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. MOLLOHAN. Mr. Speaker, under permission to extend my remarks, I include an address made by the gentleman from Massachusetts [Mr. McCORMACK] at the Jefferson-Jackson Day dinner held the evening of April 30, 1955, in Moundsville, W. Va., and conducted by the Marshall County Democratic Executive Committee:

Mr. Toastmaster, members of the clergy, my valued friends and colleagues in Congress, Senator MATTHEW NEELY, Congressman ROBERT MOLLOHAN, and Congressman CLEVELAND BAILEY, distinguished and invited guests, ladies, and gentlemen, with more than one-half of the present administration over, we now have an opportunity of appraising it objectively, whether or not it has kept it promises, of evaluating its policies, as well as the kind of government the present Republican administration has given to our country and our people.

In connection with the conduct of the Government, we must always bear in mind that the first domestic duty of our Government—as so eloquently stated in the preamble of the Constitution is to establish justice.

This means that the powers of government are dedicated and should be utilized to bring about justice to our people.

With the depressed economic conditions of West Virginia, with the large number of unemployed in your State, do you think the present Republican administration is performing the constitutional mandate of our fathers and bringing justice to the people of West Virginia?

Despite the efforts of the high-powered public relation representatives of the big corporations of the country who are operating in Washington for the Republican Party in an effort to sell President Eisenhower and the Republican Party to the people, in the same manner as they sell coffee, cigarettes, or some other commodity, the people are commencing to catch up with the broken promises of the present administration, of its control and domination by big business, and of its failures.

The record of the Republican administration, for which President Eisenhower is responsible, is such that I predict with confidence, the election in 1956 of a Democratic President—of a Democratic Congress—and convincing Democratic victories in the several States and political subdivisions of the Nation. For there are millions of Americans who voted for the Republican candidate for President in 1952 who now wish they had Harry S. Truman, or some other Democrat in the White House.

Despite the efforts of the high-powered public relation representatives of the big corporations to pressure the American people by organized propaganda, that President Eisenhower occupies a lofty, elevated position, immune from criticism or any kind or of unfavorable comment; and thereby to attempt to create in America a political vacuum—the people are awakening and are properly holding President Eisenhower, as the leader of his party and as Chief Executive, responsible for the policies of the present administration—and properly so, because President Eisenhower is responsible—and should be held responsible by the people.

As the President claims credit for any good policy, so is he responsible for any unwise and harmful policy.

In the last campaign in a speech in Boston, Vice President NIXON, whose political shifts are well known, said, "a political party is to be judged by the premises it keeps."

I agree with that statement, Mr. Vice President, but I go one important step forward—that, a political party is also to be judged by the promises it does not keep.

And the Republican record of broken promises—for which President Eisenhower must accept full responsibility—is one that is subject to justifiable severe criticism.

Let me refresh your memory and call the roll of some of the broken promises.

1. To balance the budget.
2. To reduce the national debt.
3. The great crusade.
4. Instant and massive retaliation.
5. The new military look.
6. The liberation of enslaved peoples.
7. Cooperative peace.
8. Peaceful coexistence.
9. Peace through trade.
10. Agonizing reappraisal.
11. Trade, not aid.
12. To unleash Chiang Kai-shek.
13. To meet the problems of distressed labor areas.
14. To assure equitable distribution of Government contracts to small and independent businesses.

And there are many others.

On the question of lack of coordination—and of confusion and irresponsibility on a high level—all any one has to do is read the newspapers of the past few days.

It is only a few days ago that the Under Secretary of State, Herbert Hoover, Jr., after a telephone talk with the President—issued a statement that our Government would not negotiate with the Chinese Reds unless four conditions were met—one of which is the release of American prisoners—and another that Chiang Kai-shek's government would have to participate in any negotiations.

A few days later, Secretary Dulles indicated our willingness to negotiate without Chiang Kai-shek or his representatives being present.

These two statements clearly indicate that they are inconsistent with each other.

Prepared by the Republicans was a complete compilation of our military strength, directly in violation of the position and wishes of President Eisenhower and Secretary Wilson. It is the most complete compilation that I have ever seen. While not so intended, it is a most valuable document for any potential enemy of ours to possess, such as the Soviet Union or Red China.

If this document had emanated from a Democratic sources, the Democrats would be accused of everything under the sun.

And yet, while it violates the position of Charles Wilson, as Secretary of Defense, and also of General Motors fame, as well as other fame—as Charles Wilson, the Republican, he undertook to defend the publication, which he knew, or ought to know, was not for the best interests of our country.

It was so bad that even the President, at his press conference a few days ago, termed this compilation as a blunder.

Is this evidence of coordinated and responsible leadership? It clearly shows lack of coordination, which leads to irresponsibility.

And that has been the situation that has existed quite generally throughout the past 2½ years.

These two happenings of current nature clearly show the lack of leadership of the Republican Party in Washington.

You will remember that last year we were told that the Navarre plan to save Indochina from the Chinese Reds was foolproof, and that it could not fail. In other words, that the Communists could not win in Indochina. We know, to our sorrow, the results.

We know that a good part of Indochina is now lost to the Communists; that Vietnam, Cambodia, and Laos are threatened; in fact, all of southeast Asia.

In the national interests of our country, we cannot afford to see all of southeast Asia dominated by the Communists, for this could result in our own Far Eastern defenses being outflanked.

In other words, one statement one day, and the opposite the next day or the next month.

It is no wonder that the people are commencing to catch up with such inconsistent and irresponsible leadership.

It is not difficult to understand why the people last fall again turned to the Democratic Party in Congress, and in many States of the Union, for leadership.

Is it any wonder that the people are going to turn to the Democratic Party again for complete leadership in 1956 by the election of a Democratic President, and the reelection of a Democratic Congress.

In dealing with the gang of international brigands in the Kremlin and in Peiping we must realize that we are dealing with Communist leaders who are possessed of the minds of world killers. They are dedicated to world revolution and world domination.

Until they renounce such objectives, despite their soft talk from time to time, they are determined to conquer and enslave the world.

For the only thing the Communists respect is what they fear; and that is military strength and power greater than they possess themselves.

We cannot negotiate or deal with them on a moral plane, for they have no spiritual values. They not only deny God, but they are fighting Him by attempting to conquer and enslave peoples throughout the world who believe in Him and His law. They know that as long as there is any place in the world free from Communist domination, where people believe in God, His law, and His word, that the Communist ideology will be constantly threatened. They are the prisoners on an ideology that, in order to succeed, forces and compels them to attempt to conquer and dominate the entire world.

We cannot negotiate with them on any idealistic level, for they have no ideals. But, there is one level on which we can deal with

them, and that is on the basis of the law of self-preservation.

For even the Communists cannot deny the existence of the law of self-preservation, that it applies to them and their country—just the same as it applies to all others and their countries.

And it is only through military strength, which they respect through fear; that negotiations on this level can be conducted with them.

It is only military strength which they fear, that can deter them, because of the fear of the consequences to themselves.

And yet, despite the opposition of General Ridgway, we are sharply reducing our Army, with reductions in our Navy and our Marine Corps.

In the world of today it is better that we have too much military strength, and not need it, than to have too little, and need it.

When one talks as I do the stock-form answer one receives is that President Eisenhower is a great military leader, and that he knows better than anyone else what military strength we should have.

Respecting as I do his military knowledge and experience, my judgment tells me that it is dangerous to rest the safety and security of our Nation on the judgment of one man, for he is human, and it is human to err.

Suppose the President guesses wrong?

Let me remind you that he guessed wrong in 1953, when he ordered the Truman air program of 143 air wing groups reduced to 120 air wing groups.

We Democrats opposed it. We were ridiculed, despite the fact that the late General Vandenberg, Chief of the United States Air Force, took the same position, for putting our judgment against that of President Eisenhower.

And yet, one year later, in 1954, President Eisenhower recognized that he had erred; and changed his mind, and recommended appropriations for 137 air wing groups. He could not be right both years.

He erred only 2 years ago on the strength of our Air Force. He could be wrong now in the reductions he has ordered in other military components. And if he is wrong, and a conflict comes, the consequences could be dreadful to all of our people.

In Washington, we know that at least three of the Joint Chiefs of Staff, and a majority of the National Security Council have recommended against the reductions of our Armed Forces. So we have plenty of competent military leaders, who have led armies in time of war, differing from the President.

In any event, to the Communists this is evidence of weakness and not of strength.

And remember—there is only one thing they heed and that is military strength and its relationship to the laws of self-preservation.

If they are afraid of us they will not attack.

If they are not some day they will.

The lack of direction and the uncertainty of the Republican administration in the field of foreign affairs is most noticeable. A reader of the newspaper can detect that fact.

Is there any one of you who can tell me what the foreign policy of our country is? We started out with (1) "The Great Crusade," (2) liberating of enslaved peoples, (3) agonizing reappraisal of our foreign policy, (4) massive and instant retaliation, (5) threatening utterances. And in less than 2 years we ended up with (A) peace through trade, and (B) peaceful coexistence.

In other words, we have gone from one extreme to the other.

But in this crisis the country was fortunate that last year it elected a Democratic Congress. For in the field of foreign affairs the Democratic Party is united. The Republican Party is badly split with bitterness existing in their ranks.

And frequently in recent months it has been the Democratic Party in Congress, under the leadership of Senator WALTER GEORGE, of Georgia, who is chairman of the Senate Committee on Foreign Relations; and of Congressman JAMES P. RICHARDS, of South Carolina, chairman of the House Committee on Foreign Affairs—both Democrats, speaking with logic, wisdom, and experience—who have saved our country from serious embarrassment.

When the Republican administration does not know what to do and is manifesting uncertainty bordering at times on confusion—when the Republican administration appears to listen to the voices of both the appeasers and those who would hurl the world into another world conflict—it has been the logic, the judgment, and the voice of these two legislator-statesmen speaking out with firmness and strength in the national interest of our country that has led the way.

The leadership of the Democratic Party in Congress, as a minority party during the past 2 years, and in this Congress as the majority party, has been one of supporting and fighting for all measures, both in the field of foreign and domestic affairs, that are in the best interests of our people.

Might I say that our people need have no fear of the united Democratic Party cooperating in the field of foreign affairs in a real, effective, bipartisan manner. The problem of President Eisenhower on bipartisanship is not with the Democratic Party—it is with his own Republican Party in Congress.

In this respect the President's problem is to try and establish bipartisanship between himself and the conflicting and fighting factions of his own party.

In his efforts to harmonize the differences within his own party, the President has had to frequently compromise his views—based on political considerations involving the different factions of his own party.

The Nation is witnessing the inability of the President to get the support of his own party in Congress. In the field of foreign affairs this could result in great harm to our country.

For the record indisputedly shows that President Eisenhower does not command the support and allegiance of at least one-half of the Republican Members of Congress.

Another matter of concern to the people of the country is the big-business control of our Government, as well as the giveaways of the resources of the people by this administration to certain vested interests.

As we view the Dixon-Yates contract; as we view the change in the wise public power policy of the past 20 years; as we view the intense concentration of economic power in the hands of a few, through giving to some corporations far more than their share of defense contracts, through an inequitable tax bill of last year, through lax enforcement of the antitrust laws, it is well that the people of America might feel gravely concerned about what the present Republican administration has done and is doing.

Outside of the few beneficial pieces of legislation, such as increased social-security coverage, and which was saved by the Democrats because they were extensions of Democratic measures, every action done by the present administration has been to give preference to big business and the big bankers.

Under this administration the situation of the small and independent businessmen, who are the backbone of our economic strength, has weakened tremendously. Very little consideration has been given to protective and strengthening this important segment of our national economy. When the present administration terminated the RFC, which had done a lot of good for small and independent businesses, it established in its place the Small Business Administration. But the Republican Congress put limitations into the law which makes it difficult for any real benefits to flow to this important element of American business.

In the extending of this law, which expires in a few months, the Democratic Congress will strengthen it so that real service will be rendered to our small and independent businesses.

One thing is also certain, that so far as the Democratic Congress is concerned, the passage of legislation for the benefit of big business and big bankers will not take place, and under a Democratic Congress there will be no more legislative giveaways.

So that despite the efforts of the press to cover up, the people are commencing to realize that the present administration is not representative of the people, but essentially is representative of big business.

In 1954 the people returned in part, through the election of a Democratic Congress, our Government to the people.

In order to stop further damage which is taking place through Republican administrative action, not by legislation, the people will have to complete the job in 1956 and return the Government to the people. For a Democratic President and a Democratic Congress means a people's Government.

On the cold record of this administration, of its broken promises, of its failures, of its domination by big business for the benefit of big business, of its inability to be a party of responsibility, all of which comes under the leadership of President Eisenhower, the people of the country are again turning to the Democratic Party for that leadership in which the Republican Party has failed.

There is no question but what the Democratic Party would win if we had had a Presidential election in 1954.

There is no question but what the party of stability and responsibility is the Democratic Party. With the bitterness existing among the Republicans in Congress, it is most fortunate for our country that the Democratic Party is in control of the Congress. With the constructive record of the Democratic Party—dedicated to the national interests of our country, and the inability of the Republican Party in Congress to assume responsibility, I confidently predict that the people in their wisdom and in their sound judgment will again turn to the Democratic Party in 1956 for leadership in both the White House and in the Congress.

In conclusion, I want to pay my special tribute to the delegation from West Virginia in the Congress, both in the national House of Representatives, and in the Senate of the United States. The delegation from West Virginia in both branches is one of the ablest and strongest, the most respected delegation of any of the States of the Union. West Virginia has sent to Congress a solid delegation of Democrats. Each and every one of them is truly a people's representative. The people of West Virginia and of the different congressional districts are justified in feeling proud of the members of their districts in both branches of the Congress.

I am particularly proud to see my good friend, Congressman CLEVELAND BAILEY, here tonight. I deeply respect him. He is one of the most courageous Members of our national legislative body.

I am particularly pleased to come here at the invitation of Congressman ROBERT MOLLOHAN. In his second term in the National House of Representatives, Congressman MOLLOHAN has already made an outstanding record for himself. He is a member of the important Committees on Government Operation and Armed Services. Both Speaker RAYBURN and I have profound respect for him. Like Congressman CLEVELAND BAILEY and the other Members of the House and Senate from West Virginia, Congressman

MOLLOHAN enjoys the confidence of the Speaker and myself.

As you well remember, our "Mr. Democrat," who is Speaker RAYBURN, of the national House of Representatives, addressed you last year. I know that you will always remember his visit to your midst. When I told him I was coming to Moundsville to address a Jefferson-Jackson Day rally he asked me to particularly convey to you his highest regards and fond recollections of his visit here last year.

No Advantage to America in Trade With Communist-Dominated Nations

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following letter I have received from Mr. John Sedlacek, 1321 North 13th Street, East St. Louis, Ill., condemning trade with Communist countries:

East St. Louis, Ill., April 24, 1955.

Hon. MELVIN PRICE,
House Office Building,
Washington, D. C.

SIR: The peoples of the United States do not appreciate the magnitude of the defeat the West has suffered since 1945. This defeat cannot be blamed on stupidity, it is brought about by a small group of pro-Communists, pseudeo-intellectuals, with full deliberation.

We continue to retreat and by yielding to those who cry for more trade with Iron Curtain countries, we are building up the economy of our avowed enemy, who, time and time again, has declared that their objective is to eliminate the United States as a world power.

Why should we help the Communist countries in power? Every report we receive from released victims of Communist aggressors indicates that a push in the right direction would encourage the people to rise up against their Red oppressors. Besides we receive no credit for our largesse. Anything the countries behind the Iron Curtain receive through trade with the West is labeled before distribution as coming from the Communist Peoples Government of the U. S. S. R.

The support for trade with Communist countries, whether originating in Britain or in the United States, cannot be written off as mere stupidity. It is deliberate. No one could be so colossally stupid.

Some person or groups of persons are pulling the strings. Sentiment for trade with Communist countries or countries behind the Iron Curtain is a deliberate policy inspired by Communist sympathizers right here on the home front. That must be evident to anyone who studies the record.

We just can't get over the gullibility of the people here on the home front that fall for the line of the quasi-intellectuals who are sounding off on every opportunity in a concerted drive to win support for trade with the Communist and countries that they control.

This all going on while hundreds of Americans are still languishing in Communist prisons—as one atrocity follows upon another; colossal lies are spread against the United States and the most monstrous being that of germ warfare and still members of the executive branch of Government and legislators in Washington talk of trade with Communist.

To us that have relatives in the Communist concentration camps cannot accept the peoples governments of Communist countries as civilized nations—to us it's like doing business with a bandit who has kicked you, maligned you, beaten you and robbed you. Would you invite such a bandit to your home and contemplate dealing with these evil men?

Therefore we would appreciate that you use your office to impress upon the Congress and the Nation, that trade with Communists—these evil people, with hands reeking with the blood of ours soldiers, is beyond comprehension.

Sincerely,

JOHN C. SEDLACEK.

Causes, Effect, and Preventive Treatment Methods of Dust Storms

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. AVERY. Mr. Speaker, dust storms in the Great Plains recently attracted national attention and prompted Secretary of Agriculture Benson to tour the area for first-hand information. The Secretary and our United States Congress have recognized the gravity of wind erosion to farmers and to other industries of the Great Plains. I should like to point out that there are great hopes for controlling this damage in the future.

Eight years ago the Federal Government, working with the Kansas agricultural experiment station, starting studying this problem scientifically. At that time, Austin W. Zingg, engineer, and W. S. Chepil, a soil scientist, were brought to the Kansas station to seek scientific answers to the problems of dust storms. Zingg was given larger responsibilities with the soil and water branch of the Agricultural Research Service. Dr. Chepil has remained in Kansas on a cooperative basis between the United States Department of Agricultural and the State experiment station. (Incidentally, the United States Department of Agriculture, I am convinced, is wise in using existing State experiment stations. We get a lot more mileage from the tax dollars by using these existing facilities. Dr. Chepil and his coworkers, stationed in Kansas, have had the cooperation of land-grant colleges in Colorado, Texas, New Mexico, Oklahoma, Nebraska, and California in their studies. Using these great land-grant institutions speeded the work and saved money.)

Research is slow and tedious, so we could not expect the scientists to have the dust storm problems solved by now. However, they have made remarkable progress in their research and already can make some definite recommendations on how to reduce dust storms.

In the 8 years, the researchers have found scientific proof that farmers can apply in the Great Plains to reduce dust storms:

First. Vegetation and/or vegetative cover are the best protection against soil erosion from wind.

Second. Strip-cropping wind reduce erosion by trapping soil near its origin.

Third. There are different tillage practices suitable for different soils to roughen the surface, to bring up clods, and to maintain stubble, straw, or other residue on the soil.

Soil particles most easily blown are about the size of fine sand—sugar, poppy seed, or salt. That is one-tenth of a millimeter in diameter. Tests in a wind tunnel at Kansas State College and in a portable wind tunnel taken into fields have shown that these particles are bounced along the surface of the ground and start the soil eroding. These bouncing particles also start the dust to lifting in the air. Tillage and crop practices that do not get the soil in a loose, finely granulated condition keep the land from blowing.

The scientists have found that dryland sands require at least 4 tons per acre of wheat stubble to "tie it down" during strong winds. The sands—as opposed to sandy soil—normally will not produce that much wheat stubble, so the sands should be "tied down" with permanent vegetation, Dr. Chepil said.

Sandy soils require from 1 to 2 tons per acre for almost complete portection from the high plains winds. Nearly always this amount of wheat or sorghum stubble and straw can be produced.

From one-half to 1 ton per acre of stubble will almost always protect hard lands from soil erosion during high winds.

The USDA researchers, working with their wind tunnels, derived a formula that indicates how to reduce the erodibility of a field to an insignificant amount. With the formula the scientists, studying three major factors, can predict quite accurately what is needed to prevent erosion. For example, if land has no vegetative cover, its surface must have 60 percent or more clods to resist wind erosion. If the land had 1,000 pounds of wheat stubble and straw—about the amount from a 6-bushel crop—it would resist strong winds with only 30 percent to 40 percent of its surface composed of clods.

Likewise, roughening the soil's surface with ridges will prevent wind erosion. Lister ridges 10 inches high will prevent soil erosion by wind, even if the surface of the soil has only 20 percent to 30 percent clods with virtually no vegetative cover. In practice this means that almose any soil that is not pure sand can be "tied down" against the wind. Exploratory tests with V-blade cultivators have been highly successful in the dry soils of the high plains area. The V-blade works beneath the surface, undercutting and killing weeds, but it leaves the stubble standing to protect the surface from winds.

A recent discovery by the USDA scientists at K-State is that a farmer can make his soil more erodible to wind by pulling his "chisel" either too fast or too slow. N. P. Woodruff and Dr. Chepil recently found in tests that speeds 1 and 2 on a caterpillar are too slow and that speed 5 is too fast. Soil "chiseled" in

speeds 3 or 4 resisted the wind considerably better.

I should like to emphasize that all this scientific information has come from the work of only a few scientists. At present two are on the wind project at Kansas State College. The cost of obtaining this information is now less than $25,000 a year.

Kansas' share of the emergency funds recently allotted this year to alleviate dust and drought conditions is 85 times that amount—$25,000 compared with $2,125,000.

The point I wish to emphasize is that the Government could wisely invest more in research and education aimed at permanently controlling the dust, stabilizing great plains economy, and reducing the frequency of such emergencies.

More research is needed to determine the effects different tillage implements have on different soils and under different moisture conditions. Information on this subject is fragmentary and inadequate.

Whether deep plowing is beneficial or not needs to be determined scientifically.

More information is needed on the influence of type, quantity, and position of crop residue.

Virtually no information is available on the relative effectiveness of standing stubble compared with stubble that has been knocked down by tillage.

An expanded research program is needed dealing with climatic factors. We need to know more about wind velocity and direction, temperatures, and rainfall. They are the principal factors that influence erosion. Many of the presently unsolved mysteries of winds, temperatures, and rainfall as they apply to farming conditions in the Great Plains and elsewhere can be solved in research laboratories and fields.

A Victory That Contains the Germ of Defeat

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1955

Mr. RODINO. Mr. Speaker, the townsfolk of Nutley, N. J., express simply but sincerely the sentiments of a grateful Nation to a man of greatness—Dr. Salk—through the following editorial tribute which appeared in the Nutley (N. J.) Sun under date of April 21, 1955:

LET NUTLEY TRIBUTE JONAS SALK

Jonas E. Salk is a plain name which befits a plain man, a self-made man whose entire professional career, surprisingly short thus far, has been devoted to research, dedicated to the discovery of a vaccine which will curb polio as one of the most destructive of human miseries. It is particularly fitting, in the opinion of the Nutley Sun, that, as Dr. Robert Citrino, public school physician, and the Columbus Club have, jointly, proposed, Nutley should honor Dr. Salk on May 7, the day the school doctors start the injection of Salk vaccine among the children of the two lowest grades of our public and parochial schools.

As a scientist, Dr. Salk asks no tributes, expects none. He stands to reap no rich profits from his discovery, except the priceless gratitude of an entire world which, through his genius, stands now to banish the iron lung and to eradicate one of the great killers, the great cripplers of our generation. His dedication to that one purpose establishes him as one of the great benefactors of the human race.

It will be fitting that by dedicating a day to his honor, Nutley expresses from its heart its appreciation to the man who will give our children protection against a scourge which, each year, has stricken several of ours.

R. E. H.

Technological Unemployment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement on mechanization in the textile industry, which is a thought-provoking article for each Member of Congress:

PRODUCTIVITY CHANGES IN THE TEXTILE INDUSTRY

(By Solomon Barkin, director of research, Textile Workers Union of America)

Technological displacement is taking place at at more rapid rate in the textile industry than in American industry as a whole and in the most advanced American industries. As in American industry as a whole, employment is contracting despite high production, presenting the American economy and our country with the challenge of developing social and economic policies capable of dealing with the problem of technologically displaced and permanently unemployed.

The failure to meet this problem during the twenties gave birth to the term "technological unemployment," and is a basic explanation for the depression of 1929–33. We cannot repeat this costly experience.

The reasons for the stepped-up rate of technological change in the textile industry are three in number.

First and most important has been the investment in new equipment. Since World War II, the industry has spent over $4 billion on new equipment and expansion. Most of the expenditures has been for new equipment and relatively little on new buildings. There has been a revolution in the types of machines on the floor of the American textile industry. It is estimated that well over 70 percent of the machines are of post-war construction.

New equipment, in all cases, is faster and requires less manpower. Processes are telescoped so that entire operations have been eliminated. The machines have been made more automatic and packages have been made larger so that they run longer with fewer people to tend them. The surrounding working conditions have been improved so that yarn breaks occur less frequently. Automatic controls are being substituted for human inspection and supervision.

But these expenditures are only part of the reason for the rising productivity. The second major cause is the acceptance by the textile industry of the management technology of other industries. Centralized controls are being instituted over scheduling and production and systematic quality controls are being introduced. Plant layouts are being revamped for straight-line production. Materials handling is being reduced to a minimum, and where actually necessary, mechanical means are being substituted for labor. Technically trained supervisors and time-study engineers are combining to tighten labor standards.

A third force is the substitution of new fibers for the older ones, and in each instance, the transfer of production is to plants with lower labor content per yard of output. This is indicated by the fact that whereas a worsted mill might require one-third of a man-hour per yard of serge, a cotton mill would require less than one-tenth of a man-hour per yard of cloth.

Moreover, we are on the threshold of further innovations. An industry accustomed to slow change is now being swamped by an avalanche of innovations originating both at home and abroad. The developments in other industries are truly revolutionizing it. What autmation pretends to do for other industries, the current technical developments are already effecting in this industry.

The nature of the change is suggested by the following rough calculation: Textile employment in February 155 stood at 995,100 production workers, which was 20 percent below the average employment level of 1947–49. According to the Federal Reserve Board, textile production for the month was actually 8 percent above the base period of 1947–49.

Another approximation is available from a comparison of employment trends and total textile woven yardage in the cotton, wool, silk, and synthetic fabric industry.

	Production workers [1]		Production (millions of linear yards)				Yard per man-hour
	Employment (thousands)	Man-hours (millions)	Total	Cotton	Silk and synthetic	Woolen and worsted	
1947	768.7	1,589	12,371	9,817	2,039	515.8	7.8
1948	784.3	1,603	12,405	9,640	2,267	498	7.7
1949	680.9	1,322	10,923	8,406	2,086	414	8.3
1950	718.5	1,490	13,091	10,013	2,578	471	8.8
1951	707.9	1,438	12,887	10,136	2,350	375	9.0
1952	654.3	1,329	12,160	9,514	2,294	351	9.0
1953	645.1	1,313	12,946	10,203	2,410	338	9.9
1954	575.6	1,140	12,283	9,763	2,238	281	10.8

[1] Covers scouring and combing plants, yarn and thread mills and broad-woven fabric mills.

Another index of rising productivity is supplied in the annual report of a southern cotton textile mill, Graniteville Mills of South Carolina. It shows that for the 10-year period from 1945 through 1954, it spent $18,028,000 on plant additions and replacements and the pounds of cloth produced per 1,000 man-hours rose from 5,838 to 8,981, or 54 percent. In the last year alone, the pounds produced per thousand man-hours rose by 10.84 percent, which is the largest productivity rise scored in any 1 year.

A recent report on the Harriet and Henderson Mills of Henderson, N. C., offers the same striking testimony of rapid rates of increase in actual productivity. From 1938

through 1954, the Harriet Cotton Mills report an increase of man-hour output of 124 percent and the Henderson Cotton Mill of 118 percent.

A comparison of the range of productivity at mills producing print cloths reflects on the growth in productivity. A most modern mill built in Greenwood, S. C., apparently requires 143 man-hours per thousand pounds. A survey of five average mills by the United States Bureau of Labor Statistics shows that they require from 139 to 203 man-hours per thousand pounds of print cloth. During a recent survey of another print cloth mill now operating in North Carolina, we found that it required 221 man-hours per thousand pounds, a range of 70 percent between the lowest and highest producer. These differences indicate the potentials for higher productivity effected with the modernization of equipment, plant, and improved management.

The American Textile Machinery Association reports that a modernization program in a mill of 30,336 spindles would effect an increase in output per manhour from 4.9396 pounds to 9 pounds, or 82 percent. In another mill of 34,704 spindles, a modernization program of a modest type would increase its output from 4.720 pounds per manhour to 7.6316 pounds, or 62 percent. The same organization reports that the modernization of a mill in the production of combed broadcloth would effect a reduction in manpower per shift from 70 to 43 employees, or 63 percent.

The Whitin Machine Works, Inc. reports that the modernization of the production of a 20,000-spindle combed cotton knitting yarn mill would reduce costs by 36 percent, from 15.24 cents to 9.72 cents per pound. Most of the reduction would be effected through lower labor cost. This item would be cut from 14.3 cents to 6.2 cents per pound, or by 57 percent. The labor schedule, which required 217 employees before modernization, would be reduced to 124 persons, or by 43 percent. This company indicates that a reduction of 6.2 cents in labor cost and .08 cents in power will be offset by an increase of 0.2 cent in taxes and insurance and 0.6 cent in depreciation charges, so that the reduction in labor costs would have also to carry these larger tax and depreciation charges.

The above study of the available information shows that the rise in manhour productivity in the post-war years has been at the rate of at least five percent per annum. This is far in excess of the national average and the claims which are being made as to the likely effect of automation on the entire economy. The current period of business recovery has not spelt more jobs for textile workers.

More far-reaching economic and social programs than have been hitherto adopted are required to stimulate our economy to provide jobs for those millions who still have no jobs at a time when our industrial system is meeting previous peak production records.

The 82d Airborne Division

SPEECH

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. GAVIN. Mr. Speaker, in company with 23 other Congressmen and a number of Department of Army officials including Under Secretary Charles C. Finucane and Assistant Secretary Chester R. Davis, I went to Fort Bragg on Friday, April 22, to see the airborne troops of the XVIII—18th—Airborne Corps display their prowess. The world-famous 82d Airborne Division demonstrated to us the training, religious, recreational and other influences that go to make up the present-day airborne trooper.

We hear a lot about "morale" and "esprit" in our dealings with the Armed Forces. I was tremendously impressed by the obvious pride of belonging which exists among the troopers at Fort Bragg.

We saw demonstrations of the rugged physical training that goes into the making of a paratrooper and noted the stress on mental alertness which permeates all phases of training. We were shown how, in the 82d's basic airborne course, the swinging harness was used to simulate the oscillating of a parachute as it comes to the ground; troops executed landing falls from a 4-foot platform; the 34-foot tower from which the trooper actually leaps into the air, riding a cable to the ground some 150 yards distant was utilized; wind machines blew the troopers along the ground in the process of teaching them how to collapse a parachute in high winds.

The light aviation and helicopter elements of the XVIII—18th—Airborne Corps Artillery and the 8th Helicopter Battalion showed us their versatility in equipment drops, wire laying, and message pickups. The "Whirly-Birds" demonstrated their specialty of troop movement and evacuation, as well as the hauling of supplies.

We saw the Army's giant atomic weapon, the 280-millimeter gun. We were also impressed with the 155-millimeter gun, the 8-inch howitzer, and the 240-millimeter howitzer.

Saturday morning, April 23, at exactly 9:00 a. m. more than 1,000 troopers from the 504th Airborne Infantry Regiment and the 456th Airborne Artillery Battalion parachuted into simulated combat before our gathering. Fifteen tons of heavy equipment—jeeps, three-fourth-ton vehicles, artillery pieces, and resupplies—were dropped within moments of the initial assault landing.

Later on in the day, 504th Airborne Infantrymen teamed with troopers of the 44th Tank Battalion and the 456th Airborne Field Artillery Battalion to demonstrate the shock power of the coordinated infantry-artillery-tank team. Their regimental exhibits were excellently presented.

The 2-day visit was climaxed with a review of the entire 82d Airborne Division and elements of the XVIII (18th) Airborne Corps Artillery, a thrilling sight which graphically depicted the power, might and mobility of the United States Army.

I was greatly impressed with the physical demonstrations which I witnessed. The Army is doing a magnificent training job at Fort Bragg. The demonstrations we witnessed were awe-inspiring in their sheer tactical impact.

Capt. Paul W. Hamblin, headquarters, 82d Airborne Division, gave our group a short narration on the mission of the infantryman. I cannot remember ever having previously heard a more lucid or succinct explanation of the role of the fighting soldier. At this point I would like to insert into the RECORD Captain Hamblin's talk titled "The 82d Trooper—Epitome of Fighting Men." I recommend that you not only read it, but that you retain it for future use. It will properly orient you on the individual soldier's role in warfare.

THE 82D TROOPER EPITOME OF FIGHTING MEN

(Narrated by Capt. Paul W. Hamblin, headquarters, 82d Airborne Division, at Field House on April 22, 1955)

The mission of the 82d Airborne Division is destruction of the enemy on the ground. The only effective way to completely destroy the enemy and his will to fight is to seize and hold his real estate. And the only way to completely accomplish this mission is by the use of the ground combat soldier—the infantryman. The advancement in arms and machines has exceeded man's wildest expectations. The modes and methods of warfare, for all services, have been greatly changed by these advancements. With each successive development of these arms and machines, man has had to adapt himself in order to survive. That we, as a race, do survive, is proof that it is man, not the machine, that constitutes the force for final success. For ultimate victory it is the individual soldier, with his skill, his courage, and his mental strength that we must look.

The infantryman's mission is threefold: First, to carry the fight to the enemy on the ground. Second, to close with the enemy and destroy him. Third, to hold what he has seized and force the enemy to his knees. This is the infantryman's task.

Basically, an infantryman is a soldier trained, equipped, and organized to fight on the ground. He is a dismounted, close-in fighter. His advances are characterized by relentless pushing, elbowing, and clawing inch by inch, yard by yard, mile by mile. He hangs on to his gains with bulldog tenacity. On the battlefield he moves in small, hard-to-see formations, taking advantage of routes which provide concealment—at times only enough for a single man.

No war has been won until the infantryman imposes his will on the enemy infantryman. No land is conquered until the man on foot plants his muddy GI boot on the enemy's homeland and holds it.

The sole purpose of all the marvelous machines of war, regardless of whether they travel on the water, in the air, or on the ground, is to enable the infantryman to come to grips with the enemy and to support him in this effort.

The men who fly over him, the tankers that thunder by his side, the sailors who buck the seven seas, the men who build bridges in the face of enemy fire, the artilleryman firing his missions, these and his many other comrades-in-arms sweat only in support of the infantryman fulfilling his mission. Every weapon, from the awful awe-inspiring new ones to the blackjack and trench knife, is conceived in his behalf so that, with the guts and skill that are his, he can carry the fight to the enemy, destroy him, seize the ground, and hold it.

It is an irrevocable fact that our most precious commodity is the individual trooper. We—you and I—are derelict in our duty if we do not do all within our power to insure that he is the ultimate fighting man.

Here, this evening, our displays stress the many activities and functions needed to satisfy the requirements—mental, physical, and psychological—of the fighting infantryman. All that you will see this evening—the equipment for training, the supplies, the supporting elements—all have as their sole reason for existence, the development of the individual soldier into the fighting soldier.

The Threat of Communism

EXTENSION OF REMARKS
OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. SCHENCK. Mr. Speaker, our good friend and colleague, Congressman OLIVER P. BOLTON, of Ohio's 11th District, has called my attention to a series of timely articles on world events written by Robert C. Dix, publisher of the Ravenna-Kent (Ohio) Record-Courier, and his wife, Helen, who have just returned from an extensive tour of Europe and Russia.

Mr. Speaker, our good friend and colleague, Congressman OLIVER P. BOLTON, has been ill for the past several weeks. I am happy to report that he is now feeling much better and it is expected, by his physicians, that he will soon be back with us again carrying his full share of our important responsibilities in his usual able and conscientious manner. His illness was caused and precipitated by the complete and full way in which he dedicated himself to the service of his congressional district and our entire Nation. We will all be glad to welcome him back and wish for him a lifetime of good health and opportunity for service. In the meantime, I consider it a privilege to join with Congressman OLIVER P. BOLTON and in his behalf to point out the following to the Members of the House.

Mr. Speaker, these stories, exceptionally well written by Mr. and Mrs. Robert Dix, out of their own personal and keen observations furnish us, as Members of Congress, extremely helpful information in our quest for knowledge about the threat of communism. They prove all over again, Mr. Speaker, that it may well be much later than we think and that it behooves all of us to leave no stone unturned to protect the rich heritages, the freedoms, and the rights of all our American citizenship that have been gained for us by the clear thinking, hard work, dedicated service, patriotism, and even the supreme sacrifice of life itself by our forefathers.

Mr. Speaker, Robert C. Dix and his wife, Helen, have written many stories for their newspaper as a result of their extensive tour of Europe and Russia. Each of these stories is well worth reading. I am happy to join my good friend and colleague, Congressman OLIVER P. BOLTON in requesting unanimous consent that the attached three stories by Publisher Robert C. Dix and his wife, Helen, be printed herein for the information of the Members and also as illustrative of their keen observations of these important situations.

[From the Ravenna-Kent (Ohio) Record-Courier of April 7, 1955]

CZECHOSLOVAKIA UNHAPPY LAND UNDER TIGHT COMMUNIST RULE

(By Robert C. Dix)

PRAGUE, March 29.—I am writing this article in the seclusion of my room here at Hotel Alcron and I shall not mail it until I am outside the Iron Curtain area. As it unfolds, you will see why.

This is an unhappy land. Everybody eats here. Everybody works. But the standard is low in this one-time high standard country and hope of better things, a little economic independence perhaps, has all but faded away.

People can listen to Voice of America and Radio Free Europe in spite of the rather complete jamming. And the police don't object if you do listen, but they do object if you talk about it or in any way pass on the information. But many have quit listening anyway. It's like passing in front of a candy store every day with no money in your pockets. Finally you come to the deadening realization that the candy is not for you. Then you quit looking. Finally you go to the other side of the street. Maybe some day you'll even forget that it's there.

Political control is complete. If you're young and coming up in the world, it doesn't take long to learn that getting ahead means playing the game. And if you really want to get ahead, it means getting into or close association with the party somehow.

But membership in an area already taken over is low and exclusive. If you have any kind of a record—like if your parents were bourgeoisie—it's almost impossible.

Leaving the country now is exceedingly difficult. Some do. Some die trying. Others are just sitting it out, making the best of it and trying to get along. On them the heavy propaganda is, if it isn't penetrating, at least anesthetizing in its effect.

Travel is, of course, restricted to Czechoslovakia. A person can't travel even between the satellites. He must remain within his own "concentration camp," as one person described it to me.

Some day, perhaps, everybody will be sufficiently conditioned to be trusted.

What effect the latest turn to heavy industry will have on this little satellite, no one knows. At present consumer goods are fairly plentiful, by Iron Curtain standards, but nowhere close to the standards that this once highly developed area knew. Prices are high. But since there is no incentive to save anything, people spend what little they have.

Book stores, carrying their propaganda message, stand out in the downtown shopping district. There were at least 6 or 8 within a 4-block area.

The people converse in Czech. They all know German. A large percentage understands and speaks English. But it may not be many years until Russian is the second language here. It is a "must" in the schools. And it is a language that a person will have to learn if he wants to get anywhere in this particular sphere under present conditions.

All trade that amounts to anything is with the East. Skoda at present is making a large number of powerplants, big and little, for Red China. Grains are coming back in return.

All of America's 48 States are making their contributions to our fine foreign service. I met a person, Albert Sherer, here with a Wooster, Ohio, background.

He came to the foreign service from the Air Force after the war and has specialized in the satellite countries. All of these career men know the language of the area in which they are to serve before they go there.

Rather descriptive of the situation here was the way in which we held a conference with our ambassador at the embassy. We all entered the spacious living room. Aides closed the doors and stood guard in front of them. And then, just before we began to talk, another aide turned on a sound jamming machine that would negate the effectiveness of any listening device that might be planted there.

All of the native employees at the embassy come from a central source. And they all are approved by the Communist government before they are permitted to work there.

[From the Ravenna-Kent (Ohio) Record-Courier of March 30, 1955]

ALONG THE WAY

(By Helen Dix)

ATHENS. — Gracious Queen Fredericka winked at my husband, and like any tactful woman, probably though "how I love that man for changing the subject." The subject was "Cyprus" a red-hot but embarrassing question here in Athens and one which this editor's tour, having been, as they say, "brain-washed," wished it could forget.

All this happened during the most exciting moments of my life or, as other members of the party agreed, the most exciting moments of the trip so far. Those moments stretched to more than 1 hour and 15 minutes while we were being received by their royal majesties "King Paul and Queen Fredericka, rulers of the Hellenes."

The wink, now famous especially in the Dix family, was a result of Bob's quick thinking in changing the subject from Cyprus when one editor blundered into the subject in a conversation with the queen. Her wink betrayed her gratefulness to my gallant husband for saving her from the Cyprus situation.

What does a mousy little midwestern housewife do when she goes "to visit the queen"? First she has misgivings about her clothes • • • but assured that street attire is correct she dons her best "party-go-to-PTA-meeting gown," makes sure gloves are white and spotless, takes a couple of doubtful extra glances in the mirror, then because her husband screams she is late, rushes from her hotel room convinced this whole trip is a mistake.

With the 28 other tour members (seven women) the housewife walks past the gaily dressed guard at the palace gate for about 200 feet. Here is the palace entrance, unassuming door, tiny vestibule where we deposit our coats and cameras. Up one flight of blue carpeted circular stairs, across a formal marble hall to an anteroom, also carpeted with royal blue and furnished in lovely beige Americanish furniture.

The little tinkling chimes of a clock had not completed their twelfth stroke when the "master of ceremonies" beckoned to the Queen's lady-in-waiting, the King's naval attaché, United States Ambassador and Mrs. Cannon, then our group to follow. Across the white marble hall, up the broad blue carpeted stairs to the first landing. There we were literally overcome by the most heavenly fragrance I ever expect to smell • • • the hall is apparently kept perfumed and we seven women couldn't sniff enough.

At the door of the royal apartment stood Ambassador Cannon, who shook our hand then eased us to the Queen. We had been instructed to shake hands with their Majesties (don't curtsey, you might fall) then state your name, hometown, and State, verly clearly. I took a deep gulp of air as I took the Queen's hand and my name came out beautifully but with the King I didn't get the deep gulp of air and it just squeaked out. (The Illinois editor's wife in front of me later confessed that nothing came out of her mouth to the King • • • the saliva just stuck, she wailed.)

From then on it was a lark, many uniformed waiters served a delicious little beverage and trays and trays of heavenly tidbits, the King and Queen moved with ease from group to group and within seconds we were all old friends, laughing, chatting and loving their Majesties.

The Queen is all charm, beauty and brains. She is thinner than pictures in the United States showed her, due no doubt to the two severe ear operations she has undergone this winter. Both were successful.

Her stories, her humor, her timing • • • all were excellent. She has a most eager and

exciting catch to her voice as she tells of "kidding" the doctors about her "thick skull" during her ear operations, or telling of the wonderful work done by Boy Scouts during the war or talking of her three children or of America.

Both she and the King hope to bring their children to America for a summer vacation tour soon.

What did the Queen wear? Her dress was a simple green jersey with a small black leather cord detail at the neck held by gold buckles at each side. She wore black alligator pumps. Around her neck was a single strand of large pearls which held a large diamond-studded pendant and an uncut ruby. She wore 4 bracelets, 2 gold and jade on the right arm, 2 gold and diamond, matching her necklace on the left. She wore 5 rings, 2 matching her necklace. Her hair cut informally is black and brushed into a short mass of curls.

The King, a handsome man (tall enough to come from Texas, one Texan in the party told him) wore a uniform with five rows of decorations and a large gold cross hung midway on his coat. He talked of sports and good times in America and sorrowfully of communism.

When after more than an hour and 15 minutes elapsed the King and Queen walked down the stairs with us to pose for pictures and when the photographer motioned us closer the Queen chuckled, "Shall we sing for you, too?"

As we filed past to shake hands again in goodby Their Majesties repeated time and again, "Do come back to see us," and we, like next-door neighbors, begged them to come to America to see us all, too.

[From the Ravenna-Kent (Ohio) Record-Courier of April 11, 1955]

RUSSIAN PEOPLE LIKE AMERICANS—KREMLIN HAS TIGHT GRIP

(By Robert C. Dix)

STOCKHOLM.—It's a relief to leave Russia. And that's nothing against the Russian people. Individually, so far as the ones we met are concerned, they're just ordinary human beings like you and me. Same hopes and same fears.

It's the system. And even that is difficult to put into words. Perhaps the best way to understand it is to use their own words.

Government, to them, is a thing, an institution, apart. At Leningrad on the way out we picked up a couple of American students who had had a better opportunity to talk to the average Russian than we had. Always the Russians expressed affection for the American people. Too bad, they would always say, that our Government is so warmongerish and so imperialistic.

They would always look bewildered and unbelieving when a person would try to explain that our Government was the people.

At Intourist one day, I was trying to explain to Mr. Rogov, the head of that department, that we would like to meet some Russian officialdom, that we would like to see something besides a works project, something human. We got onto the same subject. Too bad, he said, that our Government was delaying on an exchange of farm experts.

The American people wanted the exchange, he was sure. But the Government would never permit it.

I told him that if the American people wanted it, the exchange would take place. The Government is the servant of the people, I tried to explain.

But the thought didn't make a dent. Thirty-seven years of obedience and conditioning in a complete public opinion vacuum leave their mark. They have resulted in the evolution of a tremendous human force under the unchallenged authority of nine men in the Kremlin.

No other place does human history record so much power in the hands of so few.

Those were almost the exact words of our Ambassador, Mr. Bohlen, who briefed us himself on the country.

If you can imagine a group of nine men in the United States running everything here, including the United States Steel Co., the auto factories, all of the other great industries, the Army, Navy, and Air Force, the newspapers and the radio, all Government functions and everything else, you might come close to some comprehension as to the power, the aloofness and the necessary ruthlessness of the government.

There is also nowhere a tighter security in the world than at the Kremlin. There are no leaks there.

Their Achilles heel so far is their agriculture. They have industrialized their country at the expense of the peasantry. They are trying now to get agriculture back on its feet. One of their biggest gambles is putting to the plow 66 million virgin acres of prairie land, which in size is as large as all of the arable land in France and Italy.

If their gamble works, look out.

Russia has a dictatorship without a dictator. The experts seem to think that a new one will, in time, emerge. Probably Khrushchev.

Something like this takes a lot of policing. That they have. One of the highlights of my visit in Moscow was meeting Joyce Marshall, daughter of Dr. and Mrs. Leon Marshall. An old hand at being arrested, she was detained once for several hours. She told me she would show me what a member of the police force looks like. So we went for a walk in some of the little streets away from the wide boulevards. It wasn't long until our follower was visible to the discerning eye.

He stopped when we stopped, always about a half a block behind. She is often followed when she goes out. Most embassy people are. They get used to it.

But if a person is inclined to let things like that worry him, he ought not to accept an assignment in Moscow.

Whether or not any of our newsmen were followed, I don't know. We were mostly shepherded around in a group anyway. We probably were not.

One thing I kept looking for was some evidence of civil defense. War, if it ever comes, will obliterate a populace that has no civil defense program.

There may have been some. I didn't see it. But, of course, the Moscovites have their subway system. It's over 65 kilometers long and is as much as 200 feet below the surface at points.

Besides being a good transportation system and having civil defense possibilities, it's also sort of an art gallery.

Each of the 41 stations tell at story. At the Station of the Revolution, the entire struggle of the Russian people is told in pictures on the ceilings.

What are my conclusions to all this? Even the fuzziest of thinkers must have a few after an adventure of this type. They are:

1. On the possibility of change, nothing at the people's level. At the palace level, changes will continue until power gravitates to one person again.

2. The future? Well, the system holds close to a billion persons within its iron grip. Only Tito has successfully broken away. He did so because he had the strength to ward off an initial blow and because we stepped forward to provide him with needed assistance.

Other satellites do not have the strength or the will of a Tito. And all of the means of implementation of any such ideas are within the control of the faithful.

Unlike the absolute authorities of old, these modern ones don't ignore the people completely to the point that they will face guns with pitchforks. They try to mold the force, keeping it above subsistence level and then working constantly on its mentality, winning it over completely or deadening it to the inactive stage.

3. What about war? It's on now. It's at the propaganda stage. Very hot there. They will try hard to win it at that level. We must not only counter but try to win it there, too. There's also the economic phase. They would like to break us by developing all the world's resources and people. That we can't allow to happen either.

4. The length of the struggle? A long one.

Seventh Anniversary of Israel's Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. BARRETT. Mr. Speaker, on May 14, 1948, the State of Israel proclaimed its independence, and today, April 27, 1955, her people are celebrating this momentous event.

I am proud to count myself among the many American supporters and well-wishers of Israel who join on this occasion in felicitating its people upon attainment of another milestone in their thrilling history.

In an area no larger than the State of New Jersey, Israel's 1,600,000 inhabitants, surrounded by enemies on three sides and the sea on the fourth, have written in these 7 years an epic of indomitable courage and inspiring ingenuity that parallels the early struggles of our own Republic.

There, at the ancient crossroads of the Old World, men women, and children who fled from tyranny, persecution and concentration camps, have made new headway in their mighty efforts to build a bastion of democracy in the Middle East.

From the streams and mountains of Galilee, through the stony hills of Judea and the arid area of the Negev, to the fertile coastal plain these pioneer people have labored to wrest a living from soil which yields mainly citrus fruits, but nothing of mineral wealth or fuel.

It has been well said that Israel's greatest natural resource is its people. They have developed industry where none flourished before, utilizing the mechanical and inventive skills of craftsmen from all parts of Europe. Industry and crafts, indeed, have become the leading economic factor; agriculture second.

But the new nation's greatest need—its exports boycotted by its immediate neighbors—is for trade abroad to bring an inflow of dollars to buy raw materials for its own necessities and for processing and resale to others.

The progress Israel has made so far, be it remembered, has been achieved in the midst of an uneasy truce with the

Arab nations which, after all these years, are still unreconciled to its existence.

It is to be fervently hoped that the United Nations, which is struggling with the issues, may yet find a solution that the contestants may ere long agree upon the proposal for harnessing the lifegiving waters of the Jordan.

Then Israel would not need to work with one hand and a gun in the other; peace would indeed settle upon the Holy Land; once more would milk and honey flow there, and the vision of a Promised Land, now spiritually and politically fulfilled, could become an economic fact.

This is my anniversary wish for Israel.

Los Angeles Harbor Commission's Resolve for Reduction in Panama Canal Tolls on Commercial Cargo

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to present herewith text of a letter to me from the board of harbor commissioners, city of Los Angeles, Calif., dated April 25, 1955, together with the text of their resolution 2070:

BOARD OF HARBOR COMMISSIONERS,
Los Angeles, Calif., April 25, 1955.
The Honorable CLYDE DOYLE,
The House of Representatives,
Washington, D. C.

DEAR SIR: At a meeting of the board of harbor commissioners held on April 20, 1955, resolution 2070 was adopted by the board of harbor commissioners urging—

(1) That the Congress recognize the national-defense value of the Panama Canal and adopt legislation to effectuate a reduction in tolls on commercial cargo moving through the Panama Canal;

(2) That the Congress alter the financial and fiscal policies now in effect at the Panama Canal to the end that commercial cargoes be no longer burdened with excessive cost items; and

(3) That the Congress amend the present treaty so that commercial cargoes will not be required to carry the burden of any increased annuity payments that may be arranged with the Republic of Panama.

I am forwarding you herewith copy of resolution 2070 for your consideration.

Yours very truly,

M. G. ROUSE,
Secretary.

RESOLUTION 2070

"Whereas the Board of Harbor Commissioners of the City of Los Angeles is charged with the operation, management, and development of Los Angeles Harbor, one of the large harbors on the Pacific coast of the United States; and

"Whereas said board is vitally concerned with the future development and progress and with the general economic welfare of Los Angeles Harbor and the Southern California area served by said harbor; and

"Whereas the ships of the United States merchant marine contribute greatly to the economic growth and development of Los Angeles Harbor and are a vital part of our national defense; and

"Whereas the stabilization and promotion of the United States merchant marine, especially in the intercoastal trade between the east and west coasts of the United States, should be encouraged and fostered; and

"Whereas tolls paid by ships of the United States merchant marine transiting the Panama Canal are an important factor in the continued development of maritime commerce, especially intercoastal: Now, therefore, be it

"Resolved by the Board of Harbor Commissioners of the City of Los Angeles as follows: That the Board of Harbor Commissioners of the City of Los Angeles urges, (1) that the Congress recognize the national-defense value of the Panama Canal and adopt legislation to effectuate a reduction in tolls on commercial cargo moving through the Panama Canal; (2) that the Congress alter the financial and fiscal policies now in effect at the Panama Canal to the end that commercial cargoes be no longer burdened with excessive cost items; and (3) that the Congress amend the present treaty so that commercial cargoes will not be required to carry the burden of any increased annuity payments that may be arranged with the Republic of Panama; and be it further

"Resolved, That the secretary is hereby instructed to transmit copies of this resolution to such Members of Congress and to such other interested parties as the president of the board may direct."

I hereby certify that the foregoing resolution was adopted by the Board of Harbor Commissioners of the City of Los Angeles at a meeting held April 20, 1955, by the following vote: Ayes: Messrs. Menveg, Kingman, Spires, Cosgrove, Tanner (5); Noes: None.

M. W. ROUSE,
Secretary.

The Commission for the Reorganization of the Executive Branch of the Government

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. MAILLIARD. Mr. Speaker, I know all of us are interested in the work of the Commission for the Reorganization of the Executive Branch of the Government, headed by our distinguished former President, Herbert Hoover. As evidence of public interest in my own community of San Francisco, I am inserting in the Appendix of the RECORD editorials from three of our great metropolitan daily newspapers. These editorials were sent to me by the regional director of the Citizens Committee for the Hoover Report, with the request that they be included in the CONGRESSIONAL RECORD for the information of the other Members of the House:

[From the San Francisco Examiner of April 8, 1955]

BACK ON THE TRACK

The Hoover Commission report on the wasteful abuses attending Federal transportation operations, both in the air and at sea, will serve a useful and profitable purpose if it helps to get these activities back on their original track.

The Federal Government went into the maritime and air transport fields to supplement, not supplant, public carriers.

But as in all cases where the Government finds it necessary to get into business, opportunists have tried to take over the business altogether.

Again as in all such cases, it is only when the Government operation provides essential services private carriers are unable to supply that a useful purpose is served.

Shipping operators do not question, and in fact welcome, the supplementary services of the military air and sea carriers.

But when private shipping and airlines are able to perform necessary service, and are compelled to stand by in idleness while competing Government ships and planes take over the business, the operation is far afield from the original and sound intention.

In duplicating existing facilities of American transportation enterprises, according to the Hoover Commission, the Federal Government is annually spending $150 million wastfully and with great injury not only to competing business interests but to the Nation's taxpayers.

The Congress never intended to get the Government into the transportation business, as the politicians seemingly have contrived to do.

The Congress should take note of the comprehensive report of the Hoover Commission on this vital matter, and promptly get the whole air and sea military transport project back on the track of its original intentions.

[From the San Francisco Chronicle of April 20, 1955]

HOW UNITED STATES SURPLUS ADDS TO DEFICIT

The Hoover Commission issued a report this week on prevailing waste and confusion in the Government's disposal of surplus property which, if corrected, would "go a long way toward eliminating the annual deficit in the national budget."

Any such promise from the Commission obviously deserves the lively and serious interest of Congress and the public. This is the problem the Commission found:

1. The Government has a mountainous accumulation of assets, scattered throughout the world, amounting to some $155 billion. The figure does not include the value of land in the public domain, surplus farm commodities, or strategic stockpiles.

2. With proper inventory control and more realistic stock levels, from $10 billion to $25 billion of supplies now in storage could be eliminated.

3. For the next several years the Government will be getting rid of huge quantities of supplies from its warehouses. At original cost these surpluses were acquired at a rate of $2 billion worth a year. Only 5 to 7 percent of this cost will be recaptured by present methods of sale. With modern, expert techniques of selling the Commission is convinced the Government could recover more than that.

4. The Military Establishment accounts for more than 99 percent of all goods bought and stocked by the Government. Vast savings would flow from more efficient management of this property.

The task force that looked into Government surplus property was headed by Gen. Robert E. Wood, former chairman of Sears, Roebuck & Co. By random selection of supply items in common use and easily obtainable from manufacturers it found that military depots stock as long as a 20 years' supply of these items. In one case the supply was 128 years' worth. The Army Signal Corps had an authorized stock level of 1,426,000 dry cell flashlight batteries, enough for 8½ years. Yet dry cell batteries on the shelf deteriorate in months, let alone years.

Instances like this could be multiplied; the story is unvarying. Congress should insist that the Defense Department, as the principal contributor to this burden, get busy on the adoption of Hoover Commission recommendations and any other promising

procedures to save the billions of tax dollars now being lost.

[From The San Francisco News of April 25, 1955]

LET 'EM EAT HAMBURGERS

Everybody, we suppose, is against sin—except sinners.

And every one, we imagine, is against waste and deuplication and plushiness in the Way Uncle Sam runs much of his business. Every one, it would seem, except the wasters and duplicationists and plus spenders.

The Hoover Commission is out today with another of its penetrating reports. * * * This one has to do with the way Uncle's bureaucrats fritter away taxpayer millions in the purchase, shipment, storage, and use of food and clothing.

The Navy, for instance, has a 60-year supply of canned hamburgers.

While the Army was shipping 897,000 pounds of tomatoes from California to New York, the Navy was shipping 775,000 pounds of tomatoes from the east coast to California.

That type of nonsense might be amusing, in a clumsy kind of way, if it didn't filch so many dollars out of every taxpayer's pocket—dollars he otherwise could use for his own needs.

You hear there things all the time, in one branch or another of the Government. The Hoover Commission, moreover, not only does a factual job of reporting, but recomments effective ways of plugging the leaks.

This is the recond round of such reports by the Hoover Commission, and dozens of congressional committees, department committees, newspaper reporters and others have exposed and denounced the waste. Yet the waste continues on a horrible scale. The bureaucrats even ignore the laws Congress passes.

Nobody seems to have found a way to compel bureaucrats to do what any one plainly can see they ought to do. It must be in the nature of Government. Just the same, we'd like to see the guy who stocked up all those hamburgers have to eat every single can.

Confidence in Anthracite

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Confidence in Anthracite" which appeared in the Wilkes-Barre Record on April 1, 1955. The anthracite industry is, and has been for generations, the heart of the economy of northeastern Pennsylvania, and particularly in my district, Luzerne County. Presently, it is weathering severe competition from outside fuel sources and it is vitally necessary to send out a rallying cry now to those who are directly affected by its current, but only temporary I know, recession. The God-given natural resources, upon which this great country has so long depended, cannot be cast aside and tragically ignored. It must be cared for and appreciated as anything of value in this world should. Anthracite coal has served this country well—in times of peace and most certainly in war. We cannot permit it to perish. That would not only be sinful but a national economic disgrace.

The editorial follows:

CONFIDENCE IN ANTHRACITE

With respect to the future of anthracite mining as a vital factor in our economy, we had evidence of positive thinking at the annual interstate solid fuel conference in New York City yesterday.

Francis O. Case, Glen Alden Coal Co. president, while not discounting the future potential of anthracite for use in chemical, industrial, and metallurgical operations, placed heaviest stress on the importance of protecting and augmenting our share in the home-heating market.

Some 700 members of the New York State Fuel Merchants Association and the Fuel Merchants Association of New Jersey, fuel middlemen whose places of business are in key anthracite markets, were told by Mr. Case that by properly exploiting the inherent qualities of anthracite, a large part of the remaining market can be saved, and in the long run the present down trend of the industry can be reversed.

From Thomas Kennedy, vice president of the United Mine Workers of America, came a renewed pledge that the union will give its fullest cooperation to the producers and retailers.

We must never forget that anthracite is still our largest single industry. It is the means of distributing more money in our valley through payrolls and otherwise than any other segment of our economy. With a negative approach it would never get anywhere. The call is for many others to join such spokesmen as Mr. Case and Mr. Kennedy on the active firing line.

The Prairie Grouse

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, on Tuesday, April 26, I placed in the CONGRESSIONAL RECORD a letter which a conservation-minded constituent of mine, Don Berg, of Black River Falls, wrote to Charles Callison, conservation director of the National Wildlife Federation, with reference to the plight of the prairie chicken. Mr. Callison, who has cooperated with me to the highest degree on this and other conservation matters, has sent me a copy of his answer to Mr. Berg. I would like to call my colleagues' attention to Mr. Callison's answer to the suggestions set forth in Mr. Berg's letter. The letter follows:

APRIL 27, 1955.

Mr. DON BERG,
Black River Falls, Wis.

DEAR MR. BERG: Your conservation-minded Congressman JOHNSON wrote to me about your letter of April 20 in which you expressed the hope that something could be done to assure management of a part of the so-called central Wisconsin conservation area for prairie grouse. I also talked to Mr. JOHNSON about this matter in his office and have since followed up with inquiries among some of my friends in the Department of Agriculture.

This 54,700-acre area is known in Federal circles as an LU–6 (land utilization) area. It has been under long-term lease to the Wisconsin Conservation Department and as long ago as June 1953, the Federal Department of Agriculture and the Wisconsin Department agreed to conditions of a transfer of title to the State. The transfer of title has not been technically completed, but apparently it will be consummated at the State Conservation Commission meeting on May 6, as mentioned in the P. S. of your letter.

The conditions of transfer, as agreed upon by the Federal and State agencies, are essentially that the tract is to stay in public ownership and be managed for purposes consistent with the original purposes for which the land was acquired by the Federal Government, namely, conservation and sound land management to prevent soil erosion, etc. Beyond that, and at this late stage of the negotiations, I am informed it would be impossible for the Federal Government to impose any more restrictions or conditions of management upon the State agency.

The foregoing means that the Wisconsin Conservation Department will have freedom and authority to manage the lands as they see fit so long as the management is for conservation purposes. The State Department could upon its own authority reserve part of the area, as you suggest, for prairie chicken management. If an attempt were made to sell the conservation department on such a program I am sure you would have the wholehearted support of the National Wildlife Federation affiliate in your State, the Wisconsin Federation of Conservation Clubs. I feel reasonably certain also that the game section men of your conservation department would be on your side. I cannot, of course, suggest how to cope with the problem of the dominance of the Forestry Division which you suggest may have the power to dictate management of the area.

Thanks very much for writing to us. We sincerely appreciate your interest and good work in behalf of the prairie chicken as well as your support of other sound conservation objectives.

Cordially yours,
NATIONAL WILDLIFE FEDERATION,
CHARLES H. COLLINS,
Conservation Director.

Canal Zone: Panama's Best Customers

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. THOMPSON of Texas. Mr. Speaker, an informative editorial in the April 4, 1955 issue of the well-known Latin-American newspaper, the Star & Herald of Panana, Republic of Panama, presents some highly pertinent facts concerning business relations between the Republic of Panama and the Panama Canal enterprise, the military establishments on the Isthmus and residents in the Canal Zone. It is thus shown that the United States and its citizens have been magnificient customers of Panama and its people, and we are glad that this is true.

Because of the bearing of this trade on maintenance of Isthmian economy, and particularly in relation to current

discussions concerning the operation of the canal enterprise, under leave accorded, I quote its full text:

PANAMA'S GOOD CUSTOMERS

This column remarked not long ago that good traders are good neighbors. Reference was made to the high figure paid by the Panama Canal to Panama over a 6-month period for beef, coffee, foodstuffs in general, materials, and services—other than employees'—over a period of 6 months. The total approximated a million and a half dollars. That, accepted as an average, seemed a pretty fine income for the Panama firms dealing in these commodities.

Yesterday's Star & Herald carried a still more imposing figure released by the Public Information Office of the Caribbean Command at Quarry Heights. It covered the same period as that mentioned in the Panama Canal release, the last semester of 1954. The total was $2,612,554, over a million dollars more than the amount spent in Panama by the Panama Canal. Between the two organizations, Pan-Canal and Caribbean Command, Panama is thus receiving approximately $4,057,297 every 6 months from the Canal Zone, over $8 million annually for goods sold in the Republic.

All of which means that the Canal Zone is Panama's best customer as of now, may well continue to be, possibly in increasing figures, in years to come. Nor do these figures include the prices paid by both civilian and military groups for personal supplies or purchases in the Republic.

In other words it seems to prove that these near-in tourists from the Canal Zone exceed in actual sums expended the total spent by transient tourists arriving for a day's stay and devoting most of their time to sightseeing, lunching or dining and dancing at El Panama, occasionally buying a Panama hat (made in Ecuador) or a madeira tablecloth, then rushing back to their ships.

While these benefits do not flow directly into the National Treasury they do keep local merchants' heads above water and able to pay their taxes, rents, and employees.

We lack figures on the total of military personnel stationed in the Canal Zone as against the civilian population residing there. But we do believe that, so far as personal purchases are concerned, the United States Armed Forces spend infinitely more in this Republic than the Pan-Canal population.

The colonel's lady is often seen shopping in Panama's best shops and buying the best there is. She is discerning enough to appreciate the high quality of goods local mercants import. And those goods are imported from all over the world. Being in the luxury class, duties are low, and wisely so. Both the colonel's lady and possibly the admiral's lady fall hard for genuine Turkish rugs, sterling silver, diamonds and some semiprecious stones, European novelties one has to seek on the side streets of New York but seldom finds in the big department stores.

All of which proves that, if merchants were to get together and compare notes without equivocation, they would find the United States military forces constitute the top flight tourist trade for this Republic.

Furthermore they (the military) are ever ready to do a mercy job, fly relief to devastated areas or an emergency appendix case out of an isolated interior town. They have done it time and time again, continuing to do it although lives and planes have been lost in the doing.

Which is probably why Foreign Minister Octavio Fabrega said last week "We would gladly grant use of a hundred bases to the United States if such were needed, all in the spirit of friendship and understanding with which we work together.

Loyalty Day, May 1, 1955

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on the occasion of the observance of Loyalty Day, a day set aside by joint resolution of the Congress of the United States to enable Americans everywhere to rededicate themselves to the fine ideals and spiritual values inherent and practiced in the greatest Nation in the world—the United States of America. Moreover, it is a day designed to offset the May Day rallies held under Communist auspices.

The address follows:

LOYALTY DAY, MAY 1, 1955

(By Hon. DANIEL J. FLOOD)

The Congress by joint resolution has designated May 1, 1955, as the date for the observance of Loyalty Day here in the United States. In so acting, Congress is giving recognition to a custom which has become prevalent in recent years throughout almost the entire Nation. Every year since 1950, the governors of 47 of the 48 States have officially designated May 1, or a day very near to it, as Loyalty Day.

Patriotic organizations from time to time have urged an even more wide-spread recognition of this day. In many places throughout the United States, May 1 has been chosen as the particular day for the celebration of Loyalty Day to offset the many May Day rallies held on May 1 under Communist auspices.

The real purpose of Loyalty Day, it seems to me, is to provide an opportunity to rededicate ourselves to the American way of life, to reaffirm for all the world to see our devotion to the principles underlying that way of life, and to deepen our loyalty to the principles set forth in the American Bill of Rights, the first 10 amendments to the Constitution.

Seldom if ever in the history of the United States has our way of life been as seriously threatened by an alien philosophy from beyond our shores. This alien philosophy, of course, is world communism. It is the sworn enemy of every principle which has undergirded our national life in all of our history. It is implacable, malevolent, and unrelenting in its determination to destroy us. The United States is at one and the same time the greatest objective in communism's program of world conquest and the greatest barrier in its path to domination of the world.

What are some of the qualities and principles which characterize the American way of life and the American Bill of Rights—qualities and principles to which I urge every citizen to rededicate himself this year on Loyalty Day?

Our American way of life rests on two fundamental principles which guide our day-to-day thoughts and actions, and which clearly distinguish our system from all totalitarian systems, whether they be Nazi, Fascist, Communist, or any other.

The first of these principles is the importance of the individual, the foundation of all our other beliefs. It guarantees to each person the undisputed right to personal freedom and dignity, and to equality before the law. In the words of the Declaration of Independence, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable right, that among these are life, liberty, and the pursuit of happiness." These ringing words leave no doubt as to how the Founding Fathers felt about the worth and the dignity of the individual.

Since the drafting of the Declaration of Independence and the writing of the Constitution, the American people have been wise enough to realize that although under our system the worth and the dignity of the individual are fully recognized, certain rock-bottom rules must be established to give life and meaning to the concept of the individual's worth and dignity. Accordingly, in the Bill of Rights to our Constitution, and in other important documents as well, there are laid down certain basic rights to accomplish this purpose. These rights are the mainsprings of our American way of life. They can be summarized briefly in the following paragraphs.

Every person is free to worship according to the manner dictated by his conscience.

We enjoy freedom of speech and freedom of the press, including the right to criticize our Government and our public officials.

The right of the people to assemble peaceably and to petition the Government for a redress of grievances, whether fancied or real, is guaranteed.

We have the right to keep and to bear arms, though this right is frequently limited by Federal, State, or local laws and regulations.

We are protected against unreasonable search and seizure of person and property by the Government without proper authority and good cause.

No person shall be held to answer for any major crime without review and indictment by a grand jury.

No person shall ever be placed in double jeopardy for the same crime.

No person shall be compelled to act as a witness against himself in any criminal case.

If a person is accused of crime, he has the right to a speedy trial; the right to the help of a lawyer; the right to trial by jury, impartially selected; and the right to call witnesses in his favor.

No wife may be required to testify against her husband, or vice versa, in any criminal proceeding.

Private property may not be taken for public use without just compensation and due process of law.

Excessive bail may not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted.

Every person is presumed to be innocent until he is proved guilty.

The right of the individual to vote, and to vote secretly, cannot be abridged.

Every person has the right to the protection of habeas corpus, which gives anyone who claims to be unlawfully held by an officer or private person the right to have a hearing at once so that he may know the reason why he is being held. This means that the Government of the United States cannot either secretly or openly arrest persons as individuals or groups, throw them into prisons or concentration camps, hold them there indefinitely and do what it pleases to them.

Congress can pass no ex post facto law. This means that in our daily living and thinking we can enjoy the liberty of doing and saying all that the existing law permits. Even if at a later date our Government makes these things illegal, it cannot date back the law to make illegal anything that was done before the law was passed.

Treason against the United States consists only in levying war against our country, adhering to her enemies, or giving them aid and comfort. No person can be convicted of treason except on the testimony of two witnesses to the same overt act, or upon

confession in open court. This precise definition in the Constitution prevents any possibility of the slightest criticism of the Government being branded as treason, as well as prohibiting secret trials and giving accused persons no opportunity to confront witnesses.

These then are the rights which we enjoy as citizens of the United States and which are part and parcel of our American way of life. It is altogether right and proper therefore, that we should review their significance in the observance of Loyalty Day. A discussion of our rights as individuals, however, of necessity must take into account our responsibilities to the group, and these responsibilities are the second fundamental principle which guide our day-to-day thoughts and actions.

In a large society such as we have here in the United States, the interests of individuals are bound to clash from time to time. It is at this point that responsibility to the group enters the picture. The individual, while exercising his own freedoms, must not deprive others of their freedoms. Freedom does not imply unrestrained or irresponsible action. Group responsibility requires that no individual be permitted to bring harm to other people. Freedom of speech, for example, gives no one the right to shout "Fire" in a crowded theater or restaurant.

Group responsibility means giving full obedience to the laws under which the individual lives, since they were made by duly authorized representatives of the group. If a particular person dislikes a certain law, he can criticize it and make every effort to change or repeal it by constitutional means. But while that law remains in force, no person can break it without expecting to incur whatever penalty is involved.

Group responsibility means that each man is responsible for his family and loved ones. He must provide for them and ensure their well-being. It means, furthermore, that the individual bears responsibilities to his community, his church, and other groups which work for the good of all. Lastly, but perhaps of paramount importance, group responsibility means the willingness of all of us to bear arms in the defense of our country.

These, then, are the rights and responsibilities which are the warp and woof of the American way of life. They are the bulwark which protects our way of life from such abuses and totalitarian excesses as are suffered by the oppressed peoples behind the Iron Curtain by governments imposed upon them by force.

Loyalty Day presents a splendid opportunity for all American citizens once again to pledge themselves to the principles which have made our Nation the finest example of freedom, justice, and opportunity the world has yet seen. If we do pledge ourselves and continue to do so, we, as our Founding Fathers did in 1787, will also "form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

The Late Dr. T. Ryland Sanford

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of an address I delivered at Hargrave Military Academy, Chatham, Va., on April 23, 1955, at the unveiling of the portrait of the late Dr. T. Ryland Sanford.

Dr. Sanford was a devoted and consecrated churchman, an outstanding educator of great note who wielded a wide and wholesome influence in Virginia. For more than one-half century he was prominent in the work of the Baptist denomination and distinguished himself in the ministry. He was an alumnus of the University of Richmond, where his athletic prowess, his manly traits, and nobility of character are the source of legends and will ever be appreciated. Under his leadership Chatham Training School, at Chatham, Va., was established in September 1909. It later became and is now known as Hargrave Military Academy. It is a fine Baptist institution, and I was privileged to be a student there while Dr. Sanford was president. He enjoyed the high admiration, the confidence, and the esteem of all who knew him. I had for him the warmest personal affection.

Col. A. H. Camden succeeded Dr. Sanford as president of Hargrave Military Academy and served eminently in that capacity for approximately 40 years. He is now connected with Hargrave on an emeritus basis. Colonel Camden is an outstanding southside Virginia educator, a solid, substantial, and dependable citizen. Upon his retirement, Col. Joseph H. Cosby became president, and he is carrying on in the finest and highest traditions. I take this opportunity of publicly commending the services of these distinguished Virginians as well as those who are now and have been associated with them.

The address follows:

ADDRESS BY HON. WILLIAM M. TUCK DELIVERED AT HARGRAVE MILITARY ACADEMY AT THE UNVEILING AT THE PORTRAIT OF THE LATE DR. T. RYLAND SANFORD APRIL 23, 1955

Colonel Cosby, ladies and gentlemen, I am grateful for the invitation to be here today and to have the privilege of participating in this merited tribute to the late Dr. Thomas Ryland Sanford, the founder of Hargrave Military Academy. I have come in obedience to that invitation to pay this public tribute of respect to one who has answered that final summons to which every ear shall some day harken and all mortality obey, a beloved schoolteacher and preacher to whom I am greatly indebted, and a long-time friend whose memory I shall ever cherish.

Dr. Sanford was born 75 years ago in Westmoreland County, Va., near Montross. His unfortunate and untimely death occurred on April 8, 1952.

Although I had first met him at my home in Halifax County where he had come to enroll me as a student in this institution, it was here at Hargrave Military Academy (then Chatham Training School) that I first knew him.

From that time on, until he delivered his last sermon after more than one-half century in the Baptist ministry and came to the end of his labors here on earth, I was among the many thousands who held this devoted educator and consecrated churchman in the highest esteem and affections. Few men in the history of Virginia have wielded a wider and more wholesome influence over the lives of their contemporaries. It was a high privilege to have come under his beneficent influence and guidance, and to have the opportunity of basking in the warmth of his great mind and radiant personality on many occasions through the course of the long years which intervened during our acquaintance.

Dr. Sanford was the son of the Reverend and Mrs. Millard Fillmore Sanford. His father was a distinguished consecrated Baptist minister, and his mother was a lovely lady of the highest character and attainments. I likewise had the privilege of taking classes under both of them and through those and later associations became to know, understand, and appreciate the sterling qualities so characteristic of the entire Sanford family.

Early in his boyhood, he left the Northern Neck when his father moved to a pastorate in Burkeville, and it was only in the sunset of life that he finally came back to reside in the midst of the memories he had nurtured from childhood. During the long interval, he frequently returned for visits and the fishing trips which he enjoyed to the fullest. But he once remarked he never would have gotten back to stay had it not been for the affliction which forced him into partial retirement. However, that affliction never diminished his interests or dimmed the broad horizon, encompassed by his exceptionally active mind.

Much of his colorful career and certainly many of his principal interests were associated with this academy, the University of Richmond, and the Baptist Church. His athletic prowess at the University of Richmond is the source of legends which rightfully should never fade. But it was not as an athlete alone that he won the hearts of his fellow students, his teachers and the thousands who came to know him. It was primarily the spiritual magnetism of the man, the exuberant spirit that shown in his countenance, in his handclasp, and in his every word.

Like many a student since, he took delight in healthy competition—and no doubt tremendously enjoyed contributing to the 42–0 football victory over my alma mater, William and Mary, in his first game back in 1899. He had the same enthusiasm for baseball and basketball, in which he also excelled.

In fact, there was no activity in which he engaged that he was not enthusiastic and intensely interested. But the underlying theme of his life early became apparent and he was still a student when he began preaching at Branch's Church in Chesterfield County. He solved the transportation question by commuting between campus and church by bicycle—another typical example of his self-reliance and ingenuity in meeting problems as they arose. Dr. Sanford was ordained in 1902 and left school to serve three Chesterfield churches—Branch's Gill Grove, and Second Branch. Needless to say, the salary of the pastor was not excessive. But Ryland Sanford knew his economics as well as his religious teachings and saved enough to complete his education. Dr. Sanford possessed in a preeminent degree all of the qualities of a successful businessman. Had he turned his attention in that direction no doubt he would have also made a splendid success in that field.

He was a lifter, not a leaner. He believed in giving, not receiving. He believed in honest pay for a day's work, and vice versa. He was not spoonfed or pink pilled. His powers came from struggle, effort, and determination. He was reared in the atmosphere of that period of our history known as the "tragic era" when our southland had been overrun by an overpowering army; our fields impoverished; our resources exhausted; and our manpower depleted. Despite the handicaps imposed by such conditions and others unspeakably horrible, men of his generation rebuilt Virginia and made it the great Commonwealth it is today, standing as she does—proudly at the top of the sisterhood of States—able to chart its own course, unencumbered by bonded indebtedness and contributing its full share to the support and

maintenance of the national structure. It is worthy to note, too, that this was accomplished without the aid of any Marshall plan, Federal aid, giveaway programs, or technical assistance.

In 1903 he accepted a pastorate in Buckingham County where he first became widely known having conducted a great revival at Old Sharon Church. In addition to his other outstanding qualities, Dr. Sanford was blessed with an impressive and commanding personal appearance. He was tall and strong and robust. He was handsome. His face radiated those intangible but incalculable values which constitute courage, character, and manhood. He looked and acted the part of a leader. He had a complete knowledge and use of the English language. He enunciated clearly and beautifully. His words flowed freely and with facility and ease. He was a speaker of great force and when he released the full powers of his oratory, which seemed at times to be unbounded, he could stir, move and control his congregation. These were natural talents and blessings with which he was endowed and which enabled him to be such an effective influence for good in every community in which he labored.

From Buckingham County he moved to the Memorial Baptist Church at Hampton, and then to Chatham in 1908. It was here that he contributed 10 fruitful years to his church and the people of Virginia.

When he heard the Warren Training School might close, Dr. Sanford with his customary energy and enthusiasm, decided that the Baptists should have a school of their own. Under his leadership they established one and in September 1909 Chatham Training School opened its first session with 18 students and Thomas Ryland Sanford as founder and first president. Mr. J. Hunt Hargrave, a deacon in the Chatham Baptist Church, and his father were coleaders in this undertaking and it was the younger Hargrave's great contribution to the school which led to the change in name in 1925 to Hargrave Military Academy.

Dr. Sanford, who saw the school grow from that modest beginning to essentially its present status, was more than president. He was a teacher, coach, and companion to his boys, of whom I was privileged to be one. He supervised and worked with the boys—in those early days in clearing the 28-acre site for the expansion which he was sure would come.

I shall never forget the experience of my student days here. I learned many valuable lessons the hard way. In those days demerits were positive, tangible things, and some of the most lasting lessons I have ever learned came about by the impartial and firm discipline dispensed by this great man who recognized that knowledge and character were not to be instilled and cultivated by association alone, but by hard work, discipline, self-denial, and determination. These principles were inculcated by the methods he applied and the example which he set.

South Boston, Fredericksburg, Norfolk, and Luray were subsequent pastorates for Dr. Sanford before arthritis seriously handicapped him in 1941. Six years later he returned to his beloved Northern Neck to serve four more churches and finally to conclude his more than 50 years of outstanding service to his fellow man.

It was characteristic of the man that he never considered himself, but only those he was in position to help, whether in spiritual guidance, educational development, or physical health. Often he preached three times a Sunday, paid many visitations to the sick and those shut it, and still found time for a rich family life and a myriad of other activities.

His stature in church and educational affairs was such that he yielded much of his time to the demands upon him. He served as a member of the board of trustees of Hargrave and of the University of Richmond, the Home Mission Board of the Southern Baptist Convention, the Virginia Baptist Board of Missions and Education, and held various district and State offices in his church. The University of Richmond awarded him the degree of doctor of divinity in 1922 in recognition of his many contributions not only to the institution but to Virginia generally.

While participating in these extensive activities, Dr. Sanford was guiding his own family to fruitful maturity. I need not recount for this audience the story of the Sanford boys whose athletic, academic, and postgraduate accomplishments are in themselves a dramatic and entrancing story. Hargrave Military Academy has shared the benefits of this younger generation of Sanfords.

Such leaders as Dr. Sanford are responsible for the strength and durability of our free institutions in America. Our Nation was built on the foundation stone of respect for the rights of man and the dignity of the individual. Education has been an important factor in building and perpetuating this great heritage. Dr. Sanford exemplified the characteristics that thoughtful and patriotic citizens admire and shall ever champion, because he represented in wisdom, vision, and action the epitome of good citizenship. He not only was a minister, educator, and leader; he was a man steadfastly devoted to making the world a better place in which to live—and he went about this task by seeking to elevate the thoughts and aspirations of the people themselves.

It is highly appropriate that his portrait should be hung here, the scene of so much of his valuable labor, and from whose sheltered walls so many young men have gone forth with unbounded hope and opportunity to meet the challenging problems of life made strong and confident because of the principles instilled in them here. A great philosopher once said that the founding of an institution is like the well spring of a stream—the small beginnings of which are indeed plain to all, but the full, ultimate and expansive powers and influence only the omniscient can discern. We know that Hargrave Military Academy has deepened and expanded its influence everywhere, and it is the fervent hope and prayer of many that it may never wane.

Joy and sorrow are closely intermingled in this busy world of ours. Sometimes the happinesss incident to the birth of a precious baby is shadowed and saddened by the death of its mother. And frequently on the highway of life the bridal procession must tarry while the funeral train passes by.

Today we come with grief and sorrow that a life fraught with so much good should be so suddenly cut off from amongst us, but in our chastened reflections we can discern echoes of counsel and encouragement because we are filled with gratitude and appreciation for the example of such a life as that of Thomas Ryland Sanford, which should animate us all to a higher and renewed consecration to worthy and unselfish devotion to the principles which he espoused and for which he stoutly stood.

Through the lives of many individuals who came within the great expanse of his influence, the people of Virginia have reaped an enormous benefit. And through them and the unnumbered generations to follow his magnificent contribution to his people and to the general advancement of mankind will live forever.

At such a time as this when our thoughts are turned to a loved one or a friend to whom the grim messenger with the inverted torch has beckoned onward, it is good to have the sweet assurances of our religion that though dead, he yet liveth.

"He is not dead, but sleepeth, well we know.
The form that now lies mute beneath the sod
Shall rise when time her golden bugles blow,
And pour its music through the courts of God."

Austrian-Russian Treaty

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following front-page editorial which appeared in the Polish-American Journal, Saturday, April 30, 1955, on the recently signed treaty between Austria and the U. S. S. R. This newspaper, which serves the interests of Americans of Polish descent, goes on record as issuing a warning that certain provisions of the treaty will endanger the lives of many thousands of Polish people now living behind the Iron Curtain. Most certainly, with this in mind, the Austrian Treaty bears closer scrutiny before this country goes on record as approving it.

The editorial follows:

CHALLENGE TO POLONIA—LET US SAVE POLISH REFUGEES IN AUSTRIA FROM SOVIET SLAVERY

The Austrian Treaty which the Soviets and the Austrian Government just agreed to sign—pending the consent of the American, British, and French Governments—may well result in a great tragedy for about 3,000 Polish refugees in Austria.

For some strange reason, the American press did not publish the text of the Austrian Treaty. However, Julius Epstein, of the Katyn investigation fame, secured a copy of the treaty and discovered that it contains great danger to Polish and other refugees from behind the Iron Curtain, numbering about 30,000.

Article 16 of the Austrian Treaty provides: "Austria undertakes * * * to take all necessary measures to complete the voluntary repatriation of displaced persons within its territory * * * to permit the accredited representatives of any Allied or Associated Power [Communist government of Poland is an Allied and Associated Power] to visit freely such camps or centers for the purpose of conferring with its nationals * * * to prohibit in such camps or centers any propaganda hostile to the interests of the Allied and Associated Powers and any activities designed to induce such displaced persons not to return to the countries of which they are nationals * * * to dissolve immediately any 'committee,' 'center,' and other similar organizations existing in those camps and assembly centers that may be found to be engaged in activities opposed to the interests of the Allied and Associated Powers."

Moreover, paragraph 5 of article 16 provides:

"No relief shall be given by Austria to persons who refuse to return to their native countries * * * [who] are engaged in hostile activities against their countries of origin * * * or are members of organizations and groups which encourage displaced persons not to return to their countries of origin."

Insofar as 3,000 Polish refugees in Austria are concerned, none of whom, of course,

wants to be repatriated to the Communist-ruled Poland, the above-quoted excerpts from article 16 mean that they will be completely at the mercy of the Communists and will have only a choice to surrender to the Reds and become their slaves or face death for lack of relief.

Strange as it may seem, the American Government which fought against article 16 for about 8 years, suddenly accepted it on February 13, 1954, at the Berlin conference, it was revealed by Mr. Epstein.

However, not everything is lost yet.

The Austrian treaty must be approved by Britain, France, and the United States before it will become operative.

We must take advantage of this and do everything in our power to eliminate the refugee provisions from the treaty and thus save 3,000 Polish and 27,000 other displaced persons from the prospective Soviet slavery or death.

Time is of utmost importance in this matter, as the talks between the Western powers, the Soviet, and Austria on the validation of the Austrian treaty may commence any day. Therefore, immediate action is needed.

Specifically, we suggest that the Polish American Congress, all other Polish American organizations, our leaders, and the rank and file of the American Polonia immediately protest to the State Department against the acceptance of refugee provisions of article 16 of the Austrian treaty and contact our friends in Congress to raise the issue there. We should tell the Senators and Representatives that instead of giving us compliments on the occasion of the anniversary of Poland's 3d of May Constitution, they should take action to save the Polish and other refugees in Austria. Of course, the Congressmen of Polish descent should lead the crusade.

Finally, it should be understood that this is not only the fight to save Polish and other refugees in Austria.

This is, first of all, the fight to prevent a tremendous Soviet victory and the defeat of the United States in the cold war of ideas and morals. For if the refugee provisions of article 16 of the Austrian treaty will be accepted by the United States, our anti-Soviet propaganda will become worthless, as our action will do irreparable damage to our reputation as defenders of liberty and human rights.

P. S.: The free Poles in Great Britain and France should also take steps to prevail upon the British and French Governments not to accept the refugee provisions of article 16 of the Austrian treaty.

Willis W. Bradley and the Panama Canal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. THOMPSON of Texas. Mr. Speaker, among the finest memories of my congressional career are associations, during the 80th Congress—1947 to 1949—and subsequently, with the late Representative Willis W. Bradley, of California. His stature as a statesman, naval officer, and Government administrator has been extensively portrayed in the annals of the Congress by others and requires no emphasis from me.

There is, however, one facet of his congressional career that I feel ought to be described in greater detail. This concerns the Panama Canal of which he was a discriminating and objective student. As qualifications for his inquires in this field he had the background of a lifetime of study, an extensive naval experience, and a wide knowledge of the merchant marine. Moreover, it was through Representative Bradley that I first became seriously interested in the canal subject, for which service I shall always be grateful.

As a fellow member of the Committee on Merchant Marine and Fisheries, we worked in close association. Early in 1947, he became keenly aware of the Isthmian Canal studies under Public Law 280, 79th Congress, then in progress. In his search for information he did not restrict himself to routine officials temporarily serving as administrators of the canal enterprise, but sought advice from all responsible sources. For example, he arranged with Secretary of the Navy James Forrestal for a presentation on the operational problems of the Panama Canal held in the Navy Department on March 14, 1947, for the entire Committee on Merchant Marine and Fisheries.

Later, as a leading member of a congressional visitation in the Canal Zone in April of that year he was most effective. Thereafter, he rapidly assumed the status of congressional spokesman on canal matters, and had the opportunity of consulting many independent experts.

Among the most comprehensive treatmeants of the interoceanic canal problem in the records of the Congress is a notable address by Representative Bradley before the Cosmos Club of Washington on April 19, 1948, entitled "What of the Panama Canal?" Published in the CONGRESSIONAL RECORD, volume 94, part 10, April 21, 1948, page A2449, this address, by its forthright and objective clarification of key issues, contributed materially toward preventing hasty action by the Congress on a then pending report of the indicated investigation and formed a solid basis for much that followed in the consideration of the canal problem. The principal sections of this address of Representative Bradley are still applicable.

In the course of his membership of the Committee on Merchant Marine and Fisheries, its distinguished senior minority member, the late Honorable Schuyler Otis Bland, of Virginia, and Representative Bradley became close friends and collaborators, with a great common interest in the Panama Canal. Thus, these two leaders formed an effective nonpartisan team in securing proper consideration by the Congress of important canal issues before acting on recommendations of administrative agencies—a policy that the Congress has continued to follow.

Toward the end of the second session of the 80th Congress, Representative Bradley published in the CONGRESSIONAL RECORD, volume 94, part 11, June 15, 1948, an extensive bibliographical list on the Panama Canal question—the first time, as far as I can determine, such a list was ever published in the RECORD. Since then I have prepared additional comprehensive lists, the last having been published in the CONGRESSIONAL RECORD, volume 101, No. 52, March 23, 1955, page A2049, under the title "Isthmian Canal Policy of the United States—Documentation." For this effort Representative Bradley's original contribution in 1948 was my inspiration.

With the convening of the 81st Congress in January 1949, Representative Bland resumed his chairmanship of the Committee on Merchant Marine and Fisheries, over which he had presided so long before the 80th Congress. One of his first official actions was to secure authorization for an inquiry into the financial operations of the Panama Canal under House Resolution 44, 81st Congress. For this task, he appointed me as chairman of a special subcommittee.

As part of his preparations, Chairman Bland conferred as to procedure with Captain Bradley, who in 1949 left the Congress. Captain Bradley suggested that the chairman of the subcommittee visit the Panama Canal exhibit in the office of the Chief of Naval Operations of the Navy Department.

With the authority of Secretary of the Navy John L. Sullivan, of New Hampshire, I visited this exhibit on February 10, 1949, and was accompanied by Captain Bradley, and Gen. James G. Steese, distinguished engineer and former Engineer of Maintenance—Chief Engineer—of the Panama Canal. We were received by Capt. Miles P. DuVal, United States Navy, who, at the time, was Panama Canal liaison officer and Coordinator of Isthmian Canal Studies of the Navy Department.

Using terrain models of the canal and other exhibits in that office dealing with its marine features, Captain Bradley explained the problems of operations; and General Steese, those of engineering.

The explanations by these two authorities gave me a deeper insight into the nature and magnitude of the principal problems involved in the canal question. They started me on a search for knowledge that has never ended.

Later, on the evening of February 24, 1949, in company with Representative—now Senator—THOMAS E. MARTIN of Iowa, I attended a comprehensive presentation by Captain Bradley before the Engineers' Club of Washington in the auditorium of the Department of Commerce, entitled "The Why's of the Panama Canal."

The proceedings of that evening, which I included in an extension of my remarks in the CONGRESSIONAL RECORD, volume 95, part 12, March 4, 1949, page A1303, were a further important contribution of Captain Bradley toward the increased understanding of the canal problem, especially in legislative and executive circles.

At this point, it is pertinent to mention that at each of Representative Bradley's notable canal addresses, he was introduced by the Honorable Maurice H. Thatcher, of Kentucky, a former member of the Isthmian Canal Commission and later a Member of Congress, lifelong student of Panama Canal problems and an early and long continuing advocate for the creation of an unbiased and independent canal commission representative of all the major interests involved

as offering the best means for their resolution.

At the present time adequate means for the objective handling of the canal question do not exist. To supply such means, Senator THOMAS E. MARTIN and I, early in the present session, introduced identical measures, S. 766 and H. R. 3335, respectively, to create an Interoceanic Canals Commission. These bills are modeled after a measure introduced in the 80th Congress by Representative Bradley.

In the perspective that is now possible, the constructive leadership of Representative Willis W. Bradley with respect to interoceanic canals, in and out of the Congress, firmly establishes him as one of most outstanding authorities on this gravely important subject. His statements in regard thereto are accordingly indispensable sources for study not only for students and historians but as well, and more particularly, for engineers and navigators, and all the legislators and administrators charged with direct responsibility for operation, maintenance and improvement of the Panama Canal.

No one who has attempted to make an objective study of the problems of interoceanic canals can fail to note how intensely the proponents of various plans defend their ideas. They have reached their conclusions and they are apparently unwilling to consider any deviations. Sometimes they are even unwilling for Congress to appoint a commission to report on all phases of the controversy. To these partisans, each one of whom is an able and patriotic man, I suggest that if his program is sound, he need not fear to have it carefully scrutinized by an independent commission. To refuse to submit it to such an impartial group is to suggest that perhaps it lacks the merit which would insure its approval by such a group.

Irish Freedom Trail

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting and enlightening article written by one of the leading barristers in the Commonwealth of Massachusetts, namely, Attorney Charles H. McGlue, on the subject of Irish Freedom Trail.

Mr. McGlue is the most outstanding and learned member of the bar in Massachusetts on the subject of primary and election laws, and has been recognized nationally on his ability in that direction.

You will note he has an unlimited knowledge of a subject that is close to the hearts of many Americans dealing with the Irish people and their contributions in the art of free government.

A student of many years in this field, I know that many of our colleagues in the Congress will be interested in his views:

IRISH FREEDOM TRAIL—MCGLUE TELLS OF BATTLE FOR LIBERTY AND FREEDOM

My good friend over the years, the Hon. James A. Farley, of New York, once said that Patrick of Tara, Saint and Apostle of Ireland, by force of the very qualities of his saintliness, had made himself for fifteen hundred years the ruler of the hearts of the Irish people, and that it was no accident that the Irish people in turn should develop an unrivalled genius in the art of free government.

Let that thought set my theme and let us go along with the words of that great musical composer, the Dublin-born Irishman Victor Herbert. "It's a great, great day for the Irish, tonight," and so in memory, we will be with the ghosts of the galloping Gaels who fought their way, through six continents in order that all people everywhere might enjoy freedom from oppression and liberty to enjoy life as their Creator intended.

IRISH IMMORTALS

The pages of Ireland's fight for freedom has been illuminated by such names as Rory O'Moore in 1576, and Roger O'Moore in 1641; in 1778, Henry Grattan; the valiant Wolfe Tone in 1798; in 1803, the martyr Robert Emmett, and then came the great leader Daniel O'Connell, who secured Catholic emancipation for the people of Ireland; John Mitchell in 1848; James Stevens in 1865; the great parliamentarian Charles Stewart Parnell in 1881; and in 1916, the Easter Sunday martyrs Sheehy Skeffington, Thoms McDonough, Patrick Pearce, James Connelly, and Sir Roger Casement.

Very few are the countries on whose rolls of honor do not appear the names of Irish heroes and fighters for freedom. Although the Irish missionaries of religion and learning carried the torch of civilization and culture to all parts of Europe during the Dark Ages, following the fall of the Roman Empire, very little publicity has been given to the role of the Irish in the history of other nations.

IRISH FLEUR-DE-LYS

From 1692 to 1792, there was an Irish Brigade in the French army and over 500,000 Irishmen died in the service of France during that time. When King Louis XVIII dissolved the brigade in 1792, so as not to offend his English allies, he presented each regiment with a farewell banner, embroidered with an Irish harp, surrounded with shamrocks and fleur-de-Lys, and the motto inscribed thereon, "'Semper et Ubique Fidelis" (always and everywhere faithful) a rare tribute!

During Napoleon's first empire, Henry Clarke, Duc de Feltre, and an Irishman, was the minister of war. Later, Marshall MacMahon, a member of a famous Irish family, became the President of the French Republic, and to complete the French-Irish history, let it be stated that at Waterloo, it was an Irishman, the Iron Duke of Wellington, who defeated Napoleon and his armies.

SPANISH SHAMROCKS

Hibernia and Iberia have always been kin to each other ever since the reign of King Milesius, as well as the time when the Spanish Armada was sunk in the 16th century, and many Spaniards found the welcome mat awaiting them in Galway and the Aran Isles.

Not so well known, however, is the fact that Richard Wall, an Irishman, was Prime Minister of Spain under both King Ferdimand VI and King Charles III.

MIXED BOUQUETS

The Irish, however, were always good mixers and they appeared in many countries and in many causes. Naples was the base of an Irish brigade. The Austrian Army had hundreds of Irish recruits, many of whom reached the highest rank. Count Taafe, a member of a very distinguished Sligo family, played a very important role in Austro-Hungarian politics. In the olden days of the Russian Czars, Peter Lacy of Limerick, became a brigadier general in the army of Peter the Great and later was made governor of Livonia.

LATIN AMERICAN GAELS

In the civil as well as in the military life of the 20 Latin-American republics which lie to the south of our continent, the Irish have played a very prominent and important role. When the Latin-American wars of liberation got underway early in the 19th century, the two great Latin military leaders were Simon Bolivar and Jose San Martin.

CHILE AND O'HIGGINS

Gen. Sam Martin's right hand man was Bernardo O'Higgins, son of Ambrosio O'Higgins, born in County Meath, Ireland, and the last viceroy to Chile and Peru by appointment of the King of Spain. In the chief square of Santiago, capital of Chile, stands a statue of Bernardo O'Higgins, the liberator of Chile. The second brigade of O'Higgins was led by General MacKenna, another fighting-for-freedom Irishman, General O'Higgins good right arm in political matters was another Celt by the name of John McNamara. In October of 1814, a movement for the complete independence of Chile from Spain was headed by the same Bernardo O'Higgins. He joined forces with Gen. Sam Martin and they routed the Spanish Royal Army near Chacabuco. A cabildo abierto was held at Santiago and San Martin was elected governor of the country. The Wars of the Liberation were still unfinished. San Martin declined the honor and asked that it be given to O'Higgins, one of his chief officers in the liberating army. General O'Higgins was made supreme director of Chile in 1818.

ARGENTINA AND ADMIRAL BROWN OF COUNTY MAYO

Cross the high Andes from Chile and you come upon the fair country of Argentina. The freedom trail there was followed by many Celts. Admiral Brown, born in County Mayo, Ireland, has often been called the saviour of Argentina. The Gaels, Brown, Fleming, Gahan, Haggerty Morris and Shannon greatly contributed to the liberation of Argentina. The Irish people have always been affiliated with the life and the times of the Republica de Argentina. There are many Irish societies in Buenos Aires and Rosario and you may be sure that St. Patrick's Day is properly celebrated in the Argentines.

COLOMBO AND O'LEARY

In the struggles for independence of Colombia, Gen. Simon Bolivar was aided by many Irishmen. One of them was the son of the great Irish patriot and fighter for Irish freedom, Daniel O'Connell. Daniel O'Connell's wife presented a tricolor to these Irish expeditionnaires. Another interesting fact about Colombia's fight for freedom is that General Bolivar's own aide-de-camp was Daniel F. O'Leary. In the capital at Bogota, a historical painting of him hangs there for all Colombians to remember the debt they owe to the spirit of the Irish.

PERU AND O'CONNOR

One of the great national heroes of Peru in its struggle for independence was a Colonel O'Connor who more than a hundred years ago found his way up into the highest part of the Andes and did his part in bringing freedom to the white man and the Indian in that section of Latin America.

MEXICO AND O'DONOJU

Our last stop in Latin America on the Gaelic Freedom Trail will be Mexico. The very last viceroy to Mexico from Spain was

named Juan O'Donoju (here we would call it John O'Donohue). Viceroy O'Donoju arrived in Mexico from Spain in 1821 but was intercepted at Cordova by Agustin de Iturbide, a leader of the Mexican revolutionary forces. O'Donoju's signing of the treaty of peace, paved the way for Iturbide's triumphant entry into Mexico City as liberator of Mexico on September 27, 1821.

AMERICAN FREEDOM TRAIL

Space does not permit me at this time to extoll the great Irish leaders who contributed so much to the development of Australia and Canada, but the leaders in the crusade for freedom and liberty in these United States of America must be given proper recognition.

The birth of our Republic was sparked by the fiery utterance of a very distinguished Irishman, when as a member of the Virginia House of Burgesses, Patrick Henry said: "As for me, give me liberty or give me death."

It was Capt. John Sullivan whose daring capture of Fort William and Mary in December of 1774, provided the arms and ammunition which compelled the British to evacuate Boston on March 17, 1776, and also gave the Colonial troops the wherewithal to put up armed resistance at Bunker Hill on June 17, 1775.

AMERICAN REVOLUTION

Don't forget that it was Michael O'Brien and his six sons, of Machias, Maine, who captured an English convoy, and for this act of great gallantry, the Continental Congress ordered that the first ship of the American Navy be chistened *Liberty*, under command of Jack O'Brien, and the second ship be called *Hibernia* and captained by his brother, Jerry O'Brien. Remember also that the first commodore of the American Navy was John Barry.

Keep in mind that Gen. George Washington, father of our country and Commander in Chief of the Continental Army, placed General John Sullivan in command of the Continental forces at Dorchester Heights on the eve of St. Patrick's Day, 1776, and gave the password for that memorable occasion as "St. Patrick" Such prominent figures in the siege of Boston as Morgan, Knox, Stark, and Moylan were of Irish ancestry or birth.

Let it not be forgotten that the Secretary of the First Continental Congress was an Irishman named Charles Thompson; that 10 of the signers of the Declaration of Independence were of Irish blood, including John Hancock, of Massachusetts, and Charles Carroll, of Maryland; that at the Battle of Lexington and Concord, 142 of the Minute Men were of Irish extraction; that 228 of those who fought the British at Bunker Hill had Irish blood in their veins.

Also keep in mind that the White House at Washington was designed by William Hogan; that the present site of our Government in the District of Columbia was originally the farm of Daniel Carroll, brother of Charles Carroll of Carrollton; that the Irishman Crawford designed the Statue of Liberty which surmounts the National Capitol; that an Army engineer named Casey was the designer of the magnificent Library of Congress Building.

So it can truthfully be said that in the planning stages, as well as in the fighting areas, and later in constructive beginnings of our American Republic, men of Irish blood and Irish ancestry, gave every assistance in furthering the cause of liberty and freedom.

AMERICAN HISTORY

In every war since the founding of our Republic, wherever the freedom of men was at stake, whether it be the War of 1812, Mexican War, Civil War, Spanish-American War, World War I or World War II, the fighting Irish were always in there on the side of the oppressed. It was Gen. Andrew Jackson, later President, who drove the British out of New Orleans. A distinguished line of Irish heroes followed the pattern of Jackson through the generations until in the recent World War II, we became familiar with such outstanding Irish fighters as Rear Adm. Daniel J. Callaghan, Comdr. John J. Shea, Capt. Richard E. Fleming, Lt. "Butch" O'Hare, Flight Comdr. "Paddy" Finucane, Capt. Mike Moran, Capt. Colin Kelly, Sgt. Charley Kelly, Lt. Col. Thomas Lynch, Chaplain Arthur C. Lenaghan, the 12th chaplain of Irish extraction to die in action, as well as thousands of other Irish fighters for freedom. It sure is a grand and glorious record of courage, loyalty, and devotion to freedom.

A GREAT HERITAGE

So while we mediate about the chaste, humble, and Christlike life of St. Patrick and his teachings, let us also remember what a great heritage that we of Irish blood and ancestry possess. Let us take an inventory of the leadership that our group has demonstrated in our own Commonwealth of Massachusetts. Our men and women are making their mark in all the professions. Whether it be in the legal, medical, educational, business, religious, or political fields, the Irish have a way of rising to the top of their profession.

POLITICAL SCORECARD

We have United States Senator John F. Kennedy; 3 constitutional officers, Buckley, Cronin, and Kennedy; and 6 Congressmen, Boland, Donohue, Lane, McCormack, O'Neill, and Philbin; the minority leader of the State senate is forceful and resourceful Senator John E. Powers of South Boston. He has Senators Hogan of Lynn, Donahue of Holyoke, Walsh of Lowell, McCann of Cambridge, Corbett of Somerville, McDermott of Medford, Quigley of Chelsea, Hennigan of Roxbury, Beades of Dorchester, Stanton of Fitchburg, Gibney of Webster, and Fleming of Worcester, to assist him in governmental problems, and they make a great team.

ROLLCALL RECORD

In the house of representatives, the distinguished speaker of that body is the able, competent, diplomatic Michael F. Skerry, of Medford. He is the second Democratic speaker of the house in the 175 years of our history as a Commonwealth. He is the leader of 127 Democrats, of whom 72 are of Irish extraction. Here is a good sample of the rollcall record as it appears in 1955: O'Brien, of Fall River; David J. O'Connor, of Roxbury, John H. O'Connor, of Worcester; Thomas J. O'Connor, of Springfield; O'Dea, of Lowell; O'Farrell, of Malden; O'Loughlin, of West Roxbury; O'Rourke, or Northampton; and O'Sullivan, of Dorchester. They sure are a fine broth of boys.

MAYORALTY FIELD

When it comes to the mayoralty level, you have to take your hat off to the following: Mayors Hynes of Boston, Brennan of Attleboro, Lucey of Brockton, Foley of Cambridge, Quigley of Chelsea, Crowley of Everett, Kane of Fall River, Buckley of Lawrence, Frawley of Lynn, Carr of Medford, Cahillane of Northampton, O'Donnell of Peabody, Capeless of Pittsfield, White of Revere, Collins of Salem, Donovan of Somerville, Mrs. Alice Burke of Westfield, Murray of Woburn and O'Brien of Worcester.

There are only 10 city managers in Massachusetts, but the first 8 are Barrett, Curry, Deegan, Hart, McGrath, McLean and Monahan.

JUDICIAL COURT

Justices Edward A. Connihan, Jr. of Cambridge and James Joseph Ronan of Salem are members of the Supreme Judicial Court.

There are 31 Justices of our Superior Court. The Honorable John Patrick Higgins graces the court by his learning and his administrative genius as Chief Justice. Among his colleagues, you will find the following Justices: Walter L. Collins, Daniel T. O'Connell, Frank J. Donahue, John E. Swift, Joseph L. Hurley, Thomas H. Dowd, Francis J. Good, Paul Grattan Kirk, John V. Sullivan, Eugene A. Hudson, Edward J. Voke, Frank J. Murray, Daniel D. O'Brien, David G. Nagle, and John H. Meagher.

The Chief Justice of the Massachusetts Land Court is John E. Fenton, and the Chief Justice of the Boston Juvenile Court is John J. Connelly.

ERIN GO BRAGH

So be proud of your Irish blood and ancestry. You have a high mission to perform. Do honor to your Gaelic heritage and lineage in your every endeavor. Let me conclude this article with a few lines sent to me recently by the Columban Fathers of Milton, Mass., entitled "An Irish Wish":

"May the road rise to meet you,
May the wind be ever at your back,
May the good Lord ever keep you in the hollow of His hand,
May your heart be as warm as your hearthstone;
And when you come to die, may the wail of the poor
Be the only sorrow you'll leave behind.
May God bless you."

Legislation Amending the Natural Gas Act

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks I include a statement made on April 27 before the House Interstate and Foreign Commerce Committee by Hon. John J. Moloney, mayor of Covington, Ky., in regard to legislation amending the Natural Gas Act:

STATEMENT OF JOHN J. MOLONEY, MAYOR OF COVINGTON, KY., REGARDING NATURAL GAS BILL BEFORE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, HOUSE OF REPRESENTATIVES, 84TH CONGRESS, 1ST SESSION, IN OPPOSITION TO BILLS H. R. 3703, H. R. 3902, H. R. 3941, H. R. 4168

The Natural Gas Act became law on June 21, 1938. Since that time the Supreme Court has passed on the act to settle two important cases: *Federal Power* v. *Hope Natural Gas Co.*, and the more recent, *Phillips Petroleum* v. *State of Wisconsin*. In both cases this High Court has had this to say: "The primary aim of this legislation was to protect consumers against exploitation at the hands of natural-gas companies." The cities of this Nation that are served by natural-gas companies, believe that this legislation was not only necessary in 1938, but the need for protection "against exploitation at the hands of the natural-gas companies" becomes more acute each year.

Since 1947 there have been five major bills presented to the Congress, all designed to relieve sellers of gas in interstate commerce for resale, from Federal Power Commission jurisdiction. They are: (1) The Moore-Rizley, S. 734 and H. R. 4051, 80th Congress, 1st session; (2) the Priest bill, H. R. 4099, 80th Congress, 1st session; (3) Lyle-Harris bills, H. R. 79 and H. R. 1758, 80th Congress, 2d session; (4) Kerr bill, S. 1498, 81st Congress, 1st session; and (5) Lyle bill, H. R. 3285, 82d Congress, 1st session.

Each of these bills have been defeated despite the terrific pressure exerted to effect their passage. One failed only when it was impossible to muster enough votes to override a Presidential veto.

The question is again before the Congress; this time with renewed vigor, probably instigated by the recent decision of the Supreme Court in the Phillips case. The public is being bombarded with large ads in periodicals and important newspapers, stating the case of the gas producers. Every effort is being bent toward relieving the gas producer of Federal Power Commission regulation.

The ads are so designed to give the consuming public such informations as to lead them to believe that regulation at the wellhead destroys the principles of free enterprise and competitive markets. Much is made of the regulation of producers, variously estimated as numbering between 4,000 and in excess of 5,000. Also that gas produced at the wellhead and delivered to a processor or a carrier, is not in interstate commerce.

The gas taken from the wells is intended for interstate delivery. It was for this purpose that the processing companies were formed and for this reason the large pipelines were laid over great distances to reach markets in cities far removed from the wellheads. This is the reason that many wells were opened and the reason that many oil companies went into the gas producing business. Without these facilities they would have no market and these facilities are strictly interstate in character.

An act of Congress could remove this commodity from the jurisdiction of interstate agencies by law, but no act can remove it from interstate movement in fact. The gas is being brought out of the earth to be sold beyond the State line in which the well exists.

While it is difficult or impossible to conceive, as it is being produced of gas, considered other than an interstate product, it is even harder to consider the producers market free or competitive.

Whether the number of producers is 4,000 or in excess of 5,000 is relatively unimportant at the moment. The fact still remains that less than 100 producers supply at least 85 percent of the gas produced and 7 companies supply 35 percent of this same total. This hardly looks like a free market or one in which prices seek their level through competition.

By far the greater number of producers are left with but 15 percent of the market while a relative few absorb 85 percent of the consuming public's demands. With such a heavy balance in the hands of a very few in any other commodity field, this would constitute a monopoly—and it also constitutes a monopoly in the gas producing fields.

Monopolies are not conductive to free enterprise or competitive markets. This monopoly was formed by the gas producers themselves. They now seek, not a free market, but a market free to exploit the consumer by a very few producers. The Natural Gas Act of 1938 was designed to prevent such exploitation and should for this reason be retained in its present state.

How the price at the wellhead affects the consumer is easily exemplified in my own community, i. e., in northern Kentucky, surrounding the city of Covington, and known as the northern Kentucky cities, spread along and south of the south bank of the Ohio River and directly south of Cincinnati, Ohio, on the north bank of the Ohio River.

The northern Kentucky city group is comprised of 22 separate municipalities, with a total population of approximately 175,000. Covington is the largest city in this group, accounting for approximately 65,000 of the total population.

The Union Light, Heat & Power Co. is the local retail gas company serving this area. This is a subsidiary of the Cincinnati Gas & Electric Co., operating in and serving Cincinnati and adjoining cities in Hamilton County, Ohio. It is locally owned.

The Cincinnati Gas & Electric Co. and the Union Light, Heat & Power Co. buy their gas from the Kentucky Central Gas Co., who, in turn, receive their supply from United Fuel Co. Both Kentucky and United Fuel are a part of the vast Columbia system. United Fuel is supplied by Gulf Interstate and Tennessee Pipe Line, neither of which are a part of the Columbia system. From this point I do not know the identity or the number of lines that carry this supply, as they follow a devious route to the wells in the distant Southwest.

The northern Kentucky cities enjoy a rate lower than the national average. The local market also differs in that the residential use of gas accounts for a larger portion of the total sales than is generally the figure in other cities. In 1954 the average residential rate was 64.85 cents per thousand cubic feet against a national average of in excess of 83 cents per thousand cubic feet; but the residential sales accounted for about 70 percent of the local market, against a national average of approximately 55 percent.

In 1948 our rates were low, lower than they had been for some time. They did not begin to rise until 1952. Prior to 1952 most of our supply came from the West Virginia fields, but since 1952 practically all of the gas is brought in from the wells in the Southwest. The increase in rates that followed is nothing more than a reflection of the increase in rates at the wellheads.

The Public Service Commission of Kentucky has allowed little or no increase in consumers rates over the amount of increase in wholesale rates. Yet since 1952 they have allowed three increases.

Kentucky Public Service Commission case No. 2452, bearing an order date of January 24, 1953, permitted The Union Light, Heat & Power Co., to increase rates that would gross $349,200 more annual revenue; case No. 2640, order date July 22, 1954 allowed a $455,814 annual increase; case No. 2750, with an interim order date of March 21, 1955, grants an increase up to $376,794 annually depending on the outcome of cases now pending before the Federal Power Commission.

Comparing the low in 1948 with 1954 (after 2 increases) the effect on the consumer is readily seen. In 1948, 39,547 residential customers paid $1,965,214.97 for 3,243,187 thousand cubic feet; this is a yearly average of $49.69 for 82 thousand cubic feet per customer.

In 1954, 44,311 residential customers paid $3,993,073.81 for 6,157,345 thousand cubic feet or $90.11 for 139 thousand cubic feet per customer. Each customer therefore paid 81 percent more for 70 percent more gas in 1954 than in 1948.

The incease in the amount of gas used per customer is due to a more wide spread use of gas for space heating. The interim order in case No. 2750, Kentucky Public Service Commission, may or may not increase this amount by $376,794 in 1955, depending on the outcome of the cases before the Federal Power Commission.

Thus is the residential customer affected, and the local retailer has also felt this change. In 1948 the Union Light, Heat & Power Co., paid 28.64 cents per thousand cubic feet for gas; in 1954 it was 39.11 cents per thousand cubic feet. Although some other factors affected their rate of return, it dropped to 3.15 percent in 1952 and to less than 3 percent in 1953. Due to the increases granted in 1953 and 1954 it rose to 5.31 percent in 1954. However no dividends were paid from April 1952 until December 1954.

During the period from 1951 to 1953, the price at the well-head rose from 7.3 cents to an estimated 8.3 cents.

So the wholesaler, the retailer and the consumer are all vitally affected by the price at the well-head. Should you remove the regulations at the source you only pass an unregulated product into a regulated market. Those regulatory bodies that must control prices beyond these wells are left no other alternative than to pass whatever price is fixed at the well on and on until it reaches the consumers, the greater number of which are ordinary American residences. Thus the price is left to the will or the whim of the owners of the wells, too few of whom control too much of the market to leave it either free or competitive.

A Southerner Looks at the Textile Tariff Cut

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication and article I received from the Standard-Times, New Bedford, Mass.:

THE STANDARD-TIMES,
New Bedford, Mass., April 29, 1955.

DEAR SIR: The future of the textile industry in the United States will be determined by the action that the Congress takes on the foreign-trade bill.

This is not a matter that concerns the textile industry in New England, or the North, alone; it concerns the South just as much or more.

Under the provisions of H. R. 1, the country may be flooded by cheap imports that might deal a blow from which the textile industry in the United States could not recover for many years, if ever.

The seriousness of the situation was presented in the clearest possible language by Mr. William H. Grier, the general manager of the Rock Hill Printing & Finishing Co., of Rock Hill, S. C.

The New Bedford (Mass.) Standard-Times published Mr. Grier's statement in full and we enclose page containing it for your consideration.

Unless H. R. 1 is amended, the United States textile industry may be lost.

Yours very truly,

THE STANDARD-TIMES.

A SOUTHERNER LOOKS AT THE TEXTILE TARIFF CUT—WHY IS UNITED STATES TEXTILE INDUSTRY CONSIDERED EXPENDABLE?

(Why are America's textile industry, the towns it supports, and the industries with which it is allied, all considered expendable? This question is asked by William H. Grier, general manager of the Rock Hill Printing & Finishing Co., Rock Hill, S. C., a division of M. Lowenstein & Sons, Inc., new owners of Wamsutta Mills here. In his talk, prepared for delivery in Rock Hill, Mr. Grier cites the fallacies and errors inherent in the trade policies the new tariff cut exemplifies. He calls for a positive approach in building up the industry of Japan rather than the negative approach of destroying the United States textile industry to let Japan prosper.)

(By William H. Grier)

What I propose to talk to you about, gentlemen, is something which—like our very freedom—is something that is so much a part of our existence that we are inclined to take it for granted. I am going to talk about the textile industry, the economics and

makeup or structure of the textile industry, if you please, particularly from the standpoint of whether any significant part of it is expendable. For that is the issue, or question, with which we now seem to be faced.

To you, there is no need of diluting what I have to say. For one thing, it saves time. So I want to give it to you straight, lay it on the line.

Today, 175 years after its founding, textile manufacturing easily is our most competitive major industry, yet it is also our oldest manufacturing industry. It laid the foundation of our modern industrial age, and has been a partner and participant in most of the industrial progress since 1790. Today the United States textile mill industry employs well over 1 million men and women who are actually engaged in transforming raw fibers into cloth. The garment-making industry employs another 1 million persons; there are actually many millions concerned in the production of raw materials—fibers and chemicals—used by the mills, and millions more employed in related industries.

But, to go back a bit by the time of 1812 quite a few small mills had been built in our Atlantic seaboard States. History tells us the blockade of American ports by the British did much to stimulate interest in the manufacture of cotton textiles as well as other products. After the Treaty of Ghent and the Battle of New Orleans, commerce with Britain and other countries was resumed. But so heavy were imports of cotton goods that most American mills were forced to shut down.

TARIFF SPURED GROWTH

However, the American industry managed to obtain tariff protection, and from then until the outbreak of the War Between the States the growth of the industry was steady. Just about all of our textile industry and other manufacturing industry, however, was in the Northern States. The South, with its predominantly agricultural economy, was our strongest believer in free trade. It seemed quite good economics to exchange cotton and tobacco for manufactured goods from abroad.

Yet the South's grim experience in the War Between the States is the classic example in our history of what happens when a country at war is cut off from the sources of essential materials and has little capacity of its own to fill the gap. It must be recognized that the Confederate States in 1860 certainly had about as unbalanced an economy as existed anywhere in the world. And, as always, it was the strategic materials that proved most scarce, and priced sky high.

Since we have chosen to turn the pages of history for a moment, let's note here, too, that the defeated and economically ruined South of 80 years ago had no international loans, no lend-lease, no food relief, or anything else to turn to. But it did work like blue blazes. And it went to work under the formula which was then, as it is now, the secret of our growth as a nation and of our capacity to produce—the dedication to individual opportunity and free enterprise. This we take as a matter of national right—if not indeed as a matter of course.

SELFISHNESS CITED

Now—and I am giving it to you straight—it is the people who have selfish reasons of their own who are the main ones who have hit upon the idea of blaming the United States tariff for the slowdown in world trade. They say tariffs should be cut more to help trade get back on its feet.

The so-called free traders openly say that an industry ought to go where its products can be made cheapest, and good riddance if it can't stay healthy without tariff help. In the long run, they claim the country would be better off without it. Sure, they even go so far as to offer their sympathy to those who would lose their jobs.

The sadly inarticulate opponents of tariff abolition are, in general, those industries and sections of agriculture whose products are such that their costs are necessarily tied to the high domestic wage level. These interests foresee great harm and possible extinction for their business if they must compete in the American market with a flood of imported goods similar to their own but produced by workers so poorly paid that these goods can be made at very low cost and dumped in the United States at unmeetably low prices.

Yet, I think it is undeniably true that there is general agreement that the soundest bulwark for the free world at the present time is a prospering and healthy economy in the United States. In the long run it can't help Japan or any other part of the free world if our tariff policy is permitted to sell down the river a basic and vital industry like textiles.

Conceding that we have a stake in the prosperity of other nations, they have an even stronger need for our economic well-being here. It should be remembered that our purchases of foreign commodities rise and fall with our domestic economy. To deplete our own resources and weaken our own defenses in pursuit of an economic fallacy or booby trap is no answer, either to ourselves or to the free world.

Why is the textile industry so gravely concerned? It's as simple as A B C—in the textile industry wages constitute a very high proportion of the value of the product. It's not difficult to understand why there are some United States industries which profess to side with the so-called free traders or at least to take a lukewarm attitude. If you look closely enough, you'll find these industries are protected by patents—completely protected. Or else they are industries in which the labor cost is a relatively insignificant part of their total cost.

If they do not fall into either of these categories, then they are industries which have foreign plants and could do just as well or better by transferring their production to such foreign plants.

Now let's suppose that in the middle 1930's we had succumbed to the fallacious theory that a slightly lower price, based on much lower wage rates should prevail without regard for national needs. Where indeed, I ask, might we be now?

MARKETS FLOODED

Those of us in the textile industry can't easily erase from memory the fact that back then our markets were beginning to be flooded by an avalanche of bleached goods and other textile products from Japan. This was a major contributing factor to creating in 1938 the deepest depression the United States industry has ever known.

After more than a year's study the Tariff Commission determined that insufficient tariff protection for textiles was a serious hindrance to employment and maintenance of American living standards. The Roosevelt administration had to take quick action to prevent a mounting catastrophe from which the domestic textile industry might not have recovered for many years indeed, if ever.

Now, I ask you—if we had permitted liquidation of our industry then, where might we have been at the outbreak of World War II?

During World War II, when the textile industries of our allies were out of operation, the American industry bore the brunt of supplying textile equipment to their armies and civilian populations as well as our own. More than half the entire output of the American industry went to direct or indirect requirements of war. The United States Army Quartermaster Corps alone purchased more than 11,000 different items of cotton textiles.

Upon the outbreak of the Korean war, American cotton goods production was stepped up by 25 percent in a period of 4 months, to the phenomenal annual equivalent of an 11,500,000-bale consumption of raw cotton.

CONSUMPTION HIGH

America is unique because it grows more cotton than any other nation, manufactures more cotton than any other nation—because its people consume cotton on a per capita basis six times the world average, Japan, Britain, and India are now the world's leading exporters of cotton goods in order named.

Should another worldwide conflict ever break out, we could expect once again to see the textile industries of Great Britain, India, and Japan cut off from their sources of raw supplies. Again the United States would be forced to supply the armies and population of its allies.

So, I ask, is the United States textile industry expendable, as our free traders would lead us to believe?

Now I am not dealing with a hypothesis or something remote from reality. In two decades under one-way reciprocity, the United States has cut tariffs on cotton textiles some 37 percent and has given up most of its export trade. The current flow of Japanese goods into the United States exceeds those of all other countries combined and in the last few months has spurted to a level approximating the peak level of the 1930's. A great bulk of the imports this time are furnished goods and wearing apparel.

INVITATION GIVEN

Undoubtedly this invasion of the United States market has stemmed from recent United States Government statements which are an open invitation for the Japanese to do this. And further tariff concessions to Japan are contemplated at the GATT (General Agreement on Tariffs and Trade) at Geneva this month as the United States sponsors a move to try to bolster the Japanese economy. The conspicuous thing about this is that our tariff-cutting policy as now set up seems to envision textiles as our one major expendable industry.

Virtually the whole range of our cotton textile production is on the negotiable list for potential concessions. Not only that but nearly all the industry's customers—the people who make the consumer products—are on the list too, which compounds the competitive disadvantage. The products of other major industries are either notably absent from the list or are treated very tenderly.

The list also includes many special cloths and articles whether they are wholly of cotton or are a blend of fibers. It embraces rayon and other synthetic yarns and filaments. As you know, the textile industry today isn't strictly a cotton-textile industry such as it once was. The single-fiber mill has increasingly become a multi-fiber mill. From the standpoint of fibers, the industry is divided about as follows: Some 69 percent on cotton, 24 percent on man-made or synthetic fibers, and 7 percent on such fibers as wool, flax, and silk.

WHY THE SINGLING OUT?

Now, don't get me wrong. We in the textile industry do not dispute for one moment that the economic plight of Japan is serious, and that she must export to live. But the question the textile industry poses, and would like to have answered, is this: If Japan's economic plight creates an emergency which the United States as a whole is trying to remedy, why single out 1 basic industry or 1 segment of the economy to bear the brunt of the burden—especially when no other industry of comparable size has given up already more of its business at home or abroad to Japan, or contributed in a more practical way toward helping the Japanese textile industry get back on its feet after World War II?

Raw-cotton supplies, often American-type and usually American varieties fresh from our best breeding stocks, are available to foreign industries at the same prices as are paid by American mills, owing to the low cost of ocean transportation. Thus with manufacturing processses the same and with the raw material the same, the labor cost factor emerges as the only real area of competition. In the United States textile industry, as contrasted with other major industries, labor costs run high—about 40 percent—in the manufacture of products.

United States average hourly wage rates are 3 times those of Great Britain and western Europe, and 10 to 12 times those of Japan and India. The advocates of tariff reduction assert that higher American wages are offset by greater efficiency in production. This assertion implies that American cotton mills are or can be 3 times as efficient as British mills and 10 times as efficient as Japanese mills. There is no known evidence to support so fantastic a notion.

The question of relative efficiency between American and foreign competitors is usually meant to imply either 1 of 2 questionable things: That greater American efficiency has created so wide a margin of profit that prices can be lowered to meet foreign competition tariff-free, or that the level of efficiency can be raised at will to meet such foreign competition if necessary.

PROFIT NOT ASSURED

For competitive industry, higher efficiency does not necessarily mean higher profits. Its results may take the form of higher wages, lower prices, and small profits. Since it is one of the most highly competitive industries internally, textile manufacturing is typically a low profit industry, as borne out by Government figures, and any substantial curtailment of volume is quickly translated into depressed prices and financial losses. It has no unexpended margin which can be drawn upon to meet the lower prices of foreign countries on competitive goods.

In the building of its own structure and its own related economy, the one big reason why the cotton textile industry has been successful is that it has supplied to the American people the most incredible abundance, variety, and quality of textile products that have ever catered to human wants; and at prices which, relative to wages paid, are the lowest in the world. That is why the American people on a per capita basis consume about six times more cotton than the world average.

American mills operate within the American wage-and-price structure. This accounts for the industry's strength and growth here at home; but this is the textile industry's greatest weakness when facing foreign competition. Unlike other large American industries, textile manufacturing in this country has no patents or processes that are its own.

Spinning and weaving are universal processes indeed, sometimes contrary to good economic horsesense. Foreign countries can and do use the same machinery that American mills use. The industries of competing countries, rebuilt and modernized with American funds, are rapidly matching if not already exceeding the technical efficiency of the United States mills.

CONTRIBUTING SUPPORT

The United States textile industry, on the average, consumes about two-thirds of the domestic cotton crop. It is not only the major support of the United States cotton economy but a tremendous contributing economic support to numerous other domestic industries.

The transfer of any sizable United States textile production to foreign industries via the route of still lower tariffs could easily touch off a chain reaction of destruction in the American economy due to the fact that the textile industry is so closely interlinked with the chemistry industry, power, transportation, fuel, machinery, and scores of other industries. And the social disintegration in the wake of mill liquidations or migration poses the greatest danger that could come of a tariff-lowering program.

The thousands of communities now dependent wholly or largely on the textile-cotton economy of the United States could become, in large measure, a region of deserted villages and abandoned farms. The tragic thing is that there is no alternative agricultural commodity or manufacturing employment in the areas where cotton farming and textile manufacturing are most concentrated.

Even more tragic would be the fact that it would all be needless, in that it would be only a stopgap expedient which would never help world trade. This is due to the simple fact that the world today is confronted by the startling paradox of a condition of overcapacity and production surplus existing in the major manufacturing countries and a condition of extreme scarcity in the underdeveloped countries where the goods are needed most.

Many underdeveloped regions of the world, where living standards and consumption of textiles are lowest, have barred trade by artificial devices imposed by nationalistic governments.

SNARED BY OWN RULES

Providing the manufacturing countries with a "substitute market" in the one area of great abundance, the United States, while much of the rest of the world goes unclothed, isn't the answer. How could that help the plight of Asia, Latin America, Africa, Oceania, and the Near East? Those have traditionally been the areas of tremendous cotton imports which over the course of time have served to keep alive the textile industries of Europe and Japan. Today they are areas of scarcity and high prices because they are trapped in their programs of trade restrictions and nationalism.

In some countries even within our own hemisphere cotton fabrics are truly scarce and are from 2 to 3 times higher than for equivalent fabrics in the United States. Many countries, aiming to protect their small and inefficient textile industries, have reduced imports by exclusion practices so drastic that the per capita volume of cotton goods available for their domestic consumption is actually less than in prewar days.

The textile industry—and it has long been concerned with the problem of declining world trade to the extent of participating in several international textile conferences—feels the only sound course for United States foreign-trade policy to take is to strike at the heart of the problem; that is, the many different kinds of restrictions to commerce which other nations have imposed under so-called reciprocity—and thus open up great areas of consumption around the world.

BASIC TASK CITED

It considers that the basic task of world trade reconstruction requires the restoration of multilateral trade and industrial advancement of underdeveloped nations. The first of these two requirements assumes the taking of steps which lead to the reestablishment of convertibility among the world's major currencies. Only as such steps are taken will the meshwork of trade and exchange restrictions fall. The second requirement assumes the adoption of programs of economic development correlated with the material and manpower resources of industrially backward countries. It assumes likewise the cooperation of other countries in carrying out such programs.

Our industry would like to see far greater effort directed toward removal of trade barriers which almost all foreign nations, scoffing at GATT, have erected—walls which in the form of quotas, exchange controls, exorbitant tariffs, and outright discrimination are far higher and more restrictive than the United States tariff structure. We have seen American exports drop off two-thirds—our reward as the most generous nation in granting textile tariff concessions. We have seen the theory of reciprocity perverted to the point where foreign textile manufacturing nations are invited to send their goods to the United States—the one region of supreme abundance—while destitute areas of the world are bypassed.

It would be very much to the interests of the industries of all textile nations if ways are opened up for the ill-clothed nations to have a minimum of comfort and decency in their living standards.

If per capita consumption throughout the world could be raised to only one-third of what the average American enjoys, there would not be cotton fields enough, nor enough spindles and looms, to meet the needs. Is not this a worthy objective, meriting every ounce of our energy and all possible resourcefulness on the part of our Government in bringing it about, through a truly revitalized foreign-trade policy?

And in view of that, I leave you with the thought—is the American textile industry expendable?

Foreign Aid Folly

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1955

Mr. SILER. Mr. Speaker, when "G. Washington, Thos. Jefferson, Benj. Franklin" and those other patriarchs of the long lost days of America were writing America's genesis in the early history of this new Nation, no one ever thought about setting up a constitutional authorization about taxing American citizens to aid foreign lands around the world. But somehow we drifted into that unique practice under New Deal radicalism and now the foreign-air rut seems to be still holding us tight. Down in southeastern Kentucky, Jeff Abbott, the coal miner, works hard in the blackness of the underground caverns and has little above cornbread and occasional chuck roast for his meager table. Yet Jeff, as an American, pays some of the necessary tax that goes forth to aid Turkey, Belgium, and Brazil. Then there is Cora Bunch, a mountain schoolteacher, and Jim Meadors, a country merchant, and neither knows aught but consistent hardship and normal scarcity. Yet Cora and Jim, as Americans, pay some of the necessary tax that goes forth to promote Germany and Spain under our various foreign-aid schemes.

As the emerging picture of this present enlightened hour takes form, it would now be sheer folly to grant more aid to these various countries in far-off places. Why does this statement make sense? Surely our past experience with foreign aid since 1945 is ample enough proof of this observation. Since the inception of the Marshall plan in April 1948, it will be remembered that about $35 billion has been spent for economic and military aid abroad—about $20 billion for military

and $15 billion for economic assistance. A complex labyrinth of economic-aid programs has existed since the end of World War II, but each has had the same purpose—to give away some of the hard-earned substance of Jeff, Cora, and Jim. During World War II we gave away billions of dollars worth of goods as lend-lease. That program was justified, as we all concede, since we and our allies were engaged in a life-and-death struggle with the force of tyranny. It might be said that we gave our wealth and substance rather than suffer the devastation befalling other parts of the world.

But since the end of World War II we have continued to finance one aid program after another. And let the average man question one proposal for aid or try to reduce the amount of aid in any proposal and someone proclaims that communism will be aided. The big, bad Russian bear has been a handy whipping-boy to make us toe the line for more foreign aid. And while it is not to be denied that the Soviets are out to do the free world all the harm possible, yet little evidence has emerged that our aid to other countries has made any difference in the behavior or accomplished ends of the Soviets. In fact, they regard such aid, which are sacrifices for us, as only further evidence of our so-called imperialism.

And now we are confronted with a current demand for still more aid. This year the emphasis is on Asia. This latest request is for $3.53 billion for economic and military aid in the fiscal year ending June 30, 1956. Two-thirds of this sum, $2.14 billion, is for aid to Asia. Only $712.5 million of this total is for economic aid.

It seems that Miss Europe does not now need further aid. In 1954 her trade within Western Europe was 128 percent above that of 1948 and 69 percent above that of 1938. Imports from the outside world were 24 percent above those of 1948 and 11 percent above those of 1938. Exports were 83 percent above those of 1948 and exports to the dollar area were 130 percent above 1948, while imports from that area were 7 percent below 1948.

Consumption per capita in Western Europe reached the 1938 level by 1950. By 1953 it was 7 percent above that level, and in 1954 it jumped to 12 percent above prewar. The United States was 45 percent above the 1938 level.

Industrial output was about 50 percent higher than in 1938. Agricultural production was 30 percent greater.

In 1951 the countries of Western Europe planned for an annual increase of 4.5 percent in gross national product during the next 5 years. This increase was not realized in 1952, but it was realized in both 1953 and 1954.

Granted that foreign aid did promote the economic progress of some of the countries of Western Europe, it is soundly logical that any such aid anywhere has now outlived its usefulness. Countries receiving aid have become less and less reliable as allies. We need only to point to the Korean war and the fiasco of the European Defense Community to realize that our allies are little interested in a genuine attempt to unite for common defense. Selfish interests have either killed or emasculated most attempts at collective defense. Obviously the change from Marshall plan to mutual security shows little relationship of the one to the other. There is no mutual security unless we finance it. Our insistence on some compliance with promised objectives has caused United States popularity throughout the world to reach an alltime low. Despite our bungling attempts to become the big brother of the world, the mere spreading of dollars has not and will not bring popularity or good will. The sooner our Government realizes this simple truth the sooner have we reached maturity in our contemporary statesmanship.

Perhaps the most patent result of foreign aid has been the enforced postponement or rejection of necessary social and economic projects here at home. It is a well-known fact that our highways are inadequate; that new hospitals and schools are needed; that reclamation and flood-control projects have been postponed for lack of funds. How can we justify spreading money abroad for aid when we do not have sufficient funds to undertake such programs at home? We must wake up to the fact that we cannot carry the financial burdens of the free world on our backs. Why should an American shrink from being called an isolationist when his desire has been to make his own country a better place in which to live? Our neglect of highways, to cite one example, has contributed materially to 38,000 traffic deaths a year and has cost much time in travel. The disastrous floods of our river valleys could be eliminated by correct methods of flood control.

Continuation of our program of broadcasting billions will cause us eventually to face one of these two "ins"—insolvency or inflation. Who then is likely to come forth to bail us out? Certainly no European government will come to our aid. It should be considered that our Federal debt was 74 percent of our gross national product in 1953. But let us take a look at the debt of those nations we are aiding; the relationship of debt to gross national product of selected countries was as follows: Norway, 53.3 percent; Spain, 26 percent; Belgium, 67 percent; France, 37.5 percent; Germany, 32 percent; Turkey, 22 percent; Japan, 12 percent; the Philippines, 10 percent; Brazil, 7 percent; and Mexico, 4 percent. Truly we are burdened when compared with nations who are receiving our largesse; yet they claim that they cannot finance their own economies.

Foreign aid has not contributed to an increase in our real wealth. As one author has said:

> Admittedly the foreign-aid program, financed by the United States taxpayer and purchaser of Federal securities, has contributed to the striking postwar growth of this country. Yet it is a fair question whether the expenditure of equivalent resources on domestic development might not have led to an equal growth, even though of a different type. For it can hardly be argued that the export of very large quantities of goods for which the United States has not been compensated has increased this country's real wealth.

The French and Italian tax structures seem hopeless to American eyes. They fall heavily on consumers and permit flagrant violations by the wealthy. Yet little has been done toward remedying these conditions. True, at American insistence, new and more stringent tax laws have appeared on statute books, but they appear to have been evaded. Numerous disinterested persons who have traveled abroad have attested to the fact that wealthy people pay for less taxes than we do in the United States; yet that they refuse to invest in the economic development of their own countries. Why should American citizens be taxed to aid foreign nations when their own wealthy people evade taxes?

Much of the foreign aid money expended in other countries has gone to help export industries which now compete in world markets with our industries.

Communism has not been stopped by foreign aid. About 1 Frenchman in 4 is a Communist despite our expenditures of billions of dollars in rebuilding France. In Italy parties of both the left and the right have grown in power despite Marshall plan aid. Yet we are told whenever we question increased subsidies to European nations that they will fall to communism unless we continue to finance them.

Other examples of the folly of foreign aid could be cited. But it should suffice to say that our aid program has been used to finance socialistic governments in Europe and is now suggested as a bulwark of socialistic governments in Asia. That is a facet of the aid program that deserves special treatment, and so there will be no more than mention of it here.

The foreign aid program has been characterized by a proliferation of conflicting offices in many countries. Departments of our Government have worked at cross-purposes, frequently denying each other and working directly contrary to each other. In Paris until recently there were four individuals with the rank of Ambassador. In many European and other overseas areas, American Ambassadors must work with representatives of the United States Information Agency, Central Intelligence Agency, and Foreign Operations Administration. What a field that creates for misunderstandings and difficulties. Congressional committees have called attention to this anomalous situation and let us hope it is now on the way out.

These are some of the reasons why further foreign aid is futile. Certainly, such a program will not now contribute to anything like substantial furtherance of the economic rehabilitation of the world.

As of December 31, 1954, net foreign aid had cost each individual in the United States $298.52. If one were to consider the figures on a gross basis it would probably have cost each person in the United States far more than that. For my native State of Kentucky that would mean a contribution to foreign countries of about $904 million. How much improvement could be undertaken within the borders of Kentucky with a sum of that size. Truly, we could make it a far better State that it is today.

This latest request for $3.53 billion more for the next fiscal year would increase each person's contribution by $21.51, or about another $65 million from Kentucky. This means that Kentucky has contributed nearly a billion dollars for aiding foreign countries. It seems to me that we have already done far too much. Considering the aid we have given since 1940, it is no wonder that we are regarded as an impractical Santa Claus of immature judgment.

James Haskell really hit the nail on the head in reciting what we could do with the money which has been expended and is to be spent for foreign aid through June 30, 1957. He believes that by that date our postwar foreign aid to Europe alone will have totaled $60 billion. Graphically, he shows what could have been done with that tremendous sum:

1. It could have saved the average American taxpayer $1,000 in taxes.

2. It is 2½ times the total amount of the United States farm program in a decade.

3. It is nearly 4 times as much as the Government spent for public works during the New Deal.

4. It could have paid for all the new highways that America needs; also schools, hospitals, and other institutions.

Henry Hazlitt aptly expressed the contrast between foreign aid and assistance for needy domestic programs when, in discussing point 4 above, he stated:

The Government has nothing to give or lend to anybody that it does not first of all, or ultimately, take from its own taxpayers. By at least as much as it adds to the purchasing power of Paul, it must reduce the purchasing power of Peter.

Charity and mercy are admirable, desirable qualities of the human heart, but that is not so of a political machinery which should have only the function to govern for its own people and not a semblance of any function to tax those same people to further Formosa or promote Pakistan. Wake up "G. Washington, Thos. Jefferson, and Benj. Franklin" and see what we, the people, have been doing to your country through foreign aid folly. Wake up Jeff, Cora, and Jim, write your Congressmen, tell them how well you like being taxed for Turkey.

Eisenhower's Peace Ship

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial by Fred Othman, columnist for the Washington Daily News:

WHAT'S WRONG WITH A PEACE SHIP?
(By Fred Othman)

I've been hearing some snide remarks here about President Eisenhower's atomic peace ship; the idea of his critics is that such a merchant vessel belching scientific steam through her whistle is bald-faced propaganda.

Maybe so. The snarlers claim that such a beautiful, white-painted vessel tooling passengers and cargo around the world on an almost inexhaustible supply of fuel in a package the size of a cracker box would boomerang. I swear I don't see how.

If everybody wants peace around the globe, then what's wrong with advertising the boons that atoms hold in store for mankind? The sooner the better, I'd say, and as of now we may be seeing this marvel of steam navigation even sooner than Mr. Eisenhower hoped.

When he announced before the newspaper publishers' convention in New York the other day that he had such a wonder ship in the works, he didn't say exactly when he hoped to have it gliding across the Atlantic.

The trouble was that atomic steam engines, as demonstrated by the submarine *Nautilus*, needed so many miles of stainless steel plumbing with appropriate sheaths of lead to keep from atomizing the crew that it literally took years to design and build them.

Now come a pair of experts who have designed at the General Electric atom works at Schenectady, N. Y., an atomic engine that does away with the pipes. This cuts in half the weight per horsepower, does away with most of the lead sheathing, and puts the whole works in a smallish package that can be installed deep in the hold near the propeller.

As explained by Dr. E. A. Luebke, the physicist who developed the powerplant with Engineer L. B. Vandenberg, their idea was a simple one—or at least as simple as anything atomic can be. Whether I can explain it is something else, but if you'll bear with me:

The conventional atomic reactor as used in our incredible submarine gets so hot that it melts down metallic sodium to a liquid which flows through the shielded pipes to a "dingus" known as a heat exchanger. This really is a kind of stove, wherein the hot sodium heats water into steam, that then is piped to the turbines. Such an arrangement involved a never-never land of valves, gears, dials, and thick chunks of lead.

Dr. Luebke said he and Mr. Vandenberg merely built their heat exchanger around the reactor. He meant they put the hot stuff in the middle and surrounded it with the steam generating equipment. This did away with most of the pipes and those that were left became short ones. The heat exchanger itself helped to shield the people from the radiation and cut down the number of lead plates needed. This is oversimplification of course. The two experts were particularly proud of the fact that they'd arranged it so that the hot sodium pipes in contact with the cold water tubes automatically generated enough electricity to run the pump that kept the liquid circulating.

The details need not concern the rest of us. Let's just get going on our atoms-for-peace propaganda ship, is all, and it would please me if she were christened the S. S. *Mamie*.

Flexible and Rigid Price Supports

EXTENSION OF REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following correspondence with the Secretary of Agriculture:

WASHINGTON, D. C., *April 19, 1955.*
Hon. EZRA TAFT BENSON,
Secretary, Department of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: I am interested and concerned about matters that affect all, and of course, the farmers of my district. You will recall that in the 83d Congress it was my privilege and honor to be chairman of the Banking and Currency Committee of the House of Representatives and that at that time it was our responsibility to examine into and devise the increase of the borrowing authority of the Commodity Credit Corporation in order that it could play its part in the mechanics of commodity support which is a part of the law.

I am no longer burdened with the responsibility of the chairmanship of this important committee, but I am still the ranking minority member of this committee which has jurisdiction over Commodity Credit Corporation authorizations of the House of Representatives. However, I am concerned about the situation in support prices that may or may not affect the farmers in my district and in other areas of the United States.

I would appreciate your informing me at your earliest convenience of the following:

(a) What is now the commitment of the Commodity Credit Corporation in dollar valuation for all agricultural goods, either by purchase or by loan?

(b) In the judgment of you and your experts, what will be the commitments of the Commodity Credit Corporation for purchase or loan in the forseeable future in dollar volume, based on the present law?

(c) Will you please give me your best estimate of the commitments by Commodity Credit Corporation under the projected situation if the law should be amended to give to the basic commodities 90 percent of parity as is contemplated under H. R. 12?

Believe me, Mr. Secretary, I ask these questions because it seems to me that the farmers of my district and others should be fully familiar with the situation as it now exists and as it may exist if H. R. 12 should become law. I am,

Yours most respectfully,
JESSE P. WOLCOTT,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, April 22, 1955.
Hon. JESSE P. WOLCOTT,
House of Representatives.

DEAR CONGRESSMAN WOLCOTT: I appreciate your interest in the financial operations of the Commodity Credit Corporation, expressed in your letter to me of April 19.

We have made projections showing by months the status of our statutory borrowing authority, based on economic assumptions set forth in the 1956 budget estimate of the Commodity Credit Corporation. Using these projections, I shall do my best to answer your very pertinent questions.

(a) Currently (April 1955), we have in use approximately $8,400,000,000 of our $10 billion statutory borrowing authorization. This includes funds invested in commodities owned and under loan, as well as the investment in accounts and notes receivable, fixed assets and the unrestored capital impairment of the capital of the Corporation.

February is normally the seasonal peak in the commitment of CCC funds. In February 1955 we had $8,396,000,000 in use. This amount is very close to our estimate of last July, when Congress was considering the proposed increase in the borrowing authority of the Corporation from $8.5 to $10 billion. At that time we estimated our use of CCC borrowing authority in January and February of 1955 at $8.4 billion.

(b) Based on the present law, we expect to have in use in February of 1956 approxi-

mately $9,465,000,000 of our $10 billion borrowing authorization. This estimate assumes average yields, some rise in the level of economic activity, present price levels, some increase in exports, and acreage allotments for the basic crops. It is believed that these projections represent conservative rather than liberal projections of the volume of price support activity.

Based on present law, we would expect the peak in CCC of borrowing authority to be reached in February of 1956. Thereafter, we would expect CCC financial commitments to decrease as a result of reduced acquisition and increased disposal.

(c) H. R. 12 would make price support for the basic crops mandatory at 90 percent of parity. We estimate that the enactment of this law would increase the peak use of the Corporation's borrowing authority in the fiscal year 1956 by $247 million. On the basis of assumptions indicated in (b) above, this would put us within $300 million of our $10 billion statutory borrowing authorization—a margin of safety that could easily be wiped out by better than average yields, a drop in exports, or a decline in prices and economic activity.

I share the concern which your letter expresses about the increase in financial obligations which will result if H. R. 12 or other such legislation is passed by Congress. Even without a return to mandatory high rigid price supports the present $10 billion borrowing authorization may not be adequate.

I enclose a brief report which gives some of the above data in tabular form. This statement does not reflect the probable effects of H. R. 12 if it were to be enacted.

The Crop Production Report for July 1955 will contain the first most reliable source of information regarding production from 1955 crops. At that time the Department will be in a better position to appraise the potential use of the Corporation's borrowing authority and whether or not any legislative action need be proposed.

Sincerely yours,

TRUE D. MORSE,
Under Secretary.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes for the week of April 28, 1955, on the subject of our Capitol Building:

KEENOTES

(By Hon. ELIZABETH KEE)

The Capitol of the United States is much more than a building; to every American, it is a strikingly beautiful symbol of our Nation's strength.

Probably no architectural feature in all of the United States is as well known as the Capitol dome rising majestically above the Washington horizon—visible from almost any part of the city, a thing of breathtaking splendor when lighted at night.

The clean, straight, vertical lines of the main portion of the structure, when topped by the gentle, graceful curves of the huge dome, provide a picture of deep serenity in the midst of national controversy—of solidity and calm and reason no matter what the issue which might divide us in debate.

So it is only natural that our Capitol is everyone's business—that what happens to it inside or outside is a matter of national interest and personal concern. Therefore, I know there will be general interest among West Virginians in the newest proposal for "completing" the Capitol—for, literally, giving it a "face-lifting."

Former President Truman once said the dome would fall someday if the east central front of the building were not extended outward. Others have said the dome sits on top of the main structure like a derby hat without a brim. Architects say the facade is incomplete, because the central portion was not brought forward in keeping with the two wings which were added to the original building to provide the present House and Senate Chambers.

The architects may be correct that extension of the facade is an "architectural necessity" but I'm sure that most of us who are not architects would have gone right on thinking the building beautiful indeed just as it is.

Nevertheless, the space requirements of the Congress have provided a practical stimulus to accomplish an architectural objective which has been discussed since 1863. The House has finally approved—after many years of refusing to act on the matter—a resolution calling upon the Architect of the Capitol to draw up plans for the "completion" of the facade.

The additional space added to the east central front of the building, besides bringing it closer into line with the House and Senate wings, will provide much-needed space for committee rooms, for restaurant and other facilities, and for a through-passage on the gallery level between the House and the Senate sides of the building.

The decision to proceed with the planning of this improvement came shortly after a very significant improvement was made inside the building—the opening of an impressive, nonsectarian prayer room to which Members of the House and Senate can go at any time for quiet meditation.

Before a beautiful stained glass window depicting George Washington kneeling in prayer, Members can find inspiration in the Bible, or in our own quiet prayers as we seek Divine guidance in carrying out our heavy responsibilities. It is good to have this tiny chapel available in the Capitol. And, best of all, it is being used every day.

Am I My Brother's Keeper?

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. DOWDY. Mr. Speaker, yesterday, May 1, Oddfellows from many of our States, and from Canada, were in Washington for the annual Oddfellows' pilgrimage to the Tomb of the Unknown Soldier. Heretofore, the pilgrimage has been on various dates, but is now scheduled for the first Sunday in May, of each year.

Texas is signally honored in that the honorable Tellie F. Aston, of Sherman, Tex., is serving as sovereign grand master of the Sovereign Grand Lodge of the I. O. O. F.

His address at the Tomb of the Unknown Soldier was able and impressive. I am happy and honored to make it a part of the CONGRESSIONAL RECORD, in order that others may profit thereby:

AM I MY BROTHER'S KEEPER?

(Address by Tellie F. Aston, sovereign grand master of the Sovereign Grand Lodge, I. O. O. F., at the Tomb of the Unknown Soldier, May 1, 1955)

We have this day gathered together here in this sacred and hallowed Arlington Cemetery to pay a tribute of love and respect to the ones who have rendered military service to our country, many of whom sacrificed their lives that we may have the privilege of living in a free world, to live and to love, and to worship God according to the dictates of our conscience.

"Greater love hath no man than this, that a man lay down his life for his friends." To lay down one's life for friends, for humanity, for country, for a principle—that is a most glorious deed.

The one whose memory we honor today obeyed the teachings and exemplified the lives of our illustrious forefathers when he gave his life that you and I might live in a land of freedom. World War I seemed a cruel sacrifice and we were saddened by the wanton destruction of human life. Time, with its blessed healing touch, has dimmed the sorrow, but has left vivid memories of the bravery of these men, their idealism, and their willing sacrifice that the cause of right might prevail. Truly no man has given more than this brave one who sleeps so peacefully today. There is another question which must search the very depths of our hearts, "Am I my brother's keeper?" ever since the day when the Lord said unto Cain, "Where is Abel, thy brother?," and the first murderer replied: "I know not, am I my brother's keeper?," the question of responsibility for the lives of others has rested upon man. The Lord set a mark upon Cain, and we bear the responsibility today. We are our brother's keeper and as such it is our duty to give freely of our time and talents in helping share the affairs of the world so that at some time in the future the nations throughout the world may live peaceably together forever. Yes, we stand here today almost 41 years after that calm day in June 1914, when a pistol shot rang out in a quiet little Serbian city. The sound was faint at first, but later it was heard around the world, growing louder and louder until the rattle of machineguns and the roar of cannons resounded in every ear. Not until seven and one-half million men, the pride of many nations, had laid down their lives, and hospitals had claimed many millions more, did the world finally desist from a catastrophe almost greater than the mind of man could grasp. For over 4 long years the world was mad, while the struggle between liberty and imperialism went on. Then suddenly there was silence on the battlefields, and the roar of the cannon was heard no more, and then came that glorious, mad day in November 1918, when in every city, town, and hamlet in the world, men and women shouted and sang, with choking voices and streaming eyes, that the war was over. And so we all hoped and believed at that time. But history records that since the beginning of time men have fought and died for certain inalienable rights, for self-preservation, for love of their fellow man, and in the defense of their country, and for liberty and freedom; and as long as there exists freedom-loving people, others will die when necessary to preserve that heritage, each one with the hope that after this, we shall have peace.

Poets have sung in glowing numbers and orators have proclaimed with prophetic wisdom of the courage, bravery, and valor of our people, of their ideals and hopes, of sacrifices for loved ones, of love for home and country, of liberty, and of our glorious flag of America, and what it means to live in

the land of the free and the home of the brave. But these are not all of the things this soldier who lays here before us today was thinking of. Of what was he thinking? Probably of his home, his loved ones, his normal way of life, whatever that might have been—rich or poor—famous or unknown. He was not fighting for honor or renown. He was fighting for the privilege of returning home and taking his normal place in a free and peaceful world. He did not live to see his hopes and his dreams fulfilled. He left that for us to do, and just how much have we done to carry on for him?

The threat to freedom-loving people was not as great when this man gave his life for his country as it is today. The threat of communism is spreading throughout the world more rapidly than most of us realize. The time is at hand when every one of us should be alarmed at this dreadful threat to our American way of life. So far, we have not been materially affected by war. Our homes, our cities, and our industries have not been destroyed, nor our people persecuted and slaughtered, or placed in concentration camps; but today's deadly weapons, improved equipment, speed of travel, and all the inconceivable means of warfare that modern science has developed since World War I has placed the entire world to within a few hours' time from one remote part of the earth to another, and has made all nations equally vulnerable to annihilation and destruction.

From the earliest recordings of the history of man, assaults have been made against the spiritual and moral forces which existed at that time. Today we are faced with a like attack, and Odd Fellowship holds within its hands a most important weapon with which to combat the evil forces that plague the peoples of the world. It is our deep and abiding faith in the fatherhood of God and the brotherhood of man. If as much effort had been put forth in this world in years gone by to have spread these teachings and practices, as the proponents of communism have exerted in spreading its propaganda throughout the world, then the principles for which this Unknown Soldier fought and died might have been realized, and his sacrifice would have inspired greater faith of mankind in each other.

Yes, there is an urgent need in this confused and unsettled world today for renewed faith and confidence of man in man, and nation toward nation.

How can we have a part in this great reformation? We must go back to the basic principles upon which this Nation was founded: the right to worship God according to our individual desires; an acknowledgment that all men are entitled to enjoy the blessings of life, liberty and the pursuit of happiness in order that we might live and work together in a land free of tyranny and despotism.

Shall we pause a moment and review our American creed which we have all read or memorized at one time or another?

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic: a perfect union, one and inseparable, established upon those principles of freedom, equality, justice and humanity, for which American patriots sacrificed their lives and fortunes.

"I, therefore, believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag, and to defend it against all enemies."

The principles of Odd Fellowship go hand in hand with those contained in the creed of our Nation, and each in its rightful place is indispensable. But if we are to spread the gospel of brotherly love to a war-weary world, we must do so, not by loud and exalted praise of what Odd Fellowship does—or has done, confining our charities and sympathies to our own membership. Such a practice would declare us to be selfish and might even breed distrust by nonmembers. Let us at this time determine to indoctrinate ourselves with the spirit that reaches far above the forms and ceremonies of the lodge room, to detect the important principles and adhere thereto—to go forth with a fraternal love for everyone, and to practice in our daily lives that great rule: "Whatsoever ye would that others should do unto you, do ye even so unto them." Such a man would need no regalia to be recognized as an odd fellow. He would need no pictured symbol of heart and hand—he would use his own, and his life and good deeds would then follow him.

Let us cherish the true spirit of Odd Fellowship and give it full sway in our minds and hearts. It is the spirit of the ages—of victory—of regeneration, so let us strive to bring about a new age wherein the earth's weary millions can feel their lives refreshed with the hope of peace.

As we stand here today at this tomb which bears the inscription: "Here rests in honored glory an American soldier, known only to God," may we use this occasion to reconsecrate ourselves as Christian men and women to a better and more useful life, that we will render a more sincere service to our fellow man, and that we will not forget that we are "our brother's keeper." Let us earnestly and fervently rededicate our lives to the principles for which this order stands, and solemnly renew our obligations as Odd fellows and Rebekahs.

May we be ever mindful that Odd Fellowship requires us first, to be grateful to our Creator: second, to be faithful to our country; and third, to be fraternal to our fellow man. Let us hereby steadfastly resolve that we will keep the teachings of friendship, love and truth just as pure, as true, and as beautiful as the red, the white, and the blue in our flag which we love so dearly.

The Significance of Thomas Jefferson for Our Day

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Significance of Thomas Jefferson For Our Day," delivered by me, on Friday afternoon, April 29, 1955.

The meeting at which the address was made was held on the steps of the beautiful Jefferson Memorial, in a setting befitting the occasion. It was held under the auspices of the Washington Pilgrimage, ably assisted by Dr. and Mrs. Harold Dudley. Gen. Willard Paul presided, and the occasion was favored with selections by the Oxen Hill, Md., High School Band, and a wonderful chorus from the Bethesda-Chevy Chase High School.

The Washington Pilgrimage is an organization of clergy and lay church people dedicated to the preservation of our Nation's religious heritage. Annually they select and present awards to the outstanding clergy churchman, the lay churchman and churchwoman of the year. This year the awards were as follows:

Clergy churchman of the year 1955—Dr. Ralph W. Sockman:

In recognition of his outstanding service to the Nation, as an eloquent preacher of God's word, the minister for more than 20 years of the National Radio Pulpit, a valiant guardian of world peace, the director of the Hall of Fame, an inspiring teacher, and the author of many volumes of practical religious truth.

Lay churchman of the year 1955—President Dwight D. Eisenhower:

In recognition of his outstanding service to the Nation in his leadership for peace, spiritual devotion, and inspiring example of steadfast attention to religious values as President of the United States.

Churchwoman of the year 1955—Representative FRANCES P. BOLTON:

In recognition of her outstanding service to the Nation as a spiritual interpreter of public life in the Halls of Congress, in the field of international affairs, the ministry of nursing and public health, and the advancement of educational institutions and values.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR FRANK CARLSON, WASHINGTON PILGRIMAGE, JEFFERSON MEMORIAL, 4 P. M., FRIDAY, APRIL 29, 1955

Mr. Chairman, we meet here today to remind ourselves of our goodly heritage. As we stand here before the great Jefferson Memorial, we can also see the monuments of Washington and Lincoln. They remind us again of not only our great heritage, but the fact that religion has played a vital part in the development of our great Nation.

They remind us, too, that religion is not only necessary, but is vital to the existence of a virile democracy. It would be a sad day indeed for our Nation should our people forget the basic fundamental principles of the Christian religion, which, after all, is the foundation stone of this great democracy—a democracy that is on trial at the present time in the conflict of the ideologies of Christianity and paganism.

Our Nation has been blessed by having leaders with a Christian faith and a firm conviction in the continued welfare of this Nation and the preservation of its ideals.

I am pleased today to read to you a telegram from the President of the United States:

"The Honorable FRANK CARLSON,
United States Senate,
Washington, D. C.:

"Please convey my greetings and good wishes to all participants in this year's Washington pilgrimage. I am glad that on April 29 you will speak on 'The Significance of Thomas Jefferson for Our Day.' I hope that everyone in the pilgrimage will return from his visit to Washington with increased knowledge of Jefferson's life and thought and increased determination to uphold the principles of liberty in which Jefferson believed.

"DWIGHT D. EISENHOWER."

Thomas Jefferson may well be called the apostle of liberty. He expressed his attitude emphatically when he declared: "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man." His life was the fulfillment of this vow.

Jefferson was given the supreme opportunity to express his dedication to the principles of freedom when he was asked to draft the Declaration of Independence. Those memorable words will ring forever in the hearts of men through every age and clime. "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain

unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Some petrified minds and withered hearts have tried to demonstrate their superiority by libeling Jefferson and labeling this statement a lie. They remind us that some men are born weak and sickly and others are born strong and rugged, and some are born morons and others are born geniuses—as if Jefferson didn't know this too, or was referring to any of this!

No. Jefferson's statement must not be taken from its literary and historical context. His declaration, in the only sense that it can be understood, means that all men stand equal before the law.

The wealth of the rich shall not shield him from the same penalty a pauper would suffer for the same crime. Priests are not to be tried by a different code or before different courts than laymen. The accident of birth does not automatically make a man the ruler of his fellow men, whether he is a Tudor, a Stuart, a Hanover, or a Roosevelt. This equality is predicated on the fact that all men receive their life from the same Creator, who endows them also with the right to liberty and the pursuit of happiness.

These benefits flow reasonably from belief in a Creator, and it is only what might be expected that those who are atheists are the foremost in denying to their fellow men "life, liberty, and the pursuit of happiness."

The contrast between countries dominated by atheistical communism and those countries blessed by faith in God is an existing proof. Jefferson's concern was that abomination called the "divine right of kings" and that other abomination, a fixed and immutable social and economic stratification.

Even here, in God's America, Jefferson's ideals have not met complete fulfillment, but to the extent that they have, this has been, and still is, the land of opportunity for the oppressed of earth.

Perhaps no other statements made by Jefferson demonstrate his right to be called "Apostle of liberty as do those selected for the marble memorial in the Capital of our Nation. Of religious liberty he wrote:

"Almighty God hath created the mind free. All attempts to influence it by temporal punishments or burthens * * * are departure from the plan of the Holy Author of our religion * * * no man shall be compelled to frequent or support any religious worship or ministry or shall otherwise suffer on account of his religious opinions or belief. But all men shall be free to profess and by argument to maintain their opinions in matters of religion."

Thisis from an Act Establishing Religious Freedom in Virginia. Its authorship is one of the three things which Jefferson wanted to be remembered by and asked to have mentioned on his tombstone.

Jefferson was against slavery of all kinds, whether of body or mind, and he believed in education for all as a bulwark of freedom. In the stately marble memorial erected to his honor by a grateful nation one may read his words:

"God who gave us life gave us liberty. Can the liberties of a nation be secure when we have removed a conviction that these liberties are the gift of God? Indeed I tremble for my country when I reflect that God is just, that His justice cannot sleep forever. Commerce between master and slave is despotism. Nothing is more certainly written in the book of fate than that these people are to be free. Establish the law for educating the common people. This it is the business of the state to effect and on a general plan."

Jefferson was in France when our Constitutional Convention was meeting. He approved in general of the work done by the Convention, but greatly deplored the absence of a Bill of Rights. He wrote to Washington, Madison, Monroe, and others, earnestly advocating a Bill of Rights. To Madison he wrote:

"I will now tell you what I do not like. First, the omission of a Bill of Rights, providing clearly, and without the aid of sophism, for freedom of religion, freedom of the press, protection against standing armies, restriction of monopolies, the eternal and unremitting force of the habeas corpus laws, and trials by jury in all matters of fact triable by the laws of the land, and not by the laws of nations. Let me add, that a Bill of Rights is what the people are entitled to against every government on earth, general or particular, and what no just government should refuse, or rest on inference."

Many others agreed with Jefferson, and the Bill of Rights, comprising the first 10 amendments, was quickly adopted. The putting of these essential freedoms on an undeniable legal basis owes much to the man who wrote the Declaration of Independence and the bill for establishing religious freedom in Virginia.

Jefferson's service as our Minister to France during the several years just before the outbreak of the French Revolution, extended his influence as an apostle of liberty to that land also, and increased the already strong effect which our own successful Revolution had upon the French.

Throughout his long life, whether as Secretary of State in Washington's Cabinet, as President for two terms, or as the retired sage of Monticello, Jefferson ever and always was able to say as an apostle of liberty, "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

We who are privileged to gather here today can well take to heart the admonitions of our third President and rededicate ourselves to the preservation of the Christian principles that must guide this Nation if we are to be the Nation that God intended us to be.

May Day: United States Way

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address I made yesterday in Burlington, Wis., on the celebration of May Day: United States Way.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"MAY DAY: UNITED STATES WAY"
(Address by Senator WILLIAM F. KNOWLAND in Burlington, Wis., May 1, 1955)

Fellow Americans, it is fitting today that the citizens of Burlington, Wis., a typical American community, demonstrate May Day, the United States way. The theme chosen today to symbolize this patriotic ceremony appropriately sets forth the difference between our way of life and that offered to the world by international communism. "Faith shall make you free," is not a slogan for Americans; it's the very foundation on which our country and Government are based.

Ten days ago, the central committee of the Communist Party of the Soviet Union issued through its official news service, Tass, 69 annual May Day slogans. These slogans were broadcast to their satellites in Europe and in Asia and, bearing the official stamp of the Communist rulers in the Kremlin, represent communism's May Day sentiments to the world.

I want to quote you just two of the 69 official May Day slogans of the Communist Party. One reads as follows, and I quote: "Fraternal greetings to all the peoples fighting for peace, democracy, for socialism." And I might say, socialism is in capital letters.

The last slogan reads, "Under the banner of Marx, Engels, Lenin, Stalin; under the leadership of the Communist Party, forward to the victory of communism!"

Fellow Americans, contrast those slogans with the sentiments which are in your hearts today. Contrast them with our spiritual theme today, "Faith makes men free."

Communism which is stalking over the world today, is the denial of religious faith and at the same time a denial of human freedom Communist is godless. It is also a system of slavery based on contempt for, and oppression of, the common man.

But there is that which will defeat communism. It is just the twofold vital quality which all people of courage have wielded as their weapon—faith in God and faith in human freedom. These are indestructible and while we cling to them we are indestructible, too.

At the time of Yalta, just 10 years ago, less than 200 million people were behind the Communist iron curtain. Today, over 800 million people are enslaved by the most Godless tyranny the world has ever known.

Despite the fact that the Soviet Union has violated its treaties of friendship and nonaggression with Finland, Poland, Latvia, Lithuania, Estonia, Hungary, Rumania, Bulgaria, Czechoslovakia, and the Republic of China, there are still some who believe that the way to deal with an international bully is by more appeasement.

At Munich the world should have learned that the road to appeasement is not the road to peace, it is surrender on the installment plan.

The Soviet Union is an admitted violator of the United Nations charter and the resolutions in support of the Republic of Korea, a victim of communistic aggression on June 25, 1950. Yet now the Societ Union is supporting the admission of the aggressor, Communist China, into that organization.

Such action would violate the moral foundation upon which the United Nations is supposed to rest. It would be putting a premium on aggression. It would serve notice that the quickest way to membership is by shooting your way in. It would be a betrayal of the 140,000 American casualties including 35,000 of our dead.

The Chinese Communists, in violation of the armistice, admit they hold 15 American airmen; 11 of these have been sentenced to Communist prisons. There is strong reason to believe they hold several hundred other United States and United Nations military prisoners. We know they hold over 30 American civilians who have been in jail for several years.

As long as one American in the armed services or in civilian life is unjustly held, I shall not remain silent.

What does the United Nations intend to do about it? What are the American people going to do about it?

Based alone on the Soviet Union's failure to support the United Nations action in Korea and to abide by its charter obligations the Soviet Union should have been expelled from membership.

Have we forgotten the biblical injunction in Second Corinthians: "Be ye not unequally yoked together with unbelievers; for what

fellowship has righteousness with unrighteousness? And what communion has light with darkness?"

As for me, as long as I have a voice and a vote in the Senate of the United States I shall oppose the admission of Communist China.

We must always distinguish between the people of Russia and their Communist Kremlin masters. The Russian people were the first victims of the godless Marxian tyranny of Lenin and Stalin.

The struggle for power goes on in the Kremlin. The tactics may change with the faction temporarily in power. The long-term strategy for the destruction of human freedom continues throughout the world by Communist aggression from without or by subversion from within.

There will never be peace in our time in any real sense until the people of Russia and China have thrown out their Communist masters and established justice in their political system, freed their economy from the dead hand of statism concentrated on armament production and, more important than all, reopened their churches so that the guidance of the Father of us all may replace the godless teachings of Marx, Lenin, and Stalin.

The crucifix is a more potent force than the clenched fist of communism.

When the people of Russia and China gain their freedom from the tyranny which temporarily rules them we should make it known that our friendship and our assistance will be available for the establishment of peace with honor in a truly free world of freemen.

We seek not 1 foot of their territory nor control over a solitary one of their people.

We only want for them the cherished freedom to worship God according to the dictates of their conscience; to have in the hands of a truly free people the right of self-determination on who shall constitute their government and the right to change it by the decision of 200 million people rather than a cabal of less than a dozen power-mad men in the Kremlin who threaten the peace of the world; and to be able to enjoy the fruits of their labor and a rising standard of living.

We should look upon the people within the Iron Curtain as our friends and allies. Indeed, should their totalitarian masters embark upon further aggression the temporarily enslaved people may turn out to be among our stoutest allies.

Such a policy does not contemplate aggression on the part of the free world. But it does require that we never by word or deed give our moral or legal blessing to the enslavement of the 800 million people behind the Communist Iron Curtain.

Such a policy would contemplate the application of moral, economic, and diplomatic sanctions against the international Communist conspiracy which is dedicated to the destruction of the free way of life. Human freedom is a God-given right beyond the power of dictatorships to permanently destroy.

There are many persons at home and abroad who believe the Chinese Communists are now merely following a long-established technique to use negotiations (as at Panmunjom) for the purpose of building up their striking power.

Their minimum price will be a downpayment of the offshore island groups of Quemoy and Matsu. Their ultimate price, which they will hope to get by negotiation or through the United Nations, or by armed conflict, will be Formosa and membership in the United Nations.

In the long history of the Soviet Union or the shorter history of Communist China there is nothing to demonstrate that the Communist pledged word is worth the paper on which it is written.

The bones of the repudiated Soviet treaties and agreements with Latvia, Lithuania, Estonia, Poland, Hungary, Rumania, Bulgaria, Czechoslovakia, Finland, and the Republic of China, together with the 1933 Litvinov compact with the United States, are there for all to see.

More recently the violations of the Korean and Geneva armistice agreements by Communist China are an additional warning signal against placing either our faith or the survival of our friends and allies on the cynical smiling facade of a brutal Chou En-lai.

I, for one, do not believe the Communist leopard has changed its spots. Their objective has been, is, and will continue to be the destrcution of human freedom.

Unless there is some formula regarding which I have not been advised and which is difficult for me now to envision, I find it hard to comprehend how we could enter into direct negotiations with Communist China without the interests of the Republic of China being deeply involved.

History teaches us that prior experience of great powers negotiating in the absence of small allies has not reflected great credit upon the large nations, and has been disastrous to the small ones. For reference, I refer to Munich and its impact upon Czechoslovakia, and to Yalta and its impact upon Poland and the Republic of China.

Patrick Henry, on March 23, 1775, in the Virginia Legislature, said: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God: I know not what course others may take, but as for me, give me liberty or give me death."

In his day, Lincoln understood that this Nation could not continue "half slave and half free."

In 1865 at his second inaugural, Lincoln expanded this doctrine when he said:

"Fellow citizens, we cannot escape history—we here have the power and bear the responsibility—in giving freedom to the slave we assure freedom to the free. We shall nobly save or we shall meanly lose this last best hope of earth."

Just recently, I had a letter from an Air Force pilot in Formosa. In his letter to me of February 12, this pilot wrote:

"As an Air Force jet pilot assigned to this island for the next 2 years, I am sure my interest in lasting world peace is as acute as is any American.

"The presence here of my wife and children tends to intensify my natural desire that no one toss any atom or hydrogen bombs this way.

"I am quite convinced that my best chances as well as those of my country and the entire free world rest with the firm 'stop the Communist march' movement which you so forcibly represent. I have flown 400 combat missions and would rather fly 400 more than to see my kind of a world go down the drain 1 island or 1 small country at a time.

"America must wake up to the real intentions of communism and take real and purposeful steps to frustrate those intentions."

This I believe: Under the divine guidance that made us and kept up a free nations, this generation of Americans will not sacrifice principle for expediency; nor cringe in the face of brutal naked aggression and we will not barter friends and allies in the Western Hemisphere, in Europe, Africa, or Asia, in a dishonorable appeasement at a Far Eastern Munich or a second Yalta.

With the same courage and common sense that motivated the men who sat as Philadelphia and gave us, first, our Declaration of Independence and later our Constitution there, are none of our domestic problems which we as a free people cannot solve and there is no foreign foe we need ever fear.

Loyalty Day Celebration at Burlington, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. WILEY. Mr. President, yesterday it was my privilege to address an outstanding patriotic celebration at Burlington, Wis., which was part of the Nation's wide observance of May Day—Loyalty Day.

I commented on various phases of the challenge to America's patriotic citizens, including our need for upholding our end in the battle of ideas throughout the world.

I also referred to the problem of the impact of American motion pictures overseas.

I ask unanimous consent that the text of the address which I delivered and the text of a pertinent editorial which was carried in the April 28 issue of the Christian Science Monitor, entitled "The Celluloid Ally," being printed in the Appendix of the RECORD.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES "365-DAY DEDICATION TO UNITED STATES"; URGES HOLLYWOOD SIFT OUT OBJECTIONABLE MOVIES FROM OVERSEAS SHOWINGS

Many years ago, when the first telegraph message was clicked out, the message read, "What hath God wrought?"

Today, we proudly see and hail what faith—faith in America has wrought. We see that faith has "moved mountains," mountains of fear and despair and other limitations to bring into being and to preserve the greatest country on earth.

And so, I am thrilled to be with you today at this historic ceremony.

I am delighted that it is the patriotic leaders of my own State—you here in Burlington and surrounding areas—who are stirring this Nation by your great patriotic demonstration.

The eyes of all America are rightly upon you—and with deepest of pride.

DEMONSTRATING AMERICANISM

Here, today, you are expressing the finest in American ideals.

You are showing by the flags that wave aloft and the flags, so to speak, that wave in your hearts and shine in your faces—you are showing by these beautiful floats, by the magnificent bands and marching groups—what it means to be a dedicated, loyal, reverent American.

And what a contrast Loyalty Day here is to May day abroad—particularly in the fear-filled, hate-filled centers of our godless enemy, in Moscow and in other headquarters of the atheistic Communist conspiracy.

Today, here, in Godloving America, you are showing what it is to be a real Yankee Doodle Dandy. You are recapturing the devotion, the enthusiasm, the giving of one's self, which has helped America through all its severest crises.

This was the spirit which saw us through Valley Forge; it was the spirit of Gettysburg, and San Juan Hill, and the Argonne Forest, Iwo Jima, and Heartbreak Ridge. It is the spirit of Burlington, Wis., May Day-Loyalty Day, 1955.

INSTILLING PATRIOTISM IN YOUNG PEOPLE

I am particularly thrilled by what you are doing today—the example you are setting—for the young people in our midst.

Every parent among you who has a child at his side or a child in his arms or a child at home, can feel a well-justified glow of pride.

You are showing the children of Racine County and surrounding counties and of all America, what it means to be an American.

You proved in the houses of worship earlier today that love of God is a sinew of love of our country and all that it stands for.

And, too, in the great patriotic demonstration which we have been witnessing, you have been showing that we must prove in deeds, as well as by our words that we are faithful to this land—the finest, freest, most magnificent country ever to exist on the face of the earth.

You are proving your allegiance to your Government, to our constitutional Republic, the longest-lived major Government on earth today.

You are showing how May Day has been restored as a hallowed day, after years and years in which May Day had been taken over by the enemies of America for their own propaganda purposes.

You are establishing a basis for rededication to America, not just on one day a year, but 365 days a year.

And, too, you are today showing the full splendor of the American heritage.

It is the heritage purchased for us by blood and tears of heroic generations gone by.

It is a heritage of unparalleled wealth, not just material wealth, but, far mort important, wealth in things of the spirit.

AMERICA'S MATERIAL WEALTH

In material wealth, we are the envy of the world.

Our abundance-producing agriculture, our humming factories, our crowded, thriving stores, the happy faces of our contented people—these are the admiration of the world.

We are but 165 million people out of 2½ billion on earth. But we have one-half of the wealth of the world today in our own country. The total production of all our goods and services amounts to over $367 billion; 49 percent of our families enjoy an income of $5,000 a year, or more.

And income is becoming distributed ever more equitably among our people.

OUR PRICELESS FREEDOMS

But we possess an infinitely greater wealth. I refer to our freedoms, the tangible and intangible freedoms guaranteed to us under our sacred Bill of Rights, the freedoms which make the state the servant of man, instead of man the servant of the state.

I refer to freedoms of speech, press, religion, and assembly, freedom to own property, freedom to work at a place and under conditions of our own choosing.

And greatest of all our wealth is the wealth of the human spirit, of free men under God who are able to worship as they please—as you and I have worshipped today—in the faith of our fathers, and freedom to grow, to develop.

And there is the wealth of American culture, of our great literature, our music, our art, our poetry, to which you and I are heir.

No land in the world today enjoys wealth or a standard of living such as this, particularly the countries from which many of us here in Wisconsin and from which many of our forebears have come.

A PLEDGE OF FRIENDSHIP TO POLAND

I point out to you, for example, that next Tuesday, May 3, is the national holiday of a great land from which many of Wisconsin's people and their forefathers had come.

I refer to Poland—devout, faithful, gallant Poland, now enslaved under the heel of the Communist aggressor.

On this Loyalty Day, we pledge to Poland our continued warm friendship. And to all the other lands under the yoke of the Red tyrant—to the people of Eastern Germany, the people of the Baltic and Balkan States—we pledge they shall yet be free.

We shall never accept their condition of enslavement. We shall never recognize their domination under the heel of the godless tyrant.

WE PLEDGE VIGILANCE AT OUR RAMPARTS

We pledge, today, moreover our vigilance against the armed aggressor who has enslaved these people. We pledge our strength to be on the alert against this Communist enemy.

We pledge our awareness of our own danger to enemy attack, our awareness of the danger of an atomic Pearl Harbor—which must never occur.

For you and I know that man's ingenuity has contracted space and time. Wisconsin is now next-door neighbor to all the world in this age of supersonic speed.

We are but 3,500 miles away from Soviet airbases and launching sites.

By means of the great circle aerial route, Milwaukee and the other cities of the Middle West are nearer to attack than are the cities of the East. That is why our defense authorities have made Milwaukee a "Nike" guided missile site.

As a matter of fact, we of America today are imperiled basically by three types of possible long-range attack:

First, by intercontinental bomber;

Second, by intercontinental guided missile (guided to its target by electronic devices); and

Third, by intercontinental ballistic missile. (Such a missile can be shot from a launching site like a bullet from a gun or a shell from a cannon.)

Such a ballistic missile, unlike the guided missile, could not be "jammed" by counter-electronic devices. Once it is shot from its site at a speed of perhaps 10,000 miles per hour, nothing now known could stop it, except perhaps another missile or other device to ram it. Such an intercontinental missile, when it is developed 5 or 10 years from now, might be able to reach Burlington or any other city of Wisconsin—just one-half hour after it might be shot from its Soviet launching site. That is why it is we who must develop an intercontinental ballistic missile—an IBM—first, not second. We dare not be second-best. We must be first in this technological race. We must have the strongest possible deterrents to aggression.

It is of these facts that we must be aware. This is a part of intelligent, thinking citizenship—not just 1 day a year—but all 365 days.

We must be aware that the American continent has already been crossed by jet plane in 3¾ hours, and that the Atlantic Ocean has been crossed from Newfoundland to Ireland in less than that time.

We must be aware of the fact that we have wisely erected a worldwide chain of ramparts, defensive air bases in Greenland, Iceland, Britain, North Africa, Turkey, Greece, and elsewhere. These bases grimly tell the Kremlin in the only language it understands, the language of potential force, that we are on the alert.

WE HAVE FAITH WAR WILL NOT COME

These facts do not mean that we believe that war will come, or that war is inevitable.

On the contrary, it is our firm faith that war is not inevitable, that it can be avoided, provided we are strong.

We must, of course, be invincible in relation to Red Russia. We must be invincible in relation to Red China, strong and firm in our insistence on concrete demonstrations on her part that she means peace, not war. Chou En-lai and Mao-Tse-Tung cannot be trusted any more than Krushchev or Molotov can be trusted. Deeds still speak louder than words.

If the Reds really mean peace with regard to Formosa, as we hope they do, then let them prove it by acts.

As for ourselves, we truly want peace in the western Pacific and everywhere else.

We will talk over issues, but we will not cringe; we will not abandon principle nor our Nationalist Chinese ally; we will not appease. The rule of reason in negotiation will prevail, but never the rule of surrender.

We want those 15 United States airmen—totally unjustly imprisoned—back; and we demand the return of all the other imprisoned Americans, as well. We do not propose to abandon a single United States serviceman or civilian.

The righteousness, strength, and faith which made us free will keep us free.

This faith which can move mountains can also move the course of world events.

WINNING WAR OF IDEAS

But guns and steel alone will not protect us in this world today. We are in a critical worldwide battle of ideas, of free ideas against slave ideas.

And it is on this last point that I should like to make these concluding remarks.

It is up to us as loyal Americans to tell and sell the American story to the peoples of the world. We have made great progress toward this end. The leading patriotic organizations of America—the church, fraternal, veterans', labor, business, and other groups—have acquainted the rest of mankind with much of the true meaning of America.

In particular, a great many Hollywood motion pictures have been shown throughout the world which have thrilled audiences to the fine meaning of America. These films have faithfully shown the real America of the grassroots—the America of devotion to God, the America of wholesome individual enterprise, of building great and everlasting and universal values.

SOME FILMS DO US HARM ABROAD

On the other hand, I say very sincerely and frankly that one of our serious problems today is that some of the motion pictures being sent abroad by private firms depict a distorted kind of America. Such films—in the name of so-called realism—have portrayed an America of sex, sin and sadism, of gangsterism, corruption, filth, and degradation.

Such films—few in number—but powerful in effect, have literally been poisoning the minds of some people in the world against us. These films are causing the very opposite of the friendly effect which should be created, if we are to defeat Soviet propaganda.

While the United States Government will be spending some $80 million of your taxpayers' money for a worldwide program of truth, a few films produced privately in Hollywood or elsewhere have been undoing, in part, the very objective for which we, as a people, are striving.

And so I want to issue this word of caution, frankly and emphatically, to the motion-picture film companies.

It is not a new word of caution. I have consulted with them in the past in connection with the work of our Senate Foreign Relations Subcommittee on Overseas Information programs. I have advised the companies as to the seriousness of the problem. I had met with some of their outstanding leaders, and I am glad to say I found in those leaders, a deep patriotic awareness of their international responsibilities. Certainly, for example, too, the president of the Motion Picture Association of America, Mr. Eric Johnston, has proven his tremendous devotion to this country both in that capacity and in many other roles in which he has served America long and well.

The major film producers themselves have done a fine job for America by and large at home and abroad. They and the theatre owners have contributed abundantly to all sorts of charitable and good-will causes. Ours is the only nonsubsidized motion picture industry in the world, and it is the envy of the world.

But a small minority among the film companies seem occasionally more interested in greedy profit, in squeezing the last possible dollar from the overseas market, than they are interested in contributing to an accurate picture of America by withholding some possibly misleading films.

The American people—or some of them—may be able to stomach some of these sin-strewn films. An American can ordinarily interpret such films in proper perspective. He will know that this is not the real America, although it may characterize a very small part of America.

But foreign peoples—who know very little of our country, who don't have a sufficient background properly to interpret these pictures, can be utterly confused by this type of misleading film.

MORE VOLUNTARY FILM SELF-REGULATION NEEDED

What is the answer? The answer is intensified voluntary self-regulation by the film industry. It must sift out more of these misleading films. It has already sifted out many such films and prevented their distribution in countries where they could do harm.

But the fact of the matter is, and it is attested by leading authorities of the industry itself, that some motion pictures have been shown in some countries overseas which very definitely should not have been shown.

Even so renowned and universally respected a trade publication as the newspaper, Variety has just recently headlined the deep concern of many industry people, themselves, over some types of films which are going overseas.

I, of course, do not believe in Government censorship. I fought against Federal censorship of Hollywood when it was proposed.

But I say that the American people will insist that we not be misrepresented in the eyes of the world.

The Reds are pouring out enough filth about us without our adding to our own problem.

It is up to Hollywood, therefore to demonstrate its further loyalty—loyalty which I know to be a fact, by taking the appropriate voluntary action. An unscrupulous few should not be in a position to tarnish the good name of the overwhelming mass of deeply responsible industry leaders.

CONCLUSION

Meanwhile, it is up to you and to me at the grassroots or in Washington to do our part in telling and selling the American story right here at home. We must reaffirm our gratitude for our American blessings. We must demonstrate dynamic, active citizenship—365 days a year.

We must demonstrate our gratitude for the unexcelled privileges and rights which are ours—"the jewels of great price."

We must demonstrate our faith that this Nation, "of, by and for the people," shall not perish from the earth.

And by our faith, this objective shall be fulfilled. Our Government shall remain the light of the world and the beacon for all mankind.

THE CELLULOID ALLY

"Poor patriotism is bad business." Thus speaks the chairman of the Motion Picture Producers' Association. Mr. Y. Frank Freeman's declaration is a welcome sign of a sense of responsibility in the film industry for the effects of American movies on the United States' world prestige.

But application of patriotism to production of films to be shown throughout the world is a complex and often exacting requirement.

It involves, indeed, the challenging artistic problem of presenting American life as it really is. This is an exercise in selectivity and emphasis guided by a sense of cultural, social, and moral values which not only Europeans but Americans themselves often feel is wanting in film entertainment.

One often hears it said that Europeans "must like our films, they patronize them enough." Undoubtedly the resources, the photography, direction, and other aspects of technicial finish make American movies relatively attractive even when story content is poor or misleading. But it is one thing for mass audiences abroad to like the pictures as sheer entertainment and quite another for them to like the country they believe these films portray.

Europeans who know America well often remark the disparity between their own first-hand impressions of American life and those they receive from films. They note that Americans do not spend most of their waking hours in cocktail lounges, that they are not all glamorous mannequins or limousine-ensconced racketeers.

They note that there are families in America as in Europe, and that they live in quiet, cozy, modest little houses, planning the children's education, how to plant the new garden, where to spend a holiday.

Films that show this side of American life are sometimes seen in other countries. And when they are first-class films their audiences like not only the films themselves but the country they represent.

Mental Health

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Safety Signs of Mental Health," published in the New Beacon, of Provincetown, Mass., on Wednesday, April 27, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAFETY SIGNS OF MENTAL HEALTH

We were glad to read this week that the National Association for Mental Health had taken a step to acquaint the public with what the organization's medical director, Dr. George S. Stevenson termed "the positive side" of mental health.

The negative side has been amply shown to the public through recent television plays, many of them quite morbid, and through magazine articles and books. Seeing these plays and reading the published material might lead one to think that nearly everyone, including himself, was either an active or potential mental case.

Now, with Mental Health Week to be observed throughout the country from May 1 to 7, the National Association for Mental Health has issued "Safety Signs" to help you prove to yourself, at least, that you are still sane. Here they are. You might have fun checking them for yourself and the members of your family:

A tolerant, easy-going attitude toward yourself as well as others.

A realistic estimate of your own abilities—neither underestimating or overestimating.

Self respect.

The ability to give love and consider the interests of others.

Liking and trusting other people and expecting others to feel the same way about you.

Feeling as part of a group and having a sense of responsibility to your neighbors and fellowmen.

Acceptance of your responsibilities and doing something about your problems as they arise.

The ability to plan ahead, setting realistic goals for yourself.

Putting your best efforts into what you do and getting satisfaction out of doing it.

The ability to take life's disappointments in stride.

The last of these characteristics seems to us almost the most significant. Colette, the great French writer phrased it another way when she spoke of "the art of adapting oneself to anything, even to the ruin of one's own existence." If you can honestly say that you can take life's disappointments in your stride, and if you can also say that you possess to a pretty high degree the other characteristics listed, you can relax. You'll probably never have to make that visit to the psychiatrist.

The United German Hungarians Honor Hon. William Langer, of North Dakota

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The United German Hungarians Honor Senator LANGER," which was published in the column entitled "Here and Abroad, a Weekly Chat," by Austin J. App, published in the Nord-Amerika, Donnerstag, of April 7, 1955. The article concerns one of our colleagues, the Senator from North Dakota [Mr. LANGER].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE AND ABROAD

(By Austin J. App, Ph. D.)

THE UNITED GERMAN HUNGARIANS HONOR SENATOR LANGER

On Easter Sunday, April 10, the 10th Easter after the infamous Yalta agreement, which plotted the most tragic expulsions in history, the United German Hungarians of Philadelphia and vicinity are honoring with a dinner and plaque the man who did most in the United States Senate to make known and to alleviate the plight of the ethnic German expellees—Senator WILLIAM LANGER, of North Dakota. The dinner, under the chairmanship of Mr. Joseph Wolf, will be at 3 p. m. in the hall at 2007-2013 North Second Street.

For Senator LANGER, coming to Philadelphia will be revisiting familiar scenes, for he was twice honored here before. On March 26, 1949, at a testimonial dinner at the Adelphia Hotel, sponsored by the Pastorius Unit, Steuben Society of America, he was presented with a magnificent portrait of

himself painted by Mr. Conrad Linke, outstanding artist of Philadelphia. On February 19, 1950, under the joint sponsorship of the United Action Committee for Expellees and the United German Hungarians, he was honored with a purse and dinner in the United German Hungarian Hall as the courageous champion of the cause of the German expellees. In those years the so-called Langer amendment had finally succeeded in making possible the first immigration to America of people of German ethnic origin, who had before been totally discriminated against. Since then the full German quotas have been restored, many thousands of new German immigrants have come to America and can look gratefully upon Senator LANGER's pioneer efforts in their behalf, and West Germany has been given sovereignty and admitted to a nearly equal partnership with America, Britain, and France in the defense of Europe.

Senator Langer still on the job for justice

By a strange irony when the Senate on April 2 ratified the Paris Pact, by a vote of 76 to 2, one of the dissenting votes was that of Senator LANGER. The first voice in the Senate which from 1945 on was raised against the criminal Allied policies of dismantling, perpetual disarmament, dismembering Germany was now once again almost a lone voice to protest the most shameful provisions of the Paris Pact, the Saar Statute. It was a shameful choice which the Western Big Three had given the Bonn government: either to sacrifice the Saar and its people to France, or to suffer denial of sovereignty and self-defense. In such an alternative, what could Bonn and the West German people do but accept the betrayal of the Saar in return for sovereignty and self-defense, both inalienable rights which it had been a crime in the first place to take away.

But what the German people had to accept in silent desperation, an American Senator had the right and the courage to protest. When he saw that the Paris Pact, the best bone Germany could get from the dogs at her throat, was sure to pass, he rose to register his protest against their flagrant anti-German injustice of the pact. As the Philadelphia Bulletin reported it (April 2, 1955):

"Senator LANGER who voted with Senator MALONE against the treaty predicted that 'the Saar question will rise up and haunt the signatories of this treaty and in my opinion will be one of the causes of a world war'."

God bless Senator LANGER. Of all the men in the Senate Senator LANGER most courageously and farsightedly has from the beginning and even now seen the German problem steadily and seen it whole. He alone seems fully to understand that the only thing wrong with the Germans is that the power politics of envious neighbors has not permitted them to form that more perfect union of all German lands which is their inalienable right.

Senator Langer on the German expellees

Senator LANGER fought the brave fight to get the mails opened to Germany, to get relief allowed for the Germans, to stop dismantling, to get confiscated private German property returned, to get justice for German soldiers accused of war crimes at Malmedy and elsewhere, to have German prisoners of war sent home, and to remove the IRO and UNRRA discriminations against German immigration.

But what the whole world will probably longest thank him for is his championship of the 12 million surviving German expellees, victims of the greatest of the many crimes imbedded in the Yalta and Potsdam pacts. Here are just a few excerpts on the "Inhuman Mass Deportations" from his great speech in the Senate on April 5, 1949, entitled, "Germany and the ECA: If Western Civilization Is To Survive in Europe It Must Survive in Germany."

Referring to a directive entitled "Population Transfers," Senator LANGER says it concerns "one of the greatest crimes against humanity in all history," and declares:

"Nowhere in recorded history has such a grim chapter of brutality been written than in the account of what has already taken place in eastern Europe. Already, from fifteen to twenty million people have been uprooted bodily from their ancestral homes of a thousand years and thrown into the torment of a living hell, to perish, or be driven like cattle across the wastes of eastern Europe. Women and children, the old and the helpless, the innocent and the guilty alike have been subjected to cruelties which have never been surpassed, even by the Nazis themselves."

Langer first in the Senate to prove expulsions a war crime

Senator LANGER then cited count 3, section J, of the Nuremberg indictments and boldly declared: "as far back as November 17, 1944, President Roosevelt agreed in principle to the very procedure which is now listed as a war crime by the Nuremberg tribunal."

He then also cites Churchill's statement in the House of Commons on December 15, 1944, in which Churchill likewise proposed this crime of expulsion, urging (in Churchill's own words) "the total expulsion of the Germans from the area to be acquired by Poland in the west and the south." Churchill at that time added, "For expulsion is the method which, so far as we can see, will be the most satisfactory and lasting."

Well, while Roosevelt, Churchill, and Stalin were plotting the expulsion of millions of East, Sudeten, Balkan Germans, in the greatest mass crime of history, they were also blueprinting how to hang Germans for having committed a few minor expulsions involving thousands of people, not many millions, as behooves master-criminals who at Yalta presumed to remake the world in 5 days.

We resolve: the expulsion must not prove satisfactory and lasting

It was Senator LANGER, who more clearly than anyone else in the Senate, recognized the mass expulsions of Yalta and Potsdam for the enormous crimes that they were—and who spoke out against them. He was one of the first to help prove Churchill wrong in making these criminal expulsions satisfactory and lasting. It is up to all of us to see to it that these expulsions will not last, that the expellees will get their homes and homelands back. We must dedicate ourselves to proving that this greatest of all international crimes, the expulsion of 15 million Germans, will not pay.

Let the Langer dinner this Easter at the United German Hungarian hall both honor Senator LANGER for his great work and also strengthen our resolve to carry on what he started. The United German Hungarians, their president, Mr. Joseph Ball; the chairman, Mr. Joseph Wolf; their helpers; and the Ladies Auxiliary—all deserve our support and thanks for this dinner in honor of Senator WILLIAM LANGER.

Hoover Commission's Report on Federal Medical Services

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, May 2, 1955

Mr. SMITH of New Jersey. Mr. President, a criticism of the Hoover Commission's report on Federal medical services by the American Legion was printed in the CONGRESSIONAL RECORD on March 8. Under date of April 19, 1955, the Christian Science Monitor published a statement by Mr. Edward A. Sherman, regional director of the citizen's committee for the Hoover Report, which sets forth the committee's answer to the Legion's criticisms. I ask unanimous consent that the statement appearing in the Christian Science Monitor of April 19, 1955, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROPOSED CUTBACK IN VET MEDICAL CARE DEBATED—LEGION'S CRITICISM OF HOOVER REPORT DRAWS REBUTTAL

An American Legion resolution assailing the Hoover Commission's report on Federal medical services is said by Commission backers to be based on 11 allegations that are either untrue or undocumented.

Edward A. Sherman, regional director of the Citizens Committee for the Hoover Report, said this Legion blast contains 12 whereas clauses setting forth 11 allegations. "Of these 11 allegations, 5 are untrue, 2 lack a factual explanation, 1 is redundant, and 3 are matters of opinion," he said.

The Legion resolution, adopted at a conference on medical services in early March, was printed in the CONGRESSIONAL RECORD on March 8. It followed by several weeks the Hoover Commission report which recommended a cutback in free medical care for veterans. The Commission was studying the need for a general revision of the Federal Government's health programs.

TEXT OF STATEMENT

The text of Mr. Sherman's statement follows:

"Let's set forth each of these 11 allegations—and to the extent that such allegation refers to any specific matter, let's see what the Hoover Commission actually did or said on the subject.

"1. The Legion says: 'Whereas said report contains many vicious, unwarranted, and unjustified attacks on the sick and disabled veterans of America.'

"The Commission report does not bear out this statement. It says: 'There cannot be the remotest doubt that the Federal Government has a continuing obligation to care for veterans who have incurred disabilities in service and that they have a right to the highest obtainable quality of medical services.

" 'The commission * * * believes that the sentiment of the American people is that a sick and really indigent veteran should be provided care in Veterans' Administration hospitals. Recommendations are made to limit the burden on the public arising from this source.

" 'The Veterans' Administration operates 17 homes for aged veterans. Preventive health and rehabilitation programs can do much to help these older men to lead healthier and happier lives. Such programs tend to keep men going and prevent their reduction to chronic bed patients. Programs similar to some now in operation on a limited basis should be extended both for humanitarian and for economy reasons.' "

TOTAL OF 1,085 PAGES

"2. The Legion says: 'Whereas, in addition to the official report, the accompanying task force report contains misinformed discussions and presentations critical of the existing structure of veterans benefits and services.'

"The commission's task force was composed of 16 experts—12 of whom were veterans and 15 of whom were doctors. The

task force's staff and consultants included an additional 40 persons of training and experience.

"The task force's reports comprised 135 printed pages and 950 pages of appendixes, or a total of 1,085 pages of facts and discussion.

"Since the Legion mentions no facts from these 1,085 pages specifically, it is impossible to discuss their allegations on any reasonable basis.

"3. The Legion says: 'Whereas the report would form a Federal advisory council on health, another superagency, which, among its other duties, would exercise indirect control over the Veterans' Administration.'

"The commission's report points out: '26 Federal departments or agencies engage in one or more of these health functions—2 units of the Executive Office of the President, all 10 executive departments, 12 independent agencies, and 2 quasi-governmental agencies. Within these agencies 66 administrative units have health functions.'"

OVERALL POLICIES

"It goes on to say: 'Our task force points out that there is no one point where Federal medical policies and activities can be reviewed in order to further coordination, eliminate duplication, and develop overall policies. There should be an agency within the Executive Office of the President charged with these responsibilities.'

"[NOTE.—This resolution apparently represents some inconsistency in Legion policy. Legion Resolution 13, Los Angeles, 1950, is as follows: '*Resolved*, To urge the President and the Congress to immediately reactivate or reestablish a Federal Board of Hospitalization, cloaked with full authority to coordinate utilization of Federal hospitals within and between the Veterans' Administration, Department of Defense, and the Public Health Service, with a view toward making additional beds for veterans promptly available.']

"4. The Legion says: 'Whereas the report would transfer the cost of disability compensation, pensions, and military retirement from their proper place as a delayed cost of war and make this an added charge to the Nation's health program.'

"The Commission recommended that the determination as to disability be transferred to the Department of Medicine and Surgery, but still right in the Veterans' Administration, as follows:

" 'Recommendation No. 13: (a) That the responsibility and authority to establish and maintain medical criteria for disability, both initial and continuing, should be transferred from the compensation and pension branch of the Department of Veterans' Benefits, to the Department of Medicine and Surgery.

" '(b) That the Department of Medicine and Surgery should also develop and maintain a mechanism for review of disability allowances based on the possibility of increase or decrease in disabilities'."

DISABILITY ALLOWANCES

"5. The Legion says: 'Whereas the report contains direct attacks on disability compensation of those who received their disability in service and are entitled to the greatest consideration which the American public can offer.'

"These attacks cannot be located in the Commission's report. The strongest statement which is critical of the statue quo follows:

" '(a) Compensation for partial disability from service-connected injuries: These disability allowances for service-connected injury or disease are presumably equated to impairment of earning power. The existence of the service-connected disability of a veteran and the extent of that disability are determined by rating boards. There is a tendency to assume that disability is continuing and progressive, and to avoid reexamination.' "

VETERANS' HOSPITALS

" 'Another difficulty in these allowances arises from the low percentage disability ratings (30 percent or less) which are not being realistically related to loss of earning power. An example of a 30-percent disability is amputation of a great toe. For this disability the veteran is entitled to a minimum of $50 per month regardless of his other income. We urge that disability ratings be based on true medical criteria and be more realistically related to loss of earning capacity.'

"6. The Legion says: 'Whereas the commission recommends the closing of 20 hospitals when at this time there are thousands of eligible veterans certified for hospitalization unable to secure proper medical care and treatment because of the lack of beds.'

"The Commission did not approve a task force recommendation that 19 (not 20) specific Veterans' Administration hospitals be closed, as follows: Outwood, Ky.; Aspinwall, Pa.; Erie, Pa.; Beckley, W. Va.; Clarksburg, W. Va.; Amarillo, Tex.; Bonham, Tex.; Marlin, Tex.; Boise, Idaho; Fargo, N. Dak.; Minot, N. Dak.; Grand Island, Nebr.; Lincoln, Nebr.; Fort Thomas, Ky.; Grand Junction, Colo.; Iron Mountain, Mich.; Lake City, Fla.; Miles City, Mont.; Sioux Falls, S. Dak.

"The Commission did state: 'There are more veterans' hospitals than are necessary. Many are uneconomic to operate; some because of size, location, or inadequate number of patients. The task force recommends the immediate closing of certain hospitals, and in its report gives the reasons for its recommendations.

" 'Surplus hospitals recommended for closing should be disposed of through the General Services Administration and the Department of Health, Education, and Welfare, subject to recapture in a national emergency, as we have suggested in chapter II.

" 'Recommendation No. 5: That the Administrator of the Veterans' Administration consider the recommendations made by the task force as to closing of certain hospitals and obtain the advice of the proposed Federal Advisory Council of Health on these recommendations; that all hospitals determined to be surplus be closed immediately'."

EXTENT OF DISABILITY

"7. The Legion says: 'Whereas the Commission believes that authority to evaluate the extent of disability should be vested in the Department of Medicine and Surgery when the complicated laws, rules, and regulations governing rating are a joint legal, occupational, and medical matter now exercised by the VA Department of Veterans Benefits.'

"This allegation is practically the same as in No. 7 above. It is discussed there.

"8. The Legion says: 'Whereas the Commission has disregarded the health needs of our disabled veterans as established by the Congress and the people of the United States and recommends that authorizations to construct and money which is already appropriated for the construction of badly needed beds be rescinded.'

"Table XV on page 32 of the Commission's report estimates that in 1955 there will be 128,622 VA beds, of which 22,952 will be unused, or 18 percent. The Commission goes on to say:

" 'There are more veterans' hospitals than are necessary. Many are uneconomic to operate; some because of size, location, or inadequate number of patients.'

"9. The Legion says: 'Whereas this Commission has branded the Nation's veterans as goldbrickers and implies that our sick and disabled veterans are a group of perjurers to our country which they defended and which they patriotically uphold and support.'

GOLDBRICKING

"The word 'goldbricking' occurs twice in the Commission's report, in the following context. 'The various national veterans' organizations have denounced and are opposed to "goldbricking".

" 'Recommendation No. 9: That the veteran should assume a liability to pay for care of his non-service-connected disability if he can do so at some reasonable time in the future. Such a debt should be without interest. Congress should pass appropriate laws providing for the collection of such obligations.

" 'This recommendation has very substantial importance not only in eliminating "gold bricking" but also because many veterans with non-service-connected disabilities carry health insurance.

" 'The Veterans' Administration does determine whether incoming veterans with non-service-connected disabilities have health insurance. If so, they are asked to execute an assignment in favor of the Veterans' Administration. Because no payment is made for treatment in veterans' hospitals, some insurers refuse to reimburse the Veterans' Administration on the basis that there has been no personal loss to the veteran.

" 'Also the policies of some insurers have clauses specifically excluding liability for care in veterans' facilities. The Veterans' Administration does not even bill either of these categories of insurers.

" 'The total actually billed to insurance companies in 1954 amounted to about $15,700,000. The amount collected was $3,300,000.'

"10. The Legion says: 'Whereas they have recommended that a system of socialized medicine be instituted in the United States by permitting veterans to use the VA hospitals and outpatient medical services and pay at a later date when, and if able, and this program is an expanded, uneconomic, and costly program to the American taxpayer and unworthy of serious consideration by informed people.'

"The Hoover Commission has not been previously characterized as advocating any form of socialism. It is hard to see socialism in making a man (when he can afford it), or his insurance company or group (when he is privately insured), pay for medical care—when at present he need not pay, and his insurance company or group may refuse to pay. The allegation is untrue.

"11. The Legion says: 'Whereas the Commission's proposal to require our service-connected disabled veterans to file an economic statement in order to secure hospitalization for disabilities other than their service-connected disabilities.'

"The Commission says: 'A random sampling examination in 1952 by the General Accounting Office showed that out of 336 of such declarations from veterans with annual incomes of $4,000 or more, 1 had an income of $50,000; 25 had assets of $20,000 or more; 4 had assets between $100,000 and $500,000'."

Reclamation: The Nation's Wisest Investment

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1955

Mr. ENGLE. Mr. Speaker, there are before the American people at this time a great number of impassioned reports, pleas, speeches, and articles which have been sired by both the proponents and opponents of reclamation. Some of these have been helpful in gaining a better understanding of the reclamation

program. Many have been completely the opposite—inspired by a small group who are waging a vigorous campaign against the program. I do not propose to waste time in answering those few who have evidenced deliberate intent to misinform and misrepresent. If the value of reclamation to a sound national economy is known and understood, then I have no fear of the program being hurt by a few misrepresentations. My concern then is to produce proof as to the value of irrigation to the West and to the Nation. If the Nation is to continue to support an expanding economy and become economically stronger then the Nation must develop its land and water resources.

Agriculture is most important in my home State of California. And, considering American eating habits, California agriculture is mighty important to the entire Nation. You use California fruits, nuts, vegetables, and agricultural produce to balance your diets and to give you a seemingly endless variety of delightful health-giving foods. Most of this bounty comes exclusively from irrigation and virtually all future expansion must come from extending irrigation.

The value of California crop production when measured in the more usual monetary terms rounds out at a staggering billion and a half dollars annually.

History is full of stories of the fabulous California gold rush beginning with the discovery of gold in 1848. Perhaps no single event had a more profound effect in the settlement of the West; yet all of the gold produced during the first 10 fabulous years of that epic amounts to only one-third of the present annual value of crops produced in the State. Two years of California crops exceed the total of all gold produced in California since 1848. Gold is important to the economy of California, the West, and the Nation as are the products of the other great industries of my State. But none is more important than our agriculture. Every schoolchild learns of the gold-rush days but few of us take notice of the continuing bounty and wealth created through irrigation agriculture.

Since the days of the sourdoughs of 1849, the population of California has increased to almost 12 million persons. Retail sales total almost $15 billion each year, an amount equal to $1,295 for each man, woman, and child. This is $200 per person or from $600 to $800 more per family than the average per capita retail sales in the whole United States. Federal taxes paid in California last year total over $5 billion and State taxes exceed $1 billion. Total taxes paid will equal about $550 per person. The high level of retail trade and taxes paid in California cannot of course be credited to irrigation alone. However, the phenomenal growth and stability of the State could not have been attained without irrigation nor may we expect further expansion without additions to irrigation. This is important to the entire Nation. If you question it, consider that California retail sales represent an all-American market equal to or greater than the value of all United States exports.

Now as to Federal reclamation we may take pride in the wisdom of our predecessors in Congress who enacted the original reclamation law more than 50 years ago, and pride too in the accomplishments of the program they set in motion which has made possible many of the flourishing and prosperous valleys and cities of the West as we know them today instead of the endless desert of jackrabbits and sagebrush.

Some of the uninformed critics of the Federal reclamation program would have us believe that projects such as the Salt River project in Arizona, the Yuma project in Arizona and California, the Minidoka project in Idaho, the Yakima project in Washington, the North Platte project in Wyoming and Nebraska, and the other reclamation projects are on the verge of bankruptcy, but let us look at the record.

The Federal Government has spent on the Salt River project about $24.6 million for plant, property, and equipment in development of this project. More than 300,000 acres now are under irrigation which provides about 25,000 family-size farms and small suburban units.

The valley supports a population of more than 400,000 people and each year crops produced exceed 3 times the Federal expenditure. A total of almost $1.2 billion in crops or about 50 times the Federal expenditure have been produced on this project since its construction.

Federal taxes paid from the area last year which stem from the development of this irrigation economy are estimated at more than 3 times the total of Federal project funds spent, and the cumulative total of all Federal taxes is estimated at more than 22 times the Federal investment.

In addition to these contributions to the growth, strength, and stability of the local, State, and national economies we should not lose sight of the fact that the Federal funds spent on the Salt River project, as well as all other projects, are being repaid to the Federal Treasury.

Similar evidence of the real and lasting value of Federal reclamation is presented on the Yuma project in southeastern California and southwestern Arizona. Plant, property, and equipment provided with Federal funds total less than $6 million, of which more than 90 percent has already been repaid directly to the Federal Treasury. The project has produced crops valued at more than 40 times the Federal expenditure, and each year this production is about 3 times the Federal funds spent.

On the Minidoka project in Idaho, the Federal investment in plant, property, and equipment totals approximately $26.6 million. This area also produces a harvest each year which exceeds three times the total Federal expenditure. Over the years this project has produced crops valued at more than $1.5 billion, an amount 60 times greater than the Federal investment in the project and an amount equal to about three-fifths of the total Federal investment in all reclamation projects built during the 53-year history of Federal reclamation.

Keep in mind also that many of these projects, in addition to irrigation, provide flood control, hydroelectric power, and serve other useful purposes.

The Yakima project in the State of Washington represents a Federal expenditure in plant, property, and equipment of almost $50 million. The two older divisions, the Tieton and Sunnyside, have already repaid to the Federal Treasury the entire initial expenditure. Of the two new divisions, the Roza is essentially completed while on the Kennewick construction is in progress. Crops produced through 1953 aggregate about $1.3 billion, an amount 26 times greater than the Federal plant cost for both the old and the new divisions. This is just another example of the true worth of western irrigation. No one of us would suggest the Yakima Valley is not a real national asset.

In the arid region east of the Rockies, an equally impressive record of reclamation accomplishments can be found. The North Platte project in Wyoming and Nebraska produces annually more crops than the total Federal cost of plant, property, and equipment and over the years these values have accumulated to 16 times the project-construction cost. This production will continue year after year and will provide opportunities and the means of livelihood for many people both locally and in distant States through the trade-creating aspects of this basic production. The steers raised on this project may be fattened in Iowa, butchered in Chicago, with the steak eaten in Washington or a dozen other cities, with the leather and other by-products consumed in any of the 48 States.

The story of the true value of Federal reclamation is further revealed in a recently released dramatic story on one of the newer and more expensive Federal projects, the Colorado-Big Thompson project. Just 1 year ago the daily newspapers were reporting the disaster of duststorms throughout much of the West. Northern Colorado, east of the Rockies, experienced the worst drought in 20 years, and therein lies a dramatic episode in the history of Federal reclamation. Streams normally fed by the mountains' melting snow pack dwindled to trickles, and disaster lurked over hundreds of thousands of parched acres. The Colorado-Big Thompson project was the one hope to save the land and the farmers of the region. This project, a dream of 75 years, 16 years a-building, was about ready to deliver water.

The area served by the Colorado-Big Thompson project represents a substantial, thriving economy with its many cities and towns and its numerous small manufacturers firmly dependent on agriculture as the basic industry. Practically all manufacturing, trade, and transportation involve agricultural commodities, and irrigation water shortage affects the entire local economy.

Into this drought-stricken area more than 300,000 acre-feet of water, accumulated on the western slope of the moun-

tains, was delivered through project facilities for use on the farms. With the aid of this water nearly normal farm production was attained. In terms of dollars the water meant $22 million of additional crops for 1954. Gross crop values in recent years averaged $46 million. In 1954 it was $41 million. Without project water the value would have been $19 million. Thus, the water made available through the Colorado-Big Thompson project made it possible to more than double the return in this drought year. The use of project water also provided stability to the livestock industry of the area. Without project water roughtly one-half of the available feed supply would have been produced, resulting in the proportional reduction in numbers of lambs and beef cattle fattened for market.

Business failures, anticipated earlier in the year in the local area, did not occur. Furthermore, project farmers were able to continue to contribute through normal trade relations to the welfare and stability of the local economy and, in turn, to the strength and stability of the entire United States. Who were the beneficiaries? Well, take folks living in Moline where tractors are made; Chicago where fertilizers are synthesized; Port Arthur where insecticides are produced—or almost anywhere else you can name.

The critics of Federal reclamation would attempt to have us believe the Federal Treasury is being emptied to build worthless boondoggles. Again let us put this program in perspective. The total cost of plant, property, and equipment in 53 years of Federal reclamation history totals less than $2.6 billion. This is less than 6 percent of the proposed fiscal year 1956 budget for national security. The proposed budget for reclamation construction in 1956 is less than one-third of 1 percent of our national budget. We are committed to spend about $1.7 billion for irrigation and power developments in foreign countries under the foreign-aid programs since 1948. This compares with the $2.6 billion investment in plant, property, and equipment of all the Federal reclamation projects built in the United States in the past 53 years.

By these comparisons I do not imply in any sense that appropriations for national security or foreign assistance should be reduced; however, we should take stock of the accomplishments of the past and the contributions that Federal reclamation has made to the development of this great Nation and provide sufficient funds to provide opportunities through further development of our own natural resources in the West. Investment of funds for reclamation is investment in the future of our Nation.

The dramatic story of the Colorado-Big Thompson is repeated time and time again in varying degrees and in different localities. I am sure there are many inspiring facts that could be presented if only we had the information. The Interior and Insular Affairs Committee of the House in particular, and in fact all Members of Congress should be acquainted with the true facts about reclamation. Accordingly, I am requesting the Commissioner of Reclamation to assemble brief but cogent reports on other projects, such as the Central Valley project and the Columbia Basin project, which may be used as a guide in appraising the value of this program and as a means of presenting the true facts to the American people.

The "Olympia" and the 57th Anniversary of the Battle of Manila Bay

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 2, 1955

Mr. MARTIN of Pennsylvania. Mr. President, yesterday was the 57th anniversary of the battle of Manila Bay, when Admiral Dewey's fleet effected one of the most glorious victories in American naval history. Yesterday in the city of Philadelphia, services were held on the old *Olympia*, which was Admiral Dewey's flagship. I hold in my hand an account of the exercises, which was published in this morning's Philadelphia Inquirer, and it is of such interest that I ask that it be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"OLYMPIA'S" GLORY MARKED AT FETE

The 57th anniversary of the battle of Manila Bay, in which the American fleet scored a smashing victory over Spanish naval forces, was observed yesterday at the Philadelphia naval base with a brief ceremony aboard the cruiser *Olympia*, Admiral Dewey's flagship in the historic engagement.

The exercises may have been the last ever to be held on the cruiser, which lies rusting and badly in need of repairs in a back channel at the base. Sponsored by the Committee to Save the *Olympia*, a feeling of gloom mixed with the spirit of patriotism as it was pointed out the ship will be scrapped within 12 weeks unless funds are raised to preserve it as a shrine.

DAYS SEEN NUMBERED

Dr. Henry Dexter Learned, a Temple University professor and governor of the Order of the Founders and Patriots of America, who is serving as chairman of the group trying to save the vessel, said "the *Olympia's* days are numbered unless we can rescue her."

Dr. Learned announced that the city had offered the south side of pier 4, at Market Street, as a temporary site for berthing of the ship, but added that a large sum of money would be needed to pay for dredging the location. The committee held a meeting after the ceremony to discuss plans for obtaining financial support for the project.

"OLD HAND" ABOARD

Capt. Frederick J. Ilsemann, United States Navy, who was a midshipman on the *Olympia* when it was decommissioned in 1922 after carrying the body of the Unknown Soldier home from France, and Arthur T. Lou, whose father participated in the Manila Bay battle on May 1, 1898, also spoke during the program held on the ship's deck.

SIX HUNDRED AND FIFTY THOUSAND DOLLARS NEEDED

The exercises opened with invocation by Lt. Paul C. Hammerl, a naval chaplain, and closed with the playing of the Star Spangled Banner and "tapt" by the base band. Comdr. William B. Jackson introduced the speakers and guests.

Dr. Learned said the committee was unable to accept the city's offer until the necessary funds are obtained for the berthing and renovation of the ship. An act of Congress has stated that delivery of the vessel must be accepted before July 23 or it will be scrapped. The Navy estimated the cost of restoration at $650,000, and the group would need at least one-tenth of that amount to contract for the ship.

The committee had hoped to establish the *Olympia* as a nucleus of a marine museum and a spot on the west bank of the Schuylkill, above University Bridge, was advanced as a permanent location.

Police Edition

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1955

Mr. HÉBERT. Mr. Speaker, here is an editorial which does not deserve the fate it is destined to receive: Printed in a community weekly and then reprinted here in the CONGRESSIONAL RECORD.

This editorial deserves greater recognition than that.

This editorial should be printed in every newspaper in the Nation—weekly and daily.

This editorial should be reprinted in pamphlet form and distributed in every section of the country.

This editorial should be read by every individual able to read.

Here is an editorial, the like of which comes along once in a long time. It is one of those editorials which really rings the bell and sounds a call to everybody regardless of age, color or creed; regardless of position in life or rank in society. This editorial is as personal as the individual who wrote it and the individual who will read it.

Here is an editorial that lives and breathes, an editorial that is warm and human.

This editorial came from the pen of Robert Stewart, editor of the West Bank Herald, of Algiers, La., a progressive community just across the Mississippi River from New Orleans.

Bob Stewart is no stranger to readers of the CONGRESSIONAL RECORD. His editorials have been placed by me in these pages many, many times.

Bob Stewart is no stranger to the Nation's press. Only last year one of his editorials received a Freedom's Foundation Award.

Bob Stewart has merited a special place in journalistic achievements as well as a position of honor and respect in his community. This editorial is one of his finest works, because to each of us it has application.

POLICE EDITION

You, Mr. and Mrs. Average Citizen, you're all a bunch of queer ducks; that is, the way you think and act about law enforcement.

Every neighborhood, every subdivision has a civic organization. You want playgrounds, you want sewerage, you want streets paved, you want schools, and you want traffic laws to protect the lives of your loved ones, friends, and neighbors. You mean well, you are sincere—by organizing you get the public improvements your neighborhood needs; you realize the constant, increasing danger of motor traffic, you know that day in and day out many of our citizens are maimed and killed because of the laxity of laws; the carelessness of drivers or because a motorist violated a law. You want to protect yourselves and family, your neighbors and friends. You want to save a family, the sorrow and tragedy of an accidental death. You realize that gruesome traffic deaths can be avoided if people drive sanely, obey traffic signs and laws and give consideration to others. You also realize that most people don't behave themselves unless there is a pattern of established conduct. That is when you and your civic club demand that stop signs be put up; traffic lights installed and warning signals placed at vantage points. The city and State authorities do this job to protect your life. These officials know the danger, also. They agree with you, they cooperate with you, they do what you ask. Then what happens? They send me out to see the signs are obeyed. I'm a cop.

A man drives up to the stop sign, looks to the right and left, he doesn't spot me, he keeps on going. I pull him over to the curb. He is indignant. He is mad, he tells me so. He angrily gives his name. He denies not stopping, he says he's got friends. He doesn't like me, he doesn't like the idea of a ticket. By this time he hates me. I give him a ticket.

I'm a cop. My duty is to enforce your laws; to protect your life even if it cost me mine. Oh, yes, the man I gave the ticket belongs to the civic club that had the signs put up.

He thinks that traffic laws were made for everybody but Mr. Average Man. He thinks he can sneak across stop signs and not get caught; he thinks he can park in no parking zones; he thinks he can run a red light if no cop is around. Sometimes he gets by with it, sometimes we catch him, or he is caught in the switch of traffic and goes to a hospital or the morgue. He thinks he can get by without a brake tag, a driver's license or handle an automobile under the influence of liquor. If we don't catch him sometimes we read about him next morning in the newspapers.

Yes, this fine respected citizen thinks the laws were made for everybody but Mr. Average Man. That is why hospitals maintain emergency accident rooms that are always crowded with maimed, screaming, cutup and bleeding citizens. Statistics show that some of these die from crushed skulls and smashed limbs. They thought, too, that the laws were made for the other fellow—not them.

I'm a cop, I know. I'm the guy you hate, that is when you violate the law and get caught. But its different when you hear your wife scream in the middle of the night, and you find a burglar in your home. It's different when the bank gets robbed, a teller killed—you call the cops.

Yes, when the little boys down the street drowns in an open canal; when a cat gets caught in a chimney; when little Johnny falls out of a tree; when men are needed to keep crowds back from fires, parades and other hot spots; when a stranger slugs you; when a man is found dead in the gutter; when you are mugged, attacked, threatened, defrauded—you call a cop. I'm the guy you send for, my job is to protect you—to enforce the laws. You make those laws, I'm the guy you hire, who is on call 24 hours a day, to see that your wishes are carried out.

I'm the man who lives next door to you, with a wife and kids, living on a modest income, being a good neighor. I'm the guy whose kids go to school and church with your kids. I'm the man you meet at neighborhood affairs, who lives no differently from any other hardworking citizen except when you need me I'm there—even though I must give my life to save yours. I'm a cop.

You like me when you need me, but when you violate the law, and don't want to see me, that is when you really need me the most. I may save your life.

There are names of other cops engraved on a bronze tablet in our courthouse. You have forgotten these names, but we haven't. They died to uphold law and order in this city. That was their job. They died so that you can live safely in your homes; walk down the street unafraid. They died so that you can live useful, happy, law-abiding lives in a decent community. Some of these guys may have given you a ticket. They were cops.
